Mr. Toastmaster, distinguished guests, ladies and gentlemen, I would indeed be ungrateful if I failed to recognize the generous spirit that prompted my esteemed friend, GORDON CANFIELD, to give such a laudatory introduction. I deeply appreciate his comment. To you who are his friends and neighbors and constituents, may I say that I have known your Representative in the Congress during the entire 10 years that I have been privileged to be a Member of the House of Representatives, first as secretary to his illustrious predecessor and later as an intelligent, hard-working liberal-minded Member of Congress. I congratulate the people of his congressional district and especially the people of Paterson where he lives on their spendid judgment in retaining him in the Congress of the United States, where he is rendering such distinguished service as a member of the great Committee on Appropriations.

We assemble here tonight to honor the memory of Abraham Lincoln. This gathering is symbolic of the spirit of a free people exercising fundamental freedoms that are inherent in our system of constitutional government. I am convinced that from these meetings being held simultaneously all over the Nation, thousands upon thousands of our citizens will receive an inspiration for more vigorous, dynamic participation in the affairs of government to the end that we may ultimately halt the insidious forces of communism and protect and defend and preserve the liberties and freedoms guaranteed by our Constitution. We gather here tonight freely and without fear or intimidation. We are Americans, living in free America.

As Americans we enjoy the largest measure of freedom and liberty of any people in the world. We are proud of our heritage. As Republicans, we are loyal to our country and its traditions and are determined to preserve, protect, and defend our way of life. We meet tonight secure in the knowledge that despite the events of November 2, the spirit of true republicanism still lives as a vital, virile force throughout the Nation. To those of faint heart, may I call your attention to the fact that nearly 22,000,000 people in these United States voted Republican as against slightly in excess of 24,000,000 who voted Democratic. Can anyone say that 22,000,000 Americans are not a virile, vital force in this Nation? No, my friends, the Republican Party which has survived victory and defeat down through the years still lives, and under proper leadership and guidance will again command the intelligent support of those who believe in a fundamental concept of liberty and freedom for the individual and in a government of law under the Constitution.

The events of the recent past ought to serve as a warning to the 40,000,000 Americans who failed to exercise their right of suffrage and ought to inspire them to active participation in the political affairs of the States and the Nation, if we are to preserve our country and prevent an ultimate, devastating collapse that may take us down the path to state socialism or communism. It is indeed refreshing that in the midst of a tangled and snarled mess of social, economic, and international problems we as free Americans can assemble here in Paterson and freely discuss our common interests. Inspired by the life and character and work of Abraham Lincoln and the perils which he confronted at that time, we as Republicans view the future confident that the brains and the genius of the American people will ultimately solve what now appear to be insoluble problems in the interests of making America a better and safer place in which to live for all of our people. Conditions today, with the multitude of problems crying out for solution, are little different than those that faced the American people in 1854 when on March 20 of that year at the city of Ripon, Wis. (in the district I have the honor to represent), a group of militant citizens, aroused over the burning question of slavery, met to discuss freely their common problems. They were men of various political faiths confronted with a confusion of thought quite similar to that which exists in the United States today. They determined the necessity for full and complete mobilization of the forces of the United States that were opposed to the extension and continuation of slavery. With high resolve they determined to organize a new political party. They adopted the name Republican. Because their program was sound, they enlisted the aid of Horace Greeley, one of the great editors of that day. Backed by his virile pen and tremendous influence, the new party was presented to the Nation. On June 6, 1854, at a convention held at Jackson, Mich., the new party was christened. Offers of help and encouragement came from many other States. It was the spontaneous action of a determined people. The first national convention of the party met at Philadelphia on June 17, 1856, and nominated its candidates for President and Vice President. The subsequent history of the Republican Party is academic. The dominant role played by Abraham Lincoln in its formative years needs no amplification. The party has endured through victory and defeat, through war and peace, as a vehicle through which citizens of these United States may express their views and attitudes on great public questions. We are a nation dedicated to the principle of two-party government. I pray the time may never come when we will have such a variety of splinter parties that none can successfully carry on the government. The situation in France should be sufficient warning to cause all thinking Americans to pause. Our Nation has risen to its great eminence because we have always had a strong majority and minority party.

In the last campaign the Democrats were specific in their promises. They left no room for doubt. They vigorously attacked the record of the Eightieth Congress. Many Republicans were either hush-hush or divided on the issue. The Democrats made specific promises to the farmer—to labor—to the aged—to the unfortunate—and to the housewife. The Republican leadership wrote most of the same promises in their platform but refrained at the highest level from slugging it out with the opposition. Many Americans grew sympathetic for the underdog. Many apparently were not impressed by appeals for unity and reaffirmation of the Golden Rule. The people wanted concrete, definite expression from Republican leadership. This ought to teach each and every one of us that the American people are hungry for truth and facts and it is the responsibility of every good Republican in America tonight to actively and militantly fight as Lincoln did for those positive principles in which we believe.

It will not do for us as Republicans to simply say we can do it better, since that is a mere presumptive conclusion. To say that Republicans are competent and the opposition are a lot of bunglers is a mere repetition of the same presumptive conclusion. We must be able to furnish concrete evidence to show how we could do it better and show in specific terms how we can improve the ultimate welfare of our people and the Nation. In my humble opinion there is no use talking about reorganizing the Republican Party with this or that set of leaders when our first procedure should be to organize the thought and purpose of the party in keeping with its record and history. It is my opinion that such a course will develop leaders who will stand stanchly on principles and policies for the ultimate welfare of and service to our people. Our people and the future of our country are not safe in the hands of men or women who think and speak of fear and who listen alone to the coercive threats of so-called pressure groups. We must have leadership that will think first in terms of public service and of the wants and needs of the people. Not promises to the people that are incapable of fulfillment, but public service that can produce and give to the people of America and the great mass of our citizens the things which government ought to give in upbuilding and enlarging our way of life. It should be clear by now that in all times and in all lands leaders have earned their places by courageous stands and not by maneuvering or scheming to foreclose the lawful ambitions of others or by destroying the wants of the people. Our determination to see our country forge ahead is just as great and our faith in our people is just as strong as ever, and I am certain that the Republican Party has men and women who are courageous, dauntless fighters for the right and that out of this conflict that is now going on, there will arise such leadership that will save our country from drifting and sinking into the morass of fear—followed by pure socialism or communism.

On January 5 the President delivered his message on the state of the Union. You will

recall that during the recent campaign he repeatedly declared that the Eightieth Congress was the worst or second worst Congress in the history of the Nation. He repeatedly gave the impression that the Nation was all but destroyed as a result of the action or inaction of the Eightieth Congress. How different was his initial approach in delivering his address on the state of the Union: "I am happy to report to this Eighty-first Congress that the state of the Nation is good. Our Nation is better able than ever before to meet the needs of the American people and to give them their fair chance in the pursuit of happiness." He further said: "Our private-enterprise system has reached new heights of production. Since the boom year of 1929 while our population has increased by only 20 percent, our agricultural production has increased by 45 percent and our industrial production has increased by 75 percent. We are turning out far more goods and more wealth per workman than we have ever done before."

This, accomplished in the year 1948 while operating under the legislative leadership of the Republican controlled Congress. Listen, my friends,—the greatest number of people employed—the highest national income—and the greatest production ever achieved in peacetime history of the Nation. And still it was contended during the campaign that the Republican Eightieth Congress failed to meet its responsibilities to the people. I call your attention to these facts merely to demonstrate how necessary it is for our people to think and to reason if we are to find the truth that must guide our actions as citizens.

How well I recall on the 16th of December 1947, when the inflationary cycle was at its height. People were demanding that the Congress do something to control increasing living costs. The Republican leadership and the Democratic leadership were in agreement that prices of commodities were too high. The division arose over methods to be employed by the Government in attempting to fight inflation. The Democrats wanted a return to Government controls of all kinds. The Republican leadership insisted upon providing for a system of voluntary controls, and legislation was introduced to set up such a program. I recall how my Democratic friends denounced that program on the 16th of December 1947. One after another stood in the well of the House and made violent speeches denouncing the Republican program—denouncing the Eightieth Congress for inaction—denounced us for failing to provide higher wages and lower prices for the American worker and consumer. You all recall that situation. They appealed to every housewife and every worker in the Nation that the Republican Congress had done nothing to deal with this problem of inflation. The Republican-sponsored bill providing for a system of voluntary controls was enacted into law. The President signed it reluctantly. It is now February 1949—a year and 2 months have passed since the enactment of that legislation. If it was the vicious, impotent legislation characterized by the Democrats in December 1947, then it would appear logical that one of the first acts of the Eighty-first Congress would be to repeal that legislation. Imagine our surprise when the Democratic-controlled House Committee on Banking and Currency brought to the floor of the House a bill requesting the extension of the Republican measure passed by the Eightieth Congress. Gone were the wails that it was impotent. No longer do they charge that it had failed. In fact, the Secretary of Commerce, Mr. Sawyer, came before the Banking and Currency Committee and requested the extension of this legislation passed by the Eightieth Congress on the ground that it had worked in the interests of preventing a continuance of the inflationary cycle. Thus we see in one of the initial bills passed by the Eighty-first Congress a complete acknowledgment that the attitude maintained by the Republicans in the Eightieth Congress was sound, and they have nothing to offer to take its place.

One of their campaign promises was the immediate repeal of the Taft-Hartley law. I know the way in which this law has been assailed, and yet now that the Democrats are charged with the responsibility of carrying out their campaign pledges in that regard, they find themselves faced with a tremenously serious dilemma. It will not be the simple, easy task that was envisioned during the exuberant period immediately prior to and after the inaugural ceremonies. When the history of the operations of that law is carefully and fairly appraised, by labor itself, it will be seen that as a piece of legislation designed to affect the entire economy of our Nation and all of its people, it was in the public interest.

The same may be said with respect to many of the other promises that were made. Democrats themselves, now faced with the responsibility of enacting new legislation, find that the promises which they made are in many cases incapable of legislative fulfillment. For a number of years past they have tried to picture Republicans as a special-privilege class. They have instilled into the minds of many people in America that Republicans are a rich and greedy class who never think of the welfare of the common man. I come from the State of Wisconsin and was reared in an atmosphere of liberalism of thought in legislative matters. Under Republican administration in my State, we passed the first workmen's compensation law, the first unemployment compensation law, mothers and child welfare aids, blind aids, old-age pensions, apprenticeship training, and many other social and economic gains, and did so before the New Deal ever was dreamed of. We enacted laws outlawing yellow dog labor contracts in 1931 under Republican administration. We did away with indiscriminate use of injunctions in labor disputes in the same year and under the same Republican administration we defined legal and illegal labor practices and passed legislation protecting and preserving collective bargaining. These and many other great progressive pieces of legislation in the public interest were passed and became the law of my State long before the New Deal ever came into being. It was all done under the inspiring guidance and leadership of Republican statesmen who have always believed in developing the fundamental welfare of the common man. I am happy to state that the Federal Government and most of the other States in the Union have copied the legislation enacted under wise Republican leadership in Wisconsin and that most of these great progressive pieces of legislation are now the conservative law of the land.

We have a long way to go, and as I vision the future, the Republican Party must and will again represent the hope of the millions of people in America who believe in the accomplishment of social and economic ideas within the framework of our constitutional system of government. The radical cannot wait for the orderly processes of law. He wants to take short cuts that violate the spirit of the Constitution, and as a result we find ourselves now in a morass of economic and political chaos that calls for a return to fundamental thinking. I wonder sometimes how the American people can continue to think as clearly and as dispassionately as they do when overwhelmed by the constant barrage emanating from prejudiced columnists, commentators, and politicians, who instead of giving the people the truth, many times have poured out reams of distorted and prejudicial misinformation.

I have stated that we have a long way to go. Social and economic progress is never static and our constitutional system of government envisions the constant and everlasting need for change in the interest of human betterment. Let us examine one or two of these problems that need immediate attention. The Democrats have been in control of the Government continuously since March 4, 1933, with the exception of the 2 years when Congress passed into control of the Republicans, during the proceedings, of the Eightieth Congress. During all of those years, they have had complete control of all the money—all the executive and legislative and administrative departments of Government, and I may say, in addition, almost complete control of the judiciary. Why, then, with all of the billions available to them, are they still at this late date complaining about the underprivileged, the undernourished, the ill-clothed, and poorly housed third of our population. As a Republican speaking what I know to be the intent and purpose of an overwhelming majority of Republicans in the Congress, we have tried repeatedly during these years to work out a sane program of social security. Amendment of the Social Security Act, originally passed in 1935 and 1936, is long overdue.

Let me illustrate what I mean. The social-security law made provision in title I for a system of old-age pensions. Under this system, the Federal Government provided part of the funds and the State government and local governments provided another portion. As the law now stands, it is possible for an aged person in need to receive a maximum of $50 a month—$30 of which will be paid out of the Federal Treasury, provided the States and local communities put up $20. This would enable an aged couple to receive $100 a month. Remember, this payment is made in the form of old-age assistance without $1 of contribution having been made by its beneficiaries. In the event a recipient of such a pension does any work, the amount of income received is deducted each month from the amount of the pension.

The other system set up under the social-security law is what is called old-age and survivors insurance. Many phases of it are too technical to discuss on an occasion such as this. However, in order to make my point clear, may I say that under the provisions of existing law every employee contributes 1 percent of his wages toward the old-age and survivors insurance fund, and the employer contributes the same amount. Thus, 2 percent of pay rolls are taxed to provide a fund out of which old-age and survivors insurance payments are paid.

Let us take the case of a man and his wife, both of the same age, who entered the system in 1937. The husband continued to work steadily for the next 12 years—until 1949. During these 12 years he has contributed 1 percent of his earnings and the employer has contributed 1 percent to the trust fund. He and his wife attain age 65 at the same time, and he is eligible for a retirement annuity. How much does he get? He receives $44.80 and his wife receives $22.40—a total of $67.20. Thus, this man and his wife who have worked continuously and earned the maximum wage of $3,000 per year and who have contributed out of every pay check to the fund are entitled to receive only $67.20. Furthermore, if this individual does some work and earns in excess of $14.99 in any one month, his entire pension is taken away from him for that month.

Thus, under the old-age-assistance program, the man and his wife who have never contributed anything to any fund may be allowed $100 per month, and the other couple I have just described get $67.20. It is this tremendous inequality that exists that we Republicans have been trying to change—not to reduce any pensions now being paid to the aged but to give to the old-age and survivors insurance annuitants at least an even break with those aged groups who make no contribution. I have long been an advocate of decent, livable pensions for our aged people. To turn a couple out at age 65 and ask them to live upon a niggardly annuity of $67.20

and then take that away from them if they earn in excess of $14.99 in any one month is a horrible monstrosity to call social security.

It is impossible for me to understand how a party that has openly expressed its interest in the welfare of the common man could have closed its ears all these years to the necessity of reevaluating this entire social-security problem. The field is a huge one, and as a Republican I have tried to do something about it by introducing legislation that will give to the aged people of this country and the annuitants under old-age and survivors insurance some sense of security and some assurance that they can live at a subsistence level that will provide adequate nutrition, housing, and medical care.

My friends, you should know that there are hundreds of thousands of our aged people in America tonight, despite all of the 16 years of the so-called beneficent New Deal, who are compelled to live on a subsistence diet that is lower than the diet that we are furnishing to the German people under our occupation program at the present moment. If this means that Republicans do not have the interests and welfare of the common man at heart * * * if this means that we are thinking only in terms of clipping coupons and the interest of the bloated bondholders of Wall Street, then I am sure that we are lost to reason and justice.

During the sessions of the Eightieth Congress I was privileged to be chairman of the committee that provides all of the funds for the public assistance, social security, public health, and education programs of the Nation. It is with great pride that that we can point as Republicans to the work of the Eightieth Congress in the field of public health. Is there a worker in Paterson or in New Jersey or in any other part of the United States who is not an active beneficiary of the great public health programs which were inaugurated in the Eightieth Congress? You have not been told of the fight that we are waging to find the cause and a cure for cancer. You have not been told that the Eightieth Congress set up the program to find the cause and a cure for heart disease and rheumatic fever. You have not been told that the Eightieth Congress set up the great program of research and control in the field of mental health. Is there a person here or in the Nation who has not felt the blighting and searing influence of these devastating diseases either themselves or in their immediate families?

We have inaugurated and set out the greatest and most ambitious program ever conceived or devised to bring health to the people of America, and only until Republicans came into control in the Eightieth Congress were these programs implemented with the necessary funds to make them function.

I have been pleased to introduce in the present Congress a program of research and control in the field of arthritis and rheumatism, and again the Republican attitude of doing something for humanity is reflected in the unanimous support of that legislation.

Thus, my friends, while we know that there are fiscal limits beyond which we dare not go in the matter of Federal expenditures, we have fought to maintain and build up and extend those services that bring the greatest good to the greatest number of people. We want the real benefits of social security to be achieved for all our people. We want the standard of living of our people continuously raised. We want full employment. We demand the payment of good wages. We want a continuation of the program of necessary internal improvements. We want the benefits of rural electrification. We want our waterways harnessed to prevent flood and disaster and to develop the much-needed elcetrical energy for the development of our Nation. We want erosion control and reclamation and good soil practices continued. We recognize the necessity for maintaining support under agriculture in order that that great segment of our society may be able to earn a decent wage in producing the food and fiber that is so essential to our own well-being and so essential to the security of the world.

But, my fellow Americans, great as our interest is in all of these programs of public welfare, we must know where the money is coming from to pay for them. We must know how these vast sums that must be provided by taxation can be raised without breaking the back of the taxpayer. The Democrats never ask that question. They just don't seem to care. They just rely upon a provident future to provide the answer. But I assure you that the accomplishment of these worthy objectives presents no simple assignment. I realize and every thinking person must realize that there are limits to the ability of the American people to pay taxes. After all, the wage earner is the one who must bear the greatest burden of taxation, because taxes are largely translated into the price of the commodities that he must have in order to live. I do believe that so long as the international situation remains as it is, we cannot look for any great retrenchment in the Marshall plan expenditures or in the expenditures for national defense. I do believe, however, that it is possible to materially reduce the appropriation requests without interfering with the orderly carrying on of either of those two operations. I believe that it is possible to install practices of economy in our Government service through the reorganization of the entire Government, and thus effectuate several billions of dollars of savings that can be used to carry on some of the worth-while projects that the people demand.

We must not forget that Federal spending in 1940 approximated $9,000,000,000. And in the fiscal year ending June 30, 1948, we spend $36,524,000,000. We should also remember that the current annual Federal expenditures exceed the total annual income in 1933. Therefore it must be apparent to any thinking person that the one first obligation of the Eighty-first Congress is to keep the budget in balance and provide for a system of orderly debt retirement. The greatest care must be exercised that taxation does not reach the point of confiscation and dry up the source upon which taxes are levied. The best way to acquire surplus funds for debt retirement is to reduce every Government expenditure not necessary for the maintenance and extension of necessary Government services. There are literally hundreds of places in the Federal budget where savings can be effected and in no way interfere with the orderly and necessary Government services. Citizens all over America must be aroused in some way to the delicate and critical fiscal situation facing your country and mine. We must not look to the Federal Government to support us. We should support, and eventually we will be forced to support, the Government if we are to avoid complete disintegration of our American system of business as well as Government.

Now, my friends, there are many of the proposals submitted by the President in his state of the Union message that any good American who believes in human justice and human liberty can support. There are others so intimately associated with the Communist and Socialist attitude toward government that we who believe in the capitalistic system will be compelled to oppose. As a Republican, however, I do not conceive it to be my responsibility—and in saying this I believe I express the attitude of an overwhelming number of Republicans in the Congress—I repeat, I do not conceive it to be my responsibility to merely become a heckling, defeatist, and unintelligent opposition. I believe that we as a party have a golden opportunity to go to the American people with a definite program of constructive legislation that will permit the accomplishment of many of the social objectives that the people of America demand and yet do so within the framework of our constitutional guaranties and within the framework of our established capitalistic system of government.

The years ahead will present tremendous problems. The solution will affect not only every person in the United States but most of the people of the world. It is a challenging responsibility of government. Whatever the effects may be and whatever the attitude finally adopted, it will fall upon everyone, regardless of political faith or conviction. Therefore, it seems that a solemn responsibility rests upon you, and each of you, to apply to each of the problems that may arise a rule of reason and justice in the interests not of special pleaders or special groups but in the interests of all of our people. We in this Nation want to be governed by law and not by the whims and caprices of mere men. We fully realize the responsibility of government in providing for human welfare. We know that governments are instituted to protect the people against special privileges. We know that as conditions change and society becomes more and more complex, it becomes the duty and the obligation of government through the enactment of just and equitable laws to provide for justice and equality of opportunity.

We as Republicans conceive it to be the duty of the Government not to act in the role of tyrant and master through the continual issuance of Executive orders but rather to provide safeguards for freedom of action and freedom to work and freedom to live by assuming the role of constant arbiter between human rights and special privilege.

My fellow Republicans, on this day dedicated to communion with the spirit of Abraham Lincoln, let us view the future with assurance that the spirit of true Republicanism still lives, offering a safe haven of political refuge for all Americans who believe in true justice, equality, liberty, and freedom.

Federal Excise Taxes

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. MULTER. Mr. Speaker, the following is a report submitted by Mrs. Walter J. Pfizenmayer at an executive council meeting of the New York City Federation of Women's Clubs on January 28, 1949, in support of a resolution adopted urging repeal of the Federal retail-excise tax on so-called luxuries. I commend this report to the attention of my colleagues:

The history of the tax legislation covering commodities cited in this resolution is, briefly, as follows: In 1941 a 10-percent levy was imposed to conserve vital materials in short supply and to provide revenue to support a national-defense program: this levy was increased to a 20-percent war tax in 1943 on so-called luxury items to insure additional revenue and channel off surplus war wages and profits into Government securities, and discourage manufacture of products not necessary to the national defense.

The public was given Presidential assurance that these mandatory war measures would be repealed 6 months after the declaration of peace, that is, on July 1, 1947, but the Congress voted in March 1947 for indefinite extension.

It is an accepted fact that governments cannot continue to exist without revenue. The late Chief Justice Oliver Wendell Holmes said that taxes were the price civilized states

paid for their civilization: The higher the type of civilization the higher the taxes. With the expanded social program advocated at the present time it is evident that heavy taxes will be required to support it—a democracy being founded on the premise that the more fortunate share with the less privileged, and that equalization of opportunity in health, education, and advancement is highly desirable for all economic and social levels.

The majority of the industries concerned would be willing to agree to a return to the 10 percent levy on the principle that half a loaf is better than none, but insist that the provisions of the law be more clearly defined and equalization be effected by including in the program purely luxury items now tax-free, such as antiques, hand-made furniture, yachts, race horses, polo ponies, $500 evening dresses and negligees, hand-painted ties—all items well out of reach of the average middle- and lower-income groups. Why should the tie be tax-free when the clasp that holds it in place must bear a 20-percent levy, or the bride's dress, veil, shoes, hosiery go scot free, while her engagement and wedding rings carry an impost? It is both unfair and discriminatory, in our highly competitive economy, to favor one segment of the population and penalize another.

The pocketbook and leather-goods industry regards its product as a necessity—women's handbags, shopping bags, diaper bags, auto and other license folders are in daily and ordinary use. The industry is small, most of its operations are done by hand, its normal rate of employment is about 25,000 workers, more than 5,000 of whom are now on unemployment relief. The handbag is a highly necessary article in the feminine wardrobes to carry safely money, keys, tickets, essential accessories, for which we have no adequately convenient pockets, and the Government itself considered it part of the standard essential equipment of all Wacs, Waves, Spars, and nurses.

The National Association of Retail Druggists, representing 31,000 druggists and pharmaceutical associations in the 48 States, considers the majority of its products as essential to health and hygiene—over 100 items are taxed; the more familiar ones to us, such as baby oils and powders, after shaving and dandruff corrective preparations, foot powders, and deodorants, they class as medicants and not as cosmetics. Beauty and barber shops provide the livelihood for more than 3,000,000 of our population; the greater part of the income of small shops the country over has come from the sale and purchase of cosmetics, the tax has drastically reduced this. The statistical data required to be assembled and reported—the time consuming inspections by Government agents—the high penalties involved for fraudulent reports ($10,000 fine and up to 5 years' imprisonment) all combine to work hardship to the small shopkeeper who can incur liability through the carelessness or inadvertence of a clerk for whose mistakes he must pay out of his own pocket since he cannot afford the protection the larger outfits, with their staffs of highly trained accountants, enjoy.

The jewelry trade report their average sale as under $30 and a large volume under $3. They cite discrimination in the exemption from tax of crystal, glassware, plastic, and stainless steel which are also sold as decorative articles and gifts. The gold in the $15 fountain pen or pencil may total only 50 cents but the tax is $3; the same item made with stainless steel as a substitute is tax-free. Inexpensive lipsticks, compacts, costume jewelry are an everyday part of the wardrobe of the average woman or working-girl—her consumer dollar spent for tax-free articles buys only merchandise, in unfair competition with the tax-bearing commodity in the same category. It is suggested that immediate relief be offered to remove such unfair and unjust discrimination by restoring the 10 percent 1941 rate, granting an exemption from tax on the first $25 of the selling price of all jewelry items. Buyer resistance to tax-bearing articles has caused and will continue to cause severe unemployment in this industry. Income tax cannot be paid where no income is earned, and the added burden of swelling relief rolls with resultant increased income-tax levies falls—as always—on the consumer, in the middle- and lower-income groups.

The fur trade claims to be hardest hit by the combined tax levy and buyer resistance. They contend they are the only wearing apparel industry so heavily burdened. Except in certain parts of the South, furs are a part of the wardrobe of women 6 to 7 months of the year. The industry reports extensive research and technical development in all fields of preparation and handling and working of furs, which have made available to the average woman clothing of the highest quality, utility, and durability, at a cost within her reach, and the trade has been responsive to the changing demands and needs of its customers. Three-quarters of their business falls in the under-$400 category, only a small portion is mink trade, and over 900,000 units of the utility furs—muskrat, rabbit, mouton, skunk, fox, and wolf—were sold last year. A $100 fur coat gives its wearer twice the wear a similar cloth coat will, but a mouton-lined cloth coat retailing at $200 is tax-free, but the cloth-lined $79.50 mouton coat pays almost $16 in taxes. The fur industry is highly competitive and the margin of profit low; an almost virtual cessation of sales is occurring at present; consumer resistance has resulted in piled-up inventories and disastrous distress selling, with loss of bank credit and disturbing financial readjustments.

The consensus seems to be that the tax is regarded as a highly discriminatory imposition on essential products, falsely classed as luxuries; its elimination would give a substantial impetus to sales and relief to drastic and widespread unemployment and reduce mounting business failures. No justification exists for the continuance in peace of war-born measures that are creating unfair and undue hardship. Today's wholesale and retail consumer's index indicates a rise of 71 percent in business failures over 1947, with a disturbing number on the wholesale level. Consumer resistance to high prices is a contributing factor, and while the cost-of-living index indicates a steady decline during the past 3 months, it is still 29 percent higher than in 1942.

The Opportunist

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bangor Daily News of February 7, 1949:

THE OPPORTUNIST

Mr. Truman has been a life-long opportunist.

It was chance that brought him to the attention of Pendergast and the same quirk of fate that gave him his first political job—one roughly corresponding to a Maine county commissioner. Then it was the Pendergast machine which catapulted him into the United States Senate where he hitched his wagon to the Roosevelt star of spending other people's money.

He was lucky to have been named Vice President over Henry A. Wallace. (And, for that matter, so were we.) By a single heartbeat he succeeded his mentor. And his luck held out November 2 when he was elected by a minority to succeed himself.

But will Mr. Truman be lucky enough to get the ambitious "gimmie" program he outlined for a socialistic America? Or will the law of averages catch up? And will Mr. Truman's string run out?

As suggested by the United States News and World Report, there is beginning to be some question whether the United States can do everything that is asked of it, whether the taxpayers can support the world in the style to which it would like to become accustomed and assure everybody at home against all the hazards of living.

As we understand the meaning of the word, bankruptcy is that state where liabilities exceed assets. The complete status occurs when creditors get suspicious and tough and shut off credit.

Unhappily we are not approaching that dangerous state. Having tapped every source of revenue to foster laziness and indolence, the Federal Government has reached the bottom of the barrel and is already there.

The theory of sock the rich is no longer tenable. If the entire fortunes of the wealthy were confiscated outright the loot would run the Federal Government only from today until day after tomorrow, both inclusive—3 days. That cow has been milked dry.

Now we hear more and more about appropriating corporate assets. That would be more fruitful. With the spoils the Government, at its present pace, could enjoy a 3-month orgy.

But all that is looking ahead. How do we stand now? Let us take Indiana as an example. New York and California are too extreme; Maine is not sufficiently average. The Hoosier State strikes a better cross-sectional mean.

Indiana's share in the national debt is $7,000,000,000. The share of every family in that debt is $6,000. Now suppose the creditor should suddenly get hard boiled and say: "Your note is overdue. I want my money," and the process of liquidation of assets should start.

After every acre of land, every home, factory, automobile, piece of farm equipment, every mule, horse, pig, sheep, and hen had been sold and the proceeds added to existing cash assets, the State would still owe $3,000,000,000. Reduced to lowest terms, Indiana owes $7,000,000,000 of the national debt and could, if the debt were called, muster but $4,000,000,000. By definition, Indiana is bankrupt. So is every other State in greater or lesser proportion. So, then, is the United States.

And still we hear the continued cry for more revenue; revenue to feed Europe, revenue for the armed forces (and we will not quarrel there), revenue for socialized medicine, for socialized education, and revenue for low-cost housing.

But we never hear the faintest echo of a demand by the majority party to reduce the standing debt or to modify a program padded with impossibilities.

Such an echo, even the faintest echo, would indeed be sweet music.

Colored Oleomargarine

EXTENSION OF REMARKS
OF
HON. JOHN R. WALSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. WALSH. Mr. Speaker, I have introduced a bill to ban the imitation of butter through the manufacture and

sale of oleomargarine colored yellow in semblance of butter, which will eliminate the need for any taxes or license fees whatever on the butter substitute. In my judgment, this best serves the interests of my constituents, both workers and farmers, whom I represent in approximately equal numbers. Insofar as Indiana farmers are concerned, dairy products account for 13 percent of their total income. Cows are milked on four out of five farms in my State, which is tenth among all the States in the Union as a source of dairy products. Cash farm receipts from dairying in Indiana in 1947 amounted to $134,000,000, and were 42 percent as large as the total received from all crops in my State during that year.

In 1947 good quality butter sold at wholesale in Chicago for 69 cents. Indiana farmers got 70 cents a pound for their butterfat in the form of cream, or 56 cents for the eight-tenths of a pound of butterfat that goes into every pound of butter. By contrast only one-third of 1 percent of the Indiana farmers' income came from oleomargarine in that year. Compared with the $134,000,000 the farmers in my State received from dairy products, they got less than $3,000,000 for their soybean oil sold to oleomargarine manufacturers.

As a matter of fact the dairy cow is a better customer for the Indiana soybean grower than is the oleomargarine manufacturer. The oleomargarine manufacturers paid only $2,719,000 for the soybean oil they bought from Indiana farmers in the last year for which figures are available, whereas soybeans and soybean meal fed to dairy cattle in my State were worth $6,868,000 during the same period.

The Indiana dairy farmers' investment in barns and equipment amounts to $225,000,000, and the single oleo plant in my State has no such investment at stake in the butter-oleo controversy. On the contrary, it is linked with 27 other oleomargarine manufacturers in the Nation in an ill-advised attempt to destroy the market for butter produced by 3,500 local creameries, 82 of them in Indiana alone. To these butter plants I must add 1,717 dairy plants processing fluid milk, ice cream, cheese, and other dairy products in my State, whose prices will be affected adversely by unfair competition from oleo colored yellow in imitation of butter.

An immense amount of labor interest is also involved in the butter-oleo controversy in Indiana. The 82 plants producing butter in my State employed 1,466 persons at the last census, and paid out more than $2,000,000 annually in wages. No such contribution was made by the single oleomargarine manufacturer in Indiana. The dairy industry is the largest single user of trucks in the Nation, and Indiana has a vital interest in the automotive industry, both as a supplier of parts and as a builder of motor transport. The jobs of many men who build and service dairy equipment are at stake in this controversy, both in Indiana and in the Nation at large.

Mr. Speaker, I strongly feel that consumer organizations have been ill-advised to let themselves become stampeded by oleo propaganda. The oleomargarine manufacturers have said that they wanted discriminatory taxes removed from their product, but when leading dairy and farm organizations approve the elimination of those taxes—as they have—it appears that what the oleo interests now want is really something else entirely.

Oleomargarine manufacturers now demand the unrestricted right to color their product yellow in imitation of butter, which amounts to a license to practice fraud and deception at the expense of consumer and dairy farmer alike. Where is the justification for this demand? Only 3 percent of all the oleomargarine sold in 1947 was colored yellow, but apparently this was no handicap to the industry at that time. Oleo sales in that year were double the volume attained in 1940, and profits were enormous. There would seem to be no reason, now, why the manufacturers of this substitute product should be encouraged to compete unfairly for a butter market that is vital to the dairy farmers of America.

More than 25 percent of all milk products in this country goes into butter. This is because cows produce more milk during the flush summer months than in wintertime, while consumption remains about the same. Butter is the most economical and convenient form in which this surplus can be stored, shipped, and distributed. That is why butter is called the balance-wheel of the dairy industry.

There is no question that every pound of oleomargarine increases the supply of table-spreads and thus reduces the price for butter. This would not be serious if butter were an isolated product, but the fact is that the market for butter affects the price of all dairy products. This is equally true of fluid milk, ice cream, cheese, dry whole milk, and condensed milk. The entire price structure of the dairy industry is so closely interrelated that an unfavorable market for one dairy product affects the farmer's income from all dairy products.

In proof of this we have only to study the figures on the increasing sales of oleomargarine, which have usually been accompanied by lower returns on, and decreased production for, butter. When the market for butter is unfavorable, dairy farmers who milk from three to six cows no longer have an outlet for their farm-separated cream, and under these conditions they dispose of their cows and turn to other occupations. This fact has been brought home to me by the loss of 24,000 dairy cows in my State in the past year alone. A decline in dairy cow numbers on a Nation-wide basis has been steadily under way since 1940, and we have lost nearly 3,000,000 dairy cows in that time. Last year's drop in the cow population was the sharpest in history, according to the Department of Agriculture.

To my mind this is a bad thing for the people of my State, whether they are consumers or dairy farmers or local businessmen who depend on farm income for a large part of their trade. Our population is increasing, and it must be fed. Since 40 percent of our beef and veal comes from dairy herds, as well as all of our milk, it is self-evident to me that dairy farmers must be encouraged rather than discouraged at this time.

The unrestricted sale of oleo colored yellow in imitation of butter does not offer such encouragement. My bill would prevent unfair competition for the vital butter market, and insure a continuing supply of meat and milk for the dinner tables of this Nation, as well as a steady income to farmers and to businessmen who depend upon farm trade for continuing prosperity.

Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. HILL. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following address made by our former colleague and Representative from the Eighth District of Oklahoma the Honorable Ross Rizley, in my home city, Fort Collins, Colo., on Thursday, February 10, 1949, in commemorating the birth of Abraham Lincoln:

I am grateful for the opportunity to come out to this great section of the Rocky Mountain region and break bread with you on this occasion, commemorating the birthday of Abraham Lincoln, who was the greatest American statesman and humanitarian of them all.

I am especially happy to be here in the home community of your distinguished citizen and able Congressman, BILL HILL. He is my close personal friend. We commenced our service in Congress at the same time. We sat side by side for several years in the Committee on Agriculture, of which he is still a distinguished member. It is also my good fortune to know intimately and well the other former Republican Members of the Colorado delegation in the Congress who served there during most of the time that I was there. Ed Chenoweth was elected at the same time I was elected in Oklahoma. He was my neighbor in Washington. For the past several years we have lived only a few houses apart. We served side by side on the Committee on Executive Expenditures and on the Rules Committee; and Bob Rockwell is also one of my intimate friends who served most of the years that I was in the Congress.

I also have the pleasure of knowing quite well your very able and distinguished Republican Senator, Senator MILLIKIN. He is one of the outstanding Republican leaders in the Senate. All of these gentlemen were, and are, recognized as outstanding Members of the Congress, and I am firmly of the opinion that the people of Colorado will soon see the day they will sincerely regret that they failed to retain in the Congress the service of men like Ed Chenoweth, Bob Rockwell, and Dean Gillespie to represent them in the Congress of the United States.

I am sure this evening we could, with profit to all of us, spend the entire evening in reviewing the life history of that great man whose birthday will occur 2 days hence. He is, perhaps, the greatest character in history to appear upon the scene since the days of the Lowly Man of Nazareth. He exemplified all of the things that are necessary to found, maintain, and keep a great republic such as

ours. His firm and positive stand for liberty and orderly government by law under the Constitution in his day saved our Republic and our representative form of government; and, in my humble opinion, what the Republican Party needs today more than any other one thing is leadership of the courage of Lincoln, who will stand firm and steadfast for the principles and prerequisites that are fundamental to a representative democracy such as ours. If the Republican Party is to be a vital factor in the future welfare of the people in this country, if it is to function either as a minority party representing the loyal opposition, or if at some future date it shall be again entrusted with the responsibility of government in these United States, it should, in my humble opinion, divorce itself from the New Deal and the so-called Fair Deal. It must take a definite and positive stand for our capitalistic system of free enterprise. It must take a definite and positive stand for strict adherence to the principles and fundamentals of the kind of government contemplated by the founding fathers—the kind of government provided for in the Constitution and the Bill of Rights. It was never intended when the charter for our great Government was outlined, as some now advocate, that we were to be a pure democracy. Such a system was frowned upon and turned down by the founders of our Government. In its stead they set up a representative democracy—a republican form of government, and to my way of thinking, it functioned very well for more than 150 years.

The Republican Party ought to take a definite and outright stand against the New-Deal and Fair-Deal socialism. We ought to take a definite stand against communism and all of the other isms that have crept into our governmental structure, and are fast destroying our Americanism. We need Republican leadership with the courage not only to say that they believe in the United States of America and the Republic for which it stands but also with the courage to go out and fight for the things that will keep us a republic. When Abraham Lincoln was the leader of the new Republican Party he had the courage to stand for what he knew was right and to boldly condemn that which he knew to be wrong. Because of his courage and forthrightness he was defeated for political office more times than any other great leader in American history. Defeat did not cause him to compromise with wrong. He could have cut and trimmed, so to speak, just a little, and he would have defeated Stephen A. Douglas for the United States Senate in 1858. He refused to compromise his conscience, and, as a result, even though he was defeated, 2 years later he was elected President of the United States, and made the new Republican Party the most potent political factor in American history for more than half a century.

It was under the leadership of the Republican Party as founded and inspired by Abraham Lincoln, from 1861 until 1932, with only two brief interruptions, that this Nation became the greatest and the strongest in the history of governments, and, if you please, the people living in and under that Government, under Republican leadership all those years, became the best fed, the best clothed, and the best housed.

Yes, we went along for about 70 years under courageous, steadfast, and responsible Republican leadership, and this Nation prospered as have no other people prospered in the history of civilization. We provided more of everything for everybody—the best wages for the laboring man, more prosperity for agriculture, more business incentive, more modern homes for all classes of people, more modern conveniences, more labor-saving machinery and devices, more hospitals and medical care, more educational facilities, the greatest transportation system, the greatest system of communication, more churches and church-going people than at any other period of time in the world's history, and we did all of this under Republican doctrine and Republican leadership, and we did it within the framework of the Constitution and by following the principles of a republican form of government. We did it all with a minimum cost to the taxpayer and with minimum restraint upon the people's liberties, and I sincerely believe with the blessings and approval of the Great God of the Universe. The Republican Party has nothing to be ashamed of, or to apologize for. Ours is a great record, and as long as we boldly stood and fought for great American principles we could not be defeated. It was only after we ceased to stand steadfast, only after we began to compromise the integrity of our party and its principles, that we became unattractive to a majority of the voters. In 1936, in 1940, in 1944, and again in 1948, we lacked the courage and the moral stamina to give the people a choice. We said we were against the New Deal. We pretended that we were against bringing about a socialistic state in this country. We resoluted long and loud against all of this, and then our leadership got cold feet. We let the pressure group scare us. We were so office-hungry that we said, "Put us in office, and we will continue to give you, in bigger and better doses, that which we know to be wrong." Is it any wonder that the American people have, in four elections, rejected such hypocrisy and demagoguery?

The leadership in the party should realize by now that the voters in this country want a choice of remedies. In every off-year election since 1936, when only the Congress and the State officers were involved, the Republican Party has made substantial gain. Why? In my humble opinion it was because the Republican incumbent Members in Congress who have persistently fought the New Deal Socialists and who have stood steadfast for the fundamentals of our great Republican Party met the issue, and we continued to gain the approval of the majority of our people. In 1946 the Republican leadership in the Congress and in the States went all out against the New Deal socialistic schemes of continued regimentation and the destruction of our system of free and competitive enterprise.

We told the people we would get rid of the OPA and price controls. We told the people we would get rid of a million or more Government employees, that we would write a new management and labor law that would stop crippling and devastating strikes against the Government which were threatening the very foundation of our Government, that we would reduce the wartime tax burden, that we would reduce the cost of Government, that we would turn the Government back to the people and once again offer a government by law instead of a government by men, and they elected us. They gave the Republicans a majority in both Houses of the Congress. They elected a majority of Republican governors and Republican State legislators. Then what happened? While it is true that the Republican Eightieth Congress was unable to accomplish all it had hoped for, due to too many weak-kneed, vacillating New Deal Republicans, we did, however, make remarkable progress with our program of reform. I give you a few of the many accomplishments of the so-called bad, bad Eightieth Congress:

1. We balanced the budget.

2. We passed a tax bill, over the President's veto, relieving the people of burdensome wartime taxes.

3. We wrote a new Labor and Management Act.

4. We wrote a sane and conservative program for reclamation and flood control, and implemented it with substantial appropriations.

5. We wrote a sane and conservative program for agriculture and soil conservation, and implemented it with ample appropriations.

6. We amended the GI bill of rights, and made further and substantial provisions for disabled veterans, and the widows, orphans, and other dependents of disabled veterans.

7. We trimmed the President's requested budget, which was an all-time high for Government expenditures, and which would have made impossible the balancing of the budget, to the tune of approximately $5,000,000,000.

8. We provided legislation unifying the Army, the Navy, and the Air Force, and provided our Military Establishment with sufficient funds to make us the strongest military and naval power on the face of the globe.

9. We provided legislation for dealing with and getting rid, if properly administered, of the Communists which have infiltrated into every branch of our Government during the past 16 years.

10. We took a new look at, and made provisions for, adjusting the salaries and expenses of our postal employees, to conform with the increased cost of living.

These are only a few of the accomplishments and reforms that were brought about by a Republican Congress, the first Republican Congress in 16 years, and many of these reforms were written into law over the protest, and in some instances over the veto, of the President and the New Deal Socialists in Congress.

Then came the election of 1948, and the high command in the Republican Party failed, neglected, and refused to stand steadfast. It failed, neglected, and refused to defend the accomplishments of the Eightieth Congress. It failed to call the hand of the little man from Kansas City. Our top-flight candidates failed to slug it out with the former protégé of Pendergast. They chose instead to croon and swoon and talk about the American flag, home, mother, and unity, and they returned again to the same old promises of 1936, 1940, and 1944. They said "We don't like the way the Democrats administer the New Deal. It costs too much. Elect us and we will give you more competent administrators, and less-expensive administrators." Yes, that was the answer of the Republican leadership to the demagogues on the other side of the political alley. It was the Republican leadership answer to the hopes and longings of millions of Americans for a change of New Deal and Fair Deal socialism, and to their prayers for a return to representative democracy and government by law. Red-blooded Americans do not respond to such an appeal, and it should not have been expected that we would win, with that sort of a program. With nothing more to offer than a miserable program of more of the same thing and all things to all men, millions of men and women of good will throughout the country either failed to go to the polls on election day and vote, or decided to register their disgust by voting to continue Mr. Truman in power.

The fundamental issue that confronts the Republican Party today is no different than that which has confronted us in every political contest since that fateful November day in 1932. Concretely and in its simplest form, the question is whether we will keep America strong and free under and in accordance with the precepts of the Constitution, or whether we will continue to subordinate our rights and our individualism to the common level of a world-wide socialism, eventually rendering us helpless to defend ourselves against the serfdom of a communistic state.

I think it will be conceded by a large majority of our people that we have reached the lowest ebb in political morality in the history of our country where subsidies and bribes are the rule, and where the price for appointment to the great mass of created jobs is complete and docile subservience to the

New Deal, and so-called Fair Deal. The American people are now entering the seventeenth year of a continued and unbroken emergency, under which the New Deal has claimed the right to exercise so-called emergency powers outside and beyond the realms of the Constitution.

If we are to keep America strong and vigorous, we must keep her economically solvent. The best way yet discovered in the long trek of civilization through history to do that has proved to be our system of providing competitive enterprise. The benefits of our system are to be seen and valued on every hand and in every action of our daily lives, both at home and abroad. Our personal freedom, our right to worship, the freedom of our press, the integrity of our property rights, the joy of living under a government that protects rather than dominates, stem from our system of competitive enterprise under the Constitution. It is these freedoms that have produced the wealth of America, both material and the physical stamina and inventive genius of our people.

With these great resources and proper leadership we can make America so economically and militarily strong that no nation or even groups of nations would dare to wage war upon us. On the other hand, if we continue the present incompetent and inefficient leadership, and continue to elect men to public office who subscribe to the policy and practice of that leadership, we will bankrupt our country nationally, subordinate our freedoms and constitutional liberties to a world socialism, and destroy our preeminent position in world affairs. If that should be the fate of the American people, not only would they lose the greatest blessings yet bestowed upon any people, but the world would sink into darkness comparable to the civilization of the Middle Ages. History is replete with the story of the fall of many nations, and nowhere is it recorded that any nation, by a majority vote of its people, when they were given a choice of remedies, ever freely agreed to liquidate itself or commit national suicide. It has always come about by vicious and irresponsible leadership that gained control of the government through either weak or dishonest officials.

The challenge of the Republican Party today should be an affirmative program that would elect honest and courageous men to public office—leadership that will take the American people into its confidence with respect to both our domestic and foreign problems and terminate the further senseless waste of our national resources in an attempt to buy the good will of other nations. The new dealers and the fair dealers in the Republican Party who subscribed to the Truman New Deal and so-called Fair Deal ought to get out of the party. They ought to join the Truman party. The people of this country are entitled, as I said in the beginning, to a choice of remedies.

There never has been a time, it seems to me, so opportune for our party to appeal to the young men and young women of the Nation for their support and to join in a crusade to reestablish the fundamental freedoms afforded under a republican form of government as distinguished from the regimentation and government-controlled philosophies, which must of necessity go with the New Deal socialistic scheme of things. Millions of our young men and women have only shortly returned, and some are still returning, from all over the globe.

They witnessed, first hand, the way of life and the final results of what happens to people and to nations who follow patterns or "isms," which in many respects we are today aping in this country. They have seen with their own eyes, the superiority of our country in peace as well as in war, under an economy and practices invoked under a free-enterprise system. They have observed, first hand, the mode of life and the stature and status of human beings who have been the wards of paternalistic governments and who have had subscribed for them by a central government their life desires and ambitions. I cannot believe that the young men and young women in this country want any part of such a system. They want a chance to live their own lives without being dictated to by anyone. Like the pioneers of old, most of them, I am convinced, believe that all the Government owes to them is to keep the channels of opportunity open and even. They want to be free to compete one with the other in commerce, in agriculture, and in the professions. They do not want to have to lick the political boots of anyone as a prerequisite to, or as a condition precedent to, their entering upon a business career, or staying in business once they are established. I think they want to be permitted to do business, and to farm, to practice law, or to practice medicine, or any other profession in their own way, the American way, without being kicked and cuffed about by a horde of political commandos out of some Washington bureau, who are unable to make a living in their own right in any competitive enterprise or profession.

Yes, the time is ripe, the opportunity is ours, to appeal to these young men and women, offer them a political home, so to speak, based upon a progressive genuine Abraham Lincoln brand of republicanism. If we do this, these young men and women will join us by the millions in our fight to save America and democratic ideals from the ideologies of fascism, communism, newdealism, and all other "isms." As I see the picture, I conceive it to be the duty of the Republican Party to give to the voters of this Nation an opportunity to make a definite choice between the unwholesome trend of the Democratic Party toward state socialism or communism, or unbridled radicalism, to a sane, wholesome, statesmanlike, conservatism, aimed to preserve our system and form of government.

The very existence of the two-party system requires a statement of opposing principles and a program in clear terms in order that the people may make a choice at election time. There must be a clearly defined boundary line between the two parties. I want the Republican Party to compel a choice between its program and principles, and the program and principles of the so-called Fair Deal, masquerading under the name of the Democratic Party. President Truman and the Democratic leadership have by word and act established the party line for the Democratic Party. Explicitly and clearly, he has declared the Democratic Party to be the radical party of the Nation, and he has made it crystal clear that the Democratic Party, under his leadership, will continue turning further to the left. His program of legislation will continue to carry the country in the direction of State socialism, and he admits explicitly and clearly that his program shall include further centralization of Federal authority, deficit spending, radical class legislation, administration of the law to favor radical groups, curtailment of individual freedoms, a progressive nullification of the rights and privileges of the 48 States, and increasing circumscription and strangling of the American system of fair and free competition in business.

If the Republican Party is to be true to its obligations to the people of the Nation, it must declare itself to be in determined opposition to the program of radicalism offered by the other party. Our party must offer a home and a rallying place for the American voters of all parties who wish to express their disapproval of 16 years of radical encroachment and who wish to preserve that form of government and that way of life and that wise method of conducting our business affairs which made the United States of America the greatest and most progressive, the most powerful, and the most happy Nation on the earth; a wide-awake party that will fight for America, that will never submit to compromise, appeasement, or imitation, to stand firmly for the right as God gives us wisdom to see the right, to the end that America once more shall be free.

Revision of the Labor Laws

EXTENSION OF REMARKS
OF
HON. JOHN McSWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. McSWEENEY. Mr. Speaker, Leslie Gould, financial editor of the New York Journal-American, on February 2, 1949, requested that my office make a compilation of the questionnaire sent out by the General Electric Co., entitled "How Would You Revise Our Labor Laws?" received by this office. I thought it would be of interest to my fellow Members of the House to give a report on this compilation. The result follows:

RESULT OF QUESTIONNAIRE

1. Do you believe that labor laws should in general preserve the employee's right to strike? Yes, 37; no, 7; no vote, 2.

2. Do you believe labor laws should give the President of the United States the right to seek, through the courts of law, to delay a strike that would cause a national emergency endangering the health and safety of the entire country? Yes, 44; no, 1; no vote, 1.

3. When two or more unions are fighting each other over who shall do a job or who shall represent the employees, and a strike is called to compel an employer to give to the members of one union the work or recognition being given to the other union—that is a jurisdictional strike. Should labor laws prohibit such strikes? Yes, 46; no, 0; no vote, 0.

4. Should labor laws prohibit secondary boycotts—that is, prevent an employer and his employees, where there is no labor dispute, from being damaged by a union seeking to coerce another employer having a labor dispute? Yes, 46; no, 0; no vote, 0.

5. Should labor laws provide that an employer cannot deduct union dues or assessments from wages unless the employee gives his personal O. K.? Yes, 46; no, 0; no vote, 0.

6. Do you believe labor laws should see to it that both employers and unions be required to bargain in good faith? Yes, 46; no, 0; no vote, 0.

7. Should labor laws give to both employees and employers the freedom to express their own points of view on employee-relations problems, provided such views, or arguments, or opinions do not promise bribes or threaten reprisals? Yes, 46; no, 0; no vote, 0.

8. Should labor laws protect the employee against unfair practices by unions and management? Yes, 46; no, 0; no vote, 0.

9. Do you believe that labor laws should require both union officials and company officials to swear they are not Communists or Fascists or members of any party or organization which plans to overthrow the Government of the United States by force and violence? Yes, 45; no, 1; no vote, 0.

10. Do you believe labor laws should require unions to make appropriate reports to members and Government as to handling of funds just as companies are required to make appropriate reports to owners and Government? Yes, 46; no, 0; no vote, 0.

11. Should labor laws make it clear that a collective-bargaining contract must be honored by both parties? And that each has an

equal right to sue the other for breaking the contract? Yes, 46; no, 0; no vote, 0.

12. Do you believe labor laws should make it unlawful for a union to compel an employer to engage in featherbedding; that is, to pay money for work which hasn't been done or won't be done? Yes, 46; no, 0; no vote, 0.

13. Should labor laws permit the forcing of an employer to hire only workers who belong to a given union? Yes, 5; no, 41; no vote, 0.

14. Do you believe it should be unlawful for an employee to be prevented from working by the use of violence, force, or intimidation? Yes, 43; no, 3; no vote, 0.

15. Do you believe foremen and other supervisors could properly perform their management duties of serving the balanced best interests of employees, customers, and owners alike if bargaining for supervisors by unions should be included in the labor laws? Yes, 4; no, 40; no vote, 1; don't know, 1.

16. Do you believe labor laws should protect individual workers in the right to join or not to join a union—to remain or not to remain members—just as they individually wish? Yes, 45; no, 1; no vote, 0.

17. Should labor laws make clear that both unions and employers can now so affect the public for good or ill that the labor-management relations of both should be regulated equally by law? Yes, 46; no, 0; no vote, 0.

18. Should labor laws provide that a striker who has been replaced in the course of an economic strike—not involving any unfair labor practice—be permitted to vote in an election to choose a bargaining agent at the conclusion of the strike? Yes, 15; no, 28; no vote, 3.

The total number of ballots received as of February 9, 1949 was 46. The occupations listed and the number of ballots for each were: Accountant, 3; banker, 3; city auditor, 1; city engineer, 1; clerk, 2; farmer, 1; forester, 1; gardener, 1; garage proprietor, 1; general contractor, 2; housewife, 1; industrialist, 1; loan company official, 1; lumberman, 1; manufacturer, 4; masseur, 1; physician, 1; plant superintendent, 1; retired, 2; sales manager, 5; salesmen, 5; spray painter, 1; supervisor, 1; teacher, 1; utilities official, 1; and company officials, 3.

Mr. Speaker, analysis indicates that practically no union labor is represented in the survey. Only one lists his occupation as spray painter. The others are either industrialists, supervisory officials or members of the professions. The ballot itself was worded around the abuses of unions and does not question the voter on how he feels about company black lists; unwarranted lay-offs timed to conincide with a strike on the part of the workers or the use of union spies and strikebreakers.

Some persons added to the list of questions the extension of the rent-control law and others qualified their answers.

Josef Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. YATES. Mr. Speaker, the world stands aghast at the mockery of justice which the Hungarian Government has called a trial of Josef Cardinal Mindszenty. Once more we are given an example of the ruthlessness of the followers of communism and of the need of unceasing efforts to crush the philosophy they espouse. The tremendous wave of moral indignation which has followed his arrest and sentence categorizes the action for what it truly is, a degrading attempt by the forces of intolerance and darkness to crush an individual who dares to champion the cause of liberty and justice.

Cardinal Mindszenty, standing in the prisoner's dock, symbolized within his frail exterior, the composite of all the basic human rights which freedom-loving peoples hold most sacred and dear and for which they have fought and bled through the ages. Cardinal Mindszenty represented these—the right of the individual to speak freely and to worship God according to his own belief.

The sentence passed on Cardinal Mindszenty could not by any stretch of the imagination condemn him because the truths which he embodied are eternal. Rather, standing convicted in the all-powerful tribunal of world opinion are his persecutors and communism, which sought to destroy, through this individual, the ideals he represented.

This is not only the fight of the Catholic Church, for communism is an atheistic force which fights any individual who would follow the word of God. It is the fight of every Catholic, Protestant, and Jew who would live under God in a way of life which encourages freedom, justice, opportunity, and kindliness for all. It is the fight of all who believe in the brotherhood of man and the fatherhood of God.

Josef Cardinal Mindszenty stands today as the apostle of human dignity and freedom, a martyr to the democratic ideals in which we believe. His courage and devotion to principle will always be remembered.

Mr. Speaker, under leave to extend my remarks, I include an editorial appearing in the Chicago Sun-Times on February 10, 1949, entitled "Trial by Tyranny."

TRIAL BY TYRANNY

Josef Cardinal Mindszenty, of Hungary, has been found guilty of treason and sentenced to life imprisonment.

The world-wide revulsion against the trial and the judgment means that in the court of mankind everywhere outside the iron curtain the action of the Hungarian judges has been reversed and rejected. World opinion on this case is so strong that the prediction may be made that Cardinal Mindszenty will not spend the rest of his life in prison. He will go free because the tyranny that convicted him will fall long before the convicted defendant lives his normal span of years.

Our Government has told the Communists, from Stalin down, that actions speak louder than words in international relations. The action against Cardinal Mindszenty certainly has proven how right we are. By the single action of the proceedings against Cardinal Mindszenty, the Communists have demonstrated the issue of major prestige that separates the east from the west.

That issue is whether the people themselves run the state or whether the state runs the people.

The court that tried Cardinal Mindszenty was called the People's Court. That was a mockery. The record shows it. After the war, Hungary had a free election. The Small Landowners' Party, headed by a Calvinist clergyman, won 59 percent of the votes. The Social Democrats had 18 percent, and the Communists only 17 percent. That was in November 1945. Presumably a people's government was to rule Hungary.

The Russians, whose soldiers were living off the land, operated the police and the interior department. The Russian Army commander of Hungary ordered a purge of youth organizations in 1946. In January 1947 the Communist police began making political arrests. Non-Communist political parties were undermined. On May 31 a coup was completed. The Russians took over the Government. While the Prime Minister, who was in office by right of the election, was vacationing in Switzerland, the Communists seized power and installed a Prime Minister of their own.

There had been a pledge at Yalta that the citizens of Hungary should have democratic institutions of their own choice. The Communists violated that agreement.

We can go back to our own Declaration of Independence. The Government in Hungary does not derive its just powers from the consent of the governed. It has established an absolute tyranny over the people. It has invaded the rights of the people. It has made judges of the court dependent on the will of the Communist bosses. It has taken away their charters, abolished valuable laws and altered fundamentally the forms of government.

It has intruded its powers into the field of opinion. In thousands of cases it has arrested, jailed, or executed men and women for treason to government which practices the doctrine that the people are, in effect, slaves of the state. Contrary to the declaration of human rights recently approved by the General Assembly of the United Nations, it has denied fair and public hearings by independent and impartial tribunals—especially cases in which the accused have stood up for the Hungarian people against those who insist on being their masters.

Stripped down to one naked issue, the charge against Cardinal Mindszenty was that he was a traitor to such a government. Before the court he said he had never wanted to come into conflict with the laws of the state; if events beyond his control brought him into such conflict, he regretted it. The events beyond his control made the laws with which he was in conflict. They were the events by which the agents of Moscow had grabbed the state. By his confession of guilt in principle, Cardinal Mindszenty was confessing only that he was opposing tyranny, that he was guilty of doing something which he hoped would restore the rule of the people. "I was not and I am not now an enemy of the Hungarian people," he said.

Look at that courtroom. The judges, the prosecutor, and even the cardinal's own lawyer were creatures of the state tyranny. In our own country there are two trials for treason now going on. The defendants have selected their own lawyers. Juries of their fellow countrymen will decide their guilt or innocence.

The court in Hungary was the sounding board for many of the Soviet's propaganda lies against the United States. We were accused as warmongers, as destroyers of democracy. It was the sounding board of propaganda against the Catholic Church. Our democracy and the church are honored by such propaganda under such circumstances. Whatever the faults of democracy and whatever the faults of the church, they remain the outstanding enemies of the doctrine that human beings are slaves of the state.

The essence of this celebrated case is that the cardinal is guilty of treason to communism. His reply was he had not been proven to be an enemy of the people. His stand was akin to that of Patrick Henry's: "If this be treason, make the most of it."

And the world is on his side.

Social Justice

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the speech made by Mr. Eric Johnston, president of the Motion Picture Association of America, Inc., at the annual brotherhood luncheon of the Variety Club of Washington, on February 14, 1949, as follows:

It is delightful to be here in the heart of show business on this day dedicated down through the ages to St. Valentine.

I accepted your gracious invitation in a spirit of deep humbleness. It would be presumptuous of me to feel otherwise.

What could I say about brotherhood to the members of Variety? To the motion-picture industry? To all of show business? Or to the members of the National Conference of Christians and Jews?

The whole creed of Variety is rooted deep in the concept of the brotherhood of man. It is the Good Samaritan.

No medium in all the world has done more to rip up the evil weeds of bigotry and intolerance than the American motion picture. No industry has done more in a practical and positive way to help bring about greater understanding among the diverse peoples of this earth.

To that end, it has been faithful to its heritage from all of show business through many centuries.

What an enthralling story of effective accomplishment has been written by the national conference which sponsors Brotherhood Week in America. My humbleness is well leavened by my pride in membership. What a magnificent thing it is to help give living reality to the immortal concept that all men are created equal.

But my pride is leavened in its turn by a frank recognition that we are a long way from absolute reality of that inspired and inspiring principle. I know that the conference would be the first to say that brotherhood is not a matter of a week, not a matter of a month, and not a matter of a year. That it is, instead, an urgent matter every hour in the lives of each of us.

Here in America, we are shaping what I would call a more perfect legal justice. But we are discovering that justice-before-the-law is not enough in the complex society we have spun about us.

To meet the needs of our modern industrial society, we should supplement legal justice with a new kind of justice—social justice—in the neighborhood, in the community, in the office, in the factory, the countinghouse and the warehouse, as we have enthroned justice-before-the-law in the courthouse.

That is what I want to talk about today, social justice.

What do I mean by social justice? Simply this: It is the decent, human thing to do in our day-by-day relations in our neighborhood, our community, within the factory and the shop, between the worker and the boss.

Social justice is a broader subject, as I see it, than brotherhood, intolerance, or bigotry. It embraces the ideal of brotherhood; it is the antithesis of intolerance; it is the contradiction of bigotry.

Intolerance, as we refer to it, is the prejudice of one man or one group for another on account of race or creed or color or nativity. Bigotry is intolerance raised to the nth power of hate and often spelled out in violence.

Social injustice goes far beyond those circumstrictions. It crops up within the ranks of Protestants; within the ranks of Catholics, of Jews, or of Negroes; within the ranks of the people of a single neighborhood, a single community, one country.

My neighbor may belong to my own church. His ancestors may have immigrated from the same country as mine. We may have identical backgrounds, but I can still be socially unjust to him, and nobody will accuse me of intolerance.

I can be socially unjust to my employee and go scot free from any intimation of bigotry.

I have a favorite example of what I mean by social justice, and it's as new in our time as last fall. It was last fall when Yale University's football squad elected Levi Jackson as its captain for 1949. Why was this young Negro chosen to lead the team this year? Just because he was a Negro? Because Yale wished to impress the collegiate world with its disdain for racial discrimination?

Not a bit of it. It was because young Mr. Jackson was the best man to lead the team—and that's social justice in society and of the graphic sort of kind. It was justice to young Mr. Jackson because he deserved that post of leadership on merit, and the team did justice to itself by choosing the best leader. There was no tolerance shown young Mr. Jackson at all. In fact, from what I've heard of the responsibility of a Yale football captain, his teammates handed him a heck of a job.

I want to see more social justice in industry and in our everyday lives on our jobs. How can that be done?

Like this, I think:

When the individual is treated as the most precious thing on earth, and the scales tip in favor of human rights ahead of property rights if the two conflict—that is social justice.

Social justice is a rectitude of mind, but it's as replete with reason and with common sense as it is with righteousness. It's not all altruistic. It isn't unadulterated idealism. It is a blend and an amalgam of good will and self-interest.

I like to think there is a practical approach to social justice in industry. That, actually, it is good business practice. The worker who feels in his heart that he's being treated fairly by his boss is more than apt to treat his boss fairly. Social justice uncovers talent and unleashes initiative and hope, and in industry there are dividends in that for everybody.

What sort of a world would we have if more men believed in and practiced social justice as proof of their belief?

I'd say we'd have a world in which human decencies supplanted inhumanities, and in which we treated our fellow man as we would like to have them treat us.

Why—if all the world practiced social justice—

How could there be war, for we would set a precious value on life itself?

How could there be class struggle, for each man would respect the inherent dignity of the other.

How could men anywhere be denied the right to choose freely the type of political, social, and economic order they desire if man is a sovereign being?

I realize that it will be said I am painting a social utopia. I am. I plead guilty. But I am not so naive that I expect it to burst full blast upon the world in my lifetime or in that of our children. I will be content with progress if it's steady, sure, and certain, even if I think it's slow.

When we look back on the development of justice before the law we find clues to the laggardness of social justice.

The evolution of justice before the law was a long and tortuous trial. Bogs of superstition and mountains of ignorance beset its way for centuries. The classics of the ages abound with the story of its struggle: trial by fire, by ordeal, and by poison.

Medieval stuff, we say, but less than 100 years before the Declaration of Independence women were hung as witches in the sanctified precincts of Salem; and less than 100 years ago the law of this land let one man enslave another.

We can always legislate a more perfect justice-before-the-law.

For industry, we can legislate a minimum wage and workmen's compensation; a 40-hour week and fair employment practices; collective bargaining and the right of peaceful picketing.

For society in general, we can legislate increased protection of minorities; for relief and welfare and against the major shortcoming of our system—the ones with ugly names like slums, inequality of opportunity; unfair distribution of our abundance.

We can always enact social legislation, but we cannot legislate social justice. Pure justice—legal justice—can be spelled out in the statute books, but social justice must be enrolled and engrossed in the hearts and minds of men. When it isn't, legal justice can turn to ashes, and it often does.

It took a long time for men to develop thinking habits which accept the tenets of justice-before-the-law as axioms. When we say every man is innocent until his guilt is established in impartial courts, we believe it as simply as we believe the sun will rise tomorrow. When we say that no man can be tried again for a crime of which he was acquitted, it is as firmly rooted in our belief as the knowledge that spring will follow winter.

We must develop the same kind of thinking habits with respect to social justice.

The great beginnings of established social justice are evident in such organizations as Variety and the National Conference of Christians and Jews. You have been a bell-ringer against intolerance, against bigotry, and you have exemplified the brotherhood of man.

Open the throttle on social justice, and there'll be no stopping it. It has all the makings for chain reaction. The more it's practiced, the more it will be perfected. And the better and tougher-fibered our society will be.

The tomorrow of democracy pivots on the spread of social justice.

John L. Lewis

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of February 12, 1949:

JOHN LEWIS'S SIXTY-NINTH MILESTONE

If John L. Lewis, international president of the United Mine Workers of America, had the choice of a birthday he could not have made a better selection than fate decreed for him. While Lincoln and Kosciusko have prior claim to February 12, Mr. Lewis's activities and achievements as a crusader fully justify his arrival on a day of hallowed memories.

Mr. Lewis does not claim to be another Lincoln or Kosciusko. There could be only

one of each. But, in the troubled era through which the world is passing he has done a great deal to improve the lot of the mine workers and, through them, the lot of millions of other toilers in America and elsewhere. The impact of Mr. Lewis's personality has been world-wide.

Many do not wholly approve of Mr. Lewis and his methods at times. Perhaps, if the truth be known, Mr. Lewis himself would prefer an easier way to obtain results. But he has not flinched from the path of duty because of obstacles in the way. Nor has he ever hesitated to sacrifice popularity for principle. But those who denounce him in no uncertain terms have to admit he has improved conditions for the toilers and that, after all, was and is his objective.

Just as Lincoln was excoriated in his day and Kosciusko in his by royalists and their sympathizers, so John L. Lewis must be judged by the enemies he makes as well as by the cause he espouses.

The Mindszenty Case

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. MULTER. Mr. Speaker, on February 8 the New York City Council considered a resolution condemning the prosecution of Cardinal Mindszenty. In a speech that has attracted wide attention, Councilman Walter R. Hart, of Brooklyn, answered Councilman Benjamin J. Davis, Manhattan Communist, when he opposed the resolution. Following Mr. Hart's speech the resolution was adopted by the council. The text of Mr. Hart's speech follows:

TEXT OF MR. HART'S SPEECH ON MINDSZENTY CASE

I suppose we will never live to see the day when a Communist member of this council will take the floor and admit that there is anything good in the United States or anything bad in Soviet Russia.

For the past half hour, Mr. Davis has bitterly condemned the President of the United States, our democratic institutions, and our judicial system and has praised to the highest degree the so-called democracy of Soviet Russia.

He states that the people of the United States of America are not interested in the resolution and that the whole thing is a tempest in a teapot.

The members of this council were not elected simply to sign the pay roll twice a month, but to express the will of the 8,000,000 people of the city of New York. I challenge Mr. Davis' right to speak on behalf of the people of the United States of America. On the other hand, I frankly concede his right to speak on behalf of Soviet Russia because I cannot deny that he is one of the official spokesmen of the Soviet Union and has acted as such during the entire time that he has been a member of this council.

NO DEMOCRACY IN COMMUNISM

When the word "democracy" comes forth from the lips of Mr. Davis or any other Communist I am overcome by a feeling of nausea. Democracy dies in any country with the advent of communism.

In making a comparison between the judicial system of the United States and that of Soviet-controlled Hungary, Mr. Davis complains of the jury system and reminds us of the fact that he is under indictment for conspiring to teach the overthrow of the United States Government by force. He contends that the trial of Cardinal Mindszenty demonstrates a superiority of the Soviet system of jurisprudence over that of the United States.

The fact of the matter is that, although Mr. Davis was indicted many months ago for one of the most serious offenses known to our law, he has been continuously out on nominal bail and is presently awaiting trial before a jury, members of which may be challenged and excused by his attorney. Under our law, Davis, though indicted, still has the protection of the presumption of innocence guaranteed under our law to all citizens. He sits in the courtroom alongside his attorney in a country so free that he is permitted to openly question the integrity of the judge who is trying the case as well as the system under which the jurors are selected.

SOVIET PROCESS

Under the Soviet process a defendant is never brought to trial until he confesses his guilt and until such confession is forthcoming, the defendant is kept in custody. As soon as an arrest is made one can predict with certainty the pattern that will be followed—incarceration, confession, trial, and sentence. It is true that the Soviet authorities are kind enough to spare the cardinal and his attorney the trouble and expense of selecting a jury; they select it for them.

In this case, although the state is prosecuting the defendant, and the state is the Communist Party, there have been selected two members of the Communist Party and three members affiliated with parties which have coalesced with the Communist Party. The Communist Party accuses, it incarcerates and procures a confession, it prosecutes and selects a judge and jury to determine the guilt of the accused. Now, Mr. Davis, where in the name of hell do you get off to have the unmitigated gall to complain about our judicial system?

HURLS CHALLENGE

You sit in this body by the grace of the Constitution of the United States and the State of New York. You vilify our democratic institutions and even the President of the United States. I challenge you to assert that I would be accorded the same privilege if I were a member of the Kremlin or any legislative body in Soviet Russia. Could I utter one word against Stalin and continue to live? Could I attack their judicial system and walk out of the chamber as you have continuously walked out of this legislative chamber after attacking our free institutions?

You say that this is not a democracy because racial discrimination and lynchings have occurred. I could add that murders and robberies also frequently take place. But all of these acts are in violation of our law and are performed by individuals with warped minds. Our fundamental law provides for racial and religious equality and the President of the United States has expressed his determination to enforce civil rights for all, irrespective of race, religion, or color. Under the Soviet regime the people are slaughtered for their political beliefs, not by individuals in violation of the law but by the government itself.

CARDINAL'S CRIME

In this case, according to the Communists, Cardinal Mindszenty has committed the unpardonable offense of believing in an Almighty God. For practicing and preaching he has been sentenced to imprisonment for life.

In your opinion, Davis, that is democracy. Let me inform you that it is the opinion of the 150,000,000 Americans whose ancestors came from every corner of God's earth and who represent every religious denomination that it is plain unadulterated materialism.

It is true that a Catholic is no better than a person of another religion, but I will fight with my last ounce of strength anyone who will say that because of his religion he is not as good. The character of a man is not dependent upon the religion he professes, but if he has a sincere devotion to the Almighty God, whether he worship Him in a cathedral or in the humblest synagogue, he is entitled to the respect of his fellow men.

Communists, who not only deny the existence of the Almighty, but incarcerate those who differ with them on this point, are not entitled to raise their voices in protest against our free institutions.

I call upon each and every member to vote for this resolution and am sure that, with the exception of the Communist member and those who do not have the courage to admit they are Communists but continuously follow the Communist Party line, that you will do so.

Family Doctor of the Year

EXTENSION OF REMARKS

OF

HON. JAMES B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. HARE. Mr. Speaker, each year the American Medical Association selects one of its own number as "the American family doctor of the year." This selection is made on the basis of a doctor's contribution to the health and welfare of the community he serves—that is, the association selects the physician who, in the opinion of the association, has rendered the greatest, most efficient, and outstanding medical service to an American community.

On December 2, 1948, the honor of being selected the "family doctor of the year" was bestowed upon Dr. William Lowry Pressly, of Due West, S. C. I know Dr. Pressly personally, and I know the American Medical Association made no mistake in its selection. In fact, I wish to congratulate the association for its recognition of a great American.

Dr. Pressly is a graduate of Emory University, and I include herein an article appearing in the January issue of the Emory Alumnus.

From the Emory Alumnus:

"BUCK" PRESSLY QUIT BASEBALL TO BECOME "THE" DR. PRESSLY

Thirty-three years ago, or back in 1915, "Buck" Pressly was a man of two considerable, widely varying talents, and he had to choose between them.

He was a professional baseball player, good enough to have earned $5,000 a year at the sport and to have been tendered (and rejected) a major-league contract. But he also had devoted 3 years' time, effort, and money to getting his doctor of medicine degree and three other years to internship and residency.

"Buck" Pressly chose medicine, and after netting $750 in his first year of practice, began to wonder "how I had come to make such a big mistake." Now he knows.

On December 2, 1948, his sixty-first birthday anniversary, Dr. William Lowry Pressly, 12M, that same "Buck" stood before the delegates to the convention of the American Medical Association in St. Louis, Mo., to receive one of the most meaningful and prized

honors open to a man of medicine: the gold-medal award as "family doctor of the year."

Dr. Pressly, who for all these last 33 years has been living in and practicing in and around the little college town of Due West, S. C., came within a whisker of getting the award a year ago, the first time it was offered. Then, though, he had been ranked as No. 2 in a field of 200 physicians nominated for the honor.

If the AMA had not placed Dr. Pressly at the top this year, it would have had the entire South Carolina Medical Association to contend with, for it was that group which nominated and backed him both years. More specifically, it was another Emory alumnus, Dr. Horace Whitworth, 38M, of Greenville, which is due north of Due West, who first suggested him as a candidate.

"His winning was really a great thrill to me," said Alumnus Whitworth, who is secretary of the Greenville County Medical Society. "I kind of started the whole thing and have watched it grow and have been close to the collection of data. When the AMA first wrote us about having such a selection, I began thinking about 'Dr. Buck' as a man who could win."

Especially does joy reign in little Due West, where Alumnus Pressly is first citizen and a little of everything else. It is particularly proud that not only has he done all his practice there but was born and reared there, attended college there, and in all his life has left there only long enough to get a medical education.

There are those of Due West's citizenry who recollect the good doctor's horseback and horse-and-buggy days, but there are more who know that he has worn out some 24 automobiles in caring for them. In the course of his practice, he has delivered 4,200 babies, several times the total present population of his town.

Many's the patient he's taken to the larger centers of Anderson, Abbeville, and Greenville in his own car for treatment. He has often accompanied them to farther-removed places like Duke University, Boston, or Baltimore, remained with them until after serious operations, then returned to his home by plane.

It's only the complicated cases which require treatment elsewhere, though, for "Dr. Buck" by now well set up to handle most ailments—he and his well-equipped clinic with a staff comprising another general practitioner and a pediatrician, two nurses, a maid, and an orderly.

"He's just a born doctor," says one neighbor. "He's either in his office or out among his patients from 7:30 each morning until about 10 at night, when the last patient is treated in the office. In addition, I believe he is called out of bed at least half of the nights."

The wonder is that Dr. Pressly ever gets to bed, with all he takes on. Besides his general practice, which is at least a two-man job, he is physician for Due West's Erskine College and its athletic teams and surgeon for the Southern Railway. Furthermore, he serves as licensed pharmacist for the drug store in the nearby village of Donalds, which is too small to support a pharmacist.

Too, he is known in his region as "the father of public health," a title which originated when, as a young doctor, he went throughout his county vaccinating against typhoid fever at his own expense all who would let him. That was during a rampant epidemic and marked the beginning of free immunization in his area. Typhoid now is almost unknown there.

He also has sponsored well-baby clinics. But these are only his medical activities. On the side, Dr. Pressly for 26 years has been a trustee of Erskine, from which he received his A. B. and where his father taught ancient languages; for 20 years, a deacon in his church, and for 18, a member of the Due West School Board.

He has promoted the organization of a Boy Scout baseball league and the importation of high-grade beef cattle and hogs into his county; has been active in organizing the Grange and erecting its building, in obtaining better schools and improved medical service for the Negroes of his community, and in organizing a community service club. In World War I he went away briefly to serve as an Army medical officer; in World War II he stayed home and held a variety of jobs, among them that of assignment and procurement officer for medical men in South Carolina.

Long go the ability, energy, and willingness of Alumnus Pressly became known to doctors far beyond the bounds of Due West. He is, or has been, for instance, a member of the AMA Council on Medical Education; chairman of the Southern Medical Association's section on general practice; and president of his State, district, and county medical associations and societies.

Dr. Pressly in 1909–12 attended the Atlanta College of Physicians and Surgeons, which a few years later was merged into the Emory University School of Medicine. A catcher on the college baseball team during his undergraduate days at Erskine, he continued to play ball in the summers during his medical school years—but on a professional basis.

Beginning as first baseman for the Roanoke club of the Virginia league, he became playing manager after his first year and in 1912 the Pressly-run team won the league pennant. His $5,000 manager's salary looked good, especially in those days.

But after interning in Roanoke's Jefferson Hospital, he came back to Due West in 1915, and in June of that year married a Roanoke girl, Miss Elma Lipscomb. She died in September 1948. Everybody in Due West, of course, knows Dr. Pressly, and everybody has for decades. To them he's either "Dr. Buck" or "Buck." He's so well known that, to quote Dean of Women Elizabeth Nickles, of Erskine, "I would say he's cured as many with his infectious smile as with his medical skill."

Along with his nomination there went to the AMA a vast stack of letters from "Dr. Buck's" home-town friends, white and colored.

And when he came back with his award there awaited him hundreds of congratulatory messages from South Carolinians, from medical men and from Emory.

One of the most appropriate comments came from a close and long-time friend, Dr. W. Thomas Brockman, of Greenville, who said: "I can say 'Buck' has brought to South Carolina her greatest medical honor, and it is our hope that the general practice of medicine will become more popular because of him."

Emory, which is doing its best to encourage the general practitioner, hopes so too.

Lincoln Day Address of Hon. John Davis Lodge, of Connecticut

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of the Honorable JOHN DAVIS LODGE, Member of Congress from the Fourth District, Fairfield County, Conn., at the Lincoln Day dinner sponsored by the Kalamazoo County Republican Organization, Kalamazoo, Mich., on February 11, 1949:

Mr. Chairman, ladies and gentlemen, I am particularly happy to be with you all here in your attractive city on the eve of the birthday of Abraham Lincoln. I say this for a number of reasons.

First, because I am here as the guest of my good friend, PAUL SHAFER, who has for many years represented the Third District of Michigan with industry and conscientiousness in the Congress of the United States. Paul is one of the most beloved Members of the House of Representatives. It has been my good fortune to know him well during the time that I have been in Congress, and I can with all sincerity congratulate the people of Kalamazoo upon their choice.

Second, I am glad to be here because I have a strong strain of Dutch blood and I know how many Hollanders came to Kalamazoo to settle and to escape religious persecution.

And third, I am glad to be here on this particular evening because it was here that Abraham Lincoln delivered a memorable address. It was here by the River of the Boiling Pot that the political pot really began to boil in the pre-Civil War days. And it is here tonight that we should make the Republican political pot boil for 1950 and 1952.

On Wednesday, August 27, 1856, under a clear blue sky Abraham Lincoln made one of his most significant speeches to an audience estimated as high as 30,000 people. It was as a result of this speech that Zachariah Chandler, a fanatical sectionalist from Detroit, became the life-long enemy of Abraham Lincoln.

The Detroit Daily Advertiser gives a most interesting and colorful report of the Kalamazoo occasion. Apparently there were nine bands of music and a free public table which was replenished as fast as it was emptied. It appears that 2 tons of bread and 400 hams were consumed. The table was over a hundred feet in length with cross tables and was supplied with many kinds of food. Delegations traveling in caravans began arriving in Kalamazoo several days prior to the event. The Valley City and the Grand Rapids bands were there and it is said that pilgrims came in wagons in a procession 3½ miles long in a great cloud of dust which arose from the dry roads, at times enveloping vehicles, horses, and human beings.

Lincoln's effort was to preserve the Union. He had adopted a conciliatory attitude in his speech in an effort to prevent civil war. Zachariah Chandler, candidate for the Senate from Michigan, was a power with the Abolitionists. He regarded Lincoln's speech only as an effort to undermine his own influence and not as a sincere attempt to avoid civil war. But Michigan fought Lincoln's battle valiantly and in the end smashed the Chandler machine. Although General Fremont was defeated for the Presidency in the fall of that year, Lincoln achieved great political momentum at Kalamazoo.

And so I think it is most fitting that we should gather here tonight to celebrate the birthday of this great and noble man, and to reconsecrate ourselves to those principles for which he labored, for which he fought and for which he died—principles to which he gave dynamic impetus 2 years after the birth of the Republican Party when he stood upon a platform here at Kalamazoo, his long, gaunt frame at ease as he gazed over the heads of the crowd.

The Republican Party, the party of Lincoln, will survive. It will triumph. The survival of the Republican Party is important. It is important not only to the Republicans; it is important to all Americans. On its survival may well hinge the survival of the two-party system. The Republican

Party is the only political force standing between the American people and one-party government. Without the two-party system the entire political fabric of America would be altered for we should then have either a series of splinter parties as in Europe or we should have one party. A one-party system would completely invalidate our Constitution, our Bill of Rights, and all our free institutions. A splinter-party system would produce chaos and would create such confusion that economic stability would be impossible and national security would be dangerously compromised. The two-party system is perhaps the most important bulwark of freedom in America.

That the two-party system is still vital is evidenced by the fact that almost 22,000,000 people voted for Thomas E. Dewey as against slightly more than 24,000,000 people who voted for President Truman. The other candidates gathered relatively little support. It can, therefore, be concluded that the people of America are certainly not of one mind, that they believe in the two-party system and that the Republican Party has a numerous and influential following.

Yet although the voters cast a preponderant number of votes for the Republican and Democratic candidates, there is without question an increasing number of independent voters in our country. More and more people feel less and less bound by party affiliations. It should also be remembered that some 45,000,000 people failed to vote. These people must be persuaded to vote. They must be persuaded to vote Republican. This will be to their advantage and it is most emphatically in the national interest. We Americans stand today upon a pinnacle of power and prestige, with the floodlights of the world upon us. We must give a vigorous demonstration that we appreciate the value of our franchise and that our two-party system remains an active symbol of our right to disagree with each other and with our Government.

It has become the fashion in certain quarters to suppose that the Republican Party must either adopt a me-too philosophy or succumb to the stultifying horse-and-buggy doctrines which take no account of the present needs and aspirations of the American people. This type of thinking is encouraged particularly by those who have gained temporary political ascendancy. It has made many victims. Yet the recent elections do not indicate this to be the case. Neither can such a limitation of choice be justified by reason.

The fact of the matter is that the Republican Party is the party of American principles—principles which received strong and eloquent expression by Abraham Lincoln. That these principles are timeless in their validity is further evidenced by the fact that the Democratic Party gives them lip-service while recommending policies which would tend to destroy them. If one could believe the Democrats' heated protestations of faith in the private property free competitive system, the Democratic Party would be the me-too party. Actually, Democratic actions frequently constitute a betrayal of that system. Accordingly, the Republican Party is faced with a clear-cut issue of principle.

Indeed, the value and the present power of these immortal principles is further illustrated by the fact that none other than the Vice President of the United States, the Honorable ALBEN W. BARKLEY, is to make a Lincoln's Day address at Springfield, Illinois. In these circumstances, I may perhaps be forgiven if I quote the words of Thomas Jefferson: "Were we directed from Washington when to sow and when to reap, we should soon want bread * * * when all government, in little as in great things, shall be drawn to Washington as the center of all power, it will become venal and oppressive." Ladies and gentlemen, this is the issue. This is the challenge. And it was Lincoln himself who remarked: "The principles of Jefferson are the definitions and axioms of free society." This, then, was American principle and it is still deeply imbedded in the convictions of most Americans. Under a deceptive fog of hypocritical incantations on the altar of free enterprise, the Democrat Party has departed from these principles.

The choice then is not between a philosophy which was never the philosophy of Lincoln and the much advertised "liberalism" of the Democrat Party. The choice is between the true philosophy of Lincoln and Jefferson—the American philosophy—the true liberalism—and a philosophy which breeds such a dependence on government that the government becomes the master of the people. Lincoln said: "As I would not be a slave, so I would not be a master. This expresses my idea of democracy. Whatever differs from this, to the extent of the difference is no democracy."

That our choice is not between reaction and "me-tooism" is further illustrated by the felicitous fact that there is a large middle ground for useful governmental action. Truth is rarely black or white. It is usually composed of grays and shadows. Indeed, it is usually found in the moderate middle road and not in the extremes, however heady and attractive they may seem at the moment. Now there are many accommodations which government should make to modern needs. In a Nation of our industrial power and productivity abject poverty and extreme hardship can and must be prevented. While many of these problems are primarily for the States and municipalities, there is a substantial area for limited and directed Federal aid. There are many instances where the Federal Government should step in and fill the gaps where our private property system does not reach. Yes, the health of our Nation and the education of its citizens, old-age pensions and social security, minimum wages and unemployment compensation, large-scale production and full employment, rural electrification and flood control, adequate housing and soil conservation are all matters for proper Federal concern. They all involve the people's welfare. But it is most important how these objectives are approached, and it is all important to bear in mind that the essential the ultimate welfare of the American people depends upon the continuation and increase of the vital opportunities inherent in our free system.

Thus, today 25 cents out of every dollar that we spend pays for the cost of Government, 25 cents out of every dollar is taxes. One day out of every four we work for the Government; we work to pay for the cost of government. Aid to the unfortunate in our society is right and just and feasible. But a policy of Government pensions and subsidies to all would result in a tax burden which would destroy taxable property rather than increase it. It would be subject to the law of diminishing returns. It would be confiscatory. It would dry up the sources of Government revenue. It would destroy incentives. Lincoln said: "The legitimate object of government is to do for a community of people whatever they need to have done but cannot do at all, or cannot so well do, for themselves, in their separate and individual capacities. In all that the people can individually do as well for themselves government ought not to interfere." We shall do well to be guided by this thoughtful declaration.

We must cut our suit according to our cloth. There is a limit to what the American economy can bear in the way of taxes and still retain the resiliency which is its prime virtue. There is a limit to the social welfare operations which we can undertake and still expand our economy. In order to provide more jobs and higher wages, in order to increase our standard of living, we must increase and improve our tools of production. This we cannot do if incentives are stifled, if risk investments are made so risky that people won't take a chance.

This is the paramount interest of all our citizens and in particular of labor. It has been estimated that the average job in America requires a $6,000 investment. It is a disservice to the workingman to discourage such investments. The Republican Party must help the working men and women of America in the protection of their real interests. Their real interests lie in the preservation and development of the American system.

The interests of the people who work come ahead of the interests of capital and this is traditional Republican policy. Lincoln said: "Capital, which is only the fruit of labor, could never have existed if labor had not first existed. Labor is the superior of capital and deserves the much higher consideration." And he went on to say: "That men who are industrious and sober and honest in the pursuit of their own interests should, after awhile, accumulate property and after that should be allowed to enjoy it in peace, is right."

Lincoln also said: "The prudent, penniless beginner in the world labors for wages awhile, saves his surplus with which to buy tools or land for himself, then labors on his own account for another while, and at length hires another to help him. This is the just and generous and prosperous system which opens the way to all, gives hope to all and consequently an improvement of condition to all." In order to retain the right to enjoy the fruits of his labor, it is imperative that the working man should not be weighted down with taxes.

Accordingly, we must establish an order of priority in governmental expenditures.

Surely, the defense of our country and the maintenance of peace are primary considerations. Any social gains we make will melt like snow in the sun if we have war. We must achieve air superiority. We must maintain a strong Navy and increase our Army. We must have trained reserve components to throw into the breach if necessary. We must with vigilant supervision continue the European recovery program in order to create in Europe a political climate propitious for the preservation of freedom. We must help Europe to federate. We must, under the proper conditions, extend military lend-lease to certain nations, and assist them to organize their defense on European rather than on national considerations. We must support the United Nations. In short, we must give first priority to our own survival, firm in the knowledge that peace cannot be preserved unless justice is safeguarded.

For we are faced with the relentless fact that although we are legally at peace actually we are inextricably engaged in a mortal conflict of titanic proportions. It has been called a cold war. It is, in fact, a real war in China, in Greece, and in other parts of our troubled planet. And it is a fight for freedom which we have lost in Poland, in Hungary, in Roumania, in Bulgaria, in Czechoslovakia, in Albania, in Latvia, in Estonia, in Lithuania, and in Yugoslavia. It is a war which is almost lost in China and which is far from won in Greece. We know from grim and recent experience that when freedom succumbs in these countries freedom in America is threatened.

That our peace is precarious is underscored by the further fact that out of every dollar that we spend in taxes, 75 cents goes to the issue of war and peace. Out of that 75 cents, 30 cents goes to our national defense; 16 cents for payments to veterans; 17 cents for European recovery, aid to Greece and other items of foreign aid; and 12 cents for interest on the national debt, a national debt of $252,000,000,000 a national debt incurred chiefly as a result of World War II.

Is it not clear then that we must, in the interest of our national security—of which our economic health is such an essential part—postpone some social legislation, however desirable it may be, in order to achieve the larger, primary objective of world peace and security? Is not the security of the American people affected first and foremost by the issue of war and peace, and secondarily by social welfare measures, however great their intrinsic worth?

Oh, the Communists would be delighted were we to succumb to the siren call of womb-to-grave security fostered by paternalistic planners and administered at great cost to the people. The Communists are striving to induce the American people to embark upon a course which will cause a break-down in the American economy as well as in the American character. Don't forget—the Communists are waging their war on all fronts. They are lying in readiness to take immediate advantage of any weakness. If we attempt to shift our individual burdens to the Government, we shall, in the end, forfeit individual freedom. We shall have abandoned the principles of Abraham Lincoln for Lincoln believed that the individual is the complex heart of society.

Individual freedom. That is the urgent, the exciting challenge to our generation of Americans. The Republican party must rise and meet that challenge in the same crusading spirit which it manifested in 1856 when it sought to abolish slavery and in the succeeding years when it strove to protect the people's freedom against special predatory interests.

We are at this very moment fighting for our lives. In order to win that fight and in order for the Government to remain the servant of the people, it is necessary that the people should discharge the responsibilities which are inseparable from freedom.

We Americans who occupy the spotlight of leadership must strain our minds and our hearts in order to keep pace with the vast ebb and flow of thought and action on our restless planet. In order for America to prosper economically we cannot sit back and live on our income; we must create new wealth. Similarly, in order for us to meet the challenge of dialectical materialism we cannot seek nostalgic refuge in the accomplishments of our ancestors. In the words of Abraham Lincoln: "You cannot escape history."

Acting on the eternal varities which inspired our forefathers to great deeds, we too can blaze a trail of noble achievement; we can be the creators of traditions which will light the way for our descendants.

We shall have failed miserably and, in the end, utterly to grasp the import of these fateful hours if we persist in combating the brutal materialism cleverly and militantly preached by the cynical exponents of communism with apathetic and unconvincing reassertions of truths to which we give half-hearted and mealy-mouthed lip-service.

We shall be hoist with our own materialism if we do not replace the tired and hypocritical platitudes which betray our essential lack of faith with the dynamic actions which are the result of devoted thought and deep conviction.

In fact, it would appear that our failure to treat material forces as a means rather than as an end is one of the prime causes of nihilism, whether red, black, or brown.

Deep down in that dumb region of the heart in which we dwell alone, we know this to be true. We know that we have allowed our goal to become indistinct. We know that the distractions preserved for us by the blood of our fighting men are turning us away from the main job. We know that there is no open sesame out of our difficulties. We know that our material world will crash in splinters around us if it has no lofty thoughts to hold it up.

But, ladies and gentlemen, we know also that we have it within our power to meet the challenge of communism just as we met the challenge of nazism. The men who died in World War II did not die for materialism. You cannot pay a man for the loss of his life. We cannot meet the challenge of communism until we recognize its true nature. As the true challenge emerges sharp and clear from the fog of doubt and despair which has blurred our vision, the American people will rise in all their spiritual might. They have shown that they are capable of great courage and sacrifice. They will set in motion massive forces which will overwhelm our godless adversaries. Freedom will triumph over tyranny.

This is our party's opportunity for distinguished service. This is the challenge to the Republican Party. This is the challenge to America.

Wilkes-Barre, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Times-Leader:

CITY IS CENTER OF THIRD LARGEST METROPOLITAN AREA IN THE STATE—POPULATION OF 441,518 PLACES WILKES-BARRE NEXT TO PHILADELPHIA AND PITTSBURGH—SCRANTON IS FIFTH

Wilkes-Barre today was officially recognized by the United States Government as the third largest metropolitan area in the State of Pennsylvania.

Only the Philadelphia-Camden and the Pittsburgh areas surpass Wilkes-Barre in tabulations received by J. Arthur Bolender, executive secretary of the Wilkes-Barre-Wyoming Valley Chamber of Commerce. The announcement came from Loring Wood, chairman of the Federal Committee on Standard Metropolitan Areas.

The official population figures given the Wilkes-Barre area in the survey which determined its standing as a metropolitan area is 441,518.

The top-ranking Philadelphia-Camden area's population is listed at 2,956,296. Next comes Pittsburgh with a total of 2,126,801.

Wilkes-Barre is third, and then comes Allentown-Bethlehem-Easton area with a total population of 346,492.

Scranton is listed in fifth place with a total population of 301,243.

Other metropolitan areas established in Pennsylvania and the order in which they appear, according to population, follow: Reading, 241,884; Johnstown, 213,459; Lancaster, 212,504; Erie, 180,889; York, 178,002; Harrisburg, 177,410; and Altoona, 140,358.

Preliminary work on the program of establishing standard metropolitan areas was started in 1946. The Federal Committee on Standard Metropolitan Areas was set up by the Budget Bureau late in 1947. The survey on which the area classification is based extends up to and including January 30 of this year.

STANDARDS FOR AREAS

According to the definition of what the Federal Government regards as a metropolitan area, "each standard metropolitan area must include at least one city of 50,000 or more. The area as a whole must have a total population of at least 100,000. Areas may cross State lines."

Generally speaking, the metropolitan areas are set up on a county basis except in the New England States.

The Federal Government recommends the use of standard metropolitan areas by all Federal agencies compiling statistical data for general use.

The area itself will benefit because of the more uniform set of figures which might readily be used to serve as a guide to businessmen and industrial firms making surveys, particularly with the idea of deciding on business or plant locations.

The Internal Situation in China

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. HALE. Mr. Speaker, in the last few months the situation in China has been getting steadily worse. Many of us in the Congress believe that it is still not too late to do something. I have been particularly interested in an appraisal of Chinese communism by Prof. Roscoe Pound, former dean of the Harvard University Law School and a man deeply respected by American lawyers everywhere. Professor Pound served as adviser in the Chinese Ministry of Justice.

I want to call attention to the following article of his which appeared in the Harvard Law School Record for February 9 last:

ROSCOE POUND'S ANALYSIS OF CHINESE-AMERICAN AFFAIRS—HITS UNITED STATES AIMS FOR COMPROMISE, MISCONCEPTION OF RED ROLE

American policy in the Far East ought to take into account more than China. It should take account of China, Korea, and Japan in one comprehensive and consistent policy—even one comprehensive Asiatic policy. Indeed, it should be part of a world-wide policy of at least ranging ourselves with the constitutional governments which are endeavoring to set up democracies operating under law. Economic unification of the world, the bringing of every part of the world to our back door by radio and aerial transportation require that a foreign policy look at the world as a whole. It should look at this land or that with respect to the whole and as to the effect of what we do or leave undone upon the picture of the whole world.

Such has not been the American policy as to China since the war. Our policy has been one of consistent and insistent pressure upon the national government of China to compromise with the Communists where no compromise was possible. Before the Chinese constitution was adopted, abrogation of the frame of government under which China had been unified in a national government was demanded and today, while the national government is functioning under a constitution, summary throwing over of that constitution is a prime item in the Communist demands. If any proof was needed, what has happened in Czechoslovakia is proof that no middle way is possible under Communist domination. It shows no less that Communists with Russia behind them will accept nothing short of complete domination. Witness what has been happening in Yugoslavia. Coalition of a constitutional government operating under a bill of rights with Communists is impossible except on the terms in which Mark Twain characterized the Biblical prophecy of the lion and the lamb lying down together—the lamb inside.

Our policy has been in effect to undermine the morale of an exhausted and war weary

people by insisting that it could have peace only by yielding to the Communist demands by compromise amounting to abdication. We must remember that recent China has been long and severely afflicted by war. One might begin with the Opium War in 1840 when a western power forced opium on the Chinese Government of that day. Aggression went on for a generation, and in 1885 France sliced off a great territory. There followed continual and increasing extortion of cessions and concessions by European powers and successive insurrections. At the time of the Boxer Rebellion the European powers and the United States intervened. There were no less than 11 insurrections in 25 years before 1911–12 when the monarchy collapsed. Then followed a long struggle from 1912 to 1928 with the war lords. In 1931 the Japanese set up a puppet regime in Manchuria and began a series of aggressions culminating in the invasion of 1937 and 8 years of occupation of a large and richest part of the country. With the expulsion of the Japanese and while reconstruction was going on the Communists set up a civil war. All this weakened the will of the pepole to resist, and we have made it weaker by persistent calling upon the government to give in. It must be remembered also that during the war, without the knowledge or consent of the Chinese people, we undertook to give away not a little of Chinese territory.

CHINESE COMMUNISM

I hear it said that Chinese communism is only a mild socialism, distinct in all but name from the Soviet brand. The conclusive answer to this can be seen in emphatic pronouncements from Chinese Communists themselves as to the place of communism in China in the world Communist regime promoted in Russia. Even more an answer is to be found in what has happened in Poland and in Czechoslovakia. What so-called liberation by communism means is brought out by Bernard Goldstein, the only leader of the Jewish community in Warsaw at the time of the liberation by Russia. Goldstein was a Socialist. But this was not enough. He tells us that he soon found that the liberation was but another destroying tyranny.

What speaks for itself is the flow of refugees by tens and hundreds of thousands from the Communist-occupied areas to national centers where the Government has found shelter for them, fed them, and provided work for them. There is no such flow into the liberated areas; it is only out of them.

Communist demand for abrogation of the constitution means abrogation of the bill of rights. The bill of rights in the Chinese Constitution is not a mere preachment. It is safeguarded by an independent judicial yuan—an independent coordinate department of government—in which the grand justices have the ultimate power of interpreting the constitution and are authorized to enforce the express provisions of the constitution that executive acts and ordinances and legislative acts in contravention of the constitution are null and void. Demand that this excellent modern constitution, put into effect at the end of 1946, be thrown over before it has had a fair chance to operate, and while the Government was in the throes of reconstruction after a long hard war on its own soil, is but an example of what Communists do the world over in setting up despotic military regimes intolerant of individual rights and repressive of all freedom of belief, opinion writing, and teaching.

AMERICAN PRESSURE ON THE CHINESE NATIONALIST GOVERNMENT

For 3 years in which I served as adviser to the Chinese ministry of justice, I saw the effect of constant pressure from America on the Chinese Government while it was struggling with a huge task of reconstruction. It was setting up a constitutional government and putting the constitutional organization in operation thereunder. It was restoring the courts and judicial organization and the administration of justice, disrupted by the Japanese. It was restoring the educational system and rebuilding educational institutions. It was restoring and rebuilding penal and correctional institutions, often torn down and everywhere left seriously impaired by the Japanese occupation. It was reconstructing the process of administration. It was rebuilding bridges, railroads, roads, and lines of communication and transportation destroyed or dislocated by the Japanese during 8 years of holding the greater part of the country. Within a year from the time the National Government got back from Chungking the work of reconstruction had made marvelous progress. I conducted a thorough survey of the administration of justice in three provinces and six cities, and could report to the ministry that the courts, the codes, and the correctional institutions were functioning well, and in spite of many difficulties growing out of the Japanese occupation the administration of justice in eastern China would bear comparison with the administration of justice on the Continent of Europe and in America. There has been a tendency in America to be unreasonable in what was expected of the National Government in China. It was impossible to expect 100-percent constitutional democracy and 100-percent perfect administration of justice of a country of continental extent and 400,000,000 population which had never known democratic political institutions nor justice, according to law in the western sense. It was impossible to expect this perfection to be achieved in a generation after the revolution of 1911–12, two-thirds of which was taken up with fighting to establish a national government against the war lords and in standing out against Japanese invasion and occupation, and the remaining time largely taken up in resisting the Communists. When looked at on the background of these difficulties the work of the National Government since 1928 deserves all praise.

We must bear in mind that China had to suffer more and fight longer than any other of the Allied countries or German occupied countries in the Second World War. What the Government had to do was to set up a well organized, modern, constitutional democratic state operating according to law. When this was done it could go about fundamental economic and social reforms. But to try these while endeavoring to set up constitutional government might have defeated both. Chinese popular habits of thought and conduct which had crystallized for ages were not to be remade over night. As I have put it before, form had to come before reform. Let us not forget that we have serious problems of race prejudice and discrimination and of class relations in this country which we have left unsolved for much more than a generation. We do not consider our policy inefficient or reactionary because we have not solved them.

COMMUNIST CLAIMS AS TO SOCIAL REFORMS

I have heard it said that explanation of the progress made by the Communists in China is to be found in neglect of the National Government to take up and push certain fundamental social reforms undertaken and carried forward by the Communists. I have heard it said that these are four: Education of the peasantry, agrarian reform, the youth movement, and the advancement of women.

I suspect that Communist education of the peasantry is simply indoctrination in communism. Over a large part of China the National Government has had to do over again much of what it had achieved in the way of popular education. As to education of the peasantry I have in my possession some charts which I found in more than one place which were used for teaching good agricultural methods and how to read at the same time. One institution in Soochow is devoted to the training of teachers to carry forward this mode of instructing the peasants. It will not do to say that the Government has been doing nothing for peasant education.

I have heard it said repeatedly that the Chinese peasant is under a feudal system of land tenure. Nothing could be more mistaken. The difficulties of the Chinese peasant do not arise from feudalism or from large estates that need breaking up. As far back as the third century B. C. the Chinese abolished feudal tenure and primogeniture. The agrarian problem in China grows out of the very success of that reform which caused the land to be divided and subdivided endlessly. The trouble is not too large estates but minute farms too small to sustain a population sometimes denser in rural areas than in cities of the west. This has been aggravated by the introduction of a western law of inheritance which makes for increased subdivision. Where there had been a household inheritance, a system borrowed from continental Europe has introduced a modern individual inheritance. When an owner of a small tract dies leaving five children instead of the household succeeding, the inheritance must be divided into five. This makes against use of the implements we use, and yet the Chinese farmer gets a larger yield from an acre than cultivators of Europe or America. Next to minute subdivision of the land, his troubles arise from the complete dislocation of transportation and so of distribution during the Japanese occupation.

As to the youth movement, it has gone forward in the domain of the Government quite as much as elsewhere in the world. The Communists have no exclusive claim in this respect.

As to the advancement of women, subdivision (7) of article 26 of the constitution provides for election by women's organizations of delegates to the National Assembly or National Peoples Congress, the body which elects the president and vice president, and has power of amendment of the constitution. At the session last spring in which the constitutional government was organized a number of women sat as delegates. Also a number of women have been elected as members of the legislative yuan, and in the course of the survey of the administration of justice in eastern China I found women judges in many of the courts. In each of the cities which I visited I found a woman judge sitting in domestic relations cases and cases of juvenile delinquency. I doubt very much whether the Communists have done anything comparable to what the Government has achieved in this connection.

I have heard it said that while the Government was carrying on the war, the Communists were reaching the people through a program of social reform. What this really comes to is that while the Government was exerting itself to the utmost to set the country free from the Japanese occupation, and since the war has been exerting itself to the utmost with difficult problems of reconstruction, the Communists have been active in indoctrinating in communism and in destruction.

OBJECTIONS RAISED TO STANDING BY THE NATIONALIST GOVERNMENT

Let me speak briefly of the objections which are raised to our standing by a government which we treated as an ally during the war—a government which is one of the United Nations. It is said frequently that the Chinese officials and public men are reactionary. In my experience what is said to be their reactionary attitude is simply one of inquiry whether measures proposed to be borrowed from the Western World are applicable in China. It does not take long

for an adviser of one of the ministries to learn that much which he has been inclined to urge at first sight needs thorough examination to be assured that it can be made to work under the conditions in which it must be applied. Much is said about corruption of Chinese officials and public men. I inquired very carefully as to corruption in the administration of justice, conferring with bankers, businessmen, industrialists, members of chambers of commerce, and newspapermen. In no case could I get anything specific. Under the monarchy corruption was notorious. There was a general feeling that under the courts as they are today nothing but a tradition of suspicion could be shown. One newspaperman suggested to me that the pay of the judges was so inadequate that it stood to reason they must be corrupt or they could not live. In fact, I found the judges with inadequate salaries eke out their meager salaries by teaching law. This is something which such lights of our American bench as Joseph Story and Thomas McIntyre Cooley did and many other judges have had to do in American judicial history. It is said also that the Chinese officials and public men are ignorant and inefficient. Association with them for 14 years has convinced me that this is quite unfounded.

Let me name a few with whom I had especially long and close association. Dr. Wang Chen-hui, head of the judicial Yuan, is a D. C. L. of Yale and barrister of Gray's Inn. He is recognized as an outstanding jurist everywhere. His translation of the German Civil Code into English is regarded as a classic. Dr. Hsieh Kwan-sheng is a docteur en droit of the University of Paris, author of a history of Chinese law in French, published in France. He did signal work in keeping the machinery of justice going during the war and his experimental court at Chungking to try out the draft code of civil procedure was a real contribution to the science of law. Dr. Su, the Minister of Education, a doctor of philosophy of Berlin, is a learned scholar and liberal administrator of great good sense. His judgment as to what is practicable in legal education in China has been of real value for reconstruction. Judge Y. H. Kuo, president of the high court of Shanghai, would be a notable judge anywhere. Just before leaving I made a report on his draft of a statute on conflict of laws. It is a masterly piece of work, much better than the draft prepared for the Pan-American Congress of codification of law for the Western Hemisphere. No American city has a better court than his.

I have heard complaint that the Chinese officials do not take advice. On the contrary, I suspect they sometimes have relied too much upon advice from experts from the Western World unacquainted with the conditions to which their advice was to be applied. At any rate, I have found that the Chinese officials give marked attention to advice so far as money is available to carry it out. Where they do not it is usually because of lack of money to do what ideals indicate. Under the constitution the legislature controls the funds and officials can do no more than appropriations allow.

Complaint has been made in this country that the Government ignores minority parties other than the Communists. These minority parties, however, are made up of leaders with few or no followers as it was demonstrated at the time of the first elections under the constitution when the majority party agreed to withdraw its candidates in certain districts and leave a free field for the minority parties. Very generally candidates ran by petition and defeated the candidates of these parties at the election. Moreover one of the leaders of a minority party which has probably the most following is listed by the Communists as a war criminal along with the leaders of the majority party.

I hear it said also that the Government has been guilty of gross violations of the constitution. As to this it should be noted that the constitution was not in force until the end of 1946 and the Government was not fully organized under it until the spring of 1948. Much of what I have read is based on conditions during the war which, of course, were abnormal. In the second place, it must be remembered that civil war is still in progress. We in America have not been too scrupulous to enforce the Bill of Rights or adhere to the strict terms of the Constitution in times of civil war or even of world war. President Lincoln was accused of violation of the Constitution during our Civil War. The action of our Government toward citizens of Japanese birth in California or its setting up of military rule in Hawaii and superseding of the courts there during the last world war serve to remind us that a bill of rights is sometimes embarrassing to a government under the stress of war. But certainly it is not for the Communists to preach adherence to a constitution.

Again, it is complained that the Government employs a secret police. But we maintain a secret service and certainly the FBI do not go about in uniform. Moreover, the third degree has had a high development with us even in time of peace. When war is in progress and a fifth column is active a government cannot confine itself to a uniformed police. Detectives in plain clothes are an everyday matter even in time of peace.

What can the Communists show in the way of constructive achievements even remotely to compare with what the Chinese National Government has done under the greatest of difficulties in the way of building up a constitutional regime and in reconstruction after 8 years of enemy occupation?

WHAT COMMUNIST DOMINATION OF CHINA WILL MEAN

Will Communist domination mean a country with which we in America can have commercial relations such as we have had increasingly for 100 years? Will it mean a country with which we can have the cultural relations which we have maintained increasingly for more than 50 years? One has only to look at the pronouncements of the Chinese Communists as to American relations to answer these questions.

What, then, are we to do in our relations with a Communist regime? For one thing, I submit we must bear in mind the effect of what we do on Korea, on Japan, and indeed on all Asia if not on Continental Europe. We must remember the effect of what we do on the remnant in China for the situation need not be more despaired of than when the Japanese occupied the best part of the land. If we give continued aid and comfort to the Chinese Communists by our attitude toward even the remnant of the national government we shall be undoing what we have been striving to do toward maintaining democratic constitutional government in other parts of the world.

Time To Build Homes, Not To Talk About Them

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Passaic (N. J.) Herald-News of February 14, 1949:

TIME TO BUILD HOMES, NOT TALK ABOUT THEM

Federal financial aid to provide homes for our overcrowded country should be forthcoming at the current session of Congress, if both parties will forget pride and politics. There is no reason why a sensible and workable compromise cannot be obtained on the basis of the three housing measures now before the House and Senate. Three years or more after the end of a war that halted construction it is time to make a start on building, not talk about it.

The administration bill calls for 1,050,000 low-cost units to be erected in 7 years. The rate of construction would be 150,000 a year, with authority for the President to increase it to 250,000 if his Council of Economic Advisers' reports that the building market and continued need justify it. The cost would be $445,000,000 annually.

Senate Republicans fix their sights lower. They propose a 6-year program of 600,000 homes, with 100,000 to be built the first year and 135,000 thereafter. The President could step up construction to 150,000 a year, if necessary. The annual cost would be $240,000,000.

Ten House Republicans, including our own Congressman CANFIELD, favor a middle-of-the-road course. They ask for 800,000 units in 6 years at the rate of 125,000 for the first year, 135,000 thereafter, with 200,000 as the Presidential maximum in any 1 year. Their estimate of the annual charge is $320,000,000.

The slum-clearance features of the three measures are identical, as is the 40-year amortization plan. For replacing slums with modern, low-cost apartments there would be allotted a billion dollars. Nor is there any marked difference in the three proposals for construction of more livable rural homes.

In view of this broad area of agreement, it is time to stop talking and build.

Since one of these bills or a conference substitute for all three is practically certain of being passed by the Eighty-first Congress, it is time now to reactivate the Passaic Housing Authority, created during the Mayor Martini administration, but which was unable to accomplish anything because the Seventy-ninth and Eightieth Congresses failed to pass the Taft-Ellender-Wagner bill which would have given financial backing to slum-clearance projects.

Passaic and other communities interested in rebuilding substandard tenement areas ought to make sure that their low-rent housing project plans get low numbers and early attention. Passaic's survey report and application for approval of 1,500 housing units have been on file in Washington 5 years but may have to be reactivated.

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. HARRY P. O'NEILL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Bishop Haffey appearing in Catholic Light:

With the tragic ending of a mock trial in Budapest, the whole world has witnessed once again, as in ages past, a drama that will be remembered as long as men live on this globe. The essence of drama is conflict, conflict of persons, conflict of forces. The

forces are invisible, but they are as real as God in Heaven, as real as Satan in hell. The forces take up their positions, they prepare for conflict, in the hearts and wills of human beings.

Fate, as the Greeks called it, or divine providence, as we know it to be, truly reveals itself with deliberate dramatic intent. It was decreed on high that John the Baptist, the holiest of men, and Herod Antipas, one of the worst of men, should find themselves in the same generation in the same corner of the world. A clash was inevitable. The drama enacted in the persons of the Baptist and Herod the Fox is one of the masterpieces of all time. John speaks the truth with a courage born of God. Herod rants with a fury born of hell. John loses his material head, but saves his immortal soul. Herod keeps his head and his mistress and loses both his soul and the respect of all mankind.

This day, February 8, 1949, closes the enactment of another drama—the deadly conflict between the invisible power of Christ the Godman and the fulmination of the anti-Christ's wielding a hammer to enslave and a sickle to destroy. Cardinal Mindszenty is our John the Baptist in this age of terrifying conflict. Ever since that fatal November of 1945, when the Kremlin once again gave its answer to the Truman doctrine and put Matyas Rakosi, a brigadier general of the Soviet army, in charge of the work to liquidate freedom in Hungary, one man above all others stood forth and spoke forth as the champion of God, of God's Church, of the rights of all Hungarians to live as free men and enjoy the freedoms of conscience, of education, of the press.

He preached the principles of true democracy as did Pope Pius in his Christmas message of 1942. But he branded communism's brand of democracy as a monster. He challenged them in these words: "Not a democracy that puts in the place of a person ruling with limitless power another person with similar powers, not a democracy that puts instead of the egotism and ruthlessness of one group of people, the egotism and ruthlessness of another group." And then he spoke forth: "The most important feature and safest pillar of true democracy is that she acknowledges fully the laws of nature which no human power should ever dare to touch."

When the Kremlin's stooges stole 4,500 schools from the people who had built them to educate their children for time and eternity, and turned out on the street 15,000 teachers, the cardinal resisted this act of tyranny in language as clear as it was fearless. He repeatedly emphasized that the church of Christ would not surrender her right to have freedom of teaching, and her duty to go and teach all nations.

Would the fearless Mindszenty who stood stalwart against the evil of nazism and suffered imprisonment for his bravery be silent before an enslaving communism? Only a prisoner's cell could silence the voice of this modern John the Baptist. Life imprisonment is but a living death. The church of God will add to its long roster of martyrs another name that will never die, and a world of human beings will thank God for a hero and a saint who by his virile words in life and from his silent cell, worse than death, will inspire us in this evil hour to stand up and be counted as men of God, soldiers of Christ, and apostles of true liberty to all men of all nations. And with Cardinal Mindszenty we will ask God to give us power from on high to accept jailer's shackles rather than compromise truth.

Mindszenty behind the bars of steel will know a peace which the world cannot give; he will know the joy of a victory which has overcome the world, his faith. He prepares for a crown of glory while his enemies who have jailed him for the crime of loving God and serving his fellow man go down to defeat; condemned today, and for all time by the aroused conscience of God-loving, freedom-loving men and women of all climes, as cowards and criminals, the Herods and Pilates of our age, with the blood of innocents on their souls and leaving a memory as loathsome as it will be lasting.

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre (Pa.) Times-Leader of February 8, 1949:

MINDSZENTY GUILTY—OF LOVING GOD AND COUNTRY

Josef Cardinal Mindszenty, Roman Catholic primate of Hungary, was convicted of treason by a Communist People's Court in Budapest today and sentenced to life imprisonment. Many had expected he would be doomed to the gallows, but the Red puppets of Moscow have denied him the crown of martyrdom while they accomplish their foul purpose.

Life imprisonment in Hungary under the ruthless Communist dictatorship is a living death beyond the cruelest concept of civilized nations. This may be a sop of an aroused public opinion elsewhere in the world, but it perhaps would have been far more merciful for this innocent victim of Communist duplicity if his life had been taken speedily. Should he survive the tortures that are in store for him, in the not too distant future it would not be surprising if he were to die after a convenient heart attack or a fall from a window or even attempting to escape from prison. Or he might just disappear and never be heard from again, as so many hapless individuals behind the iron curtain when they obstruct the path of Stalin and his cohorts.

There is only one gleam of hope and that is, by some miracle of God's grace, Cardinal Mindszenty will survive until he can be rescued through the liberation of Europe and Asia from the clutches of the gang of international cutthroats who are attempting the conquest of the world.

The mock trial in Budapest completely vindicated the defendant in the eyes of free peoples of all faiths and just as surely convicted communism. The farcical procedure followed the familiar pattern with the Reds acting as judges, jurors, and witnesses, and the defendant, tortured and drugged, made to appear in the worst possible light. This is justice, Kremlin style. What a travesty.

It wasn't just Cardinal Mindszenty who was on trial; it was the Roman Catholic Church, the United States, and civilization itself—in short, all who have dared to oppose communism. The Hungarian churchman was the symbol of these and he was singled out for crucifixion on the altar of freedom. The great crime of which he was guilty was that he loved his God and his country and refused to accept substitutes for his faith and for his patriotism.

Despite the resentment it aroused, there was little surprise in the arrest of Cardinal Mindszenty. And least surprised of all was the defendant himself, for he had said on his visit to the United States 2 years ago that "I am going back to be crucified" and again: "My enemies can take from me no more than my life and that has already been given to God." Recently, he informed the Hungarian bishops that he repudiated in advance any statement or action that might be attributed to him in the event he was taken into custody. He knew the fate that was in store for him, but, to his lasting glory, he remained at his post in the finest tradition of his sacred calling.

Down through the centuries, the enemies of Christianity have failed in their efforts to destroy it. They have failed again in this instance, for the latest savage assault on religion and decency has served only to strengthen the faith and the determination of the millions who are enrolled under the banners of God. How great was the set-back for communism is graphically illustrated by the fact that comparatively few knew who Josef Mindszenty was until his arrest and trial; today, his name is a household word, honored and respected as his persecutors are debased and despised.

Spiraling Prices and Profits Can Create a Depression Deadfall

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. KLEIN. Mr. Speaker, under leave, I am inserting in the RECORD the following article written by Les Finnegan, the widely known labor analyst, writer, and correspondent, as published in the January 1949 issue of North American Labor:

SPIRALING PRICES AND PROFITS CAN CREATE A DEPRESSION DEADFALL

(By Les Finnegan, labor analyst)

Big business and industry are hell-bent on plunging the Nation into a catastrophic depression.

Labor and liberal economists have sounded this warning repeatedly since the end of the war. They have endeavored to warn the public and recently again they warned Congress. Two essential facts, in the opinion of most labor economists, stand out today in any estimate of where the Nation now stands and where it is going:

1. The depression of the 1930's never really ended. It was artificially converted into a spurious military prosperity by the defense program in 1939 and by the war effort in 1941. The three postwar years brought new and presumably temporary economic props in the form of the European Recovery Plan and the rearmament program. Without these, it is agreed, violent adjustments would have already occurred.

2. Big business and industry, bloated with unprecedented profits and reckless of everything save more and bigger financial killings, are throwing the Nation's economy into an increasingly menacing disbalance with every passing month. Industry's greed has created a rat race between prices and profits. The race between prices and living costs has been ignored or forgotten by the profiteers.

Both the A. F. of L. and the CIO told Congress last month that the price-profit spiral will head the Nation into disaster unless checked.

Already it has brought:

1. Greater concentration of economic power and the growth of monopoly.

2. A sharp reduction in labor's share of the national income.

3. The destruction of bank and war-bond savings.

4. Deliberate programs of planned scarcity (as in steel) and pricing conspiracies.

5. An immense growth of undistributed profits and an acute loss of consumers' purchasing power.

6. Resistance to a new round of wage increases while new campaigns are started to reduce corporation taxes but not taxes on low-bracket incomes.

The profit picture is the crux of the problem, the A. F. of L. and CIO agree. If there ever was any hope that industry would voluntarily roll back prices it is blasted now. Industry will do nothing voluntarily to endanger its soaring profits. Even the Commerce Department, enthusiastic advocate of voluntary steel allocations, now admits that program is a failure.

American industry's profits during the years 1936—39 averaged $3,900,000,000 after taxes. Profits after taxes in 1948 were more than $20,000,000,000—or more than 500 percent greater than 1936–39. The $20,000,000,000 net profit in 1948 was $2,000,000,000 higher than the previous all-time record in 1947. Steel, of course, was among the leaders in this profit-taking orgy. Bethlehem Steel showed a 40-percent rise in net profits for the third quarter of 1948 compared with the same period in 1947. General Motors, the Nation's richest corporation, did even better with a 53-percent increase in net profits from $213,000,000 for the first 9 months of 1947 to $327,000,000 for the same period in 1948.

Merely citing profit figures is, of course, not enough. The important thing is: What happens to these profits and what is the effect on the Nation's wage earners and consumers?

Even big-business apologists cannot disguise the appalling disproportion of dividends, profits, and wages. Comparing 1940 with the second quarter of 1948 the following distribution of industrial income is disclosed:

Dividends increased from $4,000,000,000 to $7,000,000,000; wages and salaries increased from $41,000,000,000 to $111,000,000,000; and undistributed profits rose from $2,000,000,000 to $13,000,000,000.

In other words, dividends increased 75 percent, wages and salaries increased 270 percent, but undistributed profits jumped 650 percent. (The wages-and-salaries figure is, of course, greatly inflated because it includes the salaries of corporation executives ranging from $50,000 to $400,000.)

What proportion has actually gone to labor? The A. F. of L. told Congress on December 8: "With each postwar year a smaller and smaller portion of the income created by American industry has gone to workers and a larger part to profits. For example, wage and salaried workers in 1939 received 65 percent of the income created by industry; in the first postwar year, 1946, the share paid to workers had dropped to 63 percent, and declined further to 61 percent in 1947 and to 60 percent in the first half of 1948. Meanwhile the share going to profits of both corporate and unincorporated business increased steadily in each postwar year. The share going to profits was 29 percent in 1939 and 37 percent in 1948 (first half), according to Commerce Department figures."

PROFIT RATES

The A. F. of L. cited these "amazing profit rates": Autos, 26 percent; textiles and apparel, 22 percent; petroleum products, 21 percent; office equipment, 25 percent; pulp and paper products, 23 percent.

These booming profits derive, of course, from excessively high prices which in turn depress the standard of living of the Nation's wage earners. How prices have outstripped wages to victimize workers and their families is told by the Consumers' Price Index of the Bureau of Labor Statistics. BLS has found that since early in 1945 living costs have jumped 37 percent, while average manufacturing wages have risen only 13 percent.

Still another way in which industry has started to pilfer the worker's pocketbook was pointed out by the A. F. of L.: "During the postwar period American businesses have been depending on profits retained in the business to furnish about 70 percent of the new capital necessary for new equipment, working capital, and other needs. This is in marked contrast to the prewar period when new capital was furnished to a much greater extent by the sale of securities to investors. This change in business practice affects our entire economy. It means in actual fact that by keeping prices high companies actually take their new capital from consumers who pay out needed cash involuntarily to meet high prices, instead of borrowing it from investors who willingly invest their savings. A large proportion of the consumers who pay for this new capital are low-income groups who have to meet high prices by cutting down their purchases of living necessities."

The CIO similarly pointed out that this type of practice produces monopolies. "When retained earnings are used to expand capacity (or to effect mergers) the present owners of the business continue to be owners of a larger and expanded business. This means that a limited number of people continue to control a larger proportion or a larger share of that business' operation. If, on the other hand, new venture capital is secured from stock issues, a larger number of people become shareholders and the managers of the business become responsible to the enlarged number of owners. As long as industry, however, does not secure new venture capital to modernize its facilities and expand capacity, it is engaging in a serious monopolistic practice. * * * This practice of expanding by the use of retained earnings has a tendency to eliminate new competition. * * *"

Proof of this argument is found in a recent report of the Federal Trade Commission showing that from 1940 to 1947 a total of 2,450 independent manufacturing and mining firms with an asset value of more than $5,000,000,000 disappeared as the result of mergers and acquisitions.

AVARICIOUS INDUSTRY

Both the A. F. of L. and CIO economists agree that avaricious industries, by pricing their products higher and higher, seem to be intent on hastening unemployment and depression. For, as the A. F. of L. points out, when workers and consumers are unable to buy the products of industry, production will be cut back, workers laid off, and full employment will be replaced by rising unemployment with immense loss to everyone. Already consumer short-term credit has increased at the rate of $3,000,000,000 a year since the war and is now 80 percent above the previous all-time peak in 1939. On top of this growing indebtedness and the loss of wartime savings is the fact that when the Republican-controlled Eightieth Congress reduced taxes it gave preferential treatment to incomes above $3,000.

There are other indexes of what is happening to the wage earner. In 1939 consumers bought 75 percent of the Nation's industrial output; government, 14 percent; business, 10 percent; and exports about 1 percent. But the consumers' ability to buy has slipped constantly and now consumers take only 69 percent of the total product.

Today, despite three rounds of wage increases, prices have so completely outrun wages that the worker's pay check buys 17 percent less than it did in January 1945. Despite wishful-thinking editorials and columns in the daily press the end of the price-profit spiral is nowhere yet in sight.

Must it mean depression? Labor economists declare that if present business practices should continue unchecked and if the European recovery plan and the rearmament program were suddenly ended a depression would not be in prospect—it would be halfway through the front door. The CIO told Congress flatly that the practice of industry to raise prices and thus profits will do more to bring on a depression and reduce production than any other single decision of industry. Industry has raised prices with no regard to increases in costs but only with regard to what the market will bear.

This self-interested thinking on the part of American industry, said the CIO, is the kind of thinking which inevitably will lead to lower levels of production—lower levels which spell unemployment, reduced income—in brief, depression with its misery and chaos. It is the old false notion of making profits through moderate levels of production and high prices instead of making the same level of profits or at least a reasonable level of profits through low prices and maximum production.

PEOPLE MUST ACT

Three years of soaring prices and profits have shown that industry and business will not regulate or check themselves for the benefit of the people and the Nation's economy. And if they will not do it the people will do it for them.

Many labor economists, therefore, want as a starting minimum program the legislation demanded by President Truman in his campaign—stand-by price controls and, above all else, an excess-profits tax and an undistributed-profits tax.

Given those as a beginning it may be possible to stave off the depression toward which the country is being pushed by industry and big business when the European recovery program is completed and when the inevitable cut-backs in military production occur.

Testimony of Dr. John D. Clark Before the Joint Committee on the Economic Report

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. HART. Mr. Speaker, on February 9 I extended my remarks in the CONGRESSIONAL RECORD Appendix to include therein a summary of the testimony offered on that day by Dr. John D. Clark, member of the President's Council of Economic Advisers, before the Joint Committee on the Economic Report.

Supplementing that summary, I herewith present the statement made by Dr. Clark before the same committee at its hearing today:

Secretary Brannan has assigned to me the responsibility to summarize the views and recommendations of the administration offered in the Economic Report of the President and in the statements in these hearings by department chiefs and by members of the Council of Economic Advisers.

When there are so many cross-currents in the business world as there are now, the citizen is disposed to read a few of the conflicting judgments about the situation and decide that it is too complicated for him to make any decision about the trend of the economy. The President of the United States and the members of this committee are not

permitted to take that easy course. The Employment Act of 1946 requires him to make this report at this time and to set forth therein the current and foreseeable trends in the levels of employment, production, and purchasing power, together with the program which he recommends to attain the declared policy of the Congress that all of the plans, functions, and resources of the Government shall be used, within certain limits, to promote maximum employment, production, and purchasing power.

This committee, established by the same statute, is enjoined to offer, as a guide to the standing committees, its findings and recommendations with respect to each of the main recommendations made by the President. Since any legislative program you may recommend must be prospective and can be valid only if it is relevant to the business conditions in the coming months, you cannot meet your obligation under the statute without reaching some conclusion about the probable course of the economy in that period. Even a negative conclusion that no action need be taken by Government would involve an affirmative judgment that the economic trend does not create a threat to the attainment of the objective of the Employment Act.

In some lines of business the excess of demand over supply which causes inflation is so obvious that the Congress has already begun to provide measures to restrain spiraling prices. The extension of rent control, and of control of exports, and the renewed waiver of anti-trust-law restraints upon agreements to channel steel and other key commodities into preferred uses are justified only because it is believed that demand in these areas is so great in comparison with the supply that socially desirable distribution of these goods cannot be attained through the free operation of the price mechanism.

The program now proposed by the President in his annual Economic Report, which you are studying, is based upon the judgment that the postwar inflationary forces are still strong and will probably become more active in the near future, requiring the provision of measures now to curb spiraling prices. This is the interpretation of the economic situation presented to the President by the Council of Economic Advisers, and it has been discussed at length during these hearings by members of the council.

The anti-inflationary measures recommended by the President upon the advice of the council are those which he first pressed upon the Congress in the special session in November 1947, following a report to him by the council that the period of relative stability in the first three quarters of the year had given way to a dangerously strong inflationary situation. I have already called to your attention the quarterly data of gross national product, national income, and personal income, each of which, after jumping upward in the final quarter of 1947, climbed higher in each quarter of 1948, while industrial production failed to increase. The vindication by events of the report by the council to the President on October 1, 1947, encourages the hope that the economist has professional tools which enable him to analyze business conditions correctly, and what is perhaps more important, to analyze them quickly.

Since October 1947 the council has made a report to the President each quarter, with many intermediate reports, and upon each occasion it has renewed its warning that the postwar inflation had not been liquidated and therefore must be feared. The course of business in 1948 confirmed these judgments, although only once did business analysts generally agree with our view. With no increase in industrial production, wages crept upward, utility charges and other costs of production increased, and the price index of the 700 commodities other than farm and food products gained 5 percent.

The price trend of these 700 commodities is more important than that of food in determining the course of the economy, because the price of food does not directly influence the cost of production of other goods. The current decline in food prices may have some effect upon the size of wage demands, but there is no indication that it will cause labor to forego a drive for another round of wage advances.

Inflationary forces have been so strong that they withstood a terriffic jolt when grain prices collapsed a year ago and they continued to press the price level upward during the rest of the year notwithstanding the erratic performance of prices of farm and food products. More than once in the past 2 years the price level has seemed to become stable as some prices have declined, and soft spots and reduced demand have appeared in the economy, but each time the inflationary movement has been resumed. Conditions are developing for the same thing to happen again.

We can never forget that the collapse of an inflationary boom is always around the corner, and for all the Council knows that corner may be immediately ahead. We have our data about all kinds of identifiable business conditions, but that data fails to inform us whether and when business sentiment will change. If this inflationary boom levels off by itself, it will be a new experience. The typical ending has been a sudden collapse followed by a rapid deflation, and the collapse has occurred unexpectedly when the business indexes are most favorable. Business sentiment changes some night for reasons and at a time which no one can foresee. Inventories which were comfortable the day before now appear to be dangerously large and orders are canceled. Business plans lose their attractive aspect and are put on the shelf. Production is cut back, workers are laid off, and the deflationary spiral is under way.

We have no experience to support the belief that a strong and long-continued inflation which is permitted to run its course can have any other ending than a business collapse. Those who interpret the current situation as the end of advancing prices and the beginning of a period of readjustment which will soon turn into full production and employment at slightly lower prices not only see an economy far more docile than the one the Council studies, but they fail to explain how forces powerful enough to drag the economy back from a beginning recession are not powerful enough to withstand counteracting forces which, according to their own premise, cannot be very strong. I am emphatic about the need to control inflation because I have a deep respect for the devastating strength of forces of deflation which feed upon themselves, and I do not join in the confidence that if they once take charge of the economy they will be easily controlled, or that they will evaporate and need no control.

While the members of the council have said that in their analysis they find greater significance in the facts that the number of workers employed in civilian production in January was greater than a year ago when the inflationary boom was most active and that the flow of income to consumers is greater, we are fully aware that unemployment increased 720,000 during the month. There is no sound basis for saying that this increase was more than seasonal. We have no experience by which to determine the seasonal trend in a labor force of more than 60,000,000. It was not until immediately before the war that we had statistics of unemployment which permitted serious study of seasonal trends in a much smaller labor force, and the war upset that foundation. Since the war we have found seasonal trends in all parts of the producing economy smothered by conditions of short supply of all kinds of goods. We do know that in January a year ago the increase in unemployment was 420,000, but I have described the conditions at that time and they did not permit normal seasonal changes to appear.

It will be April before we will know whether a real decline in employment has set in. It is because we foresee conditions arising at that time which in our opinion will again tighten the labor market that we have not changed the advice we have given to the President about the trend of the economy.

In April the increase in agricultural employment will be setting in. We will be feeling more effect of the increasing expenditures of the Government for defense and for foreign aid. The Government will end the accumulation of a Treasury surplus in March, and in April it will begin to spend more than it collects from the taxpayers. Bank reserves will no longer be suffering the effect of large transfers of funds to the Federal Reserve banks. And businessmen, who are too prone to listen to tales of distress elsewhere even when they consider their own prospects bright, may be expected to accept the significance of the report in the New York Times on February 13, 1949, that—

"Not one of five leading engineering companies could cite a single plant construction contract that had been canceled because of business recession. * * * Large new contracts for either engineering services or new plant construction are moving ahead because demand in many lines is still running ahead of supply."

TAXATION

The program proposed by the President includes certain policies to reduce inflationary pressures by reducing general demand, and others to hold specific points of pressure by direct action. In the first category are the recommendations that taxes be increased $4,000,000,000 and that the credit control powers of the Federal Reserve System be strengthened.

I need not discuss the desirability of providing revenue large enough to permit a substantial payment upon the Government debt, and perhaps there is no need to discuss the suggestion offered in some of your hearings last year that an increase in income taxes is inflationary and not deflationary. The current argument of those opposing the tax proposal is that its effect would be so deflationary as to bring on a depression.

Would the specific proposal of the President to impose the greater part of the additional tax burden upon corporate profits result in reducing the incentive of business managers to invest? I have no doubt that a unanimous vote in the affirmative would come from a poll of businessmen, but I have found that their policies have to be ascertained by considering what they do rather than what they say. Looking at what they have done, we find that corporate profits of $21,800,000,000 before taxes and of $12,800,000,000 after taxes in 1946 caused American corporations to institute a tremendous campaign of investment in new plant and equipment and that corporate profits of $18,100,000,000 after taxes in 1947 were large enough to induce corporate managers to expand new investment in plant and equipment in 1948. The proposal of the President would leave corporate profits after taxes at a level at least as high as the profit figures in 1947 and far above those of 1946.

A second argument against increasing the taxes on corporate profits is that this would reduce the funds available for new investment and it is said that equity funds are not available in capital markets and that it is undesirable or dangerous for business to use borrowed funds, which are available in

large amounts. Despite the persistent assertion that business cannot attract equity capital, there is little proof that this is true. The American Telephone & Telegraph Co. has had no trouble in securing very large additions to its equity capital by the simple device of offering attractive subscription rights to its stockholders, who first buy debentures and then turn them into stock.

The fact is that corporate managers have not made any serious attempt to secure equity capital because they are unwilling to dilute their capital structures under present market conditions and they find it very attractive to finance their needs by loans. The interest paid on loans is not only very low under the cheap-money policy of the Government but it can be deducted from income in computing income tax. Nor is there any reason to be concerned about the dangers of debt capital. The dogma which arose more than a century ago when interest rates were high, renewal or substitution of loans at maturity if times were hard was seldom accomplished, and bankruptcy was rigorously imposed upon default has little validity in these days when interest rates are very low, many credit openings are arranged for cases of hardship, and defaults seldom lead to dissolution but only to reorganization of going enterprises. The business world itself no longer believes this dogma about the virtue of equity capital and the vice of debt capital. The most distinguished names in American finance are found in the lists of directors of the great insurance companies, whose funds must be administered with the caution and prudence imposed upon the guardian of trust accounts and must be placed in investments which are not expected to default. These funds have been and are now the sources of the most spectacular debt financing in multimillion dollar terms. No one will believe that the insurance directors who make the loans believe that they are assisting the borrowing corporation to place itself in jeopardy or that on account of the loan it may be forced into trouble or be threatened with liquidation in a period of business depression.

CREDIT CONTROL AND DEBT MANAGEMENT

Credit control has been so thoroughly studied by this committee that I shall offer only the briefest summary of the reasons for the recommendation of the President that the Board of Governors of the Federal Reserve System be given the authority to increase the satutory reserve requirements of the member banks and of banks belonging to the deposit insurance system by 10 percentage points. The tightening of bank credit is the oldest of the recognized measures to reduce over-exuberant business activity. The use of this traditional policy is not related to any condition of over-expansion of bank credit itself, but arises from the fact that the commercial banks, perhaps to their misfortune, happen to be the important cogs in a machine which is easily subjected to social control for this purpose.

Although it is a point fully understood by the members of the committee, it is important to emphasize the fact that the central bank authorities are not now able to make very effective use of the original plan to influence the volume of bank credit by changing the discount rate because the Government debt management policy forces the continuance of low interest rates. The policy of supporting the price of long-term Government bonds at not less than par must be maintained, and the President has said in such vigorous terms that it will be maintained that the financial world seems to have accepted the fact. The result has been that the effort of the past year to overturn the policy has subsided, the market is taking care of itself above the peg point, and the difficulites which arose because holders of bonds were disturbed by constant speculation whether the policy would be abandoned have disappeared.

The debt-management policy, like the farm price-support program and many other national policies which our people are determined to continue, is inflationary or is an obstacle to some anti-inflationary policy. This is an inevitable characteristic of our vast economy, and it is our task to find ways, while continuing those policies, to meet dangers to continued prosperity from other sources. In the case of bank credit, such a way is found in requiring larger bank reserves.

INSTALLMENT CREDIT

One selective control of credit which the President recommends is that of installment credit, and the authority of the Board of Governors in this respect, as well as in the matter of raising reserve requirements, should be permanent. Installment credit creates an especially precarious situation because it increases the demand for goods in periods of great prosperity and then by largely drying up in periods of recession when contract debtors are straining their resources to liquidate their indebtedness it contributes a double push to the deflation. There is another reason, from the standpoint of social policy, for controlling installment credit. It is disclosed in the very argument often made by objectors that it prevents a sale to a housewife who has only $5 in her purse and who would yield to the sales appeal of nothing down and a long time to pay.

SAVINGS

An important anti-inflationary policy commended by the President which requires no additional legislation is the encouragement of individual savings. The Treasury Department has been very successful in its effort during the past year to gain the support of an army of volunteer workers and to secure the reestablishment of pay-roll deduction plans which had lapsed. The appeal of the postal savings system should not be limited by new restrictions, and there should be an adequate appropriation for the savings bond campaign of the Treasury Department.

CONTROL OF COMMODITY EXCHANGES

The recommendation of the President that permanent authority be granted to regulate trading in futures on the commodity exchanges grew out of our experience a year ago when we were most fortunate to avoid a disastrous collapse of business following a crash of grain prices which had been carried by speculative trading far above any level supported by conditions of demand and supply for grain itself. We have now had a second experience with the widespread impact of the wild gyrations which can take place only in a speculative market and could not occur in a market dealing with actual commodities. The legislation recommended by the administration would control the purely speculative trading while leaving true hedging sales and purchases free from control. All of the arguments in favor of speculative trading were marshaled years ago in opposition to the bill to regulate the securities markets, which few would now say has not proved to be desirable. It has been a matter of great good luck that in this postwar inflation we have not been forced to meet the problems of wild speculation in the securities markets, and this has had some responsibility for the fact that this business boom has lasted without a crisis much longer than experience indicated would be possible.

DIRECT CONTROLS

Among the recommendations of the President for policies which directly attack points of particular inflationary pressure, that for rent control requires only the comment that the housing situation clearly proves that the economy has not yet entered the phase where Government intervention in the making of business decisions is not needed. If rents were freed from control, the inflationary forces underlying our deceptively quiet economy would become too clear to be discounted.

The case for export controls is generally accepted. Some support such controls upon the ground that they are needed in order to channel goods in such manner as to accomplish the purpose of the foreign aid program, but there is inherent in this argument a recognition that the supply of certain commodities required for that program is too small in relation to total demand to permit the allocation of those goods to be made by the operation of the free market mechanism.

CONTROL OF PRICES AND WAGES

The recommendations of export controls, mandatory allocation powers, and of limited price and wage controls need to be considered together. In the first published report of the Council of Economic Advisers upon this problem, the report upon the impact of the foreign-aid program upon the domestic economy, the point was stressed that there were specific inflationary pressures affecting the prices of key commodities which particularly affect the cost of living and the costs of production. The conclusion then reached that general anti-inflationary measures affecting the entire economy should be supplemented by authority to apply specific controls of the prices of these key commodities is valid today.

Consumers' prices have been receding slightly but the prices of many commodities which are important in determining the costs of production of manufactured articles have continued to rise. It is because there is a chain reaction when these prices move upward that direct action against price increases is necessary in order to break the circle of spiraling inflation.

The most important of these key commodities is steel, the cost of which enters in some way into every productive process. Second in importance may be coal, for most industrial power is produced by coal and increases in its price spread their influence throughout the producing industries very rapidly. These two commodities are of great importance in another respect. The wage contracts negotiated in the steel and coal industries have had strong influence upon other wage negotiations even in industries in very different economic circumstances. A rise in wages in the steel industry tends to establish a pattern, and labor leaders now look upon the steel corporations as being especially vulnerable to new wage demands. Not only are profits running at a very high rate, but the pressure of demand clearly makes it possible for the steel producers to increase prices if wages are raised, they have been raising prices recently, and they have stated their purpose to raise prices further if costs are increased.

The recommendation for authority to control the prices of essential commodities of prime importance in determining the cost of living or the cost of production of goods is not, therefore, entirely forward looking. It relates to a situation which is now developing to a climax. If wage increases are again secured in the steel and coal industries and the prices of those commodities are again raised, the inflationary cycle will be given another twist which will carry the economy we know not where. If the Government is unwilling to take any action to halt price increases, the workers will have no reason to withhold their wage demands in the expectation that prices will not continue to rise, and the Government will have no excuse for asking the workers to make a sacrifice which the owners of business will not make.

If action is taken to prevent price increases, the Government will be justified in taking action to discourage wage increases and the President has already accepted that responsibility. A part of his proposal is that in order to prevent an established price ceiling from being broken through as the result

of wage increases, there shall be a determination by a board that wage advances are justified before those wage advances shall be accepted as a reason for permitting a price increase. The process is awkward and the definition of justifiable wage increases will please no one, but the plan would work for a time long enough, perhaps, to gain our objective of breaking the inflationary circle and attaining a stability in economic relationships which will permit us to scrap this and all other anti-inflationary programs.

The feature of the President's proposal which should come into immediate use is the holding off of price advances by applying to the fixing of prices on goods the same rule which we have applied to the fixing of prices on labor. The administration asks authority to order a delay in increases of those prices which are designated for this kind of attention until the expiration of a limited period after notice of intent to raise a price. Within that period the firm must furnish any information called for relating to the price and the propriety of a price increase, and submit, if directed, to a public hearing. At the end of the period, the Government administrator may turn to the other provisions of the proposed statute and fix the price on the commodity, or he may free the firm to make its own decision about its action. Those who have followed the hearings before this and other committees during the past 2 years when you have looked into business decisions will have little doubt that the enactment of this waiting-time provision will have a real restraining influence upon businessmen who would otherwise advance their prices as they have been doing steadily.

ENCOURAGEMENT OF PRODUCTION

The recommendations of the President with respect to long-term problems and policies cannot be considered in this brief statement, but that which is concerned with the expansion of productive capacity needs to be discussed because it has immediate importance. The one way to stop inflation which all will applaud is to increase production.

The administration is not yet proposing the policies to bring about the enlargement of productive capacity because the President has asked that a study be made both of the areas of shortage and of the manner in which the shortages can be overcome. Their general character may be described, however. There may be subsidies for high-cost producers of commodities, such as minerals, which are produced under conditions where plant capacity is not important. There may be special provisions in the tax laws for accelerated depreciation or even for tax abatement. There may be loans, or guaranties of loans, where credit is not available and capital hard to secure. Government procurement policies may be manipulated, and I use this invidious term in order to make distinct the point that all of these plans require the most careful study because in them are many pitfalls of discrimination and favoritism.

The enlargement of productive capacity is so essential to continued maximum employment and production that neither the concealed dangers in any given plan nor the required scope of Government intervention should prevent action which will be effective. The President has shown how earnestly he seeks effective action by declaring that if it comes to the point where the people cannot be furnished goods which they need in any other way and it is possible for them to secure them by having the Government itself become a producer, he is not afraid to take that final step. Who of us, if forced to answer that question without equivocation, would say otherwise? But I have no doubt that the President feels as strongly as I am sure many of us feel that it is within our ability to adopt policies which will lead private enterprise to expand its productive capacity as may be needed over the long run, and that the Government will not have to go into the business of producing commodities except for one purpose.

The one exception is the building of plants to produce such new goods as synthetic fuel. Where technological progress in perfecting new methods of production are too slow to promise a flow of needed goods as quickly as they are needed, we may agree upon a Government policy of direct action in hastening the technical experimentation and in assuming the risks of constructing commercial plants before private capital would feel justified in doing so.

The administration should have the anti-inflationary measures the President has requested without delay, for the risk in delaying action until spiraling prices are more actively at work and are establishing the base for the ultimate crash is too great. I am not certain that the respected monthly letter of the National City Bank was correct when it said, in June last, that the longer the boom continues the more severe will be the reckoning. It is enough to say that the longer inflation is permitted to run its own course, the nearer we come to a collapse.

Country Almanac

EXTENSION OF REMARKS
OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the February issue of the Country Almanac by A. B. Genung, of Freeville, N. Y.:

REVOLUTION—BACKWARD

A day after Roosevelt's election in 1932, Dr. Liberty Hyde Bailey, the grand old dean of Cornell, remarked to this writer: "The thing that's happened here is a revolution not only political but economic. In 20 years you'll understand."

Well, 16 years have gone by and we begin to understand. Truman's addresses to Congress make it clear that we are now about to be shoved further and even faster along this revolutionary road.

Great wars always upheave society and change the order of things. With two of them sweeping the world in one generation, we should have known that there would be profound changes. The surge and strain of war bring new leaders and new ideas to the top.

But the new order is not always a better order, by any means. Sometimes the new order has been better, more progressive, as after the Crusades or the Napoleonic wars. Many times in history it has been decadent, as after the Roman conquests, or the great invasions from the east in the seventh and eighth centuries. The new order has often been merely a new tyranny, which required generations of liberty-loving men to fight off.

During the present war era we have seen monstrous new tyranny come to the top in central and eastern Europe; in the latter it is still extending its power. Elsewhere in the world, including this country, we have seen new rule, new leaders, new ideologies taking over.

The seething caldron underneath all this new froth is made up of the urge among the common people to have more of the fruits of earth than they have hitherto enjoyed. It is the ceaseless battle of the have-nots against the haves. The economic turmoil, out of which the new politician emerges and capitalizes his new strength, is rooted in the determination of the have-nots to force a redistribution of wealth. They want a bigger cut of the pie. It is, at bottom, as simple as that the maid forever covets her mistress' silken gowns, and the janitor his employer's fine office and wealth. This urge is as old as human nature and the inequalities that feed it are as old as time. And one may applaud this divine discontent that wants to get ahead—but there are time-tested constructive ways to go about it and there are destructive ways.

In this country, as in England, the present revolution moves on wheels supplied by the socialistic planners. That is the sorry part about it, for that is the straight road to lower standards of living and less individual freedom. By the time the people awaken to that fact, however, a new set of despots, benevolent or otherwise, may be so firmly in the saddle that they can't be dislodged. Huey Long and his share-the-wealth are reminders.

Truman's blueprints, which are hatched out by the pink and predatory group who surround him, follow the approved code in such matters. First, you promise to take wealth away from those who have it and give it to the have-nots. Heavy taxes (in England outright confiscation) are levied on those who have anything—in this country the latter are hit also as "the corporations."

Then the property is redistributed to the have-nots in the form of fantastically high legislated wage scales and short hours, subsidies, unemployment doles, sick and old-age pensions, broad welfare doles, free education in colleges, free medical care, new houses, forced low rents, and the like. All of which naturally is manna to those on the receiving end, and since in a democracy they have the most votes they gratefully confirm and enlarge the power of the spenders. The early stages are quite simple, quite crude, quite successful politically, and quite demoralizing.

Meanwhile, the planners are always reaching for new powers over the people. Truman's present messages are rather restrained, calling merely for new controls over credit, exports, commodity exchanges, etc.; that is, over money, trade, and work. The sardonic note in all this is that the new controls are demanded in the name of controlling inflation, which is itself the supreme achievement and vehicle of the planners and without which they couldn't stay in power overnight. Real deflation would utterly wreck them.

Next, when the plucked goose shows signs of laying fewer golden eggs, you move in on the goose. You threaten to build millions of new houses, for instance. You threaten to build steel plants with taxpayers' money. Truman has reached that stage now. Then you build them. Then you take over steel bodily, and finally other industries. England has reached that stage.

But by and by you discover that men have learned to like the pleasant habit of leaning on a Government shovel. Nobody works as they used to. The old ideas of thrift and self-reliance are gone. What incentive is there, when you get hand-outs anyhow?

Production goes down and saving goes down, as it has in all of socialist Europe and will here. The difference is that when the European pie shrank they could still get generous cuts from the American pie. When our pie shrinks we'll each just have less, period.

Now, one indispensable part of this downhill revolution is a deterioration of the country's money. You can't debauch the taxation process, spend continuously beyond income, redistribute wealth via huge bond issues, without also debasing the dollar. In other words, you can't have a glorious and permanent inflation and still maintain the old ex-

change value of the money. (Consider the case of the French franc.)

So we find ourselves with money that is worth less permanently. The value of every fixed salary or income, every rent collected, every pension, every insurance policy, has been, roughly, cut in two. And as for these $252,000,000,000 of bonds outstanding, by no practical plan in sight can they possibly be paid off under a hundred years' time, and other wars will dispose of them long before that. In any case, their purchasing power will have shrunk exactly as the dollar has shrunk. That goes for your insurance policy, too.

Also, our own new order has added a really new redistribution feature, which consists in bleeding our haves for the benefit of foreign have-nots all over the globe. By the end of 1952 we shall have given away abroad over $100,000,000,000 worth of the basic wealth of the country. No other socialistic regime can make that claim. In fact, the rest of them look at us with utter incredulity.

The end of this socialistic road is flanked by two very bleak monuments. One stands for lost productive power. The other is lost liberty. The end is less of the good things of life for everybody, plus a strait-jacket of Government controls. There is no exception to this. It always works the same way. If followed far enough, in the end the common man will be a drudge in a system of despotism. But in the pleasant early hand-out stages, nobody can make him believe that for one moment.

So the Truman messages spelling out this redistribution of wealth are cast out upon the political stage with as much assurance as an experienced angler casts worms for spring suckers. We, personally, aren't worrying much about the shrewd and thrifty haves, who didn't get what they have by sloth or ignorance; they can think as fast as the socialists and will adapt themselves. And the have-nots are happy in the thought that they're being handed something—and so they are.

So rolls on the revolution—downhill.

THAT ROOT OF ALL EVIL

Any general talk about price stability must start with the subject of money, it seems to us. Inflation began when the Government confiscated our gold, locked it away in vaults, and began to print paper money that belied the promise printed on the face of it, "redeemable in gold."

But the prewar flood of paper money was a drop in the bucket compared to the deluge of currency, bank-deposit money, and bonds that attended the financing of the war and our global benefactions. From some $38,000,000,000 in 1940, the total money supply (currency plus demand bank deposits or checking money) had grown to around $110,000,000,000 last year. Plus some $252,000,000,000 of bonds, all of which nominally represent paper-purchasing power.

With all that Niagara of paper pouring off the printing presses and spreading through the community, is it any wonder that the value of the dollar was diluted?

With all those new dollars, so-called, bidding for goods, of course, prices rose to great heights.

We know of no way to have stability of the general price level, in terms of money, without having some reasonable degree of stability in the money supply. If the Government doubled the number of paper dollars in circulation tomorrow, nothing is more certain than that commodity prices would shoot further toward the sky. And the converse is true, too.

When our paper money was redeemable in gold, there was always an anchor, always a brake both on quantity of money and on prices; for the quantity of monetary gold stocks in the world is comparatively stable, and such gold exerts its influence upon world prices in accordance with world supply and demand for both goods and gold, more or less irrespective of where the gold happens to rest at a given time. Or so the economists tell us.

One might logically come to the conclusion that the way to stabilize prices would be to get back on gold, make our paper money redeemable. So it would. But the first effect would be to squeeze our inflated balloon of paper like a kid would squeeze an orange—in other words, prices would fall with a thud and would thereafter stabilize at a much lower level. That would be political and economic dynamite. It would scuttle the New Deal. It might even blow us into a revolution.

It seems clear that we can't have a managed money supply that is managed, or rather enlarged, to suit the purposes of socialistic Government spenders, without paying the piper in high prices.

We personally begin to suspect that there is no politically possible way for our present Government to come back down to the prewar price levels; so that stabilizing really means getting adjusted to the present high level or something not far below it. But that is merely the problem of the level, not of stability.

To our way of thinking, the money supply is the real root of the price problem. There isn't any use fooling around with the symptoms, such as attempted price controls, pegging bond prices, managed production, and other mumbo-jumbo, in the expectation that these will stabilize commodity prices and values generally. The place to control steam pressure is where the boiler is stoked, not at the whistle valve.

What this country needs is a good 5-cent nickel, hard money.

CAPITAL ISN'T TRASH

It is difficult to tell just when a great country like this no longer is living on its current production and really has begun to live out of capital. At the rate we're going, there is no doubt that we shall be drawing on our capital resources at some early stage.

Our own personal suspicion is that the country has been using capital wealth throughout the last war period. We do not think the soil has been depleted seriously; but the prodigal use of iron, coal, oil, lead, lumber, and other basic materials, plus the wearing down of our productive machines, may represent quite a big bite gone out of our permanent capital.

A nation is no different, in respect to the operation of this principle, than an individual or a family. It can become poor, poverty-stricken, economically bankrupt, just exactly the same.

The Socialists would have us believe that we can eat our cake and have it too. To follow that foolish line is to lead the United States of America straight to stagnation, ultimate collapse, and the political vultures that prey on dead liberties.

BYLINE FOR HISTORY

As we look over the allocations of money and supplies under the Marshall plan, two thoughts in particular persist with us. The first is the simply incredible fact that one nation is giving away its most vital labor and treasure in this fashion to other nations. And not to meet some unexpected calamity of nature but deliberately and for the restoration of the others' business and productive life.

These princely gifts go not only to nations devastated by war but to others who actually profited by the war, as Ireland, Iceland, Sweden, Turkey. The allocations just for this one year include to Ireland, $89,000,000; Iceland, $10,300,000; Sweden, $41,000,000; and to former enemies, Austria, $220,000,000; Germany, $508,000,000; Italy, $571,000,000, etc.

The second thought which continues to impress us is that this immense spending is different from any other spending. When we produce goods and exchange them in domestic commerce, or for that matter in normal foreign commerce, some kind of a trading balance is always struck as a result of these transactions. There is always a quid pro quo. It is literally a trade. Everybody gains; nobody loses really.

But this Marshall-plan spending is different, it is unique; never been anything like it before in history. The products of our land and labor are sent out and no tangible goods or services come back, for the most part. The wages and profits that grow out of this production, though they really come right out of our economic hide, are still here bidding in American markets. But the goods which should offset that new spending power are not here. Which means, of course, that this process is the very essence of inflation.

These goods handed out spell just so much material loss for the United States of America. One may argue the return in gratitude or in expectation of some future renewal of trade. But the cold fact is that the stuff is lost to us, and it is the most basic wealth of the country: steel, lumber, coal, oil, metals, fertilizer, food, textiles, and so on. By so much has the standard of living in this country got to be cut. The fact that we are able to make some of it a deferred cut is neither here nor there. What is gone is gone, and we can never have the use of it.

As salvage, what we personally would like to dare to hope is that some objective thinker will write into imperishable history that the United States of America, greatest nation of all time, at the height of its power, instead of embarking upon a career of conquest, voluntarily tightened its belt to give its most precious goods to other nations, in colossal quantity, and without expectation of pay, simply because the others asked for it. There is a charity for future generations to ponder, a charity so unprecedented in international relations that even the recipients do not understand nor appreciate it; a gesture that will stand for all time, in our opinion, as the least explainable and the most magnificent in all history.

LABOR IN THE SADDLE

This country is following British footsteps in the development of a labor government. Union labor here has grown strong, arrogant, politically aggressive. It boasts, with some reason, that it can win elections. It boasts that it will defeat any man who seeks to give the rest of the community an even break, as in the case of Senator TAFT.

Labor has been in the political saddle in England for several years. It has demonstrated where its socialistic policies lead. They lead to smaller production, higher costs, fewer things for the ordinary people, complete control of the daily lives of the people by a gang of bureaucrats. In 33 main industries United States output per man has been found by the International Labor Office to be from 113 percent to 423 percent of British production per man.

We had thought that labor leadership in this country was more far-sighted, more conscious of its heritage of individual freedom, more devoted to free enterprise, than those in England. We still hope to find that true. But up to now most of the big labor bosses here seem to be out for power, for Government controls, and for more pie without working for it, just as avidly as are their counterparts across the Atlantic.

In the end farmers will find this kind of thing intolerable, will have to—and will—resist it.

TAKE OUT MORE INSURANCE

We mentioned that the value of your insurance policies has been cut in two. And it begins to look as though that cut may possibly be permanent. In talking with several

neighbors, we note that while most folks understand that fact, very few have done anything about it.

This matter becomes a real hazard in respect to farm buildings, or village homes, for that matter. Maybe your barn has been insured for $3,000 or so for the last 25 years. Most of the time that might have given you enough coverage to help in case of fire. But what will $3,000 do now toward replacing a barn? Just about build a foundation.

Or how much of a house will $3,000 build now? Maybe it would pay for a good-sized tent.

The point is that most of us need new and bigger insurance policies. Most of us know it but put off doing anything about it. Better act on this before you let yourself sleep again.

We aren't saying anything about life-insurance policies, though they're in the picture at exactly the same size. Maybe you're already worth more dead than alive. Or maybe you intend to will your wife to the social-security system.

WE NEED SOME DOCTORS

In the nine rural townships of our county there are about half a dozen doctors. In the county seat, population 25,000, there are 50 doctors.

Doctors won't settle in the country towns. Farm people suffer and die without medical help. Something's got to be done about this situation—and soon.

A New Nation Is Born

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. KLEIN. Mr. Speaker, the family of nations is larger by one today.

The Parliament of the Republic of Israel met yesterday in Jerusalem.

It was a moment of rejoicing for the Jewish community of this tired world; and, Mr. Speaker, for those of us who are and have long been ardent Zionists, it was a moment approaching exaltation.

Only 15 years ago, Mr. Speaker, there began a series of criminal assassinations of proud and living nations, as the scourge of nazism thrust out in a dark circle from Berlin. At the same time that Hitler was destroying nation after nation, he was destroying European Jewry.

Since the triumph of free democracies over the forces of Nazi evil, not only the national victims of Hitlerism have revived and been reestablished, but new nations have been added—the Philippine Republic, the Indonesian Republic, India, Pakistan, Burma, to name but a few; and now, firmly founded on the rock of democracy, fashioned to the model of the United States, Israel begins its life as an independent state.

Yesterday, Mr. Speaker, I sent to the Press Gallery a statement which expressed my well wishes to the new republic. Under leave, I am inserting that statement:

STATEMENT ON CONVENING OF ISRAEL PARLIAMENT

Today in the Holy City of Jerusalem, sacred to three great world religions, the Parliament of the Republic of Israel convenes in an atmosphere of solemn historical importance.

For the first time in 2,000 years there is an independent Jewish state, sovereign and free.

The long gap of history from the Roman destruction of Jerusalem to the Nazi destruction of Jewry has come full turn, and once more the scattered nation has a national home.

I have just sent the following cable to the Honorable Chaim Weizmann, President of the Republic of Israel:

"Congratulations and best wishes to Israel Parliament on this historic occasion."

But those words do not begin to express the pride I feel that my country, the United States, has once more proved its devotion to democracy by aiding in the restoration of a free Judaic state, and leading the way toward full recognition.

I am inserting also the text of the address to the Parliament of Israel by the Honorable Chaim Weizmann, President of the Republic, as printed in the New York Times of today, February 15:

It is with a feeling of deep reverence and consecration that I rise to open the Constituent Assembly of the State of Israel—the first knesseth Israel [Assembly of Israel] of our time in this eternal city of Jerusalem.

This is a great moment in our history. Let us give thanks and praise God of Israel, Who in His mercy granted us the privilege of witnessing the redemption of our people after centuries of affliction and suffering. Today's event issued from the great awakening of national will that aroused our people in the last few generations. The first signs came about 75 years ago.

The best among our people, men whose names were then unknown, arose to lead their generation toward fulfillment of the dream of all generations, toward the return to Zion and the restoration of Jewish nationhood.

Those who strove to realize this dream took two paths. The first was the way of spiritual revival and the return to the well-spring of Jewish tradition, the renewal of the Hebrew language and literature, the gathering of the scattered forces of our people into one bond, the public proclamation of our historic rights, and the enlisting of help and support from the rulers of nations.

TWO DECISIVE GATHERINGS

Two gatherings mark decisive steps on this road—the Katowice conference and the first Zionist Congress. The first conference led to the creation of the World Zionist Organization workshop, where the vision hammered itself into reality, and to the establishment of the Jewish Agency as the Zionist movement's supreme political organ and the instrument of colonization.

Following this path, we secured the Balfour Declaration, the first external recognition of our right to settle as a nation in the land of our fathers.

The second path, that of practical action, of carrying out things, was the path taken by those who could not wait any longer for the nation to gird up its strength in exile and for others to recognize their rights. They thought to force God's hand, as it were; theirs was the daring to go up to the land to try to hasten the redemption of their people by their own handiwork and by the sweat of their brows and by their life's blood.

These were the first pioneers—the Biluim (first Zionist settlers on the land in Palestine)—and all who followed the flag to carve out the road of return and to lay the stone on which the future would be built. In their footsteps came a new generation of immigrants to settle on the land until the Yishuv (the community of Israel) was created. Those who took the second path also erected an organizational structure, institutions of self-government, local councils in towns and townships and assemblies of the new Jewish community, the Assefath Hanivcharim and the Vaad Leumi, which also has its seat in this building.

It is a good while now since the two paths converged and like two members of one body helped reinforce each other until the great day 9 months ago—the 5th of Iyar 5798, 14 May 1948—when we proclaimed independence and the establishment of our state. The union of two friends was now completed.

Then, compassed about as we were with blood, fire, and pillars of smoke, with the Arab war waged against us from without and within our own house, with chaos bequeathed us by the mandatory, we were not able to hold elections to lay the permanent foundations of our state. A provisional government was set up, comprising a legislature and an executive whose authority was derived from earlier elections. In this provisional government two former supreme institutions—the Jewish Agency Executive and the Vaad Leumi—joined together and were fused into one.

Today we stand on the threshold of a new era. We leave the dawn light of the provisional authority and enter the full sunshine of ordinary democratic rule. This assembly was elected by a body of citizens. In the elections the will of the entire people was fully and freely expressed. From the outset we are building on solid foundations—foundations of freedom, equality, collective responsibility, and national self-discipline.

It was no longer an isolated band of pioneers who elected this assembly, but an independent nation dwelling in its own, free country. This nation is being conceived as a gathering in of the exiles, for there is not a Jewish community throughout the world whose members have not a share in the state of Israel.

Every day, to our heart's joy, tens of thousands of our brethren from countries near and far are entering the gates of the country, which stand wide open to receive them. It is our whole prayer that this gathering of exiles will increase and embrace an ever-larger multitude of our people who will strike roots here and work side by side with us in building the state and make our unproductive places fruitful again. We will make this our goal before all else, to devote to it our best powers of thoughts and action.

HEAVY IS THE RESPONSIBILITY

Heavy indeed is the responsibility laid on us in this assembly. What we began 9 months ago on the same date, we bring to completion tonight—the restoration of the realm of Israel. If we are using state forms molded by the experience of the enlightened nations of the modern world, we know truly that these forms contain the treasured essence of the heritage of Israel.

In the ancient world this tiny country of ours raised the standard of spiritual revolt against the rights of tyranny and brute force. The law of Israel and the vision of her prophets sounded a new epic of relations between man and man, a new ordering of human society. The authority of the King of Israel was limited by law and tradition. The prophets of Israel did not fear to utter rebuke and reproof to kings and princes and with inspired words forged weapons to defend the poor and oppressed, strangers and slaves, and the orphan and the widow.

The very principle of the institution of kingship was hateful to the spiritual leaders of the people. "I will not rule over you nor shall my son rule over you. The Lord shall rule over us," declares the judge to the assembled people. The warnings of the prophet against the dangers of tyranny thunder from on high to the ears of people to our last generation.

In Israel this authority of one man was derived from the noble conception that

people are naturally free and are freely accepting the rule that law and just judgment do not need compulsion from above to live as ordered by society. The root of the principle of the constitution of that novel state was the limit set for the authority of the king, and in this sense the ancient Hebrew policy was the mother of constitutional government in the modern age.

And now it has fallen to our generation to cement anew the links of that life of freedom that were snapped by tyranny's force nearly 1,900 years ago. I do not know why it is precisely our generation that has been privileged to bring about what many generations before us longed for in the exiles of darkness. Unless we earned it by all the hardships, weariness, sorrow, and tribulation that have been our portion during the past 70 years, when one-third of our nation was annihilated.

We suffered torture and affliction as no other nation in the world and because we are a remnant—and no more than a remnant—double and treble responsibility lies upon us to fill the terrible void in our national life.

It is our people who once gave the whole world the spiritual message fundamental to civilization. The world is watching us now to see which way we choose for ourselves in ordering our lives, and is listening to hear whether a new message will go forth from Zion, and what that message will be. The new message was not born without travail and our creative spirit. The creative force of our nation will soon meet the new, serious challenge. The assembly is called on to frame the will for the supreme test. Let us strive in search of the basis of human life. Let us build a new bridge between science and the spirit of man.

This day is a great day in our lives. Let us not be overarrogant if we say that this is a great day in the history of the world. In this hour a message of hope and good cheer goes forth from this place in the sacred city to all oppressed people and to all who are struggling for freedom and equality. From this place we send fraternal blessings to our brethren throughout the world and to all states, great and small, that have recognized Israel.

(Dr. Weizmann concluded by paying tribute to prominent figures in Zionist history, including Theodor Herzl, Louis D. Brandeis, and Edmond Rothschild.)

Address of Hon. Joseph W. Martin, Jr., of Massachusetts, Republican Leader of the House of Representatives, at Charleston, S. C.

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. RIVERS. Mr. Speaker, the city of Charleston, S. C. was honored on January 28, 1949, not only in having the former distinguished Speaker of the House, but a great American, the Honorable JOSEPH W. MARTIN, JR., to address the one hundred and seventy-sixth annual banquet of the chamber of commerce. My city of Charleston prides itself on having the oldest chamber of commerce in the Nation, and has through the years been accustomed to hearing good addresses on our American way of life; but at no time has anyone delivered a more inspiring and thought-provoking address than that of former Speaker MARTIN.

Being one of the Thirteen Original Colonies, we have many things in common with New England, and many of our common stocks stem from the same basic families. Our thoughts and our economic beliefs are quite similar. Quite frankly, former Speaker MARTIN'S address was one which pleased the people of my city because it coincided with the things they have been taught to believe.

Under leave to extend my remarks, I include herewith the address of the Honorable JOSEPH W. MARTIN, JR.:

Good evening, fellow Americans. I am happy to be presented to this fine gathering by your able and distinguished Congressman, MENDEL RIVERS. He enjoys a fine reputation for his ability to aid his district and his State.

It is a privilege and a pleasure to come to this fine gathering of businessmen who are engaged in the commendable task of making South Carolina a busier, a better, and a more progressive State. I know there are some who believe a businessman is a menace and an object of scorn and abuse. Yet if it were not for the businessmen of America we could not have manned and directed the arsenals which won two world wars. If it were not for the hard-working businessmen, big and little, we would not be today the richest and most powerful Nation of the world. To be sure, they were ably backed up by the hosts of honest, sincere working men and women of America. United, and working in full harmony together, they are an invincible force. Both are necessary. Each must have respect for the other. There must be general appreciation—each will fall or rise together.

We must keep opportunity alive in the United States both for management and labor. Labor is entitled to and must have its full share of the profits and progress of industry; investments must be secure and given a chance to gain a fair return. This is the system which made America great. It is the only system which will keep us a progressive people. Unjust crippling of either labor or management through regulations, taxation, or excessive controls will retard the onward march of America.

You of South Carolina and I of Massachusetts have much in common. We represent two great American States—States that were part of America from the very beginning. We shared the adversities of less fortunate days, and we fought shoulder to shoulder for the freedom of this great country.

We have had our differences—even the best of families have little differences. Happily these differences were many years ago and are now forgotten by a determination once more to fight for the preservation of American freedom.

Business is the servant of peace. Business conventions, such as yours, represent one of America's finest expressions of constructive cooperation for peace, progress, and human welfare.

The pattern of your work and your constant deliberations for the advancement of abundance is a shining example to all the world in these difficult times of postwar readjustment and world reconstruction.

The longer I live in Washington the more convinced I become that the true path of progress and prosperity is through voluntary cooperation among men of good will.

The practical measures which advance human welfare are seldom the inventions or inspirations of government. Instead, it is the men who keep production and commerce flowing who are the real authors of our material progress, and that peace which can flower only under conditions of reasonable economic abundance.

It is the distinguishing mark of the American businessman that he is always thinking about tomorrow. Business must look forward at all times, because it is the decisions of today which make the substance of tomorrow.

However much we may worr, and fret about Washington as the center of our national economic life, the fact remains that it is the day-to-day operations of hundreds of thousands of small business enterprises throughout the country which really determine the energy, the tone, and the strength of our business structure. American business is too vast, too complex, too widespread to be guided and controlled by any central bureau of thinkers in Washington.

We live these days in an epochal period of testing. All around the world, conflicting ideologies strive for the mastery of men's hearts and minds. On the one hand, we have the system of freedom under law, the system which took deep root in all the soils of America, the system which is founded upon individual responsibility, individual discipline, devotion, initiative, energy, and skill. This is the system which, in times of stress and strain, so often calls forth unmeasured and unsuspected displays of skill and heroic performance in men and women.

Opposed to our American system of freedom and ordered liberty under law, we have abroad in the world today a second school of government—the advocates of many kinds of regimentation, statism, or benevolent bureaucracy. In one direction, this system is called the police state. In another, it is known as the welfare state. But it matters little what the opposing system may be called in different lands—the essential difference from the American way is always the same. These other systems represent the dominance of the government in the daily lives of the people. The essence of the American system is that government is the servant, never the master of the people.

I was happy to accept your invitation to Charleston today because I feel with deepest conviction that everything we hold dear in America—everything to which we aspire as a nation—is wrapped up in the success and survival of our system of constitutional government, a government of balanced powers, a government of local home rule within the States, a government which is forever restrained by law from pushing the people around to the whim of little bureaucrats with big ideas, and big appropriations.

You are all familiar with that celebrated quotation from Thomas Jefferson's letters early in the nineteenth century, when he admonished his countrymen against the perils of excessive government. Said Jefferson:

"Were we directed by Washington what to sow and what to reap, we should soon want for bread."

The world's bitter experiences with the police state over the last quarter century have given new meaning and new urgency to Jefferson's words. We all know from our practical experience on Main Street that there are many things the people can do better for themselves and more economically than the Government can. Whenever the Government moves into a new field of welfare, the costs go up by a certain percentage of bureaucratic brokerage—the overhead, or administrative costs. Then the service to the people costs not only what the people get but, in addition, something for the planners and thinkers who administer the program. That's the item of bureaucratic brokerage, and that's why every Government service always costs more than the original estimates. In the post office, for example, there will be a deficit this year amounting to more than $500,000,000, and that after the recent postage increases.

A part of my job in the House of Representatives is to bring men together on many projects of national scope and significance.

I have had a lot of experience over the last 30 years with the machinery of conciliation and compromise. I know that nothing good, nothing sound, nothing constructive ever is accomplished save in an atmosphere of mutual trust, mutual confidence, and cordial good will. That is the great secret weapon of America, the determined unity of our people in many States behind the basic fundamentals of constitutional government, government by consent of the governed, not by the will or the whim of some secret clique in far-away Washington who are chasing the elusive rainbows of collectivism and all-powerful state socialism.

Nothing has happened in our recent political history to discourage persistent American endeavor. The opposition party in this country is stronger numerically today than at any time in the last 16 years. In several important States the decision last November in the electoral college was by a margin of less than one-half of 1 percent of the total vote cast.

When you hear all this noisy chatter about a sweeping mandate for this or that project in state socialism—remember that the present administration in Washington is a minority administration—that more people in the United States voted against President Truman last November than voted for him.

I do not mention this in any spirit of narrow partisanship. I merely point out a fact which President Truman himself graciously acknowledged in his inaugural address last week, when he asked for the cooperation and support of men of all parties.

But we must keep in mind that cooperation between parties assumes agreement upon the fundamentals of our treasured American constitutional system. There is no mandate anywhere—at any time—by any group or party, to undermine or disregard the fundamentals of constitutional government. As time goes on, I hope, we shall hear less and less about the mandate.

So, I say to you, there are many constructive elements in the national picture today. Fundamentally, the aspirations of American life are much the same in every section of the country—and I am certain that the congressional delegations from the South are in no mood to see our traditional system of constitutional government undermined and weakened by the advocates of European collectivism.

I recall quite clearly that the Eightieth Congress was summoned into extraordinary session last summer to do many things in the space of 2 weeks. We were told to ease the housing shortage, bring prices down, increase wages, and nail down a lasting world peace—all in 2 weeks. But now the Eighty-first Congress has been in session 4 weeks—and all that has happened, so far, is a pay increase for the President and a small relief bill for western cattlemen.

I mention these things merely to emphasize that the new concept of state socialism for America is not moving along too fast in Washington these days.

The next thing on the legislative calendar up there is a measure to extend for six months the voluntary allocation law enacted last year by that so-called terrible Eightieth Congress; and the next thing after that is to extend the export control bill enacted last year by the Eightieth Congress. Both of these measures expire on February 28, 1949. Now, if that was such a terrible Congress, the Eightieth, as so many were told, is it not strange that the first acts of the Eighty-first will be to pick up two laws placed on the books by the Eightieth Congress and extend them for an additional period. These things mark well the difference between reckless political thunder and the practical realities of effective administration of the public business.

When passions are cooled and we view events in proper historical perspective, we will realize that the Eightieth Congress was one of the most constructive in our national life. We who helped make that program, both Republicans and Democrats, have no apologies to make for the Eightieth Congress. And may I say in all the sharp controversial measures we had the support of a majority of the Congress. We rejoice in its support of sound, forward-looking, solvent, Constitutional government.

The South has little patience with men who undertake to make business the whipping boy for all our economic stresses and strains. We accomplish little for the national welfare by lashing out politically at this group or that as the author of all adversity. The fact is that we should spend more time in Washington giving encouragement and moral support to the men and women—the workers and the managers—who keep the tides of business flowing. All too few among us realize how much we owe to the business community—how much we owe for the regular flow of food and supplies to our great cities—how much we owe for the conveniences and labor-saving devices which are obtainable at the nearest store—how much we owe businessmen for the assistance they give in community projects, in welfare work, hospitals, education, and community services of every sort.

Close down our marvelous business enterprises for so much as one week—if you can imagine such an act of folly—and most of this country would be without the barest necessities of life. In many industries there are hardly 10 days between the factory or the farm and the direct consumption of the product in the American home. How complex and how delicately balanced is the fine economic mechanism which moves this tremendous volume of goods for 145,000,000 people so swiftly, and so silently from production to consumption.

It all works like a gigantic clock. Yet some there are who would destroy this wonderful mechanism and begin building another in the pattern of the Moscow master plan.

Instead, we would do well to reflect a minute on the mighty picture of America's economic power for good—and to remind ourselves that we have a great responsibility to protect and defend this system of free-competitive enterprise, which is the source of our strength and well-being.

This job begins, to my mind, with a firm resolve to sweep Communists and fellow-travelers from the United States Government bureaus and agencies in Washington. Two years ago, in opening the Eightieth Congress, I told my colleagues in the House of Representatives: "There is no room in the Government of the United States for any who prefer the communistic system, or any other form of absolutism, to our American system. Those who do not believe in the way of life which has made us the greatest Nation of all time should not be permitted to occupy positions of trust or power in the American Government. They should be—they must be—removed."

That has been the unwavering position of every true defender of the American way throughout this terrible and costly cold war.

Some have called this issue a "red herring."

But I am happy to note that President Truman, in his inaugural address last Thursday, alluded to communism as a "false philosophy"—he said that millions have been misled by communism—and that "many peoples have sacrificed their liberties only to learn to their sorrow that deceit and mockery, poverty, and tyranny, are their reward."

We are happy, indeed, to welcome President Truman to this new position on the menace of world communism. We have known from the very beginning of our fight against subversives in Washington that we were eternally right—and that the overwhelming sentiment of the American people ultimately would compel the administration to take a firm stand against the world menace of revolutionary communism.

But as we expand our national policy against the killing moral and spiritual aggressions of Kremlin communism, let us remind ourselves every day—we must check the spread of communism at home before we can stop its poisonous growth abroad.

We have a duty close to home, to uproot the killing tentacles of communism in the United States. The Government has ample authority, ample appropriations, and ample moral support for that program—and we who love America intend to see that they put their shoulder to the wheel and get that clean-up done. What is the logic of spending billions of dollars a year overseas to check the tide of communism, if we allow it to gnaw at the very vitals of our own Government in Washington? Let's begin this clean-up at home.

There is no official guess as yet concerning the ultimate money cost of the enlarged program of world assistance. The budget sent to Congress 3 weeks ago called for spending amounting to roundly $42,000,000,000 in the fiscal year ending June 30, 1950. But that budget omitted three important items of expenditure. The three items left out of that budget may amount to several billions of dollars.

They are:

1. Enlarged aid to Europe.

2. Quick expansion of the United States Air Forces.

3. An enlarged program for reclamation, irrigation, and public works, as already outlined in the various engineering studies submitted by the President's Council of Economic Advisers.

Obviously these unbudgeted expenditures were in the President's mind when he called for new tax increases amounting to something between four billions and six and one-half billions, including increased pay-roll taxes for the social-security programs. The question then arises—how much Federal tax money can you extract from the American people without destroying their incentive to work and save?

My view is that we already are skimming off too much of the national income for Federal taxes—that the American people will not stand still for another tax increase before some serious attempt is made by the administration to reduce Government expenditures—to eliminate the tremendous waste and overlap, the duplication of work in many bureaus, and the steady piling on of new activities which the people could better handle for themselves. I suggest that before we raise any new taxes, we should try first to cut down the tremendously swollen and wasteful rate of Federal spending, for things which are unnecessary—for things we can't afford—for activities which have no rightful place in a government operated under our American constitutional scheme.

We are still paying the burdensome excise taxes at the full wartime rates—25 percent for cable and radio messages, 25 percent for leased wires, 20 percent on telephone messages, 20 percent on electric-light bulbs, 20 percent on jewelry and luggage, 10 percent on toilet articles. These are wartime tax rates—they are a direct burden on every sort of business transaction—they curb the market for consumer goods—they pyramid up and up into exorbitant costs for the whole business community.

They should be rolled back at once to the prewar rates. For no system of economy can indefinitely stand wartime tax rates carried over into peacetime operations. We must insist again that the soundest way to balance the budget and meet additional defense expenditures is to cut down on waste, extravagance, and reckless spending in the bureaus.

The budget now before Congress is the largest peacetime budget every submitted to any legislative body anywhere at any time in all the history of the world. This budget amounts to about $282 a year for every man, woman, and child in the United States. That means $1,128 a year for the average American family of four people. Under that Federal tax burden, every family must lay aside almost $100 a month out of income before it has a penny to spend for itself—for food, clothing, rent, recreation, medical and dentist bill. If we would but cut that Federal "take" in half, we could at once balance every household budget in the land. This is no time to be talking about higher taxes. There is a breaking point in this tax load—and I have a feeling that we are already perilously close to that breaking point. The cost of Government must come down.

Besides the budget receipts. the Federal Government takes in about $2,000,000,000 a year in old-age pension and retirement taxes. Those taxes are not in the budget—but the money is spent as fast as it comes in, for the routine expenses of government—and all the social-security fund gets is a Treasury I O U—a special form of Government bond, for the social-security trust fund. That trust fund now amounts to more than $10,000,000,000—and there is not one penny of cash in it—just Government bonds.

When funds are needed to pay the pension contracts the money will have to be taken from the people a second time—either in additional taxes or in new forms of Government debt. So those social-security liabilities will be paid twice by our people—once in the direct pay-roll taxes and a second time in the conversion of the bonds now in the trust fund to make cash available for the pensions.

That's the kind of "blue sky" finance they are trying in Washington these days. Such operations affect the economy of the entire country. The people get no opportunity to put their own financial houses in order at home, because the Federal tax collector is always standing at the door, for more, more, more.

We cannot stand idly by and watch these things go on forever. It's not good business—and it's not good for business. What hurts business hurts America.

These are but a few of the problems which will test our mettle as Americans during the next 2 years.

We must meet them like men—not run to the refuge of glowing promises—to be performed by the next generation.

We have a national debt of $252,000,000,000, and that is the sternest reality before the American people today.

The vital interests of this country are greater than any political party. Men and women who believe in the Constitution and in American freedom must unite for those policies which will put this great country back on the track of its true destiny.

We must be on the alert against threatened bankruptcy through extravagance and waste in Washington.

We must be on guard against the ever-advancing tides of state socialism and Federal encroachment upon local home rule.

We must stand firm against new advances by government upon the daily lives of the people.

On these great principles a host of Democratic Senators and Representatives in Congress stand shoulder to shoulder with the Republicans on the side of the American tradition.

I, for one, am on the side of hope and reasonable confidence. I have never doubted for a moment that the old faith still lives in the hearts of an overwhelming majority of our people—north, south, east, and west. There can be no doubt, as yet, that we shall eventually win through to the great American dream of ordered liberty under law.

By that program, with that vision, with that high purpose, we shall yet light the lamps of freedom again all over the world.

But we must keep our political powder dry.

Let you, as business leaders, turn to your great work with a will which can know no defeat.

It is a great challenge to the people of America. We must not fail.

Jewish State—Economic News Letter

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. MULTER. Mr. Speaker, the semimonthly bulletin about developments in the economic life of Israel, based upon reports from within the Jewish state, is now being issued jointly by the public-relations department and the economic commission of the Zionist Organization of America, of 41 East Forty-second Street, New York City. I am making a part of the RECORD the first issue of that News Letter because I believe it will prove of considerable interest and help to Members of Congress. Any Members who are interested in receiving future issues may address a letter to the editor at the above address, who has advised me that he will be happy to make future issues available to any Member of Congress desiring them.

The News Letter follows:

MESSAGE FROM THE PRESIDENT OF THE ZIONIST ORGANIZATION OF AMERICA

The Economic News Letter represents an aspect of the expanding services rendered by the ZOA to Israel and the American community. The economic life of Israel, the creation of a self-sustaining economy for its people, is an objective worthy of the best thinking and efforts of Zionists everywhere.

The News Letter is part of our program to meet the new needs and adjustments occasioned by the independence of the state of Israel and to acquaint our membership and all those interested in Israel with conditions and developments there.

In linking the economic life of Israel and America, I salute the new medium of information and urge the American community to make full use of the unique and valuable matter contained in these columns by subscribing to the publication.

Sincerely yours,

DR. EMANUEL NEUMANN.

THE ISRAEL POUND

LONDON CONTROL OF CURRENCY

Under the mandatory administration, the country's currency was issued by the Palestine Currency Board—a body situated in England and represented in Palestine by a currency officer.

The currency was rigid. It was covered by British, British dominion, and colonial government securities. No part of the Board's assets was invested in any Palestinian enterprise, and the currency offered no credit or rediscount facilities whatever. After the termination of the mandate, London control of currency became untenable, and previously existing local machinery for obtaining additional notes disappeared from Palestine. Banks were no longer in a position to increase their cash and any nervousness on the part of the public might well have had fatal results if the banks had been unable to pay out deposits.

It therefore behooved the new Israel Treasury to see that its own notes or securities became a part of the central banking and credit machinery as soon as possible.

FARSIGHTED MEASURES OF BANK

Before the termination of the mandate, the Anglo-Palestine Bank, being conscious of its great responsibility, not only to its own depositors but, in view of its leading position in Palestine, to the country as a whole, took some steps to prepare for the eventuality of British departure. The bank laid in great stocks of Palestine currency notes while these were still obtainable. The bank also decided to print its own notes, and hold them in reserve against any possible emergency.

The state of Israel was formally declared on May 14, 1948. Its provisional Government was kept fully occupied with pressing military, political, economic and other tasks. In the meantime, the Anglo-Palestine Bank studied problems of currency and was ready with plans when the Minister of Finance required them. Owing to the difficulty of hastily creating a central bank and to the time required for all preparations, including the printing of notes, the government decided to avail themselves, at least for the time being, of the credit enjoyed by the Anglo-Palestine Bank as well as of the bank's experience, machinery and banknotes. On August 17, 1948, the Provisional Council of State enacted the bank notes ordinance and the currency ordinances and signed an agreement with the Anglo-Palestine Bank under which the bank was authorized to issue its notes, which became legal tender. Palestine Currency Board notes remained legal tender until September 15, 1948. Thereafter the bank notes became sole legal tender. The exchange rate was one Israel pound for one Palestine pound. The note-issuing functions are concentrated in a special issue department of the bank, which is deemed by law to be a separate and distinct legal person. The assets which the issue department may hold against the currency circulation are: gold, foreign currency, currency notes of the Palestine Currency Board, treasury bills and other Israel Government securities due for redemption within 1 year; loans and rediscounts to banks.

CONVERSION OF CURRENCY NOTES

The new currency was favorably received by the public, and the exchange of old currency notes for new bank notes proceeded smoothly. The issue department published its first weekly statement on August 18, 1948. Its statement as of January 12, 1949, reads as follows:

	Pounds
Gold	---
Foreign currency	6,831,658
Palestine currency notes	18,823,342
Treasury bills	6,000,000
Loans and rediscounts to banks	---
Bank notes in circulation	31,655,000

The item, Palestine currency notes, has been decreasing, and will continue to do so at the rate at which these are handed in to the Palestine Currency Board in London, where credit is obtained in sterling (on what is termed No. 2 account), which increases as sterling accumulates.

PRUTA: NEW SMALL CHANGE

The Israel Government has been empowered to issue metal coins for small change. The Israel pound is to be divided into 1,000 prutot (singular—1 pruta) in lieu of the 1,000 mils as heretofore. Coins will

have denominations ranging from 1 pruta to 500 prutot (equivalent to one-half pound).

Government Borrowing

LOAN OF THE JEWISH AGENCY

The first call upon the Yishuv to lend money for defense purposes was made by the Jewish Agency for Palestine in May 1948, before the establishment of the state. The call was for subscriptions to a loan of 5,000,000 pounds repayable in 10 equal semiannual installments together with interest at 3 percent. To make the loan attractive for merchants, certain priority rights as to allocations of dollars against licenses for essential imports were attached to these certificates and the dollar rate was guaranteed at not below $3 to the pound. The loan was fully subscribed shortly after the offering. The first instalment of capital and interest was paid on December 15, and the semiannual coupons were quoted above par on the Tel-Aviv Securities Clearing House (the local stock exchange).

SHORT-TERM TREASURY LOAN

In September 1948, the Government adopted the system of offering Treasury bills maturing after 91 days for tender by banks and other interested institutions. The administrative arrangements are in the hands of the issue department of the Anglo-Palestine Bank, Ltd., which informs banks and others, weekly, of the Treasurer's offer and accepts tenders on his behalf.

NEW GOVERNMENT LOANS

The third phase of public borrowing is about to open with the forthcoming issue of three separate loans. These are as follows:

(a) Seven million five hundred thousand Israel pounds: Three-percent War Loan (1954/59).

(b) Three million Israel pounds: Three-percent Government Loan (1953).

(c) Three million Israel pounds: Popular Loan Premium Bonds (1949–69).

The first (a) is designed for merchants, manufacturers, people of means, professional men, etc., and is in the form of negotiable registered stock. Interest will be payable semiannually in March and September. Redemption will be by drawings or purchase in the open market of not less than one-tenth of the total amount of the loan in each half year beginning September 1, 1954.

The second loan (b) is designed for banks. Interest is payable semiannually. The loan is redeemable at the conclusion of 5 years or earlier subject to 3 months' prior notice.

The third loan (c) is of a type to which some conservatives might object had it not been previously employed—with a slight difference—by the late mandatory government. Interest is not paid in the normal way but distributed in the form of prizes. Four times per annum, 175 bonds will be drawn for capital redemption and prizes. In three of the four drawings, the first prize will be 5,000 Israel pounds, second 2,500 Israel pounds, third 1,000 Israel pounds, fourth 500 Israel pounds, and 168 various smaller prizes. At the third drawing of each year, the first prize will be 10,000 Israel pounds instead of 5,000 Israel pounds, the other prizes remaining the same. The total interest to be distributed by way of prizes amounts to about 3 percent per annum. The loan is designed for the smaller man. The unit is a premium bond of 20 Israel pounds, and half-bonds of 10 Israel pounds, will also be issued.

All bonds not drawn during the 20 years duration of the loan will be repaid on the conclusion of that period.

The proceeds of the above three loans, totaling 13,500,000 Israel pounds, will be used to defray war expenditure except 4,000,000 Israel pounds will be for important public works of an urgent national character (2,000,000 Israel pounds of this for the railways and civil aviation).

In view of the present stringency of liquid means, the raising of the 7,500,000 Israel pounds war loan is an undertaking which will require a considerable effort on the part of the commercial and industrial community. The various public bodies and organizations such as the chamber of commerce, manufacturers' association, etc., have promised their cooperation and the placing of the loan will be done under the auspices of public committees appointed by the treasurer.

The administration of the three loans will be undertaken by the Anglo-Palestine Bank, Ltd., on behalf of the treasury, a service similar to that rendered by the Bank of England in the administration of British Government loans.

Immigration

1948 IMMIGRATION OVER 100,000

The number of immigrants who entered Israel in the 12 months between the United Nations' Palestine resolution of November 29, 1947, and the end of November, 1948, was over 100,000. The reference is to immigrants only, exclusive of tourists and returning residents. The rate of immigration was on the increase during the latter part of the year, and a monthly figure of about 10,000 immigrants is generally accepted as correct. This means today an annual increase at the rate of about one-seventh of the existing Jewish population. It is thus equivalent to an immigration into the United States of America of about 19,000,000 in 1 year. That this is bound to be a tremendous factor in Israel's economic life need hardly be stressed. The absorption of immigration on so vast a scale has never before been undertaken in modern history. It is bound to pose enormous problems, to require considerable investments and to open equally great industrial and commercial opportunities.

The major problem, of course, is housing. Among the many plans for aid is the joint housing project of the Israel Corporation of America and the Jewish Agency for Palestine.

The Israel Corporation of America, 425 Fourth Avenue, New York City, Albert Schiff, president, organized by leading American Zionists, have registered a stock issue of $6,250,000 with the SEC. The stock is sold in units of one share of preferred and one of common for $25. The first major investment will be a low-cost, multiple-dwelling housing project in Israel in partnership with the Jewish Agency for Palestine. Blueprints and plans have been drawn and are being studied by American experts and implemented.

PLANS FOR IMMIGRANTS

Plans for the settlement of new immigrants, as outlined by the director of the Jewish agency's settlement department in December, include the establishment of 120 to 150 new settlements, the sites of 96 of which have already been selected. At least 4,500,000 pounds are needed for the establishment of these settlements, and another 1,300,000 pounds for development work in Negev.

Since the issuance of these figures, the realization of the above plans has already begun, and many settlements have been set up. These matters, too, are at present treated very discreetly for reasons of security, and the locations of the new settlements are not given. It is understood that while strategic considerations play an important part in the choice of location, the settlements will be situated on land well suited for agricultural production.

The major problem, of course, is housing. All possible means of aid are being recruited. Many American investment companies are entering this field.

INDUSTRY

It will be a regular feature of these newsletters to provide at least one item of industrial news. Industrial developments in Israel will be reviewed, or a report will be made on some interesting manufacturing enterprise.

When thinking of the U. S. A. and its industries, we immediately call to mind Detroit, with finished cars rolling off the assembly lines, or Chicago, with cattle entering the factory at one end and coming out as sausages at the other. American readers will have to forget this scale. In the States there are very many small and medium industries much like our own. These should be borne in mind when thinking of Israel and its industries.

One other point must be explained at the outset. Israel is at war, and its manpower is strained to the utmost. All industries, except those working directly for the war effort, are understaffed. Figures of production are, in consequence, correspondingly low.

PLYWOOD: TIMBER IMPORTED

A fairly young branch of industrial production and one which has grown up in two cooperative settlements, is the manufacture of plywood. Plywood is, of course, an essential article in the furniture and building industries and as such, is important in Israel, with its growing volume of immigration. Israel is not alone in building up such an industry, the raw material of which, timber, is not available locally. Quite a number of European countries, including France, Britain, Germany, and Belgium base their plywood industry largely on imported timber.

The older of the two factories was set up by the cooperative settlement of Afikim in the Jordan Valley in 1938. It is called Kelet. It was originally established to produce light boxes for the transportation of agricultural products. During the World War, the British Middle East forces also placed orders, and the plywood factory grew out of these beginnings. The original investment was about 20,000 pounds and further small investment was made until last year, when the factory was enlarged and additional up-to-date machinery was installed. The total present investment is about 125,000 pounds. The factory's products have undergone a steady improvement and are now of the highest quality.

The second factory, Taal, was established by the settlement of Mishmaroth (25 miles almost due South from Haifa) less than 2 years ago. About 35,000 pounds have been invested and a high-grade product is being manufactured. The settlement is planning to increase the factory's capacity and equipment.

The present monthly output of the two factories together is about 200 cubic meters and roughly equals present local requirements. The production planned for 1949 is a total of about 5,000 cubic meters for the year.

The timber used as raw material is mainly brought from Canada, Yugoslavia, and Equatorial Africa. Locally grown eucalyptus was used during the recent World War when timber could not be imported, but eucalyptus is unsuitable for the purpose.

DOMESTIC PRODUCT STRONGER

It is claimed that imported plywood, which is joined with organic glues such as albumen or casein, does not generally compare in strength with the locally manufactured article and can withstand dampness less well. The product of the two local factories is made with synthetic glue. The measurements, too, of the finished product are adapted to the local standards of size, and the

waste which generally occurs in the use of imported plywood is thus avoided.

It might be mentioned that in this branch of production, the cost of labor represents about 40 percent of the total cost of production. This explains in part why such an industry can be successfully conducted despite the fact that the raw material is wholly imported. Moreover, the cooperative settlements are in an advantageous position in regard to labor because they are able to switch more members on to their industrial production during periods when less labor is required in agriculture.

NOTE.—Subscribers may request discussion of particular industries and every effort will be made to treat them as soon as possible.

FOREIGN TRADE

IMPORT AND EXPORT LICENSES

A license is required for every import to or export from Israel, exclusive of goods brought by the government of Israel or goods imported for Government use, as well as goods imported for the Israeli armed forces, and personal or household utensils brought by immigrants and travellers, or gift parcels sent on certain conditions. The conditions are that the equivalent of the goods contained in one postal parcel and in one consignment does not exceed IL.15—and that each recipient of such parcel does not receive more than one parcel, as stated, within any period of 6 months.

Owing to the lack of foreign currency at present, only the importation of essential goods not produced in Israel, e. g., foodstuffs, raw materials for the local industries, or industrial equipment, is allowed. Applications for licenses to import or to export must be submitted to the export and import licensing control. Licenses are issued to Israeli citizens only. The import and export licensing control consults the Controller of Foreign Exchange, the Food Controller, the Controllers of Light and Heavy Industries, the Controller of Fuel, and the Controller of Diamonds. Licenses are confirmed only after the necessary foreign exchange has been secured, and therefore all decisions depend on the foreign currency at the Government's disposal from time to time. In view of this state of affairs, no order of priority of essential goods has been published as yet. Licenses are issued in respect of goods which are essential at the time of the application, in the order of their importance and taking into account the currency available at the time.

All applications received by the import and export licensing department are considered on their merits. The past-trade principle is usually not applied, in order not to discriminate against new immigrants.

CUSTOMS DUTIES

ARTICLES EXEMPTED FROM TARIFF

(According to the Israeli consulate general)

The following articles are exempt from customs duty, if they are included in the passengers' baggage:

(a) Old and new wearing apparel, and personal effects, in reasonable quantities.

(b) Binoculars, photographic cameras, typewriters, and sports accessories, provided they have been used, and the customs officer is satisfied that they are part of the personal belongings of the passenger.

(c) Implements, instruments, and tools for the professional use of the passenger.

(d) Intoxicating liquors up to a maximum of one-quarter liter.

(e) Eau de cologne or other scents, up to a maximum quantity of one-quarter liter.

(f) Tobacco (including cigars and cigarettes) up to a maximum quantity of 200 grams.

(g) Other goods liable to customs duty, if the amount of duty to be paid does not exceed 50 mils.

(h) The exemptions specified above are granted only in the event that the statements made to the customs officer are correct.

2. In spite of the fact that no provision is made in the customs tariff, it is customary to grant passengers exemption from customs duty on minor quantities of other articles (including foodstuffs), provided they are for his own personal use and within reasonable limits. Passengers have to declare to the customs officer that such articles are included in his baggage. If the customs officer is of the opinion that the quantities are extensive, customs duty must be paid.

Rice 1.5 mils per kilogram; canned meat (corned beef) 7.50 mils per kilogram; cheese 20 mils; butter 20 mils per kilogram; milk 8 percent of value; intoxicating liquors 600 mils for a small bottle and 1,200 mils for an ordinary-size bottle; canned fish 10 mils per kilogram; sugar 7.5 mils per kilogram plus 15 percent of value; jams 10 mils per kilogram plus 30 percent of value; other foodstuffs 35 percent of value; cigarettes 6.250 pounds per kilogram; cigars 8.500 pounds per kilogram.

Passengers bringing with them drafts of money, checks, or foreign currency, must give the customs officer detailed information. In these cases, the customs officer will register in the passport all particulars relating to the foreign currency. The foreign currency will be left in the possession of the passenger, but when leaving the country again, he will have to produce to the customs officer the sum registered in his passport. The passenger is allowed to sell the money in Israel, but only to a bank which is authorized to buy foreign currency on behalf of the authorities. In this case, the passenger will receive from the bank a note certifying the sale of the foreign currency, and this certificate must be shown by him to the customs officer, together with his passport, when leaving the country.

POSTAL SERVICE

UNITED STATES PARCEL-POST RULES

Ordinary and registered small packets and letter packages (surface or air) containing merchandise, and ordinary (unregistered and uninsured) parcel-post packages, are now accepted for mailing to the state of Israel, says a recent United States Postal Bulletin.

The weight limit for a package sent by parcel post is 22 pounds; the greatest length allowed is 3½ feet; the greatest length and girth combined, 6 feet. No provisions have been made for the insuring or registering of parcel-post packages.

According to United States Postal Bulletin No. 19192 of December 21, addressees in Israel are required to possess import licenses in order to take delivery of (1) all parcels mailed for commercial purposes; (2) all parcels sent as gifts exceeding $60 in value; and (3) parcels sent as bona fide gifts exceeding $4 but not exceeding $60 in value, when more than one is received in a 6-month period. Gift parcels not exceeding $4 in value may be received by persons in Israel in unlimited numbers without import licenses.

Parcels addressed to Israel must be marked by the senders either "Bona fide gift" or "Addressee has obtained import license," and care must be taken to see that the value of the contents is clearly shown on the customs declarations. It is the responsibility of senders to determine that the addressees of their parcels have obtained import licenses. If the licenses are not produced when required, the parcels are liable to confiscation.

A Rough Deal for District of Columbia Teachers

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. KLEIN. Mr. Speaker, the basis of American democracy is the public-school system. No nation in the world can boast our educational plant, nor the educational accomplishments of our people.

We demand of our teachers the finest educational background. They have to be college graduates to teach in the primary schools, and we demand graduate degrees of them for each successive step of increased responsibility. They must spend a certain amount of their own time in study, continuously.

Yet teachers are seldom paid in proportion to their responsibilities, to their importance in a representative Republic, and to their needs.

Here in the District of Columbia the salaries of teachers rank almost at the bottom of a tabulation of salaries proportioned to education and tenure.

To attempt to save a few pennies in the District of Columbia budget by paring back the cost-of-living increases for teachers defies all logic and reason. It is clearly discriminatory. It can result only in driving from the teaching staffs of Washington schools the cream of our teachers.

Even the conservative Washington Star feels that the District's school teachers are getting a bad deal. Under leave, I now insert the full text of an editorial from the Star of Sunday, February 13, 1949:

A FAIR DEAL FOR TEACHERS

There is no just basis for discriminating against public-school teachers in the pending plan to include District Government employees in the $330 pay-raise program voted last year for Federal workers. The Federal raise was a cost-of-living adjustment applied generally, except for the District. It costs teachers just as much to live as it does anyone else. It is grossly unfair, therefore, to hold that they should receive less than the $330 awarded Federal employees. Yet a House District subcommittee has voted in favor of giving teachers only $200, instead of the $330 favored for policemen and firemen.

Such an inequitable plan would be piling injustice on injustice and thus would add to the difficulties of School Superintendent Corning in obtaining qualified teachers. Representative BATES of Massachusetts argued that teachers should be given the full increase only if they could show that this sum is needed to meet increased living costs since they last received a raise, in 1947. That raise, he said, had boosted teachers' salaries 80 percent over those of 1942. But Dr. Corning points out that the 80-percent figure applied only to minimum and maximum salaries, that no teachers at present are being paid the maximum allowed and that the average 1947 increase actually amounted to 49 percent. Yet the cost of living has risen approximately 70 percent since the beginning of World War II. It would take a cost-of-living increase more than three times

the $200 proposed to bring the average salary of teachers to a level justified by the rise in prices since 1942.

And it will take a lot more than $200 or $300 to raise teachers' salaries in Washington to the levels prevailing in most of the large cities. Latest salary figures of the National Education Association show that Washington stands eighteenth in the list of 20 of the larger cities. The average pay here for classroom teachers is $3,486, as compared with $4,630 in New York; $4,423 in Newark, N. J.; $4,381 in Detroit, $4,294 in Los Angeles, $4,104 in Chicago, $4,075 in San Francisco, and $4,035 in Milwaukee. Other cities with higher pay scales are Cincinnati, Minneapolis, Kansas City, Mo.; Boston, Indianapolis, Cleveland, Pittsburgh, Philadelphia, Baltimore, and St. Louis.

Mr. BATES has indicated disapproval of basing pay raises here on scales prevailing in other cities. But school authorities here cannot afford to shut their minds to conditions elsewhere. One of the reasons for the teacher shortage is the lure of high salaries in other cities. The Washington school system cannot hope to attract and hold the type of teachers which it should have if the pay scale continues to be so far out of line with the average paid in other large cities. As a matter of simple equity to local teachers and as a means of maintaining good educational standards in the Nation's Capital, Congress should see to it that teachers are treated as fairly as other groups in the matter of wage increases.

Why We Need Government Steam Electric Power Plants

EXTENSION OF REMARKS
OF
HON COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. WHITE of Idaho. Mr. Speaker, it seems that so many people miss the point concerning the Government's plan to construct auxiliary steam power plants that I submit here a copy of a letter giving my views on this important issue to secretary of the Associated Taxpayers of Idaho:

FEBRUARY 15, 1949.

Mr. MAX YOST,
Associated Taxpayers of Idaho,
Boise, Idaho.

DEAR MR. YOST: Thanks for your telegram indicating the apprehension of the members of your association concerning the appropriation of funds for the construction of an auxiliary steam plant in connection with the operation of the hydroelectric plants of the Tennessee Valley Authority.

I am sure we all recognize the fact that the Federal Government has large investments in the hydroelectric plants in question, and at the present time is unable to get the maximum return from all the power generated by these plants due to seasonal conditions and slack water at certain periods of the year, and that supplemental steam plants are required to provide for the year-around utilization of the hydroelectric power available during the peak production months of the year.

As I see it, denying the Government supplemental power producing facilities to maintain power production in slack water seasons would be like limiting a farmer to the use of a motor truck to serve his transportation needs at all seasons, when horses and a sleigh are a necessity in the season of deep snowfalls.

I trust that the members of your organization will support a program to utilize steam power and thereby increase the revenue-producing capacity of the plants in question.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

The Group Libel Bill

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include a letter to the editor of the New York Times from Mr. Joachim Prinz, chairman, administrative committee, American Jewish Congress. It is an excellent analysis of the provisions and benefits of the bill which is before the Committee on the Judiciary to make unlawful the transportation or mailing of defamatory material relating to racial or religious groups.

The letter follows:

SCOPE OF GROUP LIBEL LAW—BILL ENDORSED AS SAFEGUARD AGAINST ETHNIC AND RELIGIOUS DEFAMATION

To the EDITOR OF THE NEW YORK TIMES:

Defamation of ethnic and religious groups stands revealed today as a prime cause of discord in group relations and in the embitterment of millions of individuals. Fairness and humanity demand remedial measures. The group libel bill introduced by Representatives DAWSON, KEOGH, KEATING, JAVITS, and KLEIN attempts to furnish safeguards against the established evil with scrupulous regard for constitutional guaranties of freedom of expression.

The purpose of the bill is to extend to individuals in their capacity as members of ethnic and religious groups the type of protection from libel enjoyed by them in their capacity as unaffiliated individuals.

The law, which in its present state provides protection for an individual defamed as a private party, but not as a member of an ethnic or religious group, presents an obvious anomaly. It can no more be justified than a rule which required the criminal prosecution of assaults and batteries only when motivated by malice directed against the individual victim as distinct from malice against the entire group to which the victim belonged. Such a rule is obviously not the law.

Libelous attacks on ethnic or religious groups as such touch and concern each of their individual component members. Their insidious effects are clearly beyond all dispute. Over and above the personal injuries inflicted, they have nourished and sustained ethnic and religious discrimination, contributed to civic dissension, and enfeebled the Nation at large. Undismayed by these consequences, ethnic and religious hatemongers of all types not only peddle with complete immunity their poison but are abetted in their efforts by the availability of mailing privileges.

PROVISIONS OF BILL

The bill, now introduced, which offers the best remedies to date, makes it a Federal crime to engage in such incitements by way of printed or mimeographed material, distributed in interstate commerce. Truth or reasonable and honest belief in the truth of statements made is an absolute defense under the bill. Responsible administration of the statute is assured by requiring the Attorney General's approval and supervision of each prosecution.

In no way does the bill infringe upon freedom of speech or of the press. Constitutional guarantees of both these freedoms were designed to encourage traffic in ideas and knowledge. Ethnic or religious defamation has no more relation to ideas or knowledge than the use of purely insulting or "fighting" words already barred by the law. Utterances may well be proscribed when, as decided by the Supreme Court in *Chaplinsky* v. *New Hampshire*, they form "no essential part of any exposition of ideas and are of such slight social value as a step to truth that any benefit that may be derived from them is clearly outweighed by the social interest in order and morality."

The group libel bill in question is not designed to outlaw oral statements or personal correspondence evincing ethnic or religious ill-will. It is not meant to provide a definitive solution to all ethnic and religious conflicts. It is believed, however, that within its sphere it will substantially contribute to the general health of the body politic.

JOACHIM PRINZ,
Chairman, Administrative Committee, American Jewish Congress.
NEW YORK, *February 8, 1949.*

Know Your Congress

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. MILLER of California. Mr. Speaker, Earle D. Chesney, a Government career employee of 30 years, has been liaison representative for the Veterans' Administration on Capitol Hill since 1924. He has served in two wars, having been in the Army in World War I and in the Navy in World War II where he was on duty in every theater. Later he accompanied a congressional committee on an inspection trip of all naval bases encircling the globe and has received a commendation from the Secretary of the Navy for extremely meritorious services.

Mr. Chesney was the originator and creator of a cartoon character, Eggburt and other Navy cartoons, which was one of the wartime high lights of the United States Navy.

Under leave to extend my remarks, I include the following article by Mr. Chesney entitled "Know Your Congress":

KNOW YOUR CONGRESS

(By Earle D. Chesney, Director, Congressional Liaison Service, U. S. Veterans' Administration)

When Rear Adm. Edwin D. Foster, Chief of the Bureau of Supplies and Accounts of the Navy Department invited me to speak before the Supply Corps officers on the subject, Know Your Congress, I did not realize what a difficult task I had before me. In gathering the material for this talk, I was quite sure that I would find volumes in the Congressional Library that would be interesting, but was greatly surprised to discover that little had been written on this subject. However, the late Col. Edwin A. Halsey, Secretary of the United States Senate, had written an excellent pamphlet explaining the procedure of the Senate which is good as far as it goes, but it is, I am afraid, too technical

to interest those not already familiar with the work of the Congress. Congressman WRIGHT PATMAN, a Member from Texas, and Senator ESTES KEFAUVER from Tennessee, each have written excellent books on government with Mr. KEFAUVER, perhaps, coming as near to giving an over-all picture of Congress in his book entitled, "Twentieth Century Congress," as has been published to date. It is my endeavor to give you the history and function of Congress and its relationship to Government departments.

The House of Representatives is the oldest part of our Government. Its origin came with the convention of delegates representing different sections and communities of the Thirteen Colonies, who met in Philadelphia in 1774 to carve out of the chaos of 13 unrelated local governments a central and more adhesive government. Here we find the birth of the Continental Congress, a unicameral body, which wrote the Articles of Confederation and constituted the sole governmental agency through those trying years when the Colonies were shaking off the shackles of the British Empire. During this time there was no Chief Executive, all power being vested in the Continental Congress, a unicameral body. Officer of the Congress was called the President, and we recognize such eminent names as Peyton Randolph, of Virginia; John Hancock, of Massachusetts; John Jay, of New York; and Richard Henry Lee, of Virginia, among those who served in this capacity during the 15-year existence of this Congress.

The framers of the Constitution of the United States retained the format of the Continental Congress, renamed it the House of Representatives, and it remains today the heart of our Government. Provisions for a Senate of the United States completed the legislative picture. It must suffice here to say that the writers of the Constitution in organizing the legislative branch of the Federal Government with an "upper body" and a "lower body" borrowed from the theories and details of parliamentary systems which had been in existence for centuries.

The Constitution contains, in separate articles, provisions for three departments of the Government—legislative, executive, and judicial. There is a significant difference in the grants of power to these departments. The first article, treating of legislative power, vests in Congress "all legislative powers"; the second article, vests "the executive power" in the President; and the third article states that "the judicial power of the United States" shall be vested in the Supreme Court and such inferior courts as Congress may establish. The doctrine of separation of these powers is that no one of the three branches is to encroach upon another, except as authorized by the Constitution. The essential functions of the legislature are not to be usurped by the executive nor by the judiciary. In this way a concentration of power is avoided and respective powers are delegated to the departments best fitted to exercise them.

Something of the constituency of Congress should be noted. Who is a Congressman and what are the qualifications for the office? A Congressman is a Member of either the Senate or the House of Representatives. Actually the official title of a Member of the House is "Representative," and a Member of the Senate is usually referred to as "Senator."

As it is well known, there are 435 Representatives and 96 Senators.

A Representative must be at least 25 years of age, must have been a citizen of the United States for at least 7 years, and must reside in the State—and usually, though not necessarily, in the district—from which he is elected to Congress. A Senator must be at least 30 years of age, must have been a citizen of the United States for at least 9 years, and must be a resident of the State from which he is elected to Congress. There are no other qualifications to become a Member of Congress, but it is interesting to note that the membership of Congress represents a rather complete cross section of American life. Nearly every professional and many nonprofessional vocations are present. In the Eightieth Congress there are in the Senate 24 former governors, 5 former judges, and 1 general; in the 2 Houses may be found ministers, doctors, dentists, lawyers, bankers, educators, writers, merchants, etc. The Senate has 45 veterans while the House has 200 veterans, of which 65 have been former Naval and Marine officers.

Candidates for office use various methods to attract attention and induce the people to support them. The story of Abraham Lincoln's first race for Congress in Illinois illustrates his cleverness as a campaigner. It is said that on a Sunday morning he attended church in a town some distance from his home town of Springfield. The minister, in his enthusiasm to induce his listeners to declare themselves on the side of the Lord, stopped in his sermon and said, "I want all those who desire to go to heaven when they die to please stand."

When practically all of the congregation had risen, he asked them to be seated. Then he said, "Now, all those who desire to go to the other place when they die, please stand." Nobody stood up.

Then the preacher said, "I notice that our able young lawyer from Springfield did not stand when I asked those to arise who desire to go to heaven, nor when I asked those to arise who wanted to go to the other place. I wonder if he would be willing to tell us where he does want to go."

Lincoln straightened out his long legs and arose slowly, and, turning half way around so he could see most of the congregation, bowed slightly and smiled, as he said, "I want to go to Congress."

As was mentioned before, the Constitution, using the theories of other parliamentary systems as basis for our legislative set-up, spells out the functions and powers of the two Houses of Congress and provides that each House shall determine the rules of its proceedings. The parliamentary practices in Congress have emanated from four sources generally: First, the Constitution of the United States; secondly, Jefferson's Manual of Parliamentary Practice, which was prepared by Thomas Jefferson for his own use as President of the Senate, and which constitutes the basis for some of the most important parts of the practices of the House of Representatives; thirdly, the rules of the respective Houses which have been adopted from time to time; and, fourthly, the precedents, which are decisions of presiding officers in the construing of the rules, the authority, etc., of the House and Senate. It is of interest to note that the precedents used in the House were edited and compiled by Representative CLARENCE CANNON, of Missouri, chairman of the House Committee on Appropriations, who, prior to his service in Congress, was parliamentarian of the House in the Sixty-fourth through the Sixty-sixth Congresses.

It would be of little value, as a matter of fact confusing, to take up the procedure of Congress in detail. In certain aspects the procedure of the House and Senate varies drastically, and terms that would be necessarily used would shed little light without long explanation and involved definitions. Therefore, it is felt that nothing can be accomplished by going into these matters, suffice it to say here that the customs of the proceedings, the order of business, priority of motions and proposed legislation, privileges of the Members, follow the long-established rules of parliamentary procedure as qualified and adapted to the problems which are unique to the individual Houses of Congress.

The progress of a bill in Congress before it becomes a law may seem rather complicated to those not familiar with parliamentary procedure so that when they hear someone say there ought to be a law to do this or to do that, they are not in a position to know how much work is involved before a bill is enacted into law. A bill may be drafted by any Member and by placing the measure in the hopper, a box on the Clerk's desk, it is numbered and sent to the Government Printing Office and made available next morning at the document room. The bill is referred to a standing or select committee by the Parliamentarian, who notes the titles and contents of the bill and thereby determines the committee having jurisdiction over that type of legislation.

The committee chairman usually refers the bill to a subcommittee for consideration. The subcommittees are responsible for the major bulk of the workload in Congress. In order to save the time of the full committee it is the duty of the subcommittee to hear testimony, to develop facts, and to report their findings and recommendations of the subcommittee, and report the bill. This same procedure prevails in both Houses.

However, in consideration of bills on the floors of the House and Senate, the technique differs in many respects. This is understandable because of the difference in the make-up of the House and Senate and in their basic functions. As mentioned above, the less said of these procedural matters in an undertaking of this kind the better; but merely for the sake of illustrating the point raised a couple of illustrations will be made. When a bill is read for amendment (i. e., for the purpose of consideration of amendments) no Member of the House can speak for more than 5 minutes on any one amendment. Again, generally, no Member may occupy more than 1 hour in debate on any question in the House. These limitations on debate do not apply in the Senate, and it is well known what effect the filibuster has had in the past on certain legislation.

Where the House and Senate cannot agree as to contents of a bill, an interesting procedure follows. Conferees, usually selected from the subcommittee handling the bill in committee, are appointed by the President or President pro tempore of the Senate and the Speaker of the House to settle the differences. Upon reaching an agreement through compromise, etc., the conferees report to their respective Houses, which accept or reject the results of their efforts. In case of the latter, conferees are appointed again, sometimes different ones, and the same procedure continues until there is a complete agreement between the Houses.

After both Houses have passed the bill the Speaker, in all cases, must first sign the bill; then it is referred to the Vice President or President pro tempore for signature and transmitted to the President of the United States. The general policy of the President is to refer bills to the Director of the Budget and the department involved for study before he affixes his signature. In the event the bill is vetoed, both Houses must vote again on the bill and unless passed by a two-thirds vote the bill does not become a law and the President's veto is sustained. After the President signs the bill, or after a bill has been passed over a Presidential veto, it is sent to the Department of State, where it is recorded and a public law number is assigned and the law print is made available in the House and Senate document rooms and through the Government Printing Office.

This procedure may seem ponderous, duplicatory, and inefficient to the average person. Congress itself made thorough studies of its organization and methods during the Seventy-ninth Congress, which resulted in the Legislative Reorganization Act. Among other things, this act reduced, by merger, many of the congressional committees and authorized the assignment of specialists to the committees to furnish them with much

needed and, theretofore, unavailable information on proposed legislation.

Both Appropriations Committees now have staffs which have authority to investigate Government departments and to check on their accounting systems. The Armed Services Committees have permanent staffs, as well as other major committees, with authority to investigate and secure material for the membership of their committees.

You may ask the question during this résumé of the work of Congress as to what part you may play in the Government departments where Congress is concerned. The answer, I believe, is this:

The Supply Corps of the Navy performs a most important function during peacetime as well as wartime. The Supply Corps exists to serve the fleet, and in this connection it should be borne in mind that Congress has few men in its membership who are authorities on, or who are familiar in any way with, the operation of naval craft, both air and sea, but they all have a general knowledge of the cost of food, clothing, matériel, and most of the activities that come under the cognizance of the Supply Corps and Government agencies.

In the inspections made with congressional committees during the war I noted it was only when the Supply Corps' activities were inspected that one could sense a general feeling among the Congressmen that "Here's a subject that I know what they are talking about," for immediately their interest perked up and more questions were forthcoming. This should make every supply officer a salesman of the Corps, especially in dealing with Congress.

The opportunity afforded Government officials during inspections should be accepted on the theory that "Here's a Member of Congress who desires to know just what we are doing," and explain to him in detail so he will have a clearer understanding of your problems. It must be remembered that the chief of a bureau does not sit on the floor of the House of Representatives when Congress is in session, so he cannot be present to answer any questions that may arise affecting his department. Unless Members of Congress themselves have a general knowledge of facts, it is quite possible for erroneous statements to go unchallenged and to become detrimental to the department which otherwise could have been avoided.

Your Congress, being elected by the people of the United States, is made up of a body of men and women that can truthfully be called your board of governors. They have the responsibility of keeping their voters or the stockholders of your Government advised of the state of the Union. It is impossible for any one Member of Congress to be an authority on every Government agency. It has also been found impractical for Congress to accept all Government reports as presented; therefore they must protect the taxpayers and themselves by having these investigating bodies or groups to check on information received to determine its accuracy and to improve the service and functions of Government agencies.

The word "investigation" as used by Congress is a very overtaxed word. It does not often mean what the word implies, for I am quite sure the attitude of Congress is to work with departments and to enjoy a cooperative understanding. It must be stated, however, that some investigations result from information reaching Congress that would indicate "all is not running smoothly" in some Government agency.

The story of how the Truman committee was born is an excellent illustration. The President, then a Member of the Senate from Missouri, was on the Senate Appropriations Committee and, because of his World War I experience, was particularly interested in the War Department budget. In mid-January 1941 Mr. Truman began to receive disturbing reports on the conduct of the national defense program. Letters from Missouri complained that money was being wasted in the construction work being done at Fort Leonard Wood. The Senator decided to see for himself. He loaded his suitcases into his car and drove from Washington to the fort unannounced. He strolled quietly through the sprawling huts and skeleton framework of the great barracks. On every hand he saw evidence of waste and poor management. Then he drove back to Washington, visiting camp construction projects along the way. Everywhere the story was the same. Mr. Truman returned to Washington angry clear through. On February 10, 1941, he told the Senate about it. He insisted that to avoid a national scandal and to spur on the defense effort a special committee should be established that would hunt down waste and inefficiency and open up the bottleneck. On March 1, 1941, the Senate set up a committee of seven Senators, naming Mr. Truman chairman. It is impossible to assess the accomplishments of this committee in terms of dollars and cents. Thoughtful persons have estimated that it saved between four and six billion dollars and hundreds of thousands of lives.

Not all the investigations were conducted by the Truman committee, since practically every Senate and House committee has authority under the Reorganization Act to investigate any agency which they believe is not conducting its department along sound business lines. For instance, $40,000,000 was appropriated to build the famous Pentagon Building, and, as a result of a one-man investigation by Representative ALBERT J. ENGEL, of Michigan, a member of the House Appropriations Committee, it was discovered that the actual, final cost of the Pentagon amounted to $85,861,576. Mr. ENGEL stated that whenever millions of dollars were needed above the legal limit they were obtained through some expert shuffling of funds. The additional cost may have been justified completely, but the point is that Congress was unable to follow through adequately even on this peacetime expenditure. This weakness became a glaring one, as the war made it necessary to appropriate tens of billions of dollars, much of which had been loaned to the Government by the public in the form of war bonds.

Under the reorganization act, Congress now has additional staffs for aiding its committees to enable them to do a better job. However, these staffs are gradually becoming more proficient in the technical services rendered the committees and their permanent status under the reorganization act is building a career public service on Capitol hill.

I believe that Members of Congress and attachés of the Capitol are conscientious and honest in their endeavor to see that this Government is run as efficiently as possible. It is unreasonable to assume that a Member of Congress or a clerk of a committee can know every phase of our huge Government structive any more than one can expect a supply officer to know how to fly a naval aircraft or command a submarine, just because he is in the Navy. For this reason, it is highly essential for every Government agency to acquire a better understanding of Congress and to maintain a close liaison which makes for better cooperation. It is only natural that an official resents the fact that his department is being investigated and too often shows this resentment. It must be borne in mind that policies of the Government departments have been well planned and have cleared all bureaus and the Director of the Budget, if money is involved, as well as the Comptroller General, before they are approved by Congress. Therefore, individual officials in their dealings with Members of Congress or investigators for congressional committees have no need to worry if they can explain clearly the operations of their particular department.

I remember an incident during the war when the Subcommittee on Naval Appropriations inspected a naval base in Oakland. While driving over the bridge to the base, I noticed the chairman, Mr. HARRY R. SHEPPARD, of California, was very much interested in the number of railroad cars in that area loaded with war material, standing on the sidetracks. No sooner did Admiral Mayo conclude his introduction than the chairman asked how much demurrage was being paid at that base. The admiral stated that he did not have those figures with him, but perhaps one of his assistants present could give him the information. A young officer stepped forward and gave the amount. The chairman stated that he was quite sure that the figures were incorrect since he had personally observed, as did other members of the committee, the large number of cars surrounding the naval base loaded with war material. The young officer immediately explained that it was true that the committee had seen a lot of war material on cars in that area, but added that they did not contain Navy material; instead they contained Army equipment ready for overseas shipment. The committee in their inspection found the young officer's statements to be accurate and congratulated him. It was then learned that the young officer was John Roosevelt, son of the late President. It can readily be seen that a prompt reply to the committee chairman convinced the committee that the military officers there knew what they were doing. A positive yes or no in such cases is far better than an evasive answer which only leads to suspicion.

One of our leading statesmen made a remark to me when I was first assigned to the Capitol that made a lasting impression. The President was to address a joint session of Congress and there was a bitter feeling from the opposite party as to some of his policies. The statesman referred to was a member of that opposition, and when the President entered the House Chamber, everyone rose and cheered. After the ovation he turned to me and said, "Every President, regardless of political affiliations, wants to do a good job and wants to go down in history as having been a great President." That statement, I believe goes beyond the Presidency to our Cabinet officers, Members of Congress, Government officials, and officers of the Military Establishments. Operating on this theory, I am firmly convinced that troubles can be avoided if Congress and the executive agencies could have a closer understanding. It has been proposed by several prominent Members of Congress that Cabinet officers be allowed to address the House of Representatives so that they could be questioned by Congress and give first-hand information as to the operations of their respective departments.

Under the present system, the major bulk of the legislative work is conducted by subcommittees generally consisting of five to seven members. They spend hours and days listening to testimony on vital subjects which is published after the hearings have been completed. It is a physical impossibility for any Member of Congress to read all the testimony taken before various committees in any one session before he is called upon to vote on major questions. They, therefore, must accept the statements made on the floor at the time the particular legislation is being considered and determine their vote accordingly.

Naturally, it is disappointing to department heads who feel that vital legislation is given so little personal consideration by each Member, but, under the present system, a Member of Congress, cannot possibly keep informed on all pending legislation and still conduct the necessary routine business that his office requires.

In conclusion, I should like to relate a story that former Secretary of State James F. Byrnes told, when he was a Senator from South Carolina, to a group of his friends

when discussing the amount of work conducted by Congress and the momentous decisions that have to be made every day.

A farmer was bemoaning the fact that he did not have any help and would have to give up his farm unless he secured the services of some competent man soon. A friend stated that he might get him a hired hand and to be patient.

The next morning a large strapping fellow appeared at the farmer's house and reported to work. The farmer looked him over and from the physical appearance he looked capable of doing a full day's work, so he took him out to the edge of the lot and told him to dig some post holes 20 yards apart and 3 feet deep, which would be a full day's work if the man worked steadily. About 3 o'clock in the afternoon the farmer saw him return and thought surely it was the same old story—he was quitting because the work was too hard. So he went out to meet him and remarked, "I guess you are ready to quit."

"Nope, I already finished the job," replied the hired man.

The farmer made an inspection and found that he had done exactly what he had asked although he had dug some of the holes a little deeper than was required. The next morning he assigned the hired man to plow the field, which was another full day's work, and about 3:30 p. m. the hired man returned to the farmer's house. This time the farmer was convinced that he was going to quit. But the hired hand told him that he finished the job and, sure enough, he had done an excellent day's work. The next day it was raining so the farmer took the hired hand to the cellar and told him that he was going to have it easy that day since he couldn't work in the fields and asked him to sort a carload of potatoes. He was instructed to throw the bad potatoes into one bin so they could be fed to the hogs, put the good ones in another bin so that they could be sent to market, and the potatoes selected for seed purposes to be put into the third bin. About 2 hours after he left the hired man, the farmer decided to go down to the cellar to see how he was getting along and discovered him lying on the floor, completely out. The farmer threw some water in his face to revive him. When the hired man was able to talk, the farmer asked if someone had hit him or had he struck his head on the beam, or what.

The hired man answered, "Nope, it wasn't that—it was making all those decisions that exhausted me."

Well, Congress gets exhausted too, but the decisions are more complex than those of the hired hand's, and there is no quitting for Congress if the American democracy—which we all are sworn to defend—is to survive as we know it. You in the Government can help Congress in reaching decisions on matters essential to our national interest and security by a continuing attitude and active pursuit of cooperative spirit between yourselves and the Members of Congress in every circumstance that may arise, whether large or small.

Communists Stall for Time in the West and Concentrate on Asia

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the Toronto Evening Telegram of January 15, 1949, contained an article by Lt. Col. Grigori A. Tokaev regarding the purposes of Russia in the Orient. Under leave to extend my remarks, I am including the article referred to:

(Disillusioned and dismayed, Lt. Col. Grigori A. Tokaev, Soviet jet and air research expert who carried out secret tasks for the Politburo and was privy to the innermost counsels of the Kremlin, fled his country to find freedom in Britain. In a series of articles, on successive Saturdays, he will tell Telegram readers the top secrets of Stalin.)

The most important fact about the U. S. S. R. that you of the West must get into your heads is that Stalin means business. By business I mean world domination by any means, including war. There would in all probability already have been war, or at least a red-hot incident, over Berlin but for three facts:

1. American monopoly of the atomic bomb.
2. Anglo-American air superiority.
3. Widespread discontent inside the U. S. S. R., not only in the armed forces and the population, but also in the ruling circles.

The last fact was perhaps the most important of all, and needs a little explanation. The Politburo made a number of promises to the population during the war, but immediately the urgent need for popular backing was past, it became evident that these promises would not be kept.

QUIETED BY LIQUIDATION

The immediate reaction of the Politburo to the widespread discontent which became manifest was a large-scale purge in all the spheres of Soviet life, and in particular a thorough purge of the intelligentsia under the personal supervision of the late Zhadanov, one of the most hated of Soviet leaders.

The ultimate aim of Soviet policy is the creation, by armed conflict if necessary, of a universal Soviet Union. The argument is stated repeatedly in primer-clear language in all the principal works of bolshevism—and by no one more forcefully than Stalin himself. Stalin said: "The theory of the dictatorship of the proletariat is not a specifically Russian theory but a theory compulsory for all countries." The temptation in the West is to put down Bolshevism's fantastic ambitions as sheer claptrap, but the Soviet Union is rearming as fast as the Politburo can drive the exhausted, disenchanted, and unhappy people in its power.

TEMPO IS FEVERISH

Preparations for the struggle proceed at a feverish tempo in every branch of Soviet life. No single event since the revolution itself—not even the sudden German onslaught in 1939—ever caused more consternation among the members of the Politburo than the dropping of the first atom bomb on Hiroshima. The realization that the most powerful of the capitalist countries had come into possession of a weapon which, at a stroke, had outmoded all the war machines of Communist politics was a stunning blow.

CHANGE IN STRATEGY

Since 1945, by Stalin's specific orders, Soviet strategy started to be completely overhauled to accord with the potentialities of the so-called American experiment. For 3½ years Soviet science has been striving to solve the atom problem in a practical way. Everything connected with the problem commands super-top priority. Great numbers of workmen and the brains of the leading physicists and technologists are concentrated upon this single objective. If all goes as at present, a practical, as distinct from an experimental, atomic bomb will not be in possession of the Soviet Union before 1951–53.

DATES STILL HELD

Those dates were still the basic planning dates in Soviet policy when I left Soviet service some months ago. Since a war with the United States on anything like equal terms was unthinkable without the atomic bomb, the Politburo was compelled to take a number of strategic and tactical steps in order to avoid a direct "hot" war. The outstanding example of one of these steps is the war now being waged in southeast Asia. I do not say that war will necessarily come in 3 to 5 years, but I warn you that Stalin will be ready then. Stalin is the same old Stalin. Mr. Roosevelt failed to charm him, and Mr. Churchill to move him. The fantastic burgeoning of Western power has temporarily puzzled and frustrated him. But as a Marxist-dialectician, he will undoubtedly take any chance which may present itself in any future crisis and/or upheaval in the capitalist world, provided the atom-bomb problem is solved.

POLITBURO POLICY

The next question is: Where is Soviet policy headed right now? There is no such thing as Soviet foreign policy. There is only a Politburo policy. The 13 men who stand at the summit of power inside the Soviet Union conduct its foreign affairs. Looking out from Moscow, Stalin and company visualize the Soviet revolutionary destiny in terms of two immense tasks. Task one is Europe generally, beginning with Germany; task two, Asia, beginning with China. For obvious reasons, Europe was in the beginning, and still remains, task one.

The collapse of Germany, leaving an apparent vacuum in Europe, presented the Politburo with an incredible opportunity. It concentrated at once on task one, confident that in a matter of a few years, possibly by the end of 1950, it would be master of the European continent. However, many things went wrong.

DRIVES FAILED

The failure of Communist drives in Italy, France, and Germany: the inherently anti-Communist cast of British Labor; the defection of Tito; the fact that western Communists exposed themselves as closely linked with the Kremlin; the return of United States power to Europe in the form of the Marshall plan—all these combined to bring the drive westward to a temporary standstill. These difficulties compelled a reappraisal of strategy. It was conceded by the Politburo that the struggle for Europe would prove much harder than had been assumed; and it would be dangerous to attempt to pursue it to conclusion so long as task two remained unmastered. Therefore the Politburo decided to shift its attention to Asia—with consequences now plain to everybody.

MASTERING CHINA

They have so far failed in Europe, but they are on the verge of mastering China. The Politburo has achieved in China success on a scale that the West has not yet even begun to realize. There is a popular theory that the next world war will start over China. No matter what happens elsewhere, the Politburo is basing its strategy upon the assumption that the war will be decided in Europe. As soon as task two approaches completion—perhaps in the next few months, perhaps in another year—then the Politburo will return, with whetted appetite and confidence, to Europe. Therein lies the true significance of China's collapse. From the Soviet strategic point of view, the fact that Mao Tse-tung has finally all but brought Chiang Kai-shek down after two decades of incessant struggle is only of incidental importance.

REAR IS PROTECTED

The great thing is that the ever-vulnerable rear of the Soviet Union is in the process of being secured; China's open door is closing against the West, which first pried it ajar. The collapse of China has advanced with a speed which must have surprised even the most optimistic Soviet military experts. Two mistakes have obviously helped to bring on the avalanche. The lackadaisical attitude of the West to the Soviet grip

on Outer Mongolia, which has since become the main Soviet arsenal in Asia, is the first and most outstanding reason for the present collapse of China. The second mistake was that through General Marshall's efforts to impose a coalition government, the United States, in effect, championed the Chinese Communists as true agrarian liberals and contributed to the undermining of the established government. The attempts of General Marshall to reconcile Chiang Kai-shek with Mao Tse-tung proved that the Americans have not yet clearly understood the basic principles of communism; that is, the fact that never, or under any conditions, would Communists accept loyal collaboration with non-Communists.

SOVIET AMAZED

Inside the Soviet Union, Marshall's strange efforts to divide Chiang Kai-shek's power with Mao Tse-tung's Communist regime were followed with incredulous satisfaction. For one intoxicating moment it almost appeared that the distinguished American would actually succeed where even Vanming, one member of the central committee of the Chinese Communist Party, an outstanding Comintern personality and a close friend of Stalin's, had failed. Though Marshall's coalition scheme finally broke upon the rock of Chiang's opposition, his withdrawal from China, accompanied by a virtual cessation of all United States aid to the Chiang Kai-shek government in effect represented a strategic victory for Mao against Chiang. It cleared the way for the current Communist offensives. With Chiang left to his fate, the way was open for a Soviet thrust into Asia at practically no risk. Soviet arms and military might flowed into the vacuum, and Chiang's unsupported armies were brushed aside. It would seem now that another mistake is to be added to the previous ones.

WOULD AID REDS

Mr. Hoffman, of the Economic Cooperation Administration, has been quoted as saying in Shanghai that even in the event of the Communists coming into control of the government, United States' economic aid to China would continue. Is it possible that the Western diplomats have not yet understood that any kind of compromise with the Communists is a danger to world peace?

There is a myth, fostered with consummate skill and assiduity by Soviet propagandists, that the Chinese Communists, far from owing allegiance to theoretical Marxism or the Cominform, are only simple oriental agrarians hungry for land and democracy. I have also heard the hope expressed by otherwise intelligent people in the West that Mao Tse-tung, though a self-avowed Communist, is really an agrarian nationalist, who, if pressed hard by the Kremlin, would rebel as Tito has done.

Concerning the Chinese masses enlisted under the Red banner, it can be confidently stated that their views will have no more influence upon Mao's decisions than is the case under other Communist dictatorships.

A TRUE BELIEVER

Mao himself is a dedicated Communist, a true believer. He has never deviated from the party line and was the first of the non-Soviet proconsuls to denounce Tito's heresy. If his victories continue he will certainly go down in Asiatic history as the Lenin of China. Chu-teh, C-in-C of the Chinese Communist armies, is a talented military leader. A highly placed Soviet general described him in the following terms: "He could without any further training be put in command of any Soviet front, and would carry out his duties as well as any Soviet marshal."

Chu-teh is not only a revolutionary Communist but also an officer who went through the correspondence course of the Soviet General Staff Academy.

He is supported by good Soviet staff officers, the greater part of whom are of Chinese nationality. I saw him for the first time in Moscow in or about 1934, but I know that he visited the USSR quite often, and I also know that he commands unbounded authority among the Soviet military leaders.

WORKS WITH SOVIET

I could name a number of Soviet officers of all ranks who have been working under him for the past 10 to 15 years. The adroitness with which Chu-teh has maneuvered his armies during the past years suggests a special aptitude for managing mass armies. He and Mao complement each other. They form a powerful combination, the most dangerous pair now tramping the Asiatic stage, and are the revolutionary barometer in Asia. But to assume that they have produced these colossal results themselves, as many do, is to miss the whole point of the struggle for Asia.

I myself never went to China for the Soviet government, but I have served with officers who know the situation well, and I have also studied the question thoroughly.

The Chinese Communist army is some 2,300,000 strong. (The Chinese Communist party has 2,800,000 members.)

The higher staff posts are held by Soviet officers of Chinese, Korean, and Mongolian nationalities. Many of these were recently serving in the Soviet army, went through the Soviet military academies and colleges, or else commanded Soviet military formations in the East.

EASILY OBTAINED

No one can estimate the number of Soviet officers now holding high-ranking commands or staff posts in Chu-teh's and Mao Tse-tung's armies. One thing is certain. There are many more of them than is realized in the West. One must also remember that there are a great many Chinese, Koreans, and Mongolians in the USSR. Finally, one should also bear in mind the existence of the Mongolian People's Republic under Choi Bolsan. The basis of the higher political personnel in the Chinese Communist army was made up of graduates from the Communist University of the Workers of the East (KUTV) in Moscow, and also from the Institute of the Peoples of the East in Leningrad, plus various workers' faculties, institutes, and universities in the USSR.

PLENTY OF WEAPONS

The Soviet areas of China now possess their own armament factories, most of which were built under Soviet direction. But there are not enough of them for the needs of the Chinese Communist army. After the defeat of Japan the Chinese Communists received masses of Japanese arms from the Soviet; in addition they are getting great quantities of arms of Soviet manufacture, but stamped with foreign markings. These include automatic weapons, artillery, machine-guns, grenades, pistols, mortars, etc.

The Chinese Communist Army has a large number of Soviet aircraft, mostly obsolescent. Radio equipment is practically wholly Soviet, except for that captured from Chiang Kai-shek, which is American. Paper used by Chinese Communists is practically all from the Soviet Union. An odd fact is that according to a treaty of June 1945, the Soviet Government agreed to supply Chiang Kai-shek's government with arms. (This agreement was the biggest and stupidest mistake Chiang ever made.)

For the arms never reached Chiang. Mao Tse-tung's forces intercepted most of them on the way from the Soviet Union to Nanking.

CALLED WAR BOOTY

In this way the Chinese Communists could always claim that arms of Soviet origin in their possession were not actually supplied by the USSR but came under the heading of war booty. They thus saved any diplomatic embarrassment which might have arisen. The hidden source of power of Chinese communism is Outer Mongolia, now the so-called Mongolian People's Republic. This is the Soviet fortress. It maintains a very large, well-equipped national army which in the higher echelons is almost entirely Soviet-officered. Beside this, a purely Soviet formation—comprising all types of arms, air force, artillery, tanks, infantry, etc.—are quartered in Outer Mongolia. Soviet formations are being sent there quite openly for duty as they are sent to any other part of the Soviet Union. There was no demobilization of this force after the war—a significant fact.

CHIANG'S NEEDS

Chiang has been discredited as a military leader, but he still retains some political influence. What Chiang always lacked was a clean-cut progressive policy and slogans which would rouse the people to his support in a struggle. In order to remedy the present situation special attention should be paid to what I have just said.

Chiang also needs strong military advisers, capable of appreciating the present serious situation. But all this will not be sufficient if Chiang does not get immediate support in arms, supplies, and technical equipment. If he falls and China passes under Mao's control, the rest of the Asiatic pot, now simmering, will boil over.

The unexpected opportunities for mischief now opening to the Politburo in Asia are almost unlimited. Rehearsals have already taken place in Indochina, Burma, Malaya, and the Netherlands East Indies, and the Politburo has a stern picture of the situation there. The Politburo will now do everything possible and even strive to do the impossible in order to make the Western Powers disperse their armed forces in all the corners of the world—thus striking a mighty strategical blow. It is vital to the West to understand this. Stalin would then consider task two as under control. He could then turn to task one (Europe) with relatively free hands. If the West fails to challenge and check him in the east, the inevitable show-down in the west will almost certainly come much more quickly and under conditions increasingly to Stalin's advantage.

Protest of General Court of Massachusetts Against Arrest and Imprisonment of Josef Cardinal Mindszenty and of Bishop Lajos Ordass

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolutions of the General Court of Massachusetts memorializing the Congress of the United States to use all possible means to secure the release of Cardinal Mindszenty, of the Roman Catholic faith, and Bishop Ordass, of the Lutheran faith:

Whereas, the whole civilized world and all, individuals who believe in God regardless of race, creed, or denomination, and that freedom of religion is necessary in this troubled world have been profoundly shocked by the arrest, imprisonment and sentence of His Eminence Josef Cardinal Mindszenty, of the Roman Catholic faith, and the arrest and imprisonment of Bishop Lajos Ordass, of the

Lutheran faith, by the Communist government of Hungary; and

Whereas it appears that there is no justification for such arrest, imprisonment, and sentence but that it is actuated solely by the desire to destroy religious freedom and freedom of worship; and

Whereas Hungary, recently styled "a people's Republic," a satellite of Soviet Russia, has shown its utter disregard for freedom of religion in making the arrest and causing the imprisonment of these two men of God: Therefore be it

Resolved, That the General Court of Massachusetts desires to register an emphatic protest to the government of Hungary in causing the arrest and imprisonment of these two churchmen; and be it further

Resolved, That the General Court of Massachusetts urges the President of the United States and the Secretary of State and the Members of Congress from this Commonwealth to take appropriate action to convey to the Hungarian government the demand of the people of this country that Cardinal Mindszenty and Bishop Ordass be immediately released; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the State Secretary to the President of the United States, to the Secretary of State of the United States, to the presiding officer of each branch of Congress, and to the members thereof from this Commonwealth.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. KEATING. Mr. Speaker, 31 years ago today the people of Lithuania declared their independence. On that day the Republic of Lithuania came into being at Vilnius.

Today, however, there is no free Lithuania any more than there is a free Poland, a free Hungary, or a free Czechoslovakia. All are completely crushed beneath the heel of the Russian tyrant. Freedom to worship, freedom to speak or write what they please, freedom to choose their representatives in government, freedom to join a labor union of their choice, freedom to start a business, freedom to come and go within and outside their country—all these and every other privilege which free men and women everywhere enjoy is denied these unfortunate people. Like that of her two Baltic neighbors, Latvia and Estonia, the independence of Lithuania is today an empty symbol, a hollow mockery.

Little wonder, then, that this day which should be one of rejoicing and celebration is filled with sadness for not only the Lithuanian citizens behind the Iron Curtain but also their friends and loved ones in this country.

Nor can we, professed lovers of liberty as we are, escape in our complacency the charge of participation, at least by acquiescence, in the enthrallment of this brave young republic. No more than we can escape that charge leveled at us by the courageous people of Latvia, of Estonia, and of Poland, for it was at Tehran, again at Yalta, and again at Potsdam that we, for reasons of apparent expediency, deserted the lofty principles of the Atlantic Charter to set at naught the aspirations and destinies of free people. But the American people, Mr. Speaker, have never acquiesced in or condoned this tragic betrayal.

Indeed, our own Government today does not officially recognize the annexation by Russia of Lithuania and her Baltic neighbors. For that, at least, we may be thankful. This negative approach, however, is not enough. Time and again mass liquidation of her citizens and mass deportation to Russian concentration camps have been alleged by representatives of this republic. If true, this is a denial of fundamental rights and freedoms guaranteed by the United Nations Charter. If untrue, the charges should be aired to establish the facts. Freedom everywhere and enslavement anywhere are everybody's business—most of all, perhaps, the business of liberty-loving Americans.

I wish each Member might have had, as many have, my experience of last fall in visiting the displaced persons camps in Europe. Here I met and talked with many Lithuanians, as well as those of other nationalities, who had fled from the terrors of Communist or Nazi tyranny. The cheerful courage, the sturdy character, and great industry of the Lithuanians and others who gave up everything they had rather than bend a knee before the oppressor made an indelible impression on my mind and heart.

As we salute the Republic of Lithuania today, let us dedicate ourselves to its reestablishment as a free member of the family of nations.

Taft Urges GOP To Cite Principles

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Bill Cunningham from the Boston Sunday Herald of February 13, 1949:

TAFT URGES GOP TO CITE PRINCIPLES
(By Bill Cunningham)

"Will you run for the Republican Presidential nomination again?" this reporter asked Senator ROBERT A. TAFT, as we began a conversation in an anteroom off the Senate Chamber. "Run" promptly seemed to have been a bad choice of words.

"No," said the man who's tried twice. "I don't expect to be a candidate, and I certainly shan't 'run,' not in the sense of the last time, if that's what you mean."

"Does that mean you could be drafted?" I asked him.

"It doesn't happen that way," he said, "nobody's ever drafted."

"Shining" seems to be the word that best describes the face of Senator TAFT. The rest of him is not especially distinguished nor memorable. He's no particular sartorial model. Possibly 6 feet tall, reasonably erect, but a little too thick through the middle to be called trim figure, his business suits look rather rumpled, and they don't look custom made. His hair is thinning, and such as remains, while never wild, is not in place. He wears white shirts and flowered neckties, but they are not of the violent variety. In fact, he looks about like any other man of his years and general station until you sit looking him squarely in the face at close range.

It's the cleanest face I think I ever saw, with the clearest eyes and the whitest teeth. It also has one of the easiest and friendliest smiles. They say he used to be difficult to approach and that he had a hard time selling himself to an audience. I've never found an easier man to approach, nor one who talked more easily, if always with a certain sense of dignity.

"Well," said I, "while I was waiting here, another Republican Senator delivered quite an opinion upon the subject of Senator TAFT. He happened to pass and he asked me what I was doing. When I told him I was waiting for you, he said, "Then you're waiting to see the keyman in the history of the United States."

"BOB TAFT'S fate is going to be the fate of this Nation," he said. "If they beat him in this next election, as they say they're going to, then the Republican Party is gone, and the 2-party system of government is gone. If, on the other hand, he's reelected, there'll be hope that the party can pick up a few more seats. We might get one in New York. There's another out in Illinois. There are some more here and there. If we get them, the party and the Nation will be back in business, but the keyman is TAFT, and his fate in his next campaign will tell the story."

"Do you agree with him?" I asked.

"Not entirely," he said, "did you chance to see the speech I made out in Niles, Ohio, last week?"

"No, sir," said I, "not beyond the brief summation of it carried in the newspapers."

"Well, I happen to have a copy of it on my desk," he said. "Let me go get it. I think it will answer most of your questions."

He returned with his own copy, marked and corrected and containing notations in pencil, to the corner in which I'd pulled a couple of the big leather chairs together.

He started by sketching the history of the Republican Party.

"The Republican Party was founded," he said, "in 1854 as a party determined to restore the actual practice of liberty in this country in accordance with the theory of liberty which had brought about the founding of the Republic.

LONG REPUBLICAN LEASE OF POWER

"It enjoyed a long lease of power," he said, "from 1860 to 1884, but for 20 years prior to 1896, it was a weak party, living on its Civil War reputation and hardly ever commanding the support of a majority of the people. Then in 1896, it had a new birth because in that campaign it presented fairly, frankly, and effectively its conservative philosophy. It pointed out to the workingman that the full dinner pail depended upon sound fiscal principles and the free economy so necessary for progress.

"An interesting article in Fortune magazine for January describes the real Mark Hanna as opposed to the caricature created by the cartoonists and describes Hanna's sincere interest in the American workingman and American prosperity. It was that interest, and his ability to convince the people of his sincerity, and that of McKinley, which won the overwhelming victory for the Republican Party and gave to it 16 years of power * * *."

All this was in the speech, and the references to Hanna and McKinley were made because the address had been delivered at the McKinley Memorial.

This was all background, he said, establishing the fact that the party has known its

good times and its bad, but that when they grew bad, they had been changed to good only by presenting its principles to the people.

"Some Republicans are discouraged today," he said, "because for five elections now the party has met defeat. But its defeats have been due more to its failure in presenting its principles than in the principles themselves. It lost by narrow margins in 1940, 1944, and 1948. Remember that nearly half the people voted for it in the recent elections, and that its organization is still strong throughout the Nation. Political parties have a strong will to live. The only political parties which have died are those which have forgotten or have abandoned the principles on which they were founded. That should answer your question concerning what's ahead for the party."

"Then," said I, "you feel that the Republicans have lost primarily because they didn't tell the people what they stand for."

"That's correct," the Senator said.

(That same night at the Lincoln Day dinner, I was to hear Governor Dewey say: "It is now 20 years since our country last elected a Republican President. * * * This is a dismal record * * * of desperate importance to the country lest we slip into the abyss of one-party government. * * * Without seeking to find scapegoats. * * * I would like to bring out into the open the one basic problem. The Republican Party is split wide open. It's been split wide open for years, but we've tried to gloss it over * * * to deny it to ourselves * * * to conceal it.")

"Well, what does the party really stand for?" I asked Senator TAFT.

"First of all," said he, "human liberty. That's what created the United States of America. Every American today still pays lip service to the term 'liberty.' But he does not feel it as he did for a hundred years, when the idea of liberty inspired all Americans and they boasted of it until it became tiresome to every visiting foreigner."

MANY HAVE FORGOTTEN WHAT LIBERTY MEANS

Then he explained that the theory of the paternalistic state, regimentation, peacetime controls, and the bureaucratic form of government have so diluted liberty and have placed such restrictions on it that "today many Americans and most people throughout the world have forgotten what it means." He pointed to a part of the speech which said:

"As we look back through history, we see brief periods of time in which liberty has prevailed, but in the major part of historical time, it has been suppressed by emperors and kings, by oligarchies, plutocracies, by so-called democracies and proletarian majorities. It's hard to gain and easy to lose unless it is kept alive by an aggressive determination that it shall not perish from the earth. Today the battle between liberty and totalitarian government permeates every problem of life. It lies at the base of our battle with fascism and nazism and communism. The American people believe in liberty, but the totalitarian creed which we face abroad dominates today the philosophy of the CIO.

"Through that, it dominates the Democratic Party, and, if it prevails, it ultimately will destroy liberty here at home."

Clarifying his personal position on these threats to liberty here at home, the Ohio Senator said he's opposed to price control, wage control, and allocation control in time of peace. "I was opposed to the OPA and the WPB after the war ended," he said, "because they attempted to substitute a detailed control of business for the freedom of business and the freedom of enterprise."

"I'm opposed to socialized medicine, because it takes from the people the right to buy the kind of medical service they wish to obtain, and takes their earnings in taxes to be returned in the form of Government care under a long series of bureaucratic regulations."

He said he's opposed to the tremendous burden of taxation and universal military training because "it takes from a boy and his family the right to choose and pursue his own education and occupation and imposes a year of training and indoctrination determined by so-called experts in Washington."

A few hours later, at the Lincoln Day dinner, I was to hear Governor Dewey say on the same general subject: "The overwhelming majority of all Americans in both parties believe that Government today has to be more than a cold and impartial umpire. That has been the position of our party consistently * * * repeatedly confirmed in national conventions. In 1948, our platform was unanimously voted without one dissent * * * It must mean something.

"Unless it was designed to deceive, its various sections say and mean that we are a liberal and progressive party. To be entirely specific, they say and mean that our party has solemnly declared that we believe wholeheartedly in unemployment insurance, in old-age assistance on an increased basis, in broader social security generally, in slum clearance and public housing, in public development of our water-power resources, in farm-price supports, in vigorous protection of the rights of labor."

OFFICIALLY DECLARED PRINCIPLES OF THE GOP

"All these are good, they are necessary, they are right, they are officially declared principles of the Republican Party."

Senator TAFT went on to cite four other "basic principles" of the Republican Party. The next was "equal justice under law."

"The New Deal and the present administration," he said, "still seek the solution of every problem by the creation of boards and commissions with power to make regulations having the force of law, with power to file prosecutions, try the alleged culprits, and condemn them without recourse to the courts.

"Perhaps the greatest miscarriages of justice which have ever occurred in the United States," he said, "occurred under the National Labor Relations Board interpreting the Wagner Act. Yet today President Truman is trying to restore the unlimited and unrestrained power of that Board. The Republican Party should stand today as it has stood in the past, for a rule of law, instead of a rule of arbitrary men."

The next principle, he cited, was "equality and no special privilege," and in this he cited the Taft-Hartley law. That was passed, he said, "for the parallel purpose of restraining the arbitrary power of labor union leaders. Under previous laws their power had grown until they were able to dominate every private employer, except the largest ones, and to defy the public interest. * * * Liberty may be ended by the tyranny of a majority of the people as well as by the tyranny of special groups. We are concerned that minorities shall receive fair treatment, the same rights to vote, to work, and to live their own lives as the majority."

The other "principles" cited by Senator TAFT were: "The prevention of hardship and poverty" and "higher standards of living." The meat of his comments on these was that Federal aid is often necessary, especially in the poorer States. These, however, are problems primarily for State and local governments, and even when Federal aid is given, "there should be no Federal control, nor concentration of power in Washington."

"A policy of Government hand-outs to all," he said, "would impose an intolerable tax burden, would sap at the energy and liberty of the people, and would destroy the American character. Furthermore, no people as a whole can get something for nothing. They can be only fooled into such a hope.

"The idea that people can get their medical care from the Government without paying even a greater price than they pay today is fantastic. To the extent that we do support those at the very lowest end of the income field by aid or subsidy, they can only be supported by the other four-fifths of the population; and the burden must not be so great as to discourage that four-fifths from the magnificent job they are doing today."

PLATFORM SHOULD BE HAMMERED TOGETHER

The Senator's contention is that these are basic principles of the Republican Party and that the platform should be hammered solidly together from this sort of lumber. He believes, as above quoted, that the party has lost five times because of its failures in presenting these principles of the people. He made no mention of Governor Dewey, nor of anybody else for that matter, but since he is generally accepted as the leader of the conservative wing of the party, he must have had the Willkie and the Dewey presentations in mind. Both those beat him in his tries for the nomination. Both are now generally scored as "me, too" candidates.

It was accepted by all who heard, however, that Governor Dewey was talking directly at Senator TAFT when, after stating the Republicans have lost five Presidential elections because the party is split wide open, he continued:

"We have in our party some fine, high-minded, patriotic people, who honestly oppose farm price support, unemployment insurance, old-age benefits, slum clearance, and other programs. These people consider those programs horrendous departures into paternalism and would actually repeal them all. These people believe in a laissez-faire society and look back wistfully to the miscalled 'good old days' in the nineteenth century.

"They also take the position that the sole duty of an opposition party is opposition. They urge Republicans in and out of Congress to fight every proposal of a Democratic administration regardless of its merits. This group also honestly believes and says with considerable vigor that all Republicans who support these forward-looking programs are 'me, too' Republicans and no better than New Dealers. * * * If, as a party we try to go back to the nineteenth century, or even to the 1920's, you can bury the Republican Party as the deadest pigeon in the country."

The split in the Republican Party is the difference between the types of thinking represented by these two leaders, and the difference between the leaders is that Senator TAFT can tell you what he's thinking and will do it in plain and unevasive language, while you are privileged to do your own guessing in the case of the governor. Mr. Dewey was expected to come out punching at that Lincoln Day dinner because much recent comment has been to the effect that TAFT would have made the better candidate, TAFT, and the TAFT kind of platform.

The defeated standard bearer may have thought he was punching, and he did make all headlines with his descriptions of the split and his predictions of disaster if the old guard gets control. I, for one, however, thought he lost a lot of firepower by not delivering the speech seriously, if not angrily. Instead, he pranced and grinned and smiled up into the television cameras.

There's none of this in Senator TAFT. He smiled in a tired sort of way occasionally, for he's physically weary, and said so, from those long labor-bill hearings. They've been running from early morning until late every night and he hasn't missed a day nor an hour. Around him, somehow, there seemed to be an odor of defeat, but one parted from him convinced that if he does go down, he'll go fortified with absolute belief in his convictions and the knowledge that he did the best he possibly could.

There, at least, is one man who is completely sincere.

Federal Spending Facts

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1949

Mr. REED of New York. Mr. Speaker, while the administration is shouting for an increase in income taxes, and insisting that no relief be given to the people who are paying excise taxes, I want to reassert what I have said before on the floor of the House, that the logical and sensible way to reduce taxes is to cut Government expenditures.

Whenever a person talks about reducing expenditures the demagogues cry out, "Where would you cut, and what would you cut, and how much would you cut?" The attitude of those who have in mind only one thing, and that is to spend and tax reminds me of a few lines from one of Milton's sonnets:

I did but prompt the age to quit their clogs by the known rules of ancient liberty, when straight a barbarous noise environs me of owls and cuckoos, asses, apes, and dogs.

There are many places where expenditures may be reduced, and gradually through the research of various business organizations the duplication of Government expenditures are coming to light. Under leave to extend heretofore granted, I am extending in the RECORD a bulletin issued by the Council of State Chambers which is not only revealing, but of the utmost importance to the overburdened taxpayers of the country:

THE HIGH COST OF GROWING PAINS IN GOVERNMENT

Comptroller General Lindsay Warren told a congressional committee on January 25: "The Federal Government is a hodgepodge and crazy-quilt of duplications, overlappings, inefficiencies, and inconsistencies * * * It is an ideal system for tax eaters and for those who wish to keep themselves attached to the public pay roll, but it is bad for those who have to pay the bill * * * What we must be after is this monstrous Frankenstein, created in the name of bureaucracy, and already in some instances becoming bigger than Congress, its creator."

The trouble is that our Federal Government has grown too big too fast. Its expenditures have increased from $5,143,000,000 in 1933 to $40,180,000,000 in 1949; during the same period Federal civilian personnel has increased from 564,000 persons to nearly 2,100,000 and is still growing. These facts are indicative of the expansion that has taken place.

Following are just a few of the typical instances of Federal waste, inefficiency, and overlapping which have resulted from 15 years of topsy-like pyramiding of agencies upon agencies and services upon services:

DUPLICATION

The Joint Committee on Reduction of Nonessential Federal Expenditures (known as the Byrd committee), in its report of May 1946, cited over 900 instances of duplication and overlapping among the one-thousand-one-hundred-and-odd bureaus, agencies, and departments of the Government. For instance, it found 37 agencies carrying on activities in public health, 22 in housing, 27 in labor relations, 64 in business relations, 37 in foreign aid, 24 in rehabilitation, 16 in water power and power, 24 in mapmaking, 21 in transportation, 16 in education, and so on.

MORE DUPLICATIONS

Recent House hearings on Government reorganization disclosed more instances of duplication. For instance, 65 Federal agencies are engaged in gathering statistics, 34 in acquisition of land, 12 in home and community planning, 14 in forestry, 28 in welfare, and 16 in wildlife preservation. (From CONGRESSIONAL RECORD of February 7, 1949.)

PRINTING PLANTS

There is widespread overlapping in Federally owned printing plants and facilities, not only among departments but within cities throughout the country. There are 61 separate Government printing and duplicating plants in Washington; there are 23 in San Francisco, 25 in Philadelphia, 16 in Chicago, 6 in Kansas City, 6 in Denver, 16 in New York, and so on. The Army and Air Force have 140 printing and duplicating plants, the Navy has 87, Commerce Department has 26, and Interior Department 15 (Senate Appropriations Committee, 1948).

PERSONNEL OFFICERS

A well-managed business or industrial concern employs 1 personnel officer or worker to every 200 to 250 employees. The Federal Government employs 1 to every 78 employees, and in some departments the ratio is as low as 1 to 38. (Commission on Reorganization of the Executive Branch; also House Appropriations Committee and House Civil Service Committee reports.)

STATE DEPARTMENT RED TAPE

What happens to efficient management of a Government department which grows too fast is typified by conditions in the State Department, concerning which the House Appropriations Committee report of 1948 said: "The tremendous and rapid growth of the Department has resulted in great duplication between offices and divisions." The Committee found, in the course of its studies, that few actions can clear the Department without being referred to from two to six or even more divisions having an interest in the particular subject.

A House Appropriations Committee survey disclosed that it takes as many as 35 separate steps to process a routine letter received by the State Department. A tracer put on one such letter revealed that the letter landed on 21 different desks in three different State Department buildings, and traveled through each building twice.

PURCHASING

The Commission on Reorganization of the executive branch (known as the Hoover Commission) has reported that it is possible to have about $250,000,000 annually in Government purchasing, and to reduce inventories by $2,500,000,000 by applying modern business methods. The Commission's study group found more than 150,000 employees engaged in purchasing activities.

PURCHASE ORDERS

The Commission, in its study of Government purchasing, has reported that half of the 3,000,000 purchase orders by Federal civilian agencies alone (this excludes the armed services) in a typical year are for purchases amounting to $10 or less—and it costs the Government more than $10 to perform the paperwork alone on each of these purchase orders (report of January 1949).

TYPEWRITERS

How supplies pile up under poorly planned and supervised Government procurement practices is readily seen in the following example: The Federal Government recently found its owns three and six-tenths typewriters for every Federal employee who uses one either on full-time or part of the time. (House Appropriations Committee Investigative report, 1948.)

GOVERNMENT PRINTING

Federal departments spend an estimated $55,000,000 annually for printing and publications, exclusive of forms, reports, etc.

Tons and tons of unsold and undistributed publications are sold each year as waste paper at about $38 per ton. (Senate Appropriations Committee, 1948.)

Army printing alone is a huge and wasteful business. The Department of the Army printing bill in 1948 was $8,600,000—this was about one-third higher than the entire printing bill of Congress itself. (Senate Appropriations Committee.)

STORAGE-SPACE BUNGLING

The Government Printing Office (which is an efficiently run organization) spends over a half million dollars a year for storage space for inventories, printed publications, etc. Securing storage space is, in fact, one of the Government's big problems, and one of the poorest handled. For example: The GPO learned of a surplus war plant in Baltimore which was excellent for storage purposes and negotiated with the Public Buildings Administration to get it; the PBA in turn negotiated with the War Assets Administration. The WAA, however, sold the building to private interests who immediately offered to lease the space to the Government Printing Office at a rental which would pay for the entire purchase price within a few years. (House Appropriations Committee Investigative Report, 1948.)

BARGAIN BOOKS

The Interior Department is notoriously prodigal in its expenditures for printing and publications. An example: It has published, at a total cost of $61,242, a 23-volume series on the Columbia River Basin. The printing cost per set was $36.06, but the publications were put at sale for $6.90 per set. Many sets also were distributed free of charge (Senate Appropriations Committee, 1948).

WASTE OF MANPOWER

The Bureau of Internal Revenue, according to a survey made by the House Appropriations Committee's investigative staff in 1947, is lucky if it gets 6 hours' work per day from its employees. Some of its field offices claimed that they managed to get about 4 hours per day from their workers.

WASTE OF FORMS

The same study disclosed that in 1946 the Bureau printed 500,000,000 tax forms and 115,000,000 instruction sheets to supply 47,000,000 taxpayers. Hundreds of millions of such obsolete forms are now stored in a leased building.

HOUSING

If the Federal Government should, with congressional approval, embark upon the proposed $17,800,000,000 housing program, the large part of this activity will be handled by the Housing and Home Finance Agency, formerly the Federal Public Housing Authority, concerning which an audit report made for the General Accounting Office said, "every account in the (FPHA's) general ledger is either in error, inaccurate or incomplete. * * * The lack of adequate fund controls has been the cause of a large number of errors." And the House Appropriations Committee report of 1948 declared: "The past record of the Public Housing Administration is replete with instances of maladministration and deplorable abuses of public property and funds."

HOUSING FOR VETERANS

After VJ-day the Government declared surplus some 8,100 prefabricated housing units. They were sold to France by the Federal Public Housing Authority. When asked last year by congressional investigators to explain this action in the face of shortage of housing in the United States, the Agency stated that when the houses were declared surplus the bulk of the American armed

forces was still overseas and there was no indication of a tremendous housing shortage in this country. (N. B.—The transaction occurred at about the time administration-supported housing legislation was already being urged upon Congress.)

MIXED SIGNALS—LUMBER

Senator STYLES BRIDGES has just reported the instance where, after the Army tore down a multimillion-dollar camp in Alaska and shipped the lumber out, the Interior Department bought the lumber and shipped it right back to a point in Alaska within 10 miles of the place where the Army camp had been.

Bigotry in Education

EXTENSION OF REMARKS
OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. DOLLINGER. Mr. Speaker, the indignation of parents, educators, and many other good citizens has been aroused by the discriminatory practices of certain colleges and college fraternities. Under authority to extend my remarks in the RECORD, I wish to submit two articles written by Howard Whitman on this subject, which appeared in Collier's magazine on January 8 and January 15, 1949.

One of the prime objectives of education is to promote understanding among men. From our institutions of higher learning come our professional men, statesmen, teachers, and leaders in our communities. Rank discrimination is practiced when any group has as one of its admission requirements that "members must be white persons of full Aryan blood." Such discrimination breeds lack of understanding—even hatred—and man commits crimes against his fellowmen because of it. Yet, secret clauses such as the one quoted are contained in constitutions of many national fraternities, which have great influence in our colleges and which help mold the thinking of our youth.

Knowing that this undemocratic and discriminatory system flourishes here, how do we dare to send our emissaries throughout the world to say that our ideology is best and that our people live under a true democratic system? We are in danger of being told to look to our own house first.

Congress has appropriated many millions of dollars to reach persons abroad—to feed, clothe, and rehabilitate them, and, more important, to sell them our belief in democracy as opposed to communism. How incongruous that at the same time Federal funds are spent in this country to maintain colleges and schools which discriminate against students by reason of race, color, religion, ancestry, or national origin, and where fraternities hold sway whose membership is chosen on anything but the theory that all men are created equal. In fact, on reading the following articles, one cannot help but be ashamed that the young people of this country are subjected to the terrible discrimination, unhappiness, and even mental damage caused by such fraternities.

Our Federal Government, taking the stand it has abroad, cannot afford to be a party to this discriminatory and undemocratic system. If it can do nothing drastic to stop the insidious wrong, it should at least refuse to give one penny toward its continuance. This is the purpose of H. R. 1642, which I recently introduced in Congress, which would withhold all Federal aid from schools which discriminate between students by reason of their race, color, religion, ancestry, or national origin, or which permit students to be members of student organizations which so discriminate.

After reading Mr. Whitman's articles, I sincerely hope that the Members of this Congress will give their support in committee and on the floor to my bill, H. R. 1642.

[From Collier's magazine of January 8, 1949]

THE COLLEGE FRATERNITY CRISIS

(By Howard Whitman)

PART 1. BIGOTRY ON THE CAMPUS

Hidden in the secret constitutions of some of our leading college fraternities are clauses which need airing. They deal with, and some calmly endorse, race discrimination and religious prejudice.

I have toured the colleges and I have met the practitioners of discrimination. I have met their victims. In dozens of fraternity houses I have heard the angry discussions and have visited the battle fronts in a not-too-cold war which is engulfing colleges from Maine to California.

The dawn of 1949 sees the worst college-fraternity crisis since 1875, when President McCosh drove fraternities out of Princeton. Today fraternities are on probation at some colleges. Cries for abolition are resounding at others. Many educators feel like the Middle West dean who said to me, "We'll either have good fraternities or no fraternities."

The secret clauses, upon which the battle pinpoints, may jolt many Americans.

"Members must be of the Aryan race and not of the black, Malayan, or Semitic race"—this from the constitution of one national fraternity.

Another states: Candidates for pledge-ship "must not be of Mongolian, Malaysian, Negro, or Jewish blood."

The words "white Caucasian" are frequently used as an adjustable yardstick of discrimination. It of course rules out Negroes. It has been interpreted to rule out Jews. It has been broadened to rule out, or to put a quota upon, Catholics.

One secret clause, which sounds as if it had been lifted out of Mein Kampf, limits fraternity membership to white persons of full Aryan blood.

I received a baptism in bigotry early in my tour of colleges. It happened at Ohio State, at one of the ranking fraternity houses. In a bull session with the brothers, the matter of discrimination came up. We were sitting around, smoking, talking easily. Somebody said, "Well, as to colored boys—"

A member rose and stomped out of the room. His trailing voice said, "If you're going to talk about niggers—count me out!"

At most campuses I found a few who felt the same way about discussing discriminatory practives against Jews, Catholics, Mexicans, Japanese, Chinese, and that vast group of native Americans from the wrong side of the railroad tracks, known in Greek-letter land as social inferiors.

At the University of Virginia, President Colgate Whitehead Darden told me, "I am determined to fight against social stratification. It is a subversion of the basic policy of the university!"

But for his pains to democratize a university founded by Thomas Jefferson, Darden netted himself a death's head painted on his office door. Beneath it was scrawled, Tyrant!

"Damned if we want our fraternity opened to the common herd!'" commented one of the Greek-letter boys.

At the University of Michigan, Walter Presnell, a Negro, filed his name with the dean's office along with other students who wanted to join fraternities. No fraternity would touch him.

Presnell can't quite understand it, because last summer he went to Harvard (where there is just one fraternity) and lived quite happily with two white roommates.

Dick Maloy, student city editor, writing in the Michigan Daily, stated bluntly, "Fraternities discriminate against Negroes, Catholics, and Jews. Why not clean up these blots right here at the university before trying to convince the rest of society that discrimination is a bad thing?"

But Maloy expresses the minority opinion—more typical was the fraternity man at Wisconsin who said to me, "We have to grab back a pledge pin now and then when we find out a guy is Jewish."

At Michigan, a youth was pledged and then depledged because his ancestry was Japanese-American. "Not pure Caucasian blood," a fraternity man explained.

At Bowdoin College, in Maine, a Negro boy was thrown out of one fraternity because its national organization insisted on white only. He was pledged to a second fraternity, thrown out again. He finally got into a third.

How does the knife edge of discrimination actually feel? Listen to the experience of a Catholic student at Boston University.

"I was asked to join a fraternity," he related. "Having some standing doubts, I asked the person inviting me what sort of an outfit it was.

"'Oh, this is a regular fraternity,' he replied. 'You know—Christian, and all that.'

"I pondered a moment. That word Christian. What did he mean?

"'You know, Christian—no Jews, Negroes, or Catholics. Just a nice bunch of regular fellows. That's our constitution.'"

The University of Minnesota has 32 national fraternities. Forty percent have definite discriminatory clauses in their constitutions. Several others simply discriminate by gentlemen's agreement.

Intimations of reprisal

Should a chapter revolt against what seems to be headquarters policy it would probably find itself up against the sort of situation described to me by John Dablow, fraternity adviser. "Some national fraternities have told us," he said, "that if Minnesota takes a stand against discrimination, they will revoke the charter of their chapter and remove their fraternity from our campus."

One national fraternity, apparently sensing hostility to its policy in some quarters, is sending its national executive around the country—ostensibly to "liberalize" its constitution. Yet students in one chapter were shocked to hear this good-will emissary say, "I've got a good chance of getting that discriminatory clause taken out—so long as you boys don't go taking in any damned niggers."

Picturesque Amherst College, Massachusetts, has been a testing ground in the fight between a national fraternity which favors discrimination and a local chapter of that fraternity which does not. Amherst has 13 fraternities. They all used to be national. Only 11 are national now. Two have been thrown out of their national organizations

for refusing to practice racial discrimination.

At the close of the war a faculty committee at Amherst recommended that fraternities be abolished. An alumni committee, four-fifths of whose membership consisted of fraternity men, surprised the whole campus by making the same suggestion.

But instead of abolishing fraternities, the Amherst board of trustees gave them a sound overhauling. It ruled in April 1946 that fraternities would have to take discriminatory language out of their constitutions or get off the campus. Their deadline for complying is February 1951.

The first national organization to yelp at this order—and other fraternity reforms—was Delta Tau Delta. It sent a letter to its Amherst chapter denying it permission to reopen after the war. It was to stay closed, the letter stated, until Amherst became "a suitable field for national fraternities" and until the Amherst chapter could "conform to the established customs, rules, and standards of Delta Tau Delta fraternity."

Calling a meeting, the Amherst chapter, along with alumni from the Massachusetts towns, drew up a resounding declaration of independence, stating:

"They (members of the Amherst chapter) have gone through a war where the ideals of democracy were tested under fire. They are serious in their wish to see their ideals in action. They are unafraid of, in fact welcome, the opportunity to be in a fraternity, whether it be local or national, where they may exercise their democratic rights to determine with whom they may associate without let or hindrance from some power which considers itself higher than the country in which they live or the college they have chosen."

So saying, the Delta Tau Deltas of Amherst College kissed the national organization good-by and formed their own local fraternity, Kappa Theta. They have already expressed their independence by admitting two boys who would have been barred by the race-and-creed clauses in the national constitution.

In the year just passed, courageous Amherst has had its hands full with the initiation of a Negro student into Phi Kappa Psi. The Amherst chapter informed its national organization 2 weeks ahead of time that the initiation of the Negro boy, Thomas Gibbs, was going to take place. The Phi Kappa Psi executive council reacted with such swiftness that the Amherst chapter was already an orphan—fired from the national organization for "unfraternal conduct"—by the time Gibbs was initiated on November 23.

The Amherst boys seem exhilarated at having fought this issue. Speaking of their new fraternity brother, one of them said, "We want him with us because he's a great guy. We aren't interested in his race, or his color, or anything else—just in what he is for himself."

But this is not being echoed across the country. Far from it. In a bull session of fraternity men at the University of Wisconsin, I heard a towheaded lad jump up and cry, "To hell with this talk of democratization. They've got their own fraternities."

I had heard that phrase often. When I tried it out on Wilbert Whitsett, president of Alpha Phi Alpha, a Negro fraternity ,at the University of Pittsburgh, he replied, "If we are not permitted to join other fraternities, we must form a fraternity of our own. We have no other choice."

One of his colleagues pointed out, "In the land of Jim Crow, you ride in the back of the bus—or not at all."

A member of a Jewish fraternity remarked, "The pattern of segregation is fixed by the so-called white Caucasian fraternities. We simply have to fit into it." He smiled wearily. "Nobody really likes to live in a ghetto. But sometimes you have to."

Indexed by race and creed

Every year thousands of freshmen, accustomed to being regarded simply as Americans, enter college to discover that they are sorted out by fraternities into pigeonholes labeled "Protestant, Catholic, Jew"; then cross-filed as white, black, yellow, or brown.

"Now—just a minute," objected a fraternity man when this subject came up at the Alpha Delta Phi house at Amherst. "What about your golf clubs, your business clubs, your country clubs—aren't they doing the very same thing?"

I jotted his words in my notebook and tossed them a few days later to the president of Amherst College, Dr. Charles Woolsey Cole.

President Cole replied, "Institutions of learning ought to pick and choose the best parts of our culture, not the worst. College students ought to set the pace. If they make enough headway with the democratic idea, the country clubs and the business clubs will come along later."

Setting atop the college fraternity structure is the National Interfraternity Conference comprising 58 national fraternities. At its fortieth annual meeting in New York recently, the NIC abortively battled over the discrimination issue and finally put it on ice for another year.

However, some of the NIC's leaders have not hesitated to present what they call the "other side" of the discrimination picture. At one meeting, a top NIC officer appealed to Americans to "stop shivering at the word 'discrimination.'"

He said, "I love the discriminating tongue, the discriminating eye, and the discriminating ear, and above all, the discriminating mind and soul. The person for whom I can find no love and no respect is the indiscriminate person. To be indiscriminate is to be common, to be vulgar."

One NIC spokesman insists, "There is nothing arbitrary or capricious or unnatural about fraternity membership restrictions based on race, creed, or color. College and university administrators who attempt to prevent forcibly the Nation's fraternities from exercising racial and religious restrictions in choosing members are violating the tenets of democracy."

TRYING OUT A MILDER WORD

With softer pedal, the executive secretary of a national fraternity said to me, "I wouldn't say we discriminate. All we have is a restrictive clause. You simply have to get the consent of every official of the national organization if you want to take in somebody of a different race or religion."

At Williams College, a committee on postwar extracurricular activities while stanchly defending fraternities, made this curious statement:

"It is a truism that fraternities are undemocratic. Any social or caste system is undemocratic. * * * There is no use denying the facts of life merely because one does not like them."

That an undemocratic caste system should be a fact of life in American institutions of higher learning is repugnant to a good many people. Some critics insist that colleges, being tax-free, have no right to harbor such a system. They decry the fact that in 12 States even the houses owned by discriminatory fraternities are freed from taxes.

Between the extremes of the national interfraternity conference and those who would abolish fraternities entirely is a middle ground which is all but obscured by flying fur. Many educators feel that the fraternity system, given—as one of them put it—"a transfusion of free American blood," could get up from its sickbed and walk with a truly democratic stride.

The transfusion had better be given soon. As President John Sloan Dickey, of Dartmouth, said to me, "Our colleges cannot for long be indifferent to an influence on their campuses which tends to fashion men's attitudes in a prejudicial way. * * * We must find a solution in the not-too-distant future."

I spoke with Eric Johnston just after his recent trip to Russia. Johnston is a Theta Delta Chi, University of Washington, 1917. He earnestly declared, "Our fraternities must be democratized. We're competing with another ideology in this world, and the competition is likely to go on for a long time. We've got to show them, and the rest of the world, that democracy is more than a word over here. We've got to live democracy, not just talk democracy."

[From Collier's magazine of January 15, 1949]

THE COLLEGE FRATERNITY CRISIS

(By Howard Whitman)

PART 2. DEMOCRACY IN ACTION

Seventy-five young men from 11 colleges sweated out a hectic week-end in Chicago last May to launch a new national fraternity. They worked night and day. They wrote bylaws, preambles, articles, amendments, and resolutions. They tore up pages, rewrote pages. Finally they came up with the constitution of Beta Sigma Tau, a fraternity which opens its arms alike to Christian and Jew, to white and Negro, to rich and to poor.

Having paid their own way to Chicago, the students didn't have any money to spare. They could not afford more than one paid employee to aid in their labors, a nimble-fingered public stenographer. She sweated it out with them, working way past midnight, taking shorthand, transcribing, typing. She was groggy when it was over.

But after she had typed the final version of the constitution—with its pledge of "brotherhood and democracy which transcends racial, national, and religious differences"—she had all the pep she needed to say, "Gee! I've never seen anything like this in all my life! Do you fellows really mean it?"

Assured that Beta Sigma Tau was in unmitigated earnest, she gulped, "Well, I want to help, too! You can keep my pay check! Call it a contribution—I guess I just worked free!"

Beta Sigma Tau, which formally calls itself an intercultural fraternity, is a dramatic outgrowth of the bare-fist battle over discrimination which is being fought on American campuses. This fraternity draws heavily upon the one world philosophy of Wendell Willkie and has attracted scores of college men to whom fraternities for "white Caucasians" or "full-blooded Aryans" are a little nauseating in this day.

By the opening of the fall term Beta Sigma Tau—without benefit of trumpets' blare—had amassed seven full-fledged chapters, at Ohio State, the University of California at Santa Barbara, the University of Buffalo, Hobart College, Roosevelt College, Baldwin-Wallace, and Ohio Wesleyan. In addition to these, four more chapters were busily forming. November saw the launching of chapters at Stanford, the University of California at Berkeley, the University of Southern California, and the University of California at Los Angeles—all within the month.

While most of Beta Sigma Tau's membership is white Protestant, as is the population of the United States, it includes Catholics, Jews, Mohammedans, Negroes, Chinese, and Nisei. John Caldwell, one of the top national officers of the fraternity, happens to be a Baptist from Texas. Kenneth Woodward, president of the Ohio Wesleyan chapter, happens to be a Negro.

Caldwell, who goes to the University of California at Santa Barbara, said to me: "Maybe my Texas raisin' had something to do with it. Out our way we judge a man for what he is—not for the labels on him."

Caldwell had behind him the heritage of the Pecos country, where it once was "justifiable homicide" to shoot a man for asking where you came from and what you had done before you got there.

Eschewing the mumbo jumbo of a secret order, Beta Sigma Tau will gladly tell you that its name stands for "Equality, Understanding, Unity." After the hectic founders' week end last May the boys wrote:

"Coming as we do from different racial, religious, and cultural backgrounds, we are constantly made aware of the dignity and integrity of the individual. As we better understand this concept of equality and do something practical about it, then the unity which is so much needed in our world will come."

In addition to national Beta Sigma Tau, a lusty litter of local antidiscrimination fraternities also has appeared. Union College has a new local named Beta Eta Upsilon. It calls itself an antisegregation fraternity. The fact that it came to life at Schenectady, where America's first social fraternities were born in 1825, is regarded as a meaningful straw in the wind.

In the fall of 1947 a dozen freshmen looked over the fraternities at Union, went to rushing parties, heard the blandishments of upper classmen clad in pin-striped suits, tasted punch at fraternity smokers, and then said to hell with it.

"The exclusion policy, applied to fellows of minority races and religions, stuck in our craws," one of them told me.

They formed Beta Eta Upsilon and were recognized by the college last February. Their constitution states: "This brotherhood is organized on the basis that all men are created equal, and that no discrimination because of religion, race, color, or background should be practiced by a fraternity at Union College." The membership includes nine Protestants, three Catholics, one Jew.

"Practically every fraternity on the campus has a few men who agree with us," President Clarence H. Walker declared. "They're trying to fight segregation within their own ranks. We call it the underground."

Bucknell University was in the fray as early as 1945. Three students just back from war, rebelled at the big nationals and started their own local, Phi Lambda Theta. Prominent Bucknell alumni gave them a helping hand. A year ago they acquired a fraternity house. Of their 55 brothers, 3 are Negroes, 2 Catholics, 5 Jews, and 2 Chinese.

The University of Wisconsin has a new interracial group—Sigma Delta Phi. Bowdoin has a new fraternity which calls itself ARU, meaning "All Races United." The antidiscrimination movement is hopping from campus to campus.

Sobered by a war which turned out to be a young men's proposition, thousands of students are wondering whether young men shouldn't take a bigger part in running the world. They are unwilling to follow hand-me-down systems. They squirm unhappily in the long flannels of fixed ideas. They want to think for themselves.

The wrong-side-of-the-railroad-track notion is thoroughly repugnant to them. They believe no man should be evaluated by his father's bank roll, his father's clubs, or by the social register. No man should be excluded from a fraternity because he isn't a "smoothie" or a hot dresser, or doesn't drive a convertible.

Dr. Max McConn, formerly of Lehigh, has listed the values on which old-line Greek-letter cliques judge new freshmen: (1) Money; (2) family connections; (3) type of preparatory school attended; (4) "Personality."

Personality is in quotes because it does not mean true personality values, but rather what is sometimes called "poisonality"—the ability to flash a toothy smile, a convincing handshake, an assortment of quips for the cocktail party, and, of course, plenty of sartorial whiz. Student reformers chide the Greeks mercilessly for such hot-shot standards.

Said one at Wisconsin, "If grown-ups felt that way, Van Johnson would be president."

Scoffed another, at Yale, "The fraternities are interested in families whose best part is under the ground."

EDITOR BLASTS METHODS OF SELECTION

Clayton L. Dickey, a 1947 Michigan graduate, battled bitterly with his own fraternity, Delta Tau Delta, over social discrimination. He wrote in the Michigan Daily, of which he was city editor:

"Is it a healthy thing to allow the existence, in a university community, of groups which select their members for social graces—values which aren't very important in a university scheme of things Anyone who has been through the rushing melee can tell you that good looks and/or fast chatter are paramount * * * How beneficial to a university community is a system whereby some are accepted and others are barred on the basis of false values?"

Dickey, now a United Press writer in Cleveland, said to me when I was getting this story, "If I went to college all over again, I would not join a fraternity. I liked it best just after the war, when the fraternity houses were thrown open as dormitories. I stayed at the Chi Phi house. We had a mixed group of Christians and Jews, rich and poor boys."

What is the effect of fraternity exclusiveness upon the young men who are left out? What about the 86 boys at Michigan who had their hearts set on being asked to fraternities last fall, who filed their names with the dean's office and who did not get bids?

At Amherst, storm center of the college fraternity crisis, the Amherst College alumni committee on postwar education reports: "The unwanted man psychology plays a real role with too many students. * * * The competitive status of membership among the fraternities gives rise to a good deal of heartache and insidious comparison of social status."

Wrote Amherst's subcommittee on student activities, four-fifths of whom were fraternity men themselves: "The sense of exclusiveness and social preferment * * * is hurtful to the young men who are in the fraternities because it gives them a false and undemocratic sense of superiority. And it hurts the students who are outside the fraternities by giving them a wholly unwarranted sense of being inferior and of being social outcasts."

The committee pointedly recalled that "each year in the last decade a number of otherwise thoroughly desirable young men have left college at the end of the freshman year primarily for the reason that they have failed to be elected to a fraternity."

Many educators feel that the boys who are excluded from fraternities are the very ones for whom a fraternity could do the most good.

"How about taking in an occasional misfit?" I suggested to a group of Phi Gamma Deltas. "You boys could do a lot for such a lad."

The suggestion was laughed at. I was promptly informed that taking in a "spook"—as they put it—was a contradiction of the whole idea of fraternities. It was a heresy. "We only want the cream, not the skim milk," one brother said.

College chaplains often hear the other side of the story. The Reverend John Colburn, at Amherst, has known many a pale hour when a boy has come in, quietly and alone, to weep a little over being left out. "When the fraternities reject them, these boys often live in a psychological climate of defeat—not only in college, but well into life," Chaplain Colburn remarked.

I got a better picture of what he meant when, a few hours later, I talked to a youth who had been turned down by the fraternity to which his father and two cousins belonged. He talked without rancor, but there was something behind his eyes that spelled out the story.

Psychologists are not fooled by the exclusion idea. They have put it in a test tube too many times. Exclusiveness is nothing but the old in-group and out-group mechanism which is as old as man. By forming a clique and throwing a wall of exclusion around it, Mr. A can say to Mr. B, "My group is better than your group. Therefore, I am better than you." Fortunately, men who are confident of their own worthwhileness do not need to resort to this dodge.

"It is no coincidence," one psychologist remarked, "that the men who flaunt their fraternity pins most ostentatiously are the ones who have nothing else to flaunt."

American democracy insists that in this land there shall be no aristocracy save that of talent devoted to the service of man. Thus many a college president feels that student aristocracy, if there be one, should be based upon an oft-forgotten facet of college life—education.

The scholarship ratings of the old-line Greek-letter fraternities have been less than dazzling. At Williams, the Garfield Club—composed of nonfraternity men—regularly whips the academic hides off the fraternities. At Amherst, the annual Treadway Scholarship Trophy has been won 6 times in the last 13 years by a similar group of nonfraternity men, the Lord Jeffrey Amherst Club. Michigan, typical of large universities, finds that fraternity men's scholastic average is 2.47, that of the nonfraternity men 2.56.

One college alumni committee was moved to report, "The number of students who have felt it advisable to move out of their fraternity houses in order to pursue their scholastic careers more effectively has increased in recent years."

It dryly added, "There appears recently to have been more drinking in the fraternity houses—and more women visitors—than would be generally adjudged to be conducive to concentration on intellectual growth."

He laughed at the wrong moment

The intellectual value of secret grips, passwords, rituals, and other fraternal falderal might also occasion some doubt. One New England chapter was rudely awakened while initiating a faculty member to honorary membership. The mumbo jumbo was in full career, grave brothers were arrayed in their hoods and robes, the faculty man was on his knees with his hands folded listening to the esoteric effusions—when suddenly he burst out laughing. He blurted, "Just slip me the grip—and forget this hocus-pocus!"

Many a fighter pilot, infantryman, and paratrooper has turned in his pledge pin when a plushlined punk has tried to "make a man out of him." One veteran quit rather than memorize page upon page of fraternity flummery. "I'd rather memorize a little history and economics," he quietly stated.

To demands for abolition of the fraternity system, many observers complain, "You can't leave students in a void. If you abolish fraternities, you must have a substitute plan."

Two substitute plans are now functioning with notable success: the house plan at Harvard, and the club plan at Princeton. When a freshman comes to Harvard he looks over the seven houses—large clubhouse residences, where students live, eat, and hold their parties. He applies for admission to one of them. He may prefer Lowell House. He may prefer Adams or Dunster.

The important point is: The man chooses the house—unlike the fraternity system in which the house chooses the man. The houses are interracial, nonsectarian, and conscious of neither bluebooks nor bankbooks. Harvard hangs no labels on the men it is educating for democracy.

Princeton, a foe of fraternities since Civil War days, centers its social life in 17 "eating clubs" which are similarly democratic. Vernon Geddy, chairman of the undergraduate interclub committee, earnestly told me, "The thing we're proudest of is that there is no racial, religious, or social segregation. We take a man on his merits."

Along Prospect Street, along which the club mansions are lined in elm-shaded elegance, there is a free and wholesome tang. There is neither restriction nor exclusion, Harold Yerkes, president of the Quadrangle Club, remarked, "The club system is for everybody. Clubs aren't something special. They're part of the whole college experience."

Thoughtful fraternity men know that in the Harvard and Princeton plans the fraternity system is up against a stern rival. Since the war many fraternities, perceiving the neon handwriting on the wall, have tried to mend their ways. Most of them have tossed hazing and hell week into the ash can.

Many observers take heart from what Dan Byrd, until recently president of Alpha Tau Omega at Ohio State, called "the more mature outlook which fraternities are evincing."

If the baiting and paddling of pledges no longer appeals to them, perhaps they are on the way to discovering the human being beneath the pledge pin. And when they do, they may perceive a smidge of human dignity—even in a freshman. Then—who knows?—his clothes, his looks, his race, his religion, and his old man's bank account may not matter any more.

On Keeping the Republic

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "On Keeping the Republic," by Hon. HUGH D. SCOTT, JR., chairman, Republican National Committee, at Bridgeport, Conn., February 12, 1949, over the facilities of the Columbia Broadcasting System:

As we gather here tonight to do honor to our first Republican President it is inevitable that we should contrast the standards of ethics and political morality exemplified by Abraham Lincoln with those prevailing among the men who rattle around in the seats of the mighty in Washington today.

Such a comparison—let us call it contrast—is invaluable to us. It points up and emphasizes an important fact—that to the extent to which our party has been true to the spirit and example of Lincoln throughout our history it has merited, and generally has received, the support and trust of the American people. Therein is a lesson for all Republicans.

In the words of Lincoln we must "think anew and act anew." We must be clearly conscious of the fact that free governments are devised to promote and expand the liberties and rights of people—not to enslave men, not to shove them around, but to make and keep men free. We must never forget that a promise given to the people is an obligation which must be discharged at all costs. We must never cease to insist that the people's money is to be administered for the benefit of all the people, not as a private or partisan campaign fund. And we must never lose sight of the eternal truth that human progress under free government moves ever forward—forward to greater freedom and prosperity, not greedily to more and bigger government and to inevitable oppression and suffering.

Remembering this, we shall give an adequate answer to the question raised by another great American, Benjamin Franklin, who, as he left the final session of the Constitutional Convention in my own city of Philadelphia, was asked by a little old lady what kind of a government was to be given to the American people. His unforgettable reply was, "A republic, if you can keep it."

We have had a Republic for more than 150 years. We still have its outward forms, but sometimes I fear that its inner spirit has been sadly battered—that unless present trends are halted or reversed it will not survive many more assaults from its enemies within and without our borders.

But keep the Republic we will—keep the Republic we must. The first step in that direction must be the election of a Republican Congress in 1950 and the next step sh ll be the election of a Republican President in 1952. But let us put first things first. Let us not be diverted from the immediate task in 1950 by fruitless and useless bickerings about 1952. Let us not imitate the dog in the fable who beheld his image in a stream and dropped the bone in his mouth in an effort to grab the bone he thought he saw in the water.

I have not the slightest doubt that we can win control of Congress in 1950 if we devote our energies wholeheartedly and, so far as the national picture is concerned, exclusively to that end. That is what I propose to do as chairman of the Republican National Committee, and you may be sure that during my term as chairman the energies of our headquarters staff will not be diverted to any other end. We will need the cooperation—the close cooperation—of State and local committees and of our Republican Members of the Senate and House. During the recent meeting of the national committee in Omaha tangible steps were taken to improve that cooperation, and I promise you now that I will make every effort within my power to bring that Republican joint effort to the people, whose respect we must earn and whose confidence we must gain.

As the opposition party in Congress during the next 2 years we have, as I see it, two principal duties—to propose sound and constructive solutions for national problems and to oppose those parts of the administration's program which would be destructive of our representative Republic and disastrous to our free institutions.

Mere opposition is not enough—not nearly enough—although it has its place in the program of a party which is in the minority in Washington.

Already, as a result of action taken recently by the national committee, the stage has been set, I hope, for much work this year by Republicans working together on party program and policy.

The representatives of the national committee who will serve on this policy committee have been appointed. Provision has been made for the selection of representatives of Republican Members of the Senate and House and of Republican State chairmen and State finance chairmen. As soon as these members have been selected it is my purpose, as chairman ex officio of the policy committee, to call it into session to discuss the direction to be taken by the Republican Party and decide whether or not to call the proposed national conference and, if so, to fix the time and place and to prescribe the qualifications for participation.

If such a conference is held, and I hope it will be, it should result in a clear-cut statement as to those proposals upon which Republicans in and out of Congress will cooperate with the administration and an equally clear-cut delineation of the line beyond which we, as Republicans, cannot and will not go. We should say what we will do as well as what we will not do.

Furthermore, in what may be called a third category, in instances in which the administration may be seeking a proper end by utterly improper means, I believe we must be prepared to propose alternative solutions to national problems and to battle for them to the end. Of necessity, the details of such proposals will have to be worked out by Republican Members in the Senate and House—the only national representatives of our party who have the opportunity to translate declarations of party policy into legislative action. In such instances it is well to remember that the administration by sheer power of numbers may be able to overwhelm our Republican Senators and Representatives. We do not have a majority in either the Senate or the House. Whether by design or—more probably—by carelessness the people have decreed a new lease on life for the Truman "Mis-Deal" or "Ordeal" and we shall have to put up with that situation until the elections of 1950. But every day in every week and every week in every month we can make sure that the administration knows it is in a fight and that the American people realize that it is the Republican Members who are fighting the people's battles in Congress. We can do no more for the time being and, in my opinion, we should do no less. I promise you that you are going to get full value out of the Republicans you have sent to Congress.

I hope I have made it clear that I favor an attitude of helpful cooperation with the administration in every case where that is possible. But, after all, the one sure cure for an abscessed tooth is to yank it out—not to install another abscess as a counterirritant. We may be able to give some temporary relief to the people suffering during the next 2 years but there can be no real cure until the Truman administration, this abscessed tooth in the body politic, is yanked out.

We must put an end to the obnoxious theory that certain men—and always the same old faces of the same old palace guard—are ordained to rule over the rest of the people. We must put an end to a regime which has publicly proclaimed that the people are too dumb to understand what is being done for them in Washington. We must put an end to proposals for unequal redistribution of wealth to pay off campaign debts. In short, we must put an end to privilege on the Potomac. With your help we will bounce out these princes of privilege.

We must do so for a very good and compelling reason, namely, that this Nation now has an administration which has proved by its words, as well as by its record, that it cannot be trusted. It is an administration which has acquired and retained power by making solemn promises to the people which it knew it could not keep and which it would not keep if it could.

Its stumble-bum and deceptive administration of American foreign policy abroad has been matched or exceeded by attempts to deceive the American people at home. Let's take a few examples.

At the moment the administration is trying to kid the American people into believing that the misdeal boys are trying to repeal the Labor-Management Relations Act of 1947, generally known as the Taft-Hartley Act. During the 1948 campaign Mr. Truman promised to repeal that act. So did Senator MCGRATH, the Chairman of the Democrat National Committee, and other Democrat spokesmen. But within a matter of days after the election the Democrats began to talk about revising or amending the act and the administration finally sent a bill to Congress designed to double-talk some labor leaders into thinking the act was being repealed and to double-talk other people into thinking that most of it was being retained. Actually, it is a good guess that the

name of the Taft-Hartley Act will be repealed and much of its substance will be retained. Congress will attend to that, not Mr. Truman's palace guard. You can only fool some of the people some of the time. And there come a time when even sucker bait runs into short supply.

But there are some rather peculiar features in the administration's labor relations bill. In the first place the administration proposes to strike out the Taft-Hartley Act ban on Communists as office holders in labor unions. It proposes to reopen the door for Communist domination of unions at the very time when such labor leaders as Philip Murray, the head of the CIO, are moving heaven and earth to free the ranks of labor from Communist traitors. Peculiar, isn't it—and why do you suppose it is being attempted? And did some of "good old Joe's" United States branch suggest it?

Moreover, the administration has chosen to time its drive for the resubjugation of unions to Communist domination coincidental with the persecution and very probably to the crucifixion of a cardinal of the Roman Catholic Church in Communist-dominated Hungary. Of course, the administration is piously washing its hands in public and protesting against the Hungarian atrocity. But Hungary would not be behind the iron curtain today had it not been for the insanities of our foreign policy as exemplified at Yalta and Potsdam, in the days when the Soviet dictatorship was one of our gallant allies in the fight to save democracy and good old Joe was quite palsy-walsy with our rulers. But maybe Mr. Truman thinks the latest Hungarian atrocity is just another red herring. How many must suffer and how many must die before the blind leaders of the Democrat Party wake up to the effect of their foreign-policy waverings and defaults?

There is another peculiarity about the administration's proposed revision of the Taft-Hartley Act. The Taft-Hartley Act contains a provision authorizing the President to seek injunctions to delay or prevent strikes which imperil or threaten to imperil the national health and welfare. Mr. Truman has used that power several times to halt strikes in mining, shipping, and other basic industries. Now, Mr. Truman wants that provision of the Taft-Hartley Act left out of the proposed new law. He says he doesn't need such authority because he already has inherent power to obtain injunctions in such circumstances. Let's see how that contention holds water. Back on May 25, 1946, at a time when Mr. Truman certainly had as many powers inherent or otherwise as he has today, because many of the extraordinary wartime delegations of power were still in effect, he went before a joint session of Congress and personally asked for emergency authority to draft railroad workers into the armed forces to head off a transportation strike. Where were his inherent powers then, and why didn't he use them? You know as well as I do that he had no such inherent power then, and, in my opinion, so does he. But when are we to believe what the President says—in the even-numbered years like 1946 or in the odd-numbered years like 1949? Personally, I don't know.

Now, let's take another example of administration double talk and double dealing in another field. I'm sure you all remember Mr. Truman's campaign promises to enact his full civil-rights program; promises incidentally which were also embodied in the platform adopted by the Democrat national convention. I am sure also that all of you who pay any attention to what goes on in Washington realize that what has blocked Republican efforts to enact real civil-rights legislation in the past has always been a filibuster or the threat of a filibuster by Democratic Members of the Senate. So the way to enact civil-rights legislation is to change the Senate rules to prevent filibusters. That is precisely what Republican Senators have been trying to do ever since the present session convened on January 3.

But Mr. Truman's own Democrat floor leader in the Senate, Senator LUCAS, of Illinois, prevented the Rules Committee from taking prompt action on the proposed changes in the rules. Of course Senator Lucas needed the support of other Democrat Senators and he got it—plenty of it. It's the old familiar pattern which we have seen in operation ever since the Democrats came into power in 1933—and which persisted even when they had far more than the two-thirds majority needed to end a Senate filibuster. It is always the same pattern, civil-rights legislation is kicked around and shunted from hand to hand like a hot potato until near the end of a session. Then it is trotted out for a few days' filibuster and then the Democrat leadership decides that other pressing subjects must take precedence and civil rights legislation goes over until the next session. It is always coming up "mañana" and will be so long as the Democrats control Congress. They talk it up for votes and talk it down in Congress.

For a really prime example of administration double-talk and double-dealing let us now consider the Truman tax-increase program. The Republican Eightieth Congress, you will remember, passed a bill reducing individual income taxes by a total of about $4,000,000,000 and taking 7,000,000 taxpayers off the rolls altogether. The 7,000,000 in the lower income brackets got a 100-percent tax reduction and other taxpayers got less. Mr. Truman vetoed that Republican tax-reduction bill and denounced it as a rich man's bill. Now he tells Congress he needs an additional $4,000,000,000 in revenue to finance some of his schemes—schemes designed for the most part to pay off campaign debts out of the public treasury. Wouldn't you think that the logical thing for him to do would be to ask for the repeal of the Republican tax-reduction bill, the bill he vetoed and denounced as a rich man's bill? That would give him $4,000,000,000. You would think so, but he doesn't do so and won't dare to do so. Those 7,000,000 taxpayers who were relieved of all taxes have 7,000,000 votes—maybe more if some of them live in the Pendergast wards in Kansas City.

Well, we have the Truman administration and we will have it for 4 years. The best we can do about that is to police its every act and try to block some of its more outrageous attacks upon the public welfare. We will have the Truman-Democrat Congress with us for about 2 years—it is just about 22 months until the 1950 election, to be exact. So we can do something about that sooner and the time to start doing something is right now. It will take intensive organization and unremitting hard work. But the job has to be done and the Republican party must do it. It's not just a Republican fight. It's the battle for a better living and a more secure life for every man and woman. It's my fight. It's your fight. It's everybody's opportunity to do something about it. Let's get to work.

Atlantic Defense Pact Warrants Careful Study

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. VAN ZANDT. Mr. Speaker, we are reading and hearing much daily about the formation of a North American military alliance which obviously is being established for the purpose of resisting Soviet influences.

The statements of Senators CONNALLY and VANDENBERG in which they challenge the right of spokesmen for the State Department to commit the United States to this alliance are very timely. These statements bring to the surface a fact that every American should fully understand, and that is, that Congress alone has the right to declare war.

In connection with commitments which are being made in our behalf, David Lawrence in his daily column February 14 in the Washington Evening Star made the following interesting observations in discussing the Atlantic defense pact:

ATLANTIC DEFENSE PACT NEEDLESS IF AIR POWER CAN WIN WAR ALONE—NO JUSTIFICATION SEEN FOR SECURITY BLOC UNLESS BASES ARE NECESSARY

(By David Lawrence)

The "cold war" goes on. The American people little realize the commitments that are being made in their behalf or the fact that Russia may not take complacently the formation of a North Atlantic military alliance obviously set up on the basis of a possible attack by the Soviets.

There are already some curious contradictions about it all. If, for instance, air power is as far advanced as Air Secretary Symington, Gen. Carl Spaatz, and the other champions of that cause say it is, then why is it necessary to have any alliance with the Scandinavian countries? Why, if airplanes like the B–36 can carry bombs from the United States to distant points and return safely within 16 hours nonstop, is there any need to send military equipment to Norway or Denmark or even England?

The American people have been told repeatedly that air power will win the next war, though a few cautious souls, even in the air-power school of thought, have intimated that the use of other armed services would indeed be very helpful. Congress is about to vote appropriations amounting to at least $14,000,000,000 for all armed services. The air-power advocates think more should be allocated to them than has been.

BIG RISK INVOLVED

If air power can do the main job, then the State Department is making a big mistake in pushing the North Atlantic security pact at this time. For a big risk is being taken. The Scandinavian countries are being exposed to possible reprisals from Russia, and it will not be possible to give aid to those countries without declaring war on Russia.

Certainly if the American Army and Navy are to be weakened so that most of the money is to be spent for air power, then it will not be possible for a fleet to cross the Atlantic and land troops without heavy penalties and losses, because the Russians will have overrun the territory and conquered the Scandinavian countries before aid can reach them.

As a practical matter, it is difficult to see what purpose a North Atlantic military alliance can serve unless it is based on the theory that maybe air power cannot, after all, do the immediate job and that it is wiser to have ground troops and air bases in the Scandinavian countries to which our airplanes can go instantly or to which they can go even ahead of any outbreak of war so as to support the Scandinavian countries against a sudden attack.

But such a theory assumes that air power cannot do the job in 30 days as some of its enthusiasts are saying. It assumes, moreover, that maybe the Navy must be strengthened so as to protect the transport of troops

and fuel across the ocean. For, if it be conceded that the bombers cannot use America as the base but must depend on overseas bases, then it makes sense to have both an Atlantic pact and a Mediterranean pact.

AIRCRAFT CARRIERS NEEDED

It makes sense also to construct some floating bases—aircraft carriers—which would not be dependent, as would land bases, on the strength of Scandinavian governments, which can always be infiltrated from within and frustrated by Communist political action. Aircraft carriers can move along any seacoast anywhere and protect the landing of troops and supplies.

But the extremists in the air-power school of thought are arguing vehemently against the building of big aircraft carriers. They are insisting that this is a waste of money and that the funds had better be put into long-range bombers and other weapons of the air. Certainly if they are right about it, the State Department is making a terrible blunder in pushing the North Atlantic security alliance at this or any other time.

Admiral Nimitz and General Bradley, in recent pronouncements, have indicated clearly their belief that the Buck Rogers era of air warfare is not here yet and that if a war broke out this year, for instance, it would have to be fought very much along the lines of the last war so far as naval aviation and ground-troop action are concerned. Will Congress take the money away from the other armed services in order to give air power more? If so, the State Department ought never to submit the North Atlantic security pact to the Senate. Only if the air-power school of strategy is wrong is the security-pact plan justified at all as a sensible measure of defense precaution.

Steam Plant for TVA

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. MILLER of Nebraska. Mr. Speaker, I am going to support the appropriations which will permit the TVA to build a steam plant in order to firm up the power in that great valley. I have listened with a great deal of interest to the arguments pro and con upon this subject.

In my opinion it is the duty of the Federal Government to help harness our great streams in order to produce power for the people in that community. It would not have been possible for private capital to have built the Hoover Dam, the Grand Coulee, or Muscle Shoals. It would not have been possible for private capital to build many of our great irrigation projects that have been built or to undertake those that are now needed.

Nebraska is the only State in the Union that is entirely served by public power. We do have a shortage of power because of the great expansion throughout the rural areas to the smaller towns and industrial sites. It is quite possible that Nebraska's REA or public power groups will need to build additional steam plants in order to firm up the present power and produce sufficient electric energy to supply there needs. Certainly there is a real crusade on among our farmers to get their rural electric lines energized. The farmers all over the country are anxious to get electric energy to bring many comforts to their homes. If steam plants are needed, they should be considered.

It is quite possible that some of the bookkeeping accounts in the TVA would not stand close public scrutiny. It is quite possible they are not charging sufficient for some of their power to repay the interest and depreciation costs, or the repayment of the loans. I would not want the great States of New York, Pennsylvania, or Ohio to be paying in money to subsidize the towns or communities under the TVA. If their rates are not sufficient, then it is a matter of administration. The moneys made available under this bill, and the moneys being made available to the REA and other public power districts, should be so amortized that it not only pay a reasonable rate of interest but that the loan will be entirely repaid to the Public Treasury. The REA districts in Nebraska have a good record of paying their loans and interest.

I expect to support this measure to assist the people in the Tennessee Valley to build a steam plant. I believe it is in the public interest.

Dangers in Peacetime Rent Control

EXTENSION OF REMARKS

OF

HON. WINGATE H. LUCAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. LUCAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Fort Worth (Tex.) Star-Telegram of February 13, 1949:

DANGERS IN PEACETIME RENT CONTROL

Federal rent control in some form undoubtedly will be continued by Congress beyond the present expiration date of March 31.

There is no doubt about extension of controls for the simple reason there are more tenants than there are landlords. Their numerical superiority, and hence their greater potency at the ballot box, seems to blind Congress to some obvious facts, such as:

1. The original reason for rent control has ceased to exist. There no longer are any mushrooming Army or Navy training centers. Workers no longer are pouring into industrial centers to labor in defense plants.

2. Rent control, in the absence of general control over all segments of the national economy, is fundamentally unfair and discriminatory. It penalizes one portion of our society to the benefit of other portions.

3. Rent control was a wartime expedient which has no proper place in a peacetime economy based on free enterprise. It nullifies the law of supply and demand as it relates to rental housing.

4. Rent control in peacetime is inherently dangerous. It is slowly but surely reducing the number of rental housing units available.

5. Substantially all rental housing in the United States came into being when there were no rent controls. The comparatively few rental units which have been constructed since the war are exceeded by the number of units which have been withdrawn from the rental market.

6. With rent ceilings based on depression prices, without regard to increased labor and material costs, landlords have been unable properly to maintain their properties. As a result, much of it is becoming shabby and run down. Eventually it will no longer be habitable.

7. Rent control has not prevented inflation, as it was supposed to do. It has held down the cost of housing for some, but that has been accomplished only at the expense of others. It has compelled many families to buy or build homes which, in some cases, they could not afford.

8. Rents were frozen arbitrarily on a given date in 1941. The ceilings which were established took no account of the relationship between rentals then in effect and the value of the property involved. This has caused all manner of inequities and injustices as between landlords in the same community. Some landlords have fared better than others.

We hold no brief for the rental industry, but we do not believe that landlords as a class are unscrupulous, miserly, and heartless, waiting for a chance to take advantage of every tenant sheltered under their roofs.

And we do not believe that tenants as a class are underprivileged, impoverished individuals who are incapable of exercising independent judgment and who are wholly dependent on the Federal Government for the protection of their rights. Most of them are self-reliant citizens, and many of them are enjoying far greater increases in income than their landlords.

We are deeply concerned over the violence being done to our free-enterprise system by continuation of rent control year after year, and the dangerous precedents being established by this policy.

If today's Congress can legally discriminate against landlords, tomorrow Congress might well discriminate against tenants. It is a definite possibility which tenants should recognize.

Congress should consider the extension of rent control beyond March 31 with a view to both its immediate and long-range effects. Since termination of controls on short notice might result in some cases of hardship among tenants, their extension for a reasonable time seems inescapable. But the renewal law should make definite and specific provision for the gradual tapering off of controls, with complete decontrol at the earliest possible time as the goal.

In its concern for the welfare of tenants, Congress should look to the future and consider their plight when the present supply of rental housing, through lack of proper upkeep or withdrawal from the rental market, has either ceased to exist or become undesirable.

Tenants and the lawmakers alike should consider the deplorable state of rental housing in France, which has resulted from permanent rent control. The story is told briefly in the February 5 issue of the Saturday Evening Post. Tenants, for their own long-run protection, should urge their representatives in Congress to guard against the mistake France has made from being repeated in this country.

New England Power

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. FURCOLO. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include excerpts of the following article by request:

NEW ENGLAND POWER, PUBLIC OR PRIVATE?—HYDROELECTRIC POWER POSSIBILITIES IN NEW ENGLAND

(By Judson King)

I. FEDERAL POWER POLICY

Multipurpose river development is now the fixed policy of the Federal Government for all great rivers that are interstate streams. This policy evolved with the growth of the Nation to meet modern necessities, such as flood control, navigation, soil conservation, reforestation, etc., of which power is only one factor—but a highly important factor—the integrating key of the whole. It has been 40 years in developing from Roosevelt to Roosevelt and after, and for any statesman or publicist to assert that it was the result of socialistic theorizing, or Communist inspiration, or due to the yearn of bureaucrats in Washington to augment their power and influence, is mere fustian.

It is not wise economy to construct dams, as a rule, for a single purpose such as flood control or power, when other imperative objectives can be combined in one operation and the whole made economically feasible.

These operations require unified management by a single agency with plenary control but in cooperation with other State and Federal agencies, if maximum results are to be realized, and the harnessing of a river from source to mouth, including tributaries. This principle was laid down during the administration of Theodore Roosevelt in 1908 and its soundness has been demonstrated by our national experience since and by the success of the TVA. The delay and disastrous results of bickerings and conflict between States and between separate bureaus are thereby avoided and each region and the Nation reap the benefits of unified action.

This policy is relatively new in respect of application and is still a matter of heated debate. It has been adopted in only one watershed, the Tennessee, to date, but it points the way, with proper adaptations, to the future if the greatest all-round benefits are to be achieved and we meet the challenge of the machine age of the twentieth century.

II. WHAT IS HAPPENING IN THE NATION

As to water power, when one compares what has taken place in New England with what is going forward in other sections of the United States, the result is startling. New England and New York are rich in water power, yet there is not a single Federal project in the whole region.

* * * * *

As to New England we find that the most recent Federal surveys indicate a total of at least 2,500,000 kilowatts of undeveloped capacity on the following rivers: Connecticut, Merrimack, Lake Champlain, Androscoggin, Kennebec, Penobscot, St. John, and St. Croix. If adequately harnessed these rivers are capable of developing 10,600,000,000 kilowatt-hours of energy annually, which is three times greater than the present output.

Surprisingly enough, the Connecticut has the largest potential. This indicates the uneconomic character of present utilization.

As compared with this 10,000,000,000 kilowatt-hours now going to waste, it is significant to note that the entire annual power consumption of New England for all classes of service was only 16,000,000,000 kilowatt-hours in 1947, of which 75 percent was of steam generation—with no coal or natural gas or oil in New England.

III. WHY NEW ENGLAND LAGS BEHIND

Informed adults will remember, but young people, including World War II veterans, need to be told why, and who is responsible for, New England's backward status in respect of both flood control and water power. The reasons lie in antisocial policies established when they were babes in the cradle and kids in school. These happenings have cost their parents much grief and millions of dollars and will cost them and their children millions more unless the ancient regime is ended.

For example: In 1926 the six New England Governors, in a united appeal, urged public action for flood control and power development. They got nowhere. The utilities were opposed. Yet the $52,000,000 Merrimack flood of 1927 showed the need.

Again, the Federal Flood Control Act of 1936 authorized $315,000,000 for dams in 40 States, the States benefited to pay 20 percent of the cost; $24,000,000 were allocated for reservoirs in the Connecticut and Merrimack River Basins. An interstate compact between New Hampshire, Vermont, Massachusetts, and Connecticut was necessary but no additional legislation by Congress. Three power company lawyers of high standing were officially connected with the drafting of the compact in 1937 by appointment of the Governors.

When it appeared a bill was introduced in Congress to have it approved. Why? Because the utility lawyers had slipped into the compact a joker in the shape of an innocent-looking reservation which amended Federal law and would strike down throughout the United States Federal control on the people's interest of water power, established by the act of 1920; paralyze the Federal Power Commission; hamstring the President's regional conservation program; radically affect the policy governing the administration of TVA, Bonneville, and all yardstick plants; and establish the utilities' doctrine of States' rights as a national power policy.

The intent, of course, was to enable these States to turn the water power over to New England private utilities which were spearheading an attack on the Federal Power Act. As a cover the utilities and their politicians and newspapers set up a great howl about the "invasion of New England by the New Deal in Washington," which was pure buncombe, since the act had been in effect for 17 years and New England was still in the Union.

But while this propaganda was fooling the people there was silence on the fact that around 90 percent of New England power concerns were controlled from New York.

The trick was exposed. Congress rejected the compact. New England clung to States' rights with the result that she still needs flood control and her unused water power is still running to waste while other regions are forging ahead. New England utilities, bankers, and insurance companies are primarily responsible then for this situation.

The St. Lawrence

But for the controversy over public against private power the St. Lawrence project would have been long since in operation.

In 1922 the International Joint Commission approved the seaway-power plan as feasible. Since private corporations expected to develop the power a long list of such men as H. I. Harriman, president of the New England Power Co., and John H. Finney, for the Mellon aluminum trust, testified in favor of the whole project at the hearings. (See S. Doc. 114, 67th Cong., 2d sess.)

In 1924 Herbert Hoover, then Secretary of Commerce, was chairman of a committee of officers of 10 Northeastern States which recommended the creation of a gigantic Boston to Washington superpower system of private utilities interconnected by great transmission lines with St. Lawrence power as one of the principal sources of supply.

But when in 1929 Gov. Franklin D. Roosevelt declared for public generation and handling of the power in such wise as to benefit homes and farms as well as corporations, the power trust and Wall Street executed a right about face, fought the bill creating the New York Power Authority and killed the treaty with Canada in 1934 with the result that St. Lawrence power still runs to waste.

* * * * * *

IV. ELECTRIC RATES IN NEW ENGLAND

It is well known that from 1935 to date the electric rate surveys of the Federal Power Commission have uniformly shown that New England as a region has over-all the highest electric rates of any region in the United States. Further, that the reduction of private company rates in the northeast quarter of the United States by private utilities has not kept pace with reductions of private rates in the other three quarters of the Nation, although the Eastern States supposedly have the oldest and most efficient State regulatory commissions.

Beyond question, this result has been chiefly due to the fact that the low rates established by the TVA in the Southeast, Boulder Dam in the Southwest, and the Bonneville-Coulee projects in the Northwest have by their competitive effects forced the reduction of private rates. As a rule, the farther you get from these great projects the higher rates prevail in the various States. Yet these private companies so affected are prospering financially despite inflated securities.

Absolutely necessary projects on the Missouri and other tributaries of the Father of Waters, yielding enormous blocks of cheap public power, will in a few years bring down private rates in the entire central and midwest areas.

The reason why the northeast section of the Nation has no Federal projects is that the banking and utilities interests have controlled both State and National Governments and blocked multipurpose development of the watersheds.

* * * * * *

V. WHAT CAN NEW ENGLAND DO?

Apparently a considerable segment of New England voters and a few outstanding public men have lost faith in commission regulation and are turning to public ownership of electric power as the only way by which New England can maintain her status in competition with other regions of the Nation. Those 10,000,000,000 kilowatt-hours of potential hydroelectric power in its rivers must be harnessed by the public. They also realize that along with this must come flood control, improved navigation, ending stream pollution, recreation, domestic and industrial water, reforestation, fish and wildlife preservation, soil conservation, etc., in a correlated grand enterprise—the twentieth century method, because New England like other regions must meet these needs.

Assuming this comprehensive objective and remembering that the United States Supreme Court decision in the New River case in 1940 ended all the quibbling about Federal jurisdiction over the watersheds of the navigable rivers of the Nation, there are two practical methods of procedure.

First, each State can proceed separately or by compacts with other States under Federal license. Likewise municipalities. The Federal Power Act gives preference to public bodies over private concerns. The States by appropriate legislation can aid cities or districts.

The proposed Holyoke expansion

A practical example is afforded by the present attempt of the Gas and Electric Department of Holyoke, Mass., to secure a Federal license to develop to full capacity the water power of the Connecticut River at that point. The city would purchase the properties of an existing company operating without a Federal license, and ultimately generate three times as much power as the present output.

Of course the city is being fought by the combined utilities of New England and will

get no help from the New England council. They will claim confiscation of private property which is false because a fair price will be paid. They will claim a tax loss to the city which is likewise false. Rather, there will be a large increase of tax income to the city and State because of increased business which added power will bring to the city.

TVA pays taxes and so do the municipalities and farm cooperatives. The falsity of the propaganda that the taxpayers of the Nation subsidize the cheap TVA power is a matter of record. In 1933, when TVA started, Federal income taxes from the TVA States totaled $12,000,000. In 1946 they totaled $1,100,000,000.

VI. NEW ENGLAND NEEDS A TVA

But, secondly, from the viewpoint of modern engineering and multipurpose execution in other regions this piecemeal, haphazard method would not meet the New England crisis. A comprehensive, planned, TVA type of development is necessary if the Northeast is to keep pace. Meantime, however, individual projects like Holyoke could go forward but designed to fit into the ultimate scheme.

As to power, a public transmission network like those now serving the Tennessee Valley and the Northwest would be needed. This grid would tie together all water power sites on all New England rivers from source to mouth, integrated with steam generation and connected with the St. Lawrence and Passamaquoddy. Such a hook-up would make feasible and profitable small and abandoned sites, pay for revamping old sites like Holyoke and by over-all interchange of power get the last kilowatt-hour out of the rivers and reduce production costs to the lowest possible point and not otherwise.

Then if, like TVA, uniform rates are established throughout the six States, no section would have an advantage over another and all would prosper together. Maine should consider that, when the final test comes, her law against export of power will be found unconstitutional. States' rights, State pride, State selfishness, as well as the advantage of one municipality or industry over another must be forgotten however much emotional and intellectual laceration is involved. Other regions have painfully learned that lesson in part and will continue to learn to their advantage. New England must recognize the inevitable to survive.

The famous New England council of super-big-business men will doubtless disagree as the recent report of its power survey committee would indicate. The committee engaged the engineering firm of Charles T. Main, Inc., of Boston, to make a study of the power resources of New England and size up the situation to help develop an informed public opinion and point the way to economically sound policies and enlightened action. From it we gather that all is well as is: there remains only 420,000 kilowatts of hydro power capable of feasible development (Federal Power Commission engineers estimate over 2,500,000 kilowatts, exclusive of Passamaquoddy); St. Lawrence would be of doubtful benefit and Passamaquoddy discloses no substantial ground for faith in its feasibility; possibilities of power development are given silent treatment and the question of rates is ignored with one exception, to wit: that the importance of the cost of power in manufacturing has been greatly overestimated.

These findings will not disturb the five top electric utility executives on the committee.

For comparison, New Englanders should read the report of the Muscle Shoals Commission appointed by President Hoover in 1931 after his veto of the Norris bill, to recommend a sound policy for Muscle Shoals. It was composed of State and Federal officials and advised turning the Shoals properties over to the States of Alabama and Tennessee. It engaged the Army engineers to advise them on power and they reported that development by the Government was not feasible and would prove a disastrous mistake since it would duplicate existing facilities serving the area adequately and was not needed.

* * * * *

This is but one instance which demonstrates that bankers, utility executives, and their obedient professional spokesmen anywhere, bent on immediate self-interest, are unsafe long-range planners where the public welfare is at stake.

As to sin and taxes

Whenever or wherever it is proposed that the people assume direct public control of electric service two horrific scarecrows, among others, are promptly erected by private utilities to frighten the unwary and keep possession of these profitable corn fields.

The first is sin, the second is taxes.

It is made to appear that public ownership and operation is an invasion of the sacred rights of private property, tantamount to a gross moral transgression. In Holyoke, for example, since certain gentlemen and their successors have been permitted to use the waters of the Connecticut at that point for a hundred years or so, no matter how wastefully, it will be inferred that they have an ethical right to continue in perpetuity. Hence it is held that for the city to pay them off and take possession is akin to confiscation. And so for all New England.

Now every judge and utility lawyer in New England well knows that this is sheer hokum, both legal and moral. They know that control of water power and utility services of all kinds, local, State, and National, are sovereign functions belonging to the people. They know that legally and morally the operators of private utilities are not competitive businessmen in the ordinary sense of these words, but are actually hired hands employed by the public to exercise these functions under franchises.

* * * * *

Now as to taxes. The big placard on this scarecrow reads in effect: "We pay taxes and public systems don't. Beware of an increase in your taxes."

For half a century this tax claim has been dinned into the American mind. In these days the companies which admittedly spend a million dollars or so a year for those full-page magazine ads signed by "American Business-Managed and Tax-Paying Electric Light and Power Companies" still keep it up. Incidentally 16 are New England companies. I often wonder how these gentlemen will square themselves when St. Peter asks them what respect they had for the ninth commandment, particularly wherever the New England conscience operates. Consider the following:

Twelve years ago the Federal Power Commission issued the first inclusive official study of this subject ever made and its figures were certified as correct by the private utilities before publication. The report was titled "Rates, Taxes, and Consumer Savings," and compared 691 private with 537 publicly owned utilities with respect of these items for the year 1936.

Correctly defining taxes as "payments in support of Government," the report on this item shows the following percent of base revenues paid in taxes:

	Direct taxes	Net cash contributions and free services	Total percent of base revenues
Private	14.4	None	14.4
Public	18.0	8.8	26.8

The above is for the United States. In New England 108 companies paid 16 percent of their base revenues while 39 public plants paid 24.6 percent for the support of Government. Such data is important to the formation of an accurate public opinion upon this vital and highly controversial issue and it is regrettable that the Power Commission has not followed up with annual reports of the same character.

However, Carleton L. Nau, able manager of the American Public Power Association, has abstracted the data from last year's statistical reports of the Commission, and he finds the figures show that in 1946 some 300 large private-power systems paid in taxes 19 percent of their gross revenues while 150 of the larger public systems paid 27 percent for the support of Government. So that while we hear much about that 4.6 increase of company taxes the public bodies still pay far, far more.

Chattanooga and the TVA—Taxes and flood control

Returning to the low Chattanooga rates, quoted at pages 5 to 8, the query arises: Does this plant pay taxes? The answer is, Yes; exactly as all other utilities, private and public, under State law. Chattanooga's official report for fiscal 1947 shows $386,724 taxes so paid.

And does TVA, the Federal wholesaler, pay taxes? Yes; under Federal law it paid in fiscal 1948 a total of $2,005,482 in lieu of taxes to the States affected.

But do New England and other United States taxpayers have to dig down to grant these bonanzas to the Southland? As to power, No. These facilities are self-liquidating and will be paid off in 40 years. From 1933 to 1948, after running expenses, etc., they showed total net revenues of $181,000,000. Of this, $34,000,000 have been paid back to the United States Treasury and $147,000,000 have been plowed back into the vast construction program, thus reducing appropriations by Congress.

Also TVA is boosting the Nation's revenues. Federal income taxes in the TVA States have increased from 3.4 percent of the United States total in 1933 to 6.3 percent in 1947—an up of over $2,000,000,000 in which TVA has been a large factor and which far exceeds Federal income taxes. The Government does not levy on its own enterprises any more than a city taxes the fire department or streets.

As to flood control and navigation, the answer is "Yes," just as Tennessee and other States dig down to finance river and harbor improvements from Boston to Miami and elsewhere, as well as flood control.

Like New England the Tennessee watershed has many rambunctious rivers. In February of 1948 there were big floods which the TVA systems of dams held under control. The estimated savings to agriculture was $1,600,000; to the vulnerable city of Chattanooga alone, $13,000,000 and so on. These dams will take 2 feet off the crest of a major flood on the Mississippi, an insurance value worth many millions. Yet the country is still being told that we cannot have power production at flood-control dams.

But are these reports reliable? They are. Ask Hon. Lindsay C. Warren, Comptroller General of the United States, whose department keeps tabs on Uncle Sam's accounts, including those of TVA.

To sum up, a basic conflict is in progress between so-called private enterprise on behalf of the few, and planned public enterprise on behalf of the many, over the ownership and control of natural resources. The sole yardstick of the first is dollars; of the second, dollars plus humanity. All projects are necessarily blueprinted to serve one or the other of these objectives. Take your choice in judging them.

The Value of Tito

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Constantin Fotitch, former Yugoslav Ambassador to the United States, which appeared in Human Events, February 9, 1949. This is a timely article by one who knows what is going on in Yugoslavia. It follows:

I

Norway, in northern Europe, and Yugoslavia, in the south, are two small nations which Soviet Russia must dominate in order to nullify the American plan for a North Atlantic military alliance.

If Norway can be added to the Western bloc, Great Britain will be more secure and Communist penetration will be held back from the North Sea. If Yugoslavia can be added to the western bloc, Italy and Greece will be more secure, and Communist penetration will be held back from the Mediterranean area.

Norway and Yugoslavia are thus the key points in the present diplomatic struggle. The contest for control of Norway is currently making the headlines. But the issue of whether Yugoslavia can be detached from Communist domination is of equal importance to the future of western civilization. It is now 6 months since Tito split with the Cominform. The Yugoslav dictator has been at outs with the Kremlin long enough to estimate the significance of his defection.

In the Yugoslav Assembly—controlled entirely by his followers—Tito stated on December 27, 1948, that he may have to sell raw material even to capitalistic countries, in order to buy machinery we need for the modernization of our mines and heavy industry.

Tito thus admitted that the whole economy of Communist Yugoslavia has been completely dislocated by the economic boycott which Soviet Russia has applied to punish him. In consequence, execution of Tito's ambitious 5-year plan, on which he staked the fate of the regime, has been irretrievably compromised. In a recent speech at Zagreb, Tito admitted that he must revise the 5-year plan by eliminating secondary projects and concentrating all efforts on heavy industry and mining.

Tito's statements have raised the question of whether he could be gradually led from economic collaboration toward political association with the western democracies. Any answer to that question must first take into account the charges of those skeptics who still believe that the entire conflict between Tito and his former associates is simulated.

Of course the Communists are past masters in the art of intrigue, but the conflict between Tito and Stalin has gone beyond that stage and seems to be definitely unbridgeable. It does not stop at name calling and recrimination. There have been at least two attempts to liquidate Tito, one of them involving the former chief of staff of the army, who shortly thereafter himself met a sudden death. Stalin expressed willingness to meet with President Truman in Poland or Czechoslovakia, but not in Yugoslavia. The increasingly hostile attitude of Tito's Communist neighbors, especially Bulgaria and Albania, is further evidence that this conflict is genuine.

II

Tito's split with the Soviet bloc has been appraised as of considerable value to the western powers in the cold war with the Soviets. He has been hailed as a national leader who has rallied the overwhelming majority of the Yugoslav people in defense of their independence.

These optimistic appraisals are considerably exaggerated. They credit Yugoslavia with military and economic importance far beyond reality. A good many grains of salt should have accompanied the prediction that the Soviet would suffer greater damage from the conflict than Yugoslavia itself. The same applies to the assertion that Tito is able to divert his great resources in metals to the capitalistic countries.

The prewar production reports of Yugoslavia (the postwar figures are not available in absolute figures but only in percentage) show how misleading such statements are. In 1938, Yugoslavia produced 662,015 tons of copper ore, 551,000 tons of iron ore, 749,183 tons of lead and zinc ore, 47,352 tons of chromium, 84,828 tons of bauxite.

Even if one accepts the assertion that production of these minerals has now exceeded prewar level, it is certain that the magnitude of Yugloslav production is far from being of such importance as to affect world economy in any important degree. Of course, for a country the size of Yugoslavia, it represents a great economic asset; but not sufficient to stir the greatest interest in the west and raise a storm among the governments in the east, to quote one recent observation.

In addition to its mineral resources, Yugoslavia can be expected to show a surplus of food, food products, and timber. But the export of those products has already been pushed to the limit by Tito's trade agreements with Switzerland, Sweden, and Great Britain. The export of food products was made possible at the expense of the domestic population, especially in the cities. The ration of basic food borders on undernourishment, that of meat being only 200 grams (6 ounces) a week, and bread 300 grams a day. Even such meager rations are seldom honored.

In the presence of growing popular discontent, Tito, in his above-mentioned speech in parliament, announced that further exports of food will be discontinued in 1949. He obviously meant that no new trade agreements involving food from Yugoslavia will be concluded.

III

In spite of Yugoslavia's limited economic potential it is suggested that Tito's new orientation will play an important part in trade and commerce with the west. And with the change of economic orientation it is predicted that a political reorientation will follow. Until now nothing has occurred to justify these optimistic predictions.

Tito, hard pressed by the commercial boycott imposed by the Soviet and its satellites, is simply fighting to stave off an economic collapse which would engulf his whole regime. He is trying to obtain from the west the machinery and industrial products on which depend even the partial execution of his ambitious but now unattainable 5-year plan.

Moreover, some of these western countries (such as Great Britain and Switzerland) had important prewar investments in Yugoslavia. Those investments have been expropriated by Tito in the true Communist tradition. But in the discussion of the trade agreements, these bourgeois governments unsympathetically presented Tito with heavy bills for indemnity to their citizens. Great Britain alone requested £7,000,000 for Trepca Mines, Ltd., owned by a British company. Finally the British Government compromised for £4,500,000 ($18,000,000) to be paid in annual installments.

Those payments can only be covered by exports from Yugoslavia, thus diminishing to a considerable extent the return in British goods. To make up this trade deficit the Tito regime seeks to increase domestic production by imposing compulsory overtime and speed-up methods. These have transformed the country into a vast camp of slave labor, mercilessly terrorized by the secret police.

IV

If the economic collaboration of Yugoslavia with the western world is of secondary importance, there should be even less illusion about the potential value of political collaboration with Tito.

Since his spectacular break with the Cominform, the Yugoslav dictator has always emphasized that he remains faithful to communism and loyal to the Soviet Union. At the Danube Conference, held last July and August in Belgrade, Tito's delegation was a most unfriendly host to the American and western European delegations. During the last Assembly of the United Nations the Yugoslav delegation unreservedly supported the Soviets. Recent statements of Yugoslav Communist leaders emphasized that Yugoslavia will always remain loyal to Stalin. The new Chief of Staff of the Yugoslav Army, Peko Dapchevich, on December 14 solemnly proclaimed that in case of conflict: "The Yugoslav Army will be on the side of the Soviet Russia and is already preparing itself to protect the freedom of the eastern countries from the warmongering west."

Recently the United Nations Special Balkan Commission has again formally accused Yugoslavia of giving continuous support to the Greek guerrillas. And Tito's propaganda continues as before its constant attacks against reactionary capitalism.

American and British correspondents in Belgrade have been working hard to detect some signs of a changing attitude on Tito's part. About all they have been able to report in this line is that at the reception given by Tito on the occasion of the anniversary of the Yugoslav Republic—November 29—the representatives of the western countries were for the first time treated on a footing of equality with the Soviets and admitted to the same reception room with their Communist colleagues.

In the face of these facts, Americans should not be lulled into believing that Tito's regime has undergone a nationalist and democratic evolution. Tito is simply struggling to maintain himself in power and to save his regime. He well knows that with the Soviets there is no compromise. Hard pressed, the Yugoslav dictator therefore makes certain overtures to the west, but it would be an inexcusable blunder to believe that he will turn all out against the Kremlin. It would be even more inexcusable if the democratic west should help to maintain in power a dictatorial regime originally imposed by the Soviets against the will of the overwhelming majority of the Yugoslav people.

Tito has a certain "nuisance value" in this cold war. His conflict with the Cominform undoubtedly weakens the monolithic Soviet system. But beyond that he is no asset to the western world. And to try to make Tito an ally would damage the position of the western countries among the people of Yugoslavia as well as among all other nations enslaved by Soviet dictatorship. The prestige of the west depends not only on its material strength, but just as much on its moral position as defender of those principles and ideals on which civilization depends.

Religious Education for Today

EXTENSION OF REMARKS
OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. HAYS of Arkansas. Mr. Speaker, I have just finished an arresting and timely statement by Dr. J. L. Kesler on the place that Christian education occupies in the solution of some of our problems. Dr. Kesler is an outstanding educator, and the views expressed here were presented recently at a meeting of the Education Commission of the Southern Baptist Convention, of which Dr. Charles D. Johnson, of Baylor University, is chairman. The lofty ideals expressed by Dr. Kesler have not only an inspirational quality but contain the profoundest wisdom for our times. It is not the purpose of Christianity to serve any particular economic or social patterns, but if our finest political principles are saved, we must draw upon the resources of faith which Dr. Kesler describes. The teachers in our colleges who are supplying a spiritual interpretation of life are rendering a great service in the defense of our institutions. If the college men and women are impressed by this type of instruction and develop Christian principles for their careers as citizens, then there is hope for us. Otherwise, materialism will win, and our western civilization will be weakened. Such men as Dr. Kesler and Dr. Johnson have placed us very much in their debt by advancing the ideals so eloquently stated here.

With the leave to extend my remarks I include the full text of Dr. Kesler's article, as follows:

RELIGIOUS EDUCATION FOR TODAY

(By J. L. Kesler)

Today we face a broken and shattered world.

The problems of human life growing out of the war are tremendous and tragic; and only the practice of the teachings of Jesus himself will keep another world war, with its unspeakable calamities, from coming again; and, possibly, in our lifetime. Such teaching, therefore, and its faithful practice is the most important enterprise that ever made its appeal to human responsibility.

What we need is a religious education that will make Christianity Christian. The Christianity we have is not Christian enough to change our world from a human slaughterhouse to a human brotherhood.

Christianity has not failed. It has never been tried. This has been said before. But it was never so evident as it is today. Not even has friendship been tried in international relations except for selfish ends.

First, then, in what ways do the present uncertainty and confusions in moral and ethical standards affect moral and religious education? The answer is, they paralyze it, wherever they dominate the situation.

Wherever men stand uncertain and confused, stand shilly-shally, with no standard of moral sanctions, no compelling motive, no directive norm, no inescapable conviction, no ethical imperative, nothing happens. Men have to be sure of something or the fire goes out. Nothing great is ever done without some faith seizure, some invincible conviction, some incomparable drive and loyalty that not only unifies and sets on fire the whole community—unifies and fuses it into one indissoluble solidarity, into one undiscouraged strength and power.

This comes about in the educational process by participation; for nothing permanent in character and action is ever done by proxy.

This may be thought of as a challenge to the teacher, and so it is. That is to say, to the real teacher who is not himself in confusion about moral and ethical standards nor the meaning of religion.

But the teacher to whom there is no goal in sight, no meaning in religion, no content, who is simply all dressed up in his mechanism and methods and nowhere to go, what about him? He simply goes nowhere and leads nobody out of the wilderness. We need clear-cut ends in view, frontal purposes built about preferential values that simply will not wait till tomorrow in this swiftly changing world.

We need, may I say, no fixed verbal absolutes in ethics and religion any more than anywhere else. We need no final authority to command and no educational creeds, however well seasoned with the wisdom of passing pedagogs. Instead we need the sense of the infinite values of growing childhood and youth reaching up toward unseen but illimitable altitudes possible to our nature and to our common humanity. We need the ways by which we climb in sight. We need particularly to join intelligence to aspiration in life's long pilgrimage to those tablelands of social and ethical achievement of our race Life has meaning in proportion to our interpretation of our experiences in terms of our almost infinite capacity for hope and love and joy and peace, for truth and the almost endless possibilities of the friendly life.

We are living in a changing world in which a changing world view of religion is going on. And its consequences are seen in fundamentalist and modernist fevers, in the growing pains of religion and science, in magic hopes and irrational disappointments.

The change from an irrational religion—creed, ritual, sacrament—capricious and unreliable—to a scientific, social, and ethical religion, intelligible in terms of the rest of our knowledge and consistent with it, means a total recentering of the content, the outlook, the method, and the motivation of the whole of life and its tasks in the world.

As Dr. Holman says in his book, The Cure of Souls, "Whatever the cause, this disintegration of one's philosophy of life, world view, or fundamental religious conviction, this experience of seeing one's world go to smash, entails for multitudes heart crushing disillusionment and despair. Fundamental doubts about life's meaning and value arise. Why should one continue one's life of moral endeavor, or indeed, continue to live at all?"

Here is a problem of religious education and a challenge to religious education, to courageous, creative religious education in which the student's whole nature and destiny are involved. He is to be enlightened, energized, and motivated anew—no formal or conventional matter, no mere school or church or institutional matter; it needs no priest's fumbling nor side-stepping from reality. Here men find life or lose it.

We must remember that it is the community that educates. We need first of all to Christianize the social order in which we live, to change the central method of our present civilization from competition, trying to get the better of one another for profit, to cooperation, working together in the interest of one another in a world brotherhood of the friendly life, a civilization keyed to prosperity and peace. This would mean the elimination of commercial, industrial, economic, and international wars and every form of exploitation of many by man. Unjust profit motives and all overreaching would gradually disappear as the more satisfying and more profitable service motive took its place. Privileged positions would come to be discredited and despised, so that to accept a privileged position would not only be bad manners but treason against men as men and against God as Father of men who created us brothers. As long as we teach religion as at present motivated we may expect all tests and surveys, as the Indian Survey—and half a dozen since—to find no relation between biblical knowledge and moral sanctions. Why?

We are not teaching the Bible and we are not teaching religion so as to develop the deeply ethical, the profoundly spiritual person who cares for others and treats them, even in the most irritating situations as he himself would like to be treated in like situations, not even asking the question, Do they belong to our race, our color, our creed, or our Nation?

Indeed, we might inquire if there be any difference between good churchmen and outsiders when war breaks out; or when industrial strikes imperil the life of the community or Nation, or when exploited childhood brings a larger profit to the mill owner, or in crises like the present where many starve while many have millions stacked sky high—really can we tell the difference? Yet I think Jesus expected a difference, as every teacher does who has a great lesson to teach and great lives to create. He came to make men good and through them to create a good world—not chiefly to save us from hell hereafter, that is incidental, but to save us to the heavenly life here and now, which makes heaven possible—came to make men good in all the social and ethical relations in the personal, national, and international life—came to get men to do justly, to love mercy, and to walk humbly with God, and yet we have made him merely our scapegoat to the wilderness instead of our divine guide to a civilization where life and love are sacred and where men love to bear one another's burdens and so fulfill the law of Christ. Jesus has no limit to his world program for a larger, fuller, freer, better world.

When Lord Shaftsbury, trying to save the children and workingmen in England from unprecedented brutality and misery had to say that he was opposed more by the respectable and religious people than by others; and when Jesus had to say to the best churchmen of his time, "Woe unto you scribes and Pharisees, hypocrites; for ye shut up the kingdom of Heaven against men; for ye neither go in yourselves, neither suffer ye them that are entering to go in," it looks like something has gone wrong with the guardians of respectable religion. We may yet have to say with the prophet, "The time is come that judgment must begin at the House of God." At least, it is time we were doing something about it in our schools and churches and in the highways and hedges where the people live.

And now, by your permission, I want to quote a statement by Rev. Herman F. Reissig on hearing an American general say, "I don't like war, but I want to protect my country."

Mr. Reissig says, "Protect 'my country.' But where is 'my country?' Who has decreed that 'my country' shall include only the geographical area?

"Where Milton sang, where Rembrandt painted, bounded by the Atlantic and Pacific Oceans, Canada, and Mexico? Who has decreed that 'my country' shall embrace only those men, institutions, and events which lie between the year 1942 and the present? Who may thus limit and define 'my country?'

"Where Isaiah lifted up his voice for human justice, there is my country.

"Where Plato announced the reality of the spiritual, there is my country.

"Where Jesus offered his life for men, there is my country.

"Where St. Francis lived the compassionate life, there is my country.

"Where Shakespeare swept the human scene into his dreams, there is my country.

"Where Luther struck for the liberty of the soul, there is my country.

"Where Milton sang, where Rembrandt painted, where Goethe wrote, there is my country.

"Who draws these little lines, limiting my allegiance by accidents of time and space?

"Where Gandhi fights a swordless fight for freedom, there is my country.

"Where Schweitzer heals the bodies of black men, there is my country.

"Where brave men stand firm against Hitler's barbarism, there is my country.

"Where Kagawa champions the underprivileged, there is my country.

"I would protect my country. For my country I would fight against all enemies.

"Where is my country and who are its enemies?

"Wherever men and women lift the flag of justice, or of beauty, or of freedom, or of truth, or of peace, or of fellowship, there is my country.

"Who enslaves men in body for the sake of gain or in mind for the sake of power, who tramples on others' rights, who closes the doors of opportunity, who serves the dark gods of superstition and prejudice, who turns his eyes toward the past, who denies to others privileges he desires for himself—he is my enemy.

"God help me to protect my country against all enemies."

I heard this statement of Mr. Reissig nearly 30 years ago, a few years after the First World War, and to me it expresses the unity and solidarity of mankind, just as Jesus did, where, as world citizens, there is neither Jew nor Greek, bond nor free, but a larger and richer and ampler manhood and a fuller interpretation of the universality of the Christian life, creating one world and one humanity.

Finally, in the United Nations there is a possible hope of permanent peace. This can be now only a hope, and a hope that grows fainter as we think of a war-minded world and a not much less war-minded church. But, even so, may this hope have safe pilgrimage under morning stars till the day dawns in some fond future, when Christianity becomes Christian, and lifts the tragedies of war from the shoulders of the world.

My! What Christianity might do it we had it. What a task and what a hope.

In principle, simple as the Golden Rule; in practice, difficult as the perversity of human nature; in achievement, the joy of the whole earth.

Tennessee Valley Authority

EXTENSION OF REMARKS

OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. JONES of Alabama. Mr. Speaker, the succession of events within recent years has placed this great Republic in a position of world leadership unlike that of any other nation in the course of history. All peoples of the world seeking freedom and who are at this moment endeavoring to escape the fears of oppression, want, and tyranny, look toward the United States as the citadel of hope. We in this country have set the course in cooperation with other democratic nations to provide peace with all nations. To accomplish that peace we have dedicated our good will, our sincerity, and the use of our resources in bringing about world concord. Since the end of World War II, while we have been about this job, a colossus has raised its ugly head and cast its shadow across the pathway of our course, threatening the future security of the entire world.

Yes, Mr. Speaker, our former ally in the last great conflict has embarked upon world conquest with an appeal to hate, prejudice, and with the preachments of an ungodly philosophy. This nation is Russia. To thwart the efforts of her doctrine of communism, we must prepare for the preservation of the integrity of all democratic countries. This will require the same effort and the same zeal with which we prosecuted World War II. It is necessary for us at this moment to take an accounting of our capacity to carry out this objective in terms of our natural resources. Certainly the last war made an unprecedented demand on our great wealth.

When we engage in any sort of accounting of our natural wealth and natural resources, we are reminded of our ability to produce on the farm and in the factories. Let us for one moment think of where we find ourselves today with respect to our soil, our forests, and our mineral resources.

Within recent years we have come to realize that the use of our land has not been wise and that fertility and plant life have been literally mined from the soil without replenishment. Erosion was not being arrested and our irreplaceable topsoil joined excessive rainfall on its excursion to the sea. Today, we not only recognize this national problem but we are actually assisting the farmer in programs of soil conservation, flood control, and reclamation. We are encouraging farm practices that are profitable to him immediately as well as the future welfare of the country.

Not too long ago, America abounded with virgin forests across the breadth of the land. Today, we are acutely aware that we have not been wise managers of this great natural resource and we know that very little of this richness will be inherited by our children. In an effort to overcome our shortsightedness we have recently begun the task of reforestation in the hope that some day our forests will again be sufficient to supply our needs.

In the past we proudly boasted about the inexhaustible supplies of natural resources and our geologists speculated that we had sufficient mineral resources to supply our needs for hundreds of years to come. Our unprecedented national expansion and growth, together with two great wars that utilized an incalculable amount of iron, coal, and other minerals, find these geologists now speculating as to where new deposits of these minerals can be found 10, 20, 30 years from now in quantities sufficient enough to meet our needs.

This picture of our present situation with respect to these natural resources is certainly grave enough to cause apprehension and anxiety.

One of the greatest of our natural resources that survives without damage, without injury, regardless of neglect, is the great nonexpendable resource of water power. When the Tennessee Valley Authority was enacted, it was sometimes referred to as a noble experiment. Those of us who have observed it and examined it know that TVA is the accomplishment which its creators dreamed.

The appropriation now pending will mean greater productivity, greater usefulness, and will add immeasurably to our national security by making full use of the nonexpendable water power that now flows in the Tennessee River. I shall not, at this moment, remind you of the virtues nor the accomplishments of this great agency during the course of the last war. Its record is too well known. Its signal successes are now a matter of history.

This appropriation will determine if we are conservatives in the real sense of the word, for the sum that will be appropriated today will further enhance the value of the entire project, and make it more profitable in its repayment schedule.

Gentlemen, the situation in this area of the Tennessee Valley as far as electric power is concerned is critical. And, unless the appropriation is made for the construction of the New Johnsonville steam plant, we will be without electricity to carry on rural electrification, to supply our villages and cities with power, and the resulting lack of electric power will thereby curtail the industrial capacity and expansion of this vast area.

Mr. Speaker, we today are the architects of America for the years to come. I sincerely hope we shall not be shortsighted in providing for the future welfare of this country by denying this most necessary and all important appropriation.

Veterans' Hospital at Baltimore

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. GARMATZ. Mr. Speaker, at the request of Mayor Thomas D'Alesandro, Jr., of Baltimore, a meeting of the Maryland congressional delegation was held this morning with representatives of the various veterans' organizations in Maryland. The purpose of the meeting was to bring to the attention of the Maryland congressional delegation the urgent need for a general medical-surgical hospital in Baltimore for the veterans, and to urge their concerted action toward se-

curing the hospital. Under leave to extend my remarks, I wish to insert the testimony presented by Mayor D'Alesandro as follows:

The State of Maryland has a total veteran population of approximately 288,000. Of this number, approximately 230,000 saw service in World War II, while 58,000 constitute the veteran population of other wars. The latter figure is significant and should be remembered as it will have a bearing on comments included hereunder.

It is understood that Albany, Buffalo, and Brooklyn, N. Y., will have general hospitals with capacities of 1,000 beds each which will be available sometime during 1949 or early in 1950, and that the President has approved 1,000-bed hospitals for New York, N. Y., and Syracuse, N. Y. Certainly, the city of Baltimore, with a population which is greater than any of the cities listed above, except Brooklyn and New York, should have a general medical hospital with a capacity of at least 1,000 beds.

Moreover, it is understood that general hospitals are scheduled to be constructed in the following cities: Denver, Colo., 500 general medical beds; Wilkes-Barre, Pa., 475 general medical beds; Providence, R. I., 399 general medical beds; Wilmington, Del., 300 general medical beds; Little Rock, Ark., 500 general medical beds; Shreveport, La., 450 general medical beds; Seattle, Wash., 300 general medical beds; and 19 other cities are scheduled to have general medical hospitals with capacities ranging from 100 to 350 beds.

Inasmuch as Baltimore is a highly industrialized metropolitan city, it is felt that a 1,000-bed general medical hospital should be built on the 15-acre piece of property owned by the Federal Government in the city of Baltimore at Loch Raven and Alameda Boulevards, which was purchased for the construction of a 300-bed tuberculosis hospital. We believe that all the general medical beds in the State of Maryland should be consolidated and located in Baltimore. As the veterans grow older, certainly there will be a demand for additional general medical beds and all beds of this type for Maryland should be concentrated at one point in the metropolitan area of Baltimore, where approximately 60 percent of the State's veteran population resides.

The 58,000 veterans of other wars must also be given consideration at this time, particularly in view of the average age of those veterans. As those veterans become older year by year, and they are unable to properly support themselves, it appears to us that some action should be taken by the Federal Government to provide domiciliary facilities for them. This could be accomplished by setting aside 300 beds for tuberculosis cases in the 1,000-bed hospital proposed for Baltimore, and converting Fort Howard to a domiciliary facility. Approval of the project suggested would give Maryland a 1,000-bed hospital in Baltimore.

To further point out the justification for such a hospital in Baltimore, I cite the following from a letter of Paul B. Magnuson, Chief Medical Director of the Veterans' Administration, to the Honorable MILLARD E. TYDINGS, United States Senator from Maryland, dated November 19, 1948:

"We do, however, realize the need for additional general medical and surgical beds in this area, and we are prepared to recommend the construction of a new general medical and surgical hospital in Baltimore in the event of a future hospital-construction program."

I cannot emphasize too strongly the need for this Veterans' Administration hospital and earnestly request that you do everything within your power to secure construction of such a hospital in Baltimore.

Former DP Repays Loan With Interest

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and article:

UNITED SERVICE FOR
NEW AMERICANS, INC.,
New York, N. Y., February 8, 1949.

Congressman JAMES G. FULTON,
House of Representatives,
Washington, D. C.

DEAR JIM: From time to time a story comes across my desk that for sheer drama and warmth is unsurpassed. I had such an experience the other day and it's the type of story I think you will be interested in. You may already have heard about it since it appeared on the front page of the New York Herald Tribune last Friday, a clipping of which I am enclosing.

This story, more than anything else I've seen in recent years, helps to keep alive the spark of personal initiative and ambition which made our country as great as it is today. It is essentially a story of a man who came to this country 2 years ago, homeless, frightened, destitute, and who, today, is a successful businessman, giving employment to American citizens where no employment in this line existed before. This story could have happened only in America, and I think we need all take pride in that fact.

It occurred to me that in these days of crises and stress, that this story would effectively illustrate the fact that America is still the land of golden opportunities. Your colleagues in Congress may want to know about it. In my opinion, it is good enough to read in the CONGRESSIONAL RECORD. I sincerely hope that you will share my opinion.

Cordially yours,

REUBEN B. RESNIK,
Director, Community Relations Department, a constituent agency of the United Jewish Appeal.

DP, JOBLESS HERE 2 YEARS AGO, PAYS $2,000 LOAN, ADDS $1,000

Leon Jolson, 36, who arrived in New York 2 years ago from a displaced persons camp in Germany, made a gift of $1,000 yesterday to the United Jewish Appeals through the United Service for New Americans, Inc., Jewish relief agency that lent him $2,000 to start a sewing-machine business here.

Mr. Jolson, now president of the Necchi Sewing Machine Sales Co., 1151 Broadway, which he said has done a $1,000,000 business since his arrival, also paid off the last installment of the $2,000 loan. After presenting the $1,000 check to Edwin Rosenberg, president of the relief agency, in the latter's office, 417 Fifth Avenue, Mr. Jolson told the story of his 2-year rise from relief to riches.

Though well established in the sewing-machine busines in Warsaw before the war, Mr. Jolson was unable at first to find employment here. He and his wife subsisted on $90 a month from the agency, until he borrowed a small sum of money to export 10,000 American sewing-machine needles to Italy. The success of that venture, plus the results of a careful survey of his career and personality, led the agency to advance him $2,000 to import to this country a number of Necchi sewing machines, made in Pavia, Italy. These machines, he said yesterday, were equipped to do zig-zag stitching, embroidery and buttonholing and to sew on buttons without the addition of special attachments. Since then, he said, he has imported 15,000 machines, costing more than $1,000,000. He estimated his personal profit last year at $25,000.

He still lives in a four-room walk-up apartment at 980 Fox Street, the Bronx, but hopes to find something better soon because his wife is about to have her first baby.

His gift of $1,000 to the agency was to enable some other displaced person to come to this country in appreciation of the opportunity he had found here, he said. He has taken out first papers for American citizenship.

The sewing machine not only enabled Mr. Jolson to start his own business here but had a part in his wartime experience. Because of his sewing-machine skill he was placed in charge of a uniform-making plant in a Nazi concentration camp, where eventually two guards revealed that they had been employed before the war by Mr. Jolson's father, a Warsaw sewing-machine merchant. Because of this earlier friendship the guards helped Mr. Jolson with forged papers.

Later he and his wife lived for 26 months in a secret room of a friend's house in Warsaw. He never ventured out, but listened all day to a foreign-news radio and his wife distributed bulletins to the Warsaw underground.

Statement of Mayor Thomas D'Alesandro

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. GARMATZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Thomas D'Alesandro, Jr., mayor of Baltimore City, and chairman, standing committee on legislation of the United States Conference of Mayors, on S. 138, before the Senate Committee on Banking and Currency, February 17, 1949:

My name is Thomas D'Alesandro, Jr. I am mayor of Baltimore and chairman of the standing committee on legislation of the United States Conference of Mayors, the membership of which comprises practically all of the larger cities of the Nation. Approximately 60,000,000 American people live in the cities represented in our organization.

I am appearing before this committee to record the support of the United States Conference of Mayors for S. 138. This is not the first time that the conference has actively supported a broad slum-clearance and public-housing program. As early as 1935 the conference of mayors took affirmative action in support of a national public-housing program. Each of our annual conferences, since 1937, has gone on record in favor of an expanded public-housing program. We vigorously supported S. 866 in the Eightieth Congress.

There is probably no single group which is more aware of all of the ramifications of the housing and slum clearance problem than the Nation's mayors. In the last few years our offices have been besieged by distressed citizens pleading for assistance in finding homes for their families. We know of the disrupting effect of the housing shortage upon normal family life, of the families which have broken up, of the children who have had no proper homes during their growing years, and of the marriages which have had to be postponed.

The postwar housing shortage has made the headlines, but it is only one aspect of the problem. The evil effects of our slums and blighted areas are more basic than a temporary shortage, and have long been a major concern to the Nation's mayors. We are familiar with the toll that these areas have taken as breeders of crime and disease, and the price paid in warped and twisted lives. Through studies made by various city agencies we have learned of the excessive municipal costs in these areas for public health, fire protection, police protection, and similar services. You have undoubtedly heard the figures which have been collected to prove these points and I will not take your time to cite them again.

The Nation's mayors have been the closest observers of past efforts to remedy these conditions. We know that private enterprise is unable to touch the housing needs of our low-income families despite the notoriously inaccurate claims of certain selfish interests. Private enterprise has not been able to handle this problem in the past and there is no evidence that it would be more successful in the future. If private enterprise could do what has been claimed for it by some who indicate that they are representing the building interests, we would not now have any slums. I do not blame private enterprise for this, but I do blame the exaggerated claims made by the real-estate lobby.

The mayors of this country are completely convinced that public low-rent housing is the only means of providing decent housing for our low-income families. Let me quote you some very impressive figures on this point. Last year a subcommittee of the Joint Committee on Housing under Senator WAGNER sent questionnaires to all governors, all mayors of cities over 50,000, and to a number of prominent citizens. Here are some of the results:

1. Practically all of the mayors replying reported that their cities contained a substantial number of low-income families living in slums or other substandard housing conditions.

2. Nine out of ten mayors agreed that within the foreseeable future private enterprise could not provide decent housing, new or old, for these low-income families at rents or costs they could afford.

3. On the other hand, 93 percent of the mayors of cities with existing low-rent public housing reported that these projects, to the extent that they had been provided, were adequately serving low-income families. All said that they had been built and operated efficiently, and that conditions of health, delinquency, and crime had been improved. More than five-sixths of them thought that the cost of city services in the neighborhoods had been reduced and real-estate values increased. All agreed that the projects are not presently competitive with private housing of acceptable standards, and only one mayor indicated that the projects had ever presented any such competition.

4. Sixty-seven out of seventy mayors favored continuation of Federal assistance to local communities in providing public low-rent housing.

This last figure is, I think, really amazing. If any of the charges which have been made against public housing were at all true, certainly the mayors would know, since they have seen public housing operate at close range. If these charges were true there would have been many more mayors opposed to a continuation of the program than a mere 8 out of 70. I can think of no other public issue which could command such complete agreement among mayors.

I have mentioned the charges which have been made against public housing. Let me dispose of a few of them briefly.

It has been alleged that public housing is not serving low-income families and that many upper-income families are residing in public low-rent housing projects. It is true that in the period after the war there were a number of families whose incomes exceeded the limits for continued occupancy. This was primarily due to the fact that during the war a number of projects were diverted from their original purpose and were used to house war workers regardless of income. This diversion was, of course, authorized by Congress. When the war was over these projects reverted to their low-rent status, but it was impossible immediately to remove the over-income families due to the housing shortage. These families have, however, been removed as fast as local circumstances permitted.

In Baltimore, for example, the program for removing over-income families started in May 1947. We have about 5,000 low-rent dwellings in Baltimore, and at that time about 1,000 families were over the limits for continued occupancy. A certain proportion moved out each month, but, even so, the number continued to rise to a peak of 1,200 in February 1948, since this was a period of rising incomes and additional families became ineligible. Now, however, I am informed by the Housing Authority of Baltimore that, as of the end of 1948, there were only 430 ineligible families in our low-rent projects and that even these could hardly be regarded as upper income. The average income of these 430 over-income families was only $2,943 per year. The average income of all 5,000 families in our low-rent projects (including the ineligible families) was only $1,742 per year. Furthermore, the average income of all the new families who moved into our low-rent public housing during the year 1948 was only $1,410 per year. I'll leave it to your imaginations to figure out how a family can be raised on such incomes at today's prices.

It has also been claimed that public housing is not needed in order to get rid of our slums. Slum conditions, it is said, could be eliminated if each city were to adopt an adequate set of housing standards and then see that these standards were enforced. These claims seem to have been based, to a great extent, upon our experience in Baltimore with a housing-law-enforcement program. This program has attracted national attention as the Baltimore plan. As mayor of Baltimore and as the responsible head of the city government which is carrying out this law-enforcement program, I want to clear up once and for all the confusion and exaggerated claims which are being made in various parts of the country about the Baltimore plan.

We in Baltimore are justifiably proud of our law-enforcement program. It is chiefly a health and sanitation measure. It is based upon a housing code, which sets certain minimum health and sanitation standards, and upon a vigorous program of enforcement of this code. Our enforcement revolves around a specially created housing court, which I believe is the only one of its kind in the country.

The program is designed to relieve somewhat the worst slum conditions until such time as the slums can be torn down and satisfactory housing supplied. It does not do more, simply because to do more would be completely impractical in view of the delapidated character of the present buildings. The standards set up in the housing code are as high as are feasible, but even so are well below those of decent and adequate housing. For example, the code requires the installation of an inside toilet fixture, but it does not require the provision of a bath because there is no space for a bath in most of our slum dwellings. Even the small amount of space needed for a toilet must come from some other room, already too small and crowded.

The Baltimore plan might be compared to first aid administered in the temporary absence of a doctor, which would not be necessary if the doctor were present to begin with, and which in no way eliminates the eventual need for the doctor's services.

Our law-enforcement program does not add one dwelling to our supply of low-rent houses and at the moment our crying need is for more low-rent dwellings. In fact, a strict law-enforcement program reduces the total supply of dwellings, since some buildings must be completely demolished. Furthermore such a program must rely upon the availability of an additional supply of low-rent dwellings if it is to be effective in curing one of the principal causes of slums—that is, the crowding of more than one family into a single dwelling unit. I strongly believe that other cities should consider adoption of the Baltimore plan as an interim method of relieving slum conditions to some extent, but don't let anybody kid you into thinking that it is, in any sense, a substitute for an adequate slum clearance, redevelopment, and public low-rent housing program.

It has been said that housing and slum clearance are local problems and should be handled directly by the cities and States without Federal assistance. I am not going to debate the theoretical merits of this question, but I will say that without Federal assistance nothing effective will be done, except in a few of the wealthier States. The areas which have the worst housing needs are those which are least able to help themselves. The problem is one of the most urgent domestic issues confronting the country. For the Federal Government to turn the whole matter back to the States and cities would represent an indefensible neglect of its proper responsibility for the national welfare.

I have so far spoken mainly about public housing because it has caused more controversy than any other aspect of the proposed legislation being considered by this committee. I do not, however, want to overlook two other items covered in legislation before this committee—redevelopment and middle-income housing.

My support for public housing is not inconsistent with my belief that private enterprise should be encouraged and assisted to handle as much of the housing and slum-clearance problem as it can. Private enterprise has not heretofore been able to operate in slum areas because of the high cost of existing properties and the difficulties involved in assembling an area sufficiently large to be usable. Redevelopment, as proposed in title I of S. 138, provides a formula to overcome these difficulties. Use of this formula should enable private enterprise to assume a portion of the job of slum clearance.

The necessity for Federal assistance to redevelopment is illustrated by our experience in Baltimore. The Baltimore Redevelopment Commission was one of the first to be created in the country. Eight official redevelopment areas have been established covering a total of about 400 acres. These areas represent only a portion of our total slum areas. Last November the city overwhelmingly approved a $500,000,000-bond issue for redevelopment purposes. This is the most that the city can afford and yet it will serve to treat only one, or at most two, of the eight areas. Senate bill 138, if adopted, will, in effect, triple our resources and enable us to use private enterprise in tackling a real job of slum clearance.

Senate bill 138 is primarily designed to assist low-income families. These are, of course, the families most urgently in need of assistance, but in centering our attention on this group we should not overlook the fact that there is a middle income group above the public housing level, but below the point at which private enterprise is currently providing decent housing. Certain additional legislation is before your committee designed to deal with this problem through either a liberalization of FHA mortgage insurance or a system of direct loans to cooperatives and nonprofit corporations. I do not wish to

comment in detail on this legislation other than to state that the United States Conference of Mayors heartily endorses its purpose.

In conclusion I would like to make a few specific recommendations with respect to S. 138.

With respect to redevelopment, the requirements set forth in section 105 (c), pertaining to the handling of families who must be relocated, are so rigid as to seriously hamper the program. It has been suggested that a good lawyer might block the program indefinitely by proving that a dwelling provided for a family to be relocated was a block further from the neighborhood grocery store, even though the dwelling was fully adequate in every respect. It does not appear important to detail the handling of displaced families in the Federal statute as this matter is covered in most local redevelopment legislation, and as a practical matter local city councils are not going to give the necessary approvals and pass the required ordinances for redevelopment projects unless they are reasonably satisfied with the handling of constituents who are to be displaced from redevelopment sites. It is recommended that this section be changed so as to give the Administrator broad discretion in determining whether local plans for the handling of this problem are adequate. The proviso at the end of this section which places special restrictions upon demolition prior to July 1, 1951, is undesirable and should be removed from the bill. There is urgent need for starting the program promptly and, as pointed out above, local political considerations will guard against unsympathetic handling of displaced families.

Section 202 establishes an absolute veterans' preference for public housing. I am thoroughly in accord with the purpose of this section. Low-income veterans have undoubtedly suffered more acutely than any other group as a result of the housing shortage and should be given every possible break. In Baltimore, veterans are given preference in our present public-housing projects and, I believe, they are given a similar preference in most other communities. Nevertheless, the bill as now written may result in more housing but no slum clearance.

It must be frankly recognized that in most cities, the initial public housing projects must be constructed on vacant sites because of the present impossibility of clearing slum sites. These first projects can, however, be used as the means for relocating families in specific slum areas, thus enabling those areas to be cleared and rebuilt. Such a procedure might be nullified by the type of veterans' preference in the bill as it is now written. In view of the considerable pressure for slum clearance and the public's expectation that slum clearance will be accomplished under the redevelopment and public-housing programs it may be well to modify this absolute veterans' priority in some manner to provide for persons to be displaced by slum clearance operations.

The United States Housing Act of 1937 requires local annual contributions equal to 20 percent of the Federal annual contributions. In all cases this requirement has been met through local-tax exemption. In many localities, but not all, housing authorities have made payments in lieu of taxes which originally ranged up to 5 percent of shelter rent. Even with these payments the value of tax exemptions have far exceeded the 20 percent legal requirement, and have often been greater than the Federal contributions. The cost to the localities of serving the projects and their occupants has been much greater than the payments in lieu of taxes. Several years ago the Federal Public Housing Authority (now the Public Housing Administration) decided that the then existing arrangements were unfair to the municipalities and it authorized an increase in payments in lieu of taxes to 10 percent of shelter rents. The Eightieth Congress, however, canceled this authorization and insisted upon a return to the original practice, which in some cases meant no payments at all.

The present bill authorizes payments in lieu of taxes at a flat rate of 5 percent of shelter rents. This provision at least has the virtue of uniformity, but we feel that it imposes a share of the burden upon local governments far larger than was contemplated by the original act. It may well cause some communities to call a halt to their public-housing programs long before the need for low-rent housing has been met. We strongly urge this committee to change the payment-in-lieu-of-taxes provision from 5 percent of shelter rent to 10 percent.

Section 505 calls for the elimination of tax exemption for local housing authority bonds. We are completely opposed to this section for reasons which, I believe, are well known to this committee. I understand that it has been generally agreed that this section will be stricken from the bill.

I also understand that the Administration has submitted an amendment deleting the equivalent elimination requirements from the United States Housing Act. We are completely in favor of this amendment. The bill treats slum clearance as a separate, though related, problem from the provision of low-rent housing. Also, circumstances have changed enormously since 1937, when the United States Housing Act was approved. The equivalent elimination requirement, in effect, means that the quality of dwellings available to low-income families can be improved, but that the number cannot be increased. This was all right before the war when many slum dwellings were vacant. Now our need is for both an improvement in quality and an increase in number.

That concludes my comments on specific points in the bill. The actual execution of this legislation would be largely in the hands of local housing and redevelopment officials who have gone over its various provisions with the greatest care. They have suggested several changes of a more detailed and technical nature than those which I have discussed, and these changes have been presented to this committee by Mr. Lawrence M. Cox, president of the National Association of Housing Officials. We know that this committee will give full consideration to these recommendations.

We have worked long and hard for adequate housing and slum-clearance legislation. Last year the prospects appeared uncertain, but I for one have never lost hope. In Baltimore we have been so confident that the urgency of the problem would eventually be recognized that exactly a year ago the city made a special allocation of funds to our Housing Authority to undertake a program of advance planning. Now that it appears certain that we will get some action it is gratifying to know that we will be in a position to start work quickly.

Allow me to thank the committee for the privilege of appearing here for the United States Conference of Mayors in support of S. 138.

Thirty-first Anniversary of the Signing of Lithuanian Declaration of Independence

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement which I have made on the thirty-first anniversary of the signing of the Lithuanian Declaration of Independence:

Today, February 16, 1949, marks the thirty-first anniversary of the signing of the Declaration of Lithuanian Independence in the city of Vilnius. It is with a deep sense of pleasure that I join with many of my colleagues in the House to extend my sincerest wishes for the future to the people of Lithuania and to the Americans of Lithuanian descent.

In the destruction of their independence the sympathy of our people goes to the people of Lithuania in their own homeland and to those living in the United States. I have no doubt in my own mind that this is only a temporary set-back and that in the years to come when communism throughout the world is stopped and rolled back, the real independence of Lithuania will once again be restored and her people will be free to enjoy freedom and free to worship their God.

Although Lithuania has a population of less than 3,000,000 people, the spirit of independence is in the very soil of the country. Liberty-loving Americans sympathize with them and pray for their successful and permanent liberation. It is going to be a long and hard road toward the ultimate goal. With determination and self-sacrifice, this goal will be attained.

As I have said on many previous occasions, Lithuania will once again take her rightful place among the free nations of the world.

Expansion and Improvement of Steel-Making Facilities

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. FULTON. Mr. Speaker, lately there has been some furore over the ability of American steel companies to make enough steel to meet the requirements of our national economy and our foreign-aid program. The steel industry has been receiving a continuous, and in some cases a vituperative, harassing. A hue and cry has been raised over rates of expansion of steel-making capacity. The rate of steel production has been called inadequate. Governmental pressure is being exerted in connection with the distribution of steel.

Let me say that all of this sound and fury is misdirected. The steel industry should be receiving credit and recognition for great production achievements.

Simultaneously, the steel industry is rehabilitating steel-making facilities worn out during World War II and adding new facilities at a rate unequaled during any other period in the history of our country.

An article in the January 6 edition of Iron Age says that postwar improvement programs of American steel companies add up to $2,000,000,000. Included in this sum is money to increase the capacity of the industry to produce raw steel—steel ingots—as well as to improve and expand steel-finishing facilities.

Iron Age says that between 2,500,000 and 3,000,000 tons of ingots were sold on

conversion arrangements during 1948. This means the ingots were made at plants that did not have enough equipment to roll them into sheet and strip and pipe and plate, the items now shortest in supply.

The major part of the money that steel companies are spending will go to improve this condition. New facilities will make it possible for them to make more finished steel in the types the customer demands. At the same time facilities are being added to make more raw or unfinished steel.

According to the Iron Age story, steel companies of this country will have increased their steel-making ability by more than 5,000,000 net tons in the 2-year period ending December 31, 1949. Half of that gain is already here. The rest will come during the remainder of this year. Five million net tons that will build 2,500,000 automobiles.

This increase in steel-making ability is important. Capacity is a theoretical figure, something that a steel company should be able to attain based on past experience. The 5,000,000-ton figure is made up about half and half of new melting furnaces and technological improvements to present equipment.

Technological improvements are more important to the country because: One, they take less steel than construction of new plants; and two, they mean better utilization of our valuable raw materials.

The magnitude of this effort can be even better told in production figures. During 1948 the steel industry shipped about 65,000,000 tons of finished steel to its customers—more than it has ever shipped in any single year, peacetime or wartime.

This year the industry will be able to ship, barring strikes and other work stoppages, almost 70,000,000 tons of finished steel—5,000,000 tons more than was shipped last year.

This is about 9,000,000 tons more than the average finished steel production during World War II, which we fought and won on an annual average output of or y 60,600,000 tons of finished steel.

The steel companies today are a vital driving force in our fast-developing postwar economy. They are the keystone in our entire industrial structure.

These facts are little known or seldom considered. A case in point is the recent discussion of freight-car building. All over the country we read that steel companies were going to be asked by the Office of Defense Transportation to increase the amount of steel they are allocating for the freight-car-building program. That program now has a goal of 10,000 cars a month. The ODT wants to boost this to 12,000 or 14,000 cars a month. The inference is that only one thing is preventing such an increase—insufficient steel.

If you will look at the record of the number of cars the railroads have been ordering and at the backlogs of the individual shops that build cars, you will find out why.

Orders have not been coming in at a rate to justify a 12,000-car program. The monthly average of orders placed by the railroads during August, September, October, and November last year was only 5,228 cars. The car-building shops cannot build 12,000 cars a month if they do not have orders. Giving them twice as much steel would do no good.

On the positive side of the ledger, let us consider the progress of the steel industry by citing one example: Jones & Laughlin Steel Corp., of Pittsburgh, Pa.

The president of Jones & Laughlin is Admiral Ben Moreell, former commander of the Navy's Seabees during World War II. Recently he issued a statement which appeared in advertisements carried by a number of publications throughout the Nation. Because of its significance, I would like to read Admiral Moreell's entire message:

We're backing a sure thing with $210,000,000—the future of the United States of America.

Since January 1946 Jones & Laughlin Steel Corp. has been engaged in the greatest improvement program in its 97-year history.

Jones & Laughlin is plowing current earnings back into the business, plus other cash borrowed on future earnings * * * to meet your demands for more steel * * * to guarantee new sources of vital raw materials * * * and to expand and improve steel-finishing mills to better our products.

From this program our 16,000 customers will get more and better steel at lower costs; our 43,000 employees will have greater security and higher earning possibilities, and 2,000 new jobs will be created; our 25,000 shareholders will have a safer and more profitable investment.

And 146,000,000 Americans will enjoy greater national security and better living. This program will succeed because Jones & Laughlin is a typical American industrial team. This team, to serve its customers and the national security, needs the savings of investors, the strength, skill, and cooperation of labor, the leadership and technical experience of management.

We are but one of the many teams that make up our American industry which is moving with increased momentum toward the goal of better living for all people everywhere.

BEN MOREELL,
President.

The major phases of Jones & Laughlin's program completed during the past year include installation of the fastest steel rolling mill in the world and construction of one of the world's largest coke ovens.

During 1949 J. & L. will start or complete construction of the following installations: The world's largest coal washer; consolidation of two mines into what reportedly will be the largest underground coal mine in the world; a new six-furnace open hearth shop with finishing facilities, in addition to the one new open hearth completed during the past year; modernization of a continuous hot strip-sheet mill; and increased blast furnace and cold-rolling capacity.

In view of the current discussion of productive capacity and improvement plans of the steel industry, I believe this information is significant. The program J. & L. is carrying out will increase steel-making capacity, lower costs, and improve the quality of steel products. It will directly benefit industrial users, J. & L. employees and shareholders, and our entire economy.

In relation to the size of this company, it is a very large program. In fact, the total estimated cost of the program is almost as large as the total shareholder investment in J. & L. at the time the program started 3 years ago.

I look upon this rehabilitation and improvement program as an example of what is necessary for the security of our Nation and its continuous prosperity. I feel it is an achievement worthy of recognition and commendation.

[From the Pittsburgh Post-Gazette of December 28, 1948]

LICKING A STEEL SHORTAGE

The Jones & Laughlin Steel Corp.'s $210,000,000 rehabilitation and improvement program in the Pittsburgh district and in Cleveland is further evidence that the steel shortage will be beaten by the industry itself, perhaps some time in 1949, if industry is given half a chance.

Because J. & L. believes in the future of the American free-enterprise system, it is willing to expand at a cost representing 90 percent of the company's total worth at the time the program started 3 years ago.

Capital for this expansion is coming from earnings and from borrowings against future earnings. It has meant sacrifice on the part of shareholders. But it will, in the long run, benefit all concerned. It will provide more and better steel at lower costs to the company's 16,000 customers, provide greater earnings and security for its 43,000 employees, create 2,000 new jobs, and provide a safer and more profitable investment for 25,000 shareholders.

Here is a splendid example of American enterprise under a free economy. It is being duplicated to varying extents by companies throughout the industry. Only last week officials of the United States Steel Corporation testified in Washington that the company plans to spend $250,000,000 in plant and equipment in 1949, providing an additional 600,000 tons of ingot capacity.

And why were these officials in Washington? They went there to try to convince certain Congressmen of the folly of putting the Government into the steel business and of reenacting an excess-profits tax.

If Congress does either or both of these things, it will deal the steel industry and our economy generally a serious blow. An excess-profits tax would prevent expansions of the sort undertaken by J. & L. and United States Steel. Earnings must be good if industry is to expand at today's swollen costs. The Wall Street Journal reported Monday that assuming facilities that cost $100,000 before the war are replaceable today for $200,000, a corporation must draw upon its earnings not for $200,000 but for $261,290. It must earn the original cost, the increased replacement expense, and the tax upon the increase.

For the Government to tax the steel industry to the point where private expansion is impossible, and then to put tax funds into Government steel mills because there is a shortage is to compound lunacy. If the Government will stay out of the steel business and follow a sane tax policy, the temporary steel shortage will soon be licked to everyone's advantage in the traditional American way.

[From the New York World-Telegram of December 29, 1948]

OUTPUT EXPANDED—AMERICAN INDUSTRIES SPEND VAST AMOUNTS ON NEW PRODUCTIVE FACILITIES

(By Ralph Hendershot)

The so-called man in the street is none too well acquainted with the expansion that has taken place in American industry since the end of World War II. During the last 2 years alone more than $30,000,000,000 have been spent to expand and improve this Nation's productive facilities. And that is a very large

sum of money, despite its depreciated purchasing power.

An advertisement being run currently in several publications by the Jones & Laughlin Steel Corp. tells what that company has accomplished with the expenditure of $210,000,000. Among other things, it installed the world's fastest steel rolling mills, one of the world's largest coke ovens, and a new open-hearth furnace.

The importance of this expenditure can be better appreciated when it is considered that it aggregates nearly as much as the total investment of the company's stockholders 3 years ago, when the program was started. It will mean, according to Ben Moreell, chairman of the board and president, better steel at lower costs. Customers, stockholders, and employees all will benefit.

BACKING A SURE THING

Why did the managements of Jones & Laughlin and all the other corporations, big and small, decide to spend so much money on improvements and betterments at this time? It is because they have confidence in the future of the United States and because they know that if they are to maintain their positions among producers in the years ahead they must be in a strong competitive position.

Mr. Moreell stated in his company's advertisement that "we're backing a sure thing with $210,000,000—the future of the United States of America."

Many people may wonder why some of this money was not spent during the depression of the 1930's, when prices were a great deal lower and when it would have done so much to pull the Nation out of the doldrums. One of the reasons is that the money was not available at that time. A large portion of the recent good earnings of corporations have been plowed back into this expansion program. And the balance was secured primarily from banks and insurance companies.

NEW DEALERS WERE WRONG

It will be recalled that in the early days of the New Deal our people were being told by top people in Government positions that the economy of this Nation had reached maturity. The suggestion was that we would do well to hold our own from a production standpoint and probably would even begin to grow old. These huge expenditures give the lie to that sort of reasoning. They prove that we are still a virile and growing Nation.

Had those who believed that profits were an unnecessary evil had their way, however, their theories might well have proven true. Had it not been for the excellent corporate profits of recent years, this expansion would not have been possible.

[From the Pittsburgh Press of December 30, 1948]

RESERVES MEAN JOBS

There is no great mystery about why union leaders attack corporation profits—even though many of them must know that some of the things they say are exaggerated and preposterous. It's part of the game of keeping the membership stirred up, and also of forcing the employer to make concessions.

But it is more difficult to understand why not only corporation profits, but also corporation reserve funds, have come to be regarded with hostility by union bosses.

If reserve funds are excessive, so that they represent a scheme to avoid taxes, that's a different matter. But this qualification is not made by union critics. They seem to be suspicious of and opposed to all reserve funds—even those which merely represent a safety margin against future hard times, and those which are used to provide expansion, new jobs, and greater security for old jobs.

During the recent congressional investigation of profits, Donald Montgomery, economist for the United Auto Workers, sharply criticized reserve funds. Consumers, he said, have become the main source of new capital for industrial expansion. He said they were unwillingly providing such capital by paying high prices for a company's product.

Various union spokesmen apparently are working on the theory that corporations should cut prices by the amount of these reserve funds, or pay them out as dividends. Then, as Mr. Montgomery proposed, capital for expansion should be obtained from investors.

The catch about this theory is that investors are refusing to put up money for industrial growth. Corporation securities are hard to sell. Investors have been scared by the hostile attitude of both union leaders and politicians. They fear controls and higher taxes will cut profits.

And they'll be all the more scared if corporations are not permitted to set up reserve funds. For this would mean that companies could not modernize or expand their facilities or make provision against times of slumping sales.

A company without reserves is like an individual without any savings. It gets into trouble the first time anything goes wrong. It cannot take advantage of opportunities when they arise.

Not only are investors in such a company very unsafe, and apt to lose their savings. The workers also are very insecure, and apt to lose their jobs.

A case in point is furnished here in Pittsburgh by the $210,000,000 rehabilitation and improvement program of the Jones & Laughlin Steel Corp. and also by the program of U. S. Steel to spend two hundred and fifty millions for plant and equipment in 1949.

All the capital for the J. & L. program has been drawn from earnings and from borrowings against future earnings. As the company points out, its shareholders "have given up returns on their investment in order to make this program possible."

Both the J. & L. and U. S. Steel programs, and similar expansions recently announced by other companies, will do something for which steel union leaders have been clamoring—provide greater capacity, create new jobs, and provide greater security for old jobs.

Yet none of these programs could have been carried out had not the companies saved enough out of earnings to pay the cost. Had the money been paid out, either through slightly lower prices or higher dividends, it would be gone. None would be available to provide better equipment, increased production, new jobs, and security against business reverses.

Mr. Montgomery, the Auto Workers' economist, said companies could get money from investors if they would pay out more of their profits in dividends instead of keeping two-thirds of each dollar for reserves.

That sounds nice—but you can imagine just how the union economists would be screaming about extortionate dividends had that plan been followed.

From the labor standpoint, such a policy would leave workers completely at the mercy of every fluctuation in the demand for products.

Military Aircraft

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Kendall K. Hoyt, editor of Letter to Airmen, of January 20, 1949:

MILITARY AIRCRAFT

The main issue in aviation this year is how much military aircraft output is needed to maintain adequate air forces and a healthy industry.

The 34,000,000 airframe pounds covered by the budget for next fiscal year will supply half to a third of actual needs.

Here are estimates from various sources as compiled by Representative CARL HINSHAW, Republican, California, vice chairman of last year's Aviation Policy Board, for minimum procurement. Figures are millions of pounds per year:

Air Coordinating Committee, 1945:	
Minimum after world peace is well assured	30
Minimum to cooperate in maintenance of world peace	60
President's Air Policy Commission, 1948:	
Recommended for 1948 calendar year	34
Recommended for 1949 calendar year	56
Congressional Aviation Policy Board, 1948:	
Initial strength to mount successful air offensive promptly	111
Strength necessary to prevent the loss of a war	63
Stanford University Survey: Minimum to provide base for expansion	80
Budget:	
Ordered in 1949 appropriations (spreading to later years)	45
Provided in 1950 budget	34

Among these figures, just which is the right one for fiscal 1950 is hard to state precisely, because officials who could supply the facts are gagged against support of any budget but the Truman one.

But it is evident that after years of production below the minimum, there is a deficiency which requires a substantial increase to offset.

Depletion of planes in reserve—war leftovers in storage—is at an alarming rate. In the 1948 fiscal year, Mr. HINSHAW says, the Air Force and Navy put into service planes weighing some 64,000,000 pounds.

Of this total 43,000,000 pounds were from reserve; only 21,000,000 new.

The surplus continues to dwindle rapidly, but the budget does not contemplate stepping up new output before fiscal 1951, 18 months hence.

What in the foreign situation, HINSHAW asks, justifies such a policy?

Cost of Hospital Service

EXTENSION OF REMARKS

OF

HON. ROBERT E. JONES, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial, which was published in the Atlanta Journal of January 25, 1949:

THIS EVER-WIDENING GAP MUST SOMEHOW BE BRIDGED

We are impressed by an article written by Robert F. Whitaker, superintendent of Atlanta's Emory University Hospital, in a recent issue of the Journal magazine. To a

large extent we find ourselves in agreement with Mr. Whitaker's contentions, but with this one we are in especial agreement:

"Somehow the gap between rising costs in the hospital field and the ability of the patient to pay must be closed."

What is more important, particularly in this trouble-torn world of today, than the general health of the people? Its importance is being recognized more acutely every day by private enterprise.

One significant result of that awareness has been the inauguration of a variety of health programs by business institutions—programs designed specifically to safeguard the health of their employees and, consequently, to salvage what otherwise might be a needless and costly loss of man-hours of production.

In our own community we find distinguished examples of this mounting concern of intelligent businessmen with the health of their workers. We find an outstanding example at Fulton Bag and Cotton Mills, which only recently received a national citation for its pioneering work in instituting a foot-health clinic for its employees.

And so it goes. The public health must be safeguarded. Good education and good health—these are two of the Nation's most precious assets. We must allow neither to deteriorate.

In his penetrating article, Mr. Whitaker discerns that the American people today are concerned chiefly, when it comes to the matter of health, with the quality of their hospital care and with its cost. He makes this pertinent observation, "Like good roads or good education, hospital care costs money. It is going to keep on costing money. As our knowledge increases and our tools become more highly developed, it may cost even more than it does now."

The gap between the rising costs and the ability of the patient to pay grows even wider. How then, to bridge it?

Who built our hospitals? Whence came the money to erect these institutions? Mr. Whitaker answers that question in these words, "The fact is that these hospitals are here to serve Atlanta and the South because, in past years, individuals or groups of people, seeing the need for such institutions, gave the money to build them. In not a single case does the patient pay anything toward the multiplied millions of dollars it cost to establish these hospitals and equip them originally. In most cases, he pays absolutely nothing for depreciation or for major repairs or replacements. The hospitals must simply hope that the people who gave the money to build them will again be generous when the time for more capital outlay arrives."

Thus, all of us, the rich and the mighty, the poor and the lowly alike, are and have been dependent upon charity, the generosity of the relative few.

The Detroit Free Press, taking inventory at the beginning of a new year, points to the crying need for public housing, slum eradication, improved transportation, education, and facilities for recreation in which all can participate. Says the Free Press: "Detroit, for example, talks grandly of multimillion-dollar projects which will center the eyes of the world upon the city. But little that is constructive is done to provide adequate parks and playgrounds for Detroit's underprivileged children; to replace firetrap, hopelessly overcrowded school buildings, or to relieve the disgraceful congestion in municipally operated Receiving Hospital."

Is this hospital congestion in Detroit more painful than that in Atlanta, or in numerous other cities of the Nation? It seems unlikely.

What is the answer, then?

The American Medical Association assesses its members to provide a fund to fight a proposed governmental program of prepaid medical care. Does it bite off its nose to spite its face?

The proposed plan is less radical in its intent than the system adopted by Great Britain. The patient would be able to go to the doctor of his choice; the doctor would be free to accept or reject a patient. Moreover, the doctor would be assured of payment (not now always the case).

Only the well-to-do can afford today prolonged hospital treatment or truly adequate medical care. Certainly doctors by the score do work for charity, give freely of their time, their great talent. Should they not be assured of recompense?

We revert to the fine article by Mr. Whitaker. The cost of hospital care, the cost of all medical care, arises. The gap between rising costs and the ability of the patient to pay ever widens. Somehow it must be closed.

We do not have the solution at hand. We do not know that the proposal which has been made for prepaid medical care will solve properly our ills and lacks.

But we do believe that we must assure our people—all of them—of the care of their health to which they are entitled, so that we may remain a nation of strong men and women. They are not now assured of it. The gap is too great for crossing. Somehow, it is imperative that it be bridged.

Infamous Mock Trial of Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. CHARLES R. HOWELL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. HOWELL. Mr. Speaker, last week the Members of this body went on record as vigorously opposing the false trial and outrageous treatment given His Eminence Josef Cardinal Mindszenty, primate of Hungary. The people of my district in New Jersey and all of the people of my State are likewise outraged and shocked by this infamous mockery of justice and wish to make their feelings known to the world. To that end, the One Hundred and Seventy-third Legislature of the State of New Jersey on February 7, 1949, adopted a resolution memorializing the President of the United States and the Secretary of State to exercise every force at their command to bring about the release of Josef Cardinal Mindszenty and Bishop Lajos Ordaff, who have been incarcerated by the Communist-controlled government of Hungary. That resolution is so important to the people of my district and of my State that it is my desire to have it set forth here and made a part of this RECORD so that all the Nation may know the feelings of our State government on this vital question.

It is as follows:

Resolution memorializing the President of the United States and the Secretary of State to exercise every force at their command to bring about the release of Josef Cardinal Mindszenty and Bishop Lajos Ordaff, who have been incarcerated by the Communist-controlled Government of Hungary

Whereas this house of general assembly has been sickened and shocked by the infamous mock trial which the Soviet Government of Hungary has forced Josef Cardinal Mindszenty, heroic Hungarian patriot, to undergo, as well as the wrongful imprisonment of Bishop Lajos Ordaff, of the Lutheran Church of Hungary; and

Whereas these actions of the Soviet Government stamp them as being criminals against humanity and the Divinity: Now, therefore, be it

Resolved by the General Assembly of the State of New Jersey:

1. That the President of the United States and the Congress of the United States be, and hereby are, memorialized and urged to instruct the delegates of the United States in the United Nations to institute proceedings in the General Assembly of the United Nations to indict the Soviet Government of Hungary and to cause the United Nations and the United Nations General Assembly to brand them as world criminals; and

2. That the President of the United States and the Congress of the United States take such steps as will exclude the Government of Hungary from any financial or material supplies of whatever kind from the United States Government by whatever method while Hungary persists in persecuting religion; and

3. That the clerk of the house be, and hereby is, directed to send copies of this resolution to the within-named officials and to the United States Senators H. ALEXANDER SMITH and ROBERT C. HENDRICKSON for appropriate action by them.

Trial of Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. GORSKI of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Buffalo Courier-Express of February 15, 1949:

THE POPE'S ADDRESS

The calm, majestic, and sorrowful dignity of Pope Pius XII's speech to the extraordinary consistory of the College of Cardinals yesterday added to the force and effectiveness of his condemnation of persecution of Cardinal Mindszenty by Communists in Hungary. In denouncing the unfairness of the Mindszenty trial and in pointing out that the cardinal's physical and mental condition indicated he had been subjected to secret influences of a sinister nature, the Pontiff concurred in the conclusions of most observers.

Spokesmen of all branches of the Christian church—and, indeed, all who believe in religion at all—must agree with the Pope's declaration: "Those who rashly trample upon the liberty of the church and the rights of human conscience may at length understand that no civil society can endure when religion has been suppressed and God, as it were, driven into exile."

The Pope's address to the cardinals made history; and of comparably historic importance is the report that, in the secret debate in which the cardinals engaged after his speech, plans were made for a united front of all Christians—not Catholics alone—to resist atheistic communism. It is only by presenting such a united front that Christianity can meet and beat back the enemies of religion at all points of attack.

Housing Legislation

EXTENSION OF REMARKS
OF

HON. WESLEY A. D'EWART

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. D'EWART. Mr. Speaker, I offer for the consideration of the Members the Senate Resolution No. 2 of the Senate of the State of Montana, expressing the views of that body on the subject of housing legislation:

Senate Resolution 2

Resolution to the Congress of the United States transmitted by the Senate of the State of Montana relative to housing legislation

Whereas there is certain proposed housing legislation presently before the National Congress known respectively as H. R. 933 in the House of Representatives, and S. 138 in the United States Senate, designed by its sponsors to relieve housing shortages and to improve housing standards in the United States; and

Whereas the above designated legislative matters incorporate therein—

First, a provision for the expenditure of $250,000,000 per year of Federal funds over the next 5 years, or a total of $1,250,000,000, to be matched by municipalities with a sum of $625,000,000, to a grand total of $1,881,000,000 for slum clearance; and

Second. A proposal for the erection of 1,000,000 public housing units over a 7-year period carrying a rental subsidy to occupants of $445,000,000 per year for the next 40 years of the existence of said housing, obligating the Federal Treasury to spend a total of $17,000,000,000; and

Third. A proposal for an initial appropriation of $250,000,000, for outright grants of $1,000 to $2,000 to individual farmers as a subsidy in the construction of farm homes, together with additional sums for architectural and engineering services; and

Fourth. That the approximate total of these nonliquidative expenditures probably will exceed $20,000,000,000; and

Whereas it is the opinion of the Members of the Senate of the State of Montana that a more equitable and more economical method of spending these sums for housing assistance should be substituted for the aforesaid described proposals, more suitable to the people of Montana, and particularly to the veterans, many of whom are still in dire need of suitable housing accommodations: Therefore, be it

Resolved by the Senate of the State of Montana, Thirty-first Legislative Assembly, That there be substituted legislative proposals in the Congress of the United States embodying—

A subsidy of $1,000 for the construction of any new home by any owner-occupant when matched by an equal amount in cash or other equivalent on any new home not exceeding $7,000 in cost, exclusive of land: *Provided,* That such home be constructed in accordance with the minimum construction requirements of the Federal Housing Administration in locations conforming to the administrative regulations of the said Federal Housing Administration, and providing that the borrower in the event that a commitment for an FHA-insured loan is required in the construction or purchase of such home, meet the accepted standards for such borrowers incorporated in the mortgage risk pattern procedure of the said Federal Housing Administration: *And provided further,* That the owner-occupants be prohibited from, by contract agreement or otherwise, reselling such homes at a higher price than the original cost less the $1,000 subsidy except as the same may be adjusted from time to time for actual replacement cost increases as determined through Federal Housing Administration appraisal procedures; and be it further

Resolved, That it is the opinion of the members of the Senate of the State of Montana in transmitting this recommendation that the cost of such a program would not exceed the cost of the proposals above referred to now before the Congress by virtue of the fact that the total yearly volume of units within this price range would not exceed $300,000, involving a total yearly expenditure of $300,000,000, and it is further the opinion of this body that this type of housing assistance is more in keeping with the American tradition of individual home ownership, and that the opportunity provided this large class of substantial citizens for moving into their own homes will release hundreds of thousands of existing older and still useful, satisfactory housing units for occupancy by those who require the low rentals that these properties afford.

Taxes on Margarine

EXTENSION OF REMARKS
OF

HON. EDGAR A. JONAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following copy of a resolution adopted by the State board of the Illinois Federation of Women's Clubs on December 8, 1948, which was submitted to me by Julia Macpherson Webster, chairman of legislation of the federation:

Whereas the American Medical Association, the New York Academy of Medicine, the National Research Council, and other leading scientific organizations have now approved margarine as a wholesome food product; and

Whereas yellow is the accepted color for a bread spread, and American housewives spend needless hours mixing in the color at home; and

Whereas discrimination against wholesome and nutritious food products, such as yellow margarine, is wrong in principle and out of keeping with American traditions of free enterprise; and

Whereas the current high cost of living makes it more important than ever that margarine be made freely available to consumers in the yellow color in which they desire it: Therefore be it

Resolved by the board of directors of the Illinois Federation of Women's Clubs assembled in Chicago, Ill., December 8, 1948, That it urge the immediate repeal of those provisions of the Illinois State margarine law which now prohibit the manufacture and/or sale of yellow margarine, and that it urge the immediate repeal of the Federal margarine law, which taxes yellow margarine 10 cents per pound and imposes burdensome levies on retail and wholesale dealers in the products; and be it further

Resolved, That a copy of this resolution be forwarded to all members of the Illinois General Assembly, to the Governor of Illinois, and to the Illinois delegation to Congress.

Ireland

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following release from the Irish Legation, February 11, 1949:

WHY THE TORY PARTY WON THE SIX-COUNTY ELECTION

The results of the six-county election could not have been otherwise. The area in which they took place was specifically designed by the British Tory Cabinet of 1920 to produce a permanent majority for the Tory Party in Northern Ireland. It was for that purpose that Ireland was partitioned and that purpose has been fulfilled in this election and in every election for 28 years. No rivers, mountains, or lakes separate the six counties from the rest of Ireland, nor is there any racial, religious, or economic distinguishing marks between the two areas. One basis only existed for partition, and that was to take away from the rest of Ireland as large a territory as the concentration of Orangemen in Belfast, Down, and Antrim could outvote. Wholly Nationalist areas were included in the severed territory because, numerically, the block of Tory votes concentrated in two counties could overwhelm them. The result of the election is merely this process working itself out a generation later.

Because the triumph of the Tory Party is certain from the beginning, strange features show themselves in this election. On nomination day between one-half and one-third of the house was elected without a vote being cast; this is traditional. Indeed, the average number of candidates returned without contest in the last four general elections is 27, or more than one-half of the house. This would mean in America that something like 200 Congressmen would be returned without a fight. The absurdity of the idea illustrates the nature of democracy in the six counties. In the present election there was only one contest in the whole of Antrim, which contains one-sixth of the entire population of the area. The parallel is that in an area with a population of 23,000,000 Americans, every Representative but one got his seat without opposition. There were no contests in 6 of the 16 seats in Belfast. That too is traditional. There are nine electoral divisions in the six counties that have not seen a contested election for over 20 years; in six others there was only one contest in the same period. The explanation is that the elaborate precautions taken to ensure a Tory victory every time has led to a lack of any real vigor in the public life of the area.

To make assurance doubly sure, the Tory Party does not rely on its permanent majority to win. It has so altered the boundaries of constituencies as to confine the opposition and compel them to waste their votes in a few huge majorities. Fermanagh is an outstanding example of this, where Nationalists, the majority, got one seat in this election, and Tories, the minority, got two. This process of elaborate manipulation with constituency boundaries covers the whole area and makes a Tory vote much more effective than (in some cases twice as effective as) an opposition one.

On top of this gerrymandering there was in this election a second major trick played

on the electorate. An out-of-date register was deliberately used. "When Sir Basil Brooke," says the Manchester Guardian, "rushes a general election in Northern Ireland on the partition issue and prefers a stale register, 3 years old, to the new one that will be available on April 1 he is indulging in a pure party maneuver. There is no serious partition issue that calls for an election in February rather than in April." The use of this out-dated register had the effect of debarring everybody who came of age since January 31, 1946, thus disenfranchising mainly young and generously minded voters. The British Labor Party representative in the area, Mr. Arthur Johnson, said on January 21, "It is my considered opinion that the effective strength of this register will be 60 percent and no more." By arranging to keep 40 percent of voters from the polls the Tory Party planned to increase the relative strength of its own vote. It attempted this in another way also. It spread fear that the civic, religious, and economic liberties of its followers were in imminent danger from invaders and so inflamed their passions that many opposition meetings have had to be suspended and candidates were seriously injured by such missiles as oranges studded with razor blades.

As a result of gerrymandering, defective voting lists, and organized violence, general elections in the six counties have been made the opposite to democratic. The effect is that there has on this occasion, as on others, been no real consultation with the people. The average total poll in the last four general elections (1929, 1933, 1938, and 1945) has been 264,919. Of this the Government got 145,801, and opposition groups 139,118. Even if all official and unofficial Tory candidates be lumped together, Government, or pro-partitionist, poll is brought only to about 200,000, which is merely one-fourth of the registered voters of the six counties, one-twelfth of the registered voters of the whole of Ireland, and one-twentieth of the Irish population.

Thus the six-county elections are no democratic test in which a people can change its government. They are merely a machine for returning by a handful of votes the party that has been in office for 28 years, ruling the area created by a British Tory Cabinet to give them this permanent grip on government.

Move Over

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including herewith an editorial from the Palm Beach Post, West Palm Beach, Fla., a newspaper published in my district, entitled "Move Over." The editorial is written by the editor, Hon. Charles Francis Coe. This editorial is constructive and very timely when the question of increasing taxes is under consideration by the Congress. I commend it to the reading of all Members of Congress to the end that we may be more thoughtful of our people when it comes to increasing the burden of taxation more and more and more.

The editorial follows:

MOVE OVER

In the accompanying cartoon, Mr. Enright portrays the humble figure of free enterprise, being pushed off the bench by the crowding figures of tax. The point is well stated.

Free enterprise is the American way. It is the way in which mass production came into being. It is the way in which the blessings of science have been practicalized for everyday use, by everyday people. It is the way in which living standards have been raised above those of any other people. It is the way wars have been won, schools built, churches maintained, roads strewn over the land, homes built.

To overtax free enterprise is to destroy it. That means turning to some new device to keep an ordered society and defend against collapse. No such new device now appears. Free enterprise is, and of right should be, the greatest of our taxpayers. By producing wealth through free enterprise, and allotting that wealth in equitable measure to the common weal, which is Government; and the worker and investor, which is the American home; we maintain order.

Let Government demand a disproportionate share of the wealth produced, and free enterprise encounters strangulation. That means the American home faces strangulation. The incredible number of taxes now levied upon production strikes at the heart of the land. It has long been recognized that the power to tax is the power to destroy. Placing that power in the hands of political organizations, less devoted to country than to political dominion, is playing with fire.

That is what happened in Germany, Italy, and Russia. It is what happens every time the rights of a people are absorbed in the maw of professional politics. The human is so constituted that, wherever he undertakes his work, he will strive for growth. That is just as true in Government bureaus as it is in candy stores, bakeries, steel mills, or farms.

The growth in Government, though, need be controlled only by the political power to appropriate money. Government need produce and earn nothing. That is not true anywhere else. Thus we see an array of Government bureaus which staggers the imagination and withers the purse. The greatest single support of these is free enterprise. When employment falls off, the Government suffers in collections just like everyone else. To erect a steeple of bureaus is to burden the people. It is to take from production and nourish unproduction.

No Government bureau produces anything. Their sole metier is service. And too much service can be worse than none. It can also run costs into fabulous dimensions. It has. If the essential elements of our way of life are to abide with us, there must be room on the bench for all. Every mentally energized bureaucrat must not be permitted the expansion of his dreams, for these will sooner or later yank us summarily back to the vital over-all production from which every dollar must come through free enterprise. And one day we will discover our enterprise no longer free, but under foreclosure of mortgage.

Once we push free enterprise off the bench, we face one of two alternatives. The first is chaos. The second is a new way to assemble and dynamize the essential elements. No new way is even conjecturally on the horizon. Tax. Tax. Tax. City tax. County tax. State tax. Federal tax. Profits tax. Income tax. Undivided-profits tax. Capital-gains tax. Excise tax. In the latter, literally thousands of separate and distinct taxes lie hidden from view.

Recent publications showed more than 500 taxes paid on a single pair of shoes by the time those shoes crossed the retail counter. Old-age tax. Security tax. Transaction tax. Luxury tax. Amusement tax. Utilities tax. Estate tax. Inheritance tax. Stamp tax. Intangible tax. Tangible tax. School tax. Gasoline tax.

We could go on for pages, enumerating the taxes which big Government gobbles from little purses, as well as from big purses.

The backbone of freedom is free enterprise. The challenge to man's dignity and ingenuity is free enterprise. It is a spurious and specious array of ghosts who crowd that free enterprise from the bench. But they crowd.

Theirs is the grasping clutch about the throat of liberty. Theirs is the presence in which freedom cannot endure.

CHARLES FRANCIS COE.

Flood Control in the Wabash River Watershed and Tributaries Thereto

EXTENSION OF REMARKS
OF
HON. THURMAN C. CROOK
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. CROOK. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following house concurrent resolution of the Indiana Legislature memorializing Congress to enact effective legislation providing for flood control in the Wabash River watershed area and tributaries thereto:

House Concurrent Resolution 3

Concurrent resolution memorializing Congress to enact effective legislation providing for flood control in the Wabash River watershed area and tributaries thereto

Whereas each year the overflow of the many rivers, streams, creeks, and tributaries which empty into the Wabash River creates a flood condition imperiling life and causing property damage throughout the entire Wabash Valley, contributing at the same time to similar conditions which exist in the Southern States through which the Ohio and Mississippi River flow; and

Whereas the specific consequences of such flood conditions are: Silting and sedimentation of stream channels, reservoirs, dams, ditches, and harbors; loss of soil and water; and increase in the speed and volume of rainfall run-off, causing severe and increasing floods, which bring suffering, disease, and death, impoverishment of families, damage to roads, highways, railways, buildings, and other property from floods; and losses in navigation, hydroelectric power, municipal water supply, and underground water reserve: Therefore be it

Resolved by the house of representatives (the senate concurring):

SECTION 1. The Eighty-sixth General Assembly of the State of Indiana does hereby memorialize and petition the Congress of the United States to enact effective legislation for the control of floods and the prevention of soil erosion, to preserve natural resources, prevent impairment of dams and reservoirs, assist in maintaining the navigability of rivers, protect and promote the health, safety, and general welfare of the people, and to appropriate sufficient funds for the execution of such legislation.

SEC. 2. The principal clerk of this house is directed to forward copies of this resolution to the Secretary of the United States Senate, to the Clerk of the National House of Representatives and to each United States Senator and Congressman from Indiana.

AMA Versus the Nation's Health

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. KLEIN. Mr. Speaker, under leave I am inserting in the CONGRESSIONAL RECORD an important editorial from the New York Post of February 15 which analyzes clearly and accurately the deficiencies of the tardy national health proposals of the American Medical Association.

This editorial, dealing as it does with the details of the AMA proposals, passes briefly over the issue of the necessity of a Federal Health Department with a Secretary of Cabinet rank; but this seems an opportune time to point out a danger in this proposal. Organized medicine asks that the Secretary be, by law, a doctor of medicine. This would introduce into government a very dangerous principle not greatly different from the corporative state of Mussolini. The political power of the AMA in Federal and State government now is too great for comfort or safety; with a doctor elevated to cabinet rank, his qualification as an active member of the American Medical Association virtually specified by law, this country could easily be faced with a situation in which any deviation from the AMA orthodoxy in medical philosophy could result in a new form of Un-American Activities Committee investigations.

THE HIGH COST OF HEALTH

The American Medical Association has offered a substitute for President Truman's compulsory health insurance plan.

It's gratifying that the AMA has shifted from a negative mislabeling of national health insurance as socialized medicine to offer positive suggestions of its own.

The health needs of the United States demand that reform, rather than rebuttal, be applied to the staggering fact that one-fourth of our families could not afford adequate medical treatment in 1946.

However welcome its recognition that 25 percent of our homes cannot be denied full medical care without the sickness of social neglect eventually infecting the entire community—the AMA program, taken by itself, is inadequate.

The proposals are candidly offered as an alternative to the Truman plan.

But the simple truth is that many of the AMA's suggestions must be considered as a necessary supplement to, rather than substitute for, any national health insurance program.

The AMA has called for a Federal department of health which would foster new medical and hospital facilities, particularly for the aged and chronically ill; increase training of doctors and nurses and step up research, public health education, and other programs.

One could argue whether a Federal health department, with a secretary of Cabinet rank, is necessary.

But one cannot argue with the AMA's insight that the United States will never begin to care for its medically underprivileged until we have provided adequate health facilities and educated more dentists, doctors, and nurses.

The United States Public Health Service flatly states that the $375,000,000 of Federal funds currently appropriated to meet one-third the cost for State construction of hospitals, health centers, etc., will produce only 20 percent of the medical facilities imperatively needed.

Further, a recent survey indicates that 40,000,000 Americans live in communities lacking even the basic protection of full-time health departments.

Finally, and perhaps most conclusively, in California 580 people share the services of 1 doctor, while in Mississippi over 1,000 citizens are dependent upon a single physician.

But once we have built the shining new hospitals and trained a sufficient number of doctors and nurses, what then? We still will not have answered the financial problem of families unable to afford decent medical care.

The AMA suggests that voluntary hospital and medical-care programs—such as, we presume, the Blue Cross plan—be extended to cover more families, including those in rural communities. It adds that the States should pay any indigent's way, with a medical-care authority established to receive and administer funds with proper representation of consumer and medical interests.

Yet the New York Blue Cross plan has just announced that rising costs have forced it to increase its subscription rates from 24 to 32 percent.

This suggests that private health-insurance plans—while highly beneficial to middle-income families—are subject to the fluctuations of our economy and could easily be pushed by inflationary pressures beyond the reach of many wage earners. The number of indigents compelled to accept State charity could swell alarmingly, with predictable detriment to their morale and to the solvency of State treasuries.

The administration's program, on the other hand, would be financed by a slight pay-roll tax (rising to 1½ percent of earnings up to $3,600) on both employer and employee, with Federal subsidies expected to make up any difference between current medical costs and the size of the national health-insurance fund.

Under the Truman plan a worker would not be faced with the problem of either paying beyond his means or going without medical care.

The AMA seems honestly willing to consider a realistic health program for the United States. But its realism suffers by ignoring the fact that compulsory health insurance could prevent thousands of American families from being priced out of good health—and productive democratic citizenship.

Ten Years of Soil Conservation

EXTENSION OF REMARKS
OF
HON. ALBERT J. ENGEL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. ENGEL of Michigan. Mr. Speaker, I represent a district in Michigan where soil depletion and erosion have been a terrific problem, and hence where soil conservation becomes a real need. Furthermore, in view of this need, we want our soil conservation translated into real action.

Fortunately we have a number of excellent soil conservation districts which for the most part have turned out fine records of actual results. One of the best is the South Muskegon Soil Conservation District, which I believe is also one of the oldest in my part of the country. It has just concluded its tenth year as a district and in commemoration has published a fine summary of its work during that period.

I thought I was familiar with the program of that group, but, on reading the summary, even I am astonished at what 10 years of consistent work can accomplish.

When this group came into existence, in 1938, the soils of its area were visibly deteriorated. Sand blows were spreading and threatening thousands of acres of adjacent land. Wooded areas were neglected or being stripped for fuel wood and the general condition of the woodlands was very poor. The better soils of eastern townships were beginning to show the effects of erosion in bare knobs, gullies, and abandoned fields. Delinquent tax rolls were longer every year.

Here, taken from the district's printed report, is the down-to-earth citation of results during the subsequent 10 years:

SOME THINGS ACCOMPLISHED

Seven hundred and fifty acres sand blow stabilized.

Six million trees planted.

Eighty miles windbreak planted.

One hundred and fifty thousand lineal feet sod waterway established.

Two thousand five hundred acres wind strip cropping established.

Eight hundred acres contour strip cropping established.

Seven hundred and fifty farm conservation plans worked out.

TREE NURSERY

To provide a reliable source of tree-planting stock, a tree nursery was established on the Hosted farm, in Sullivan Township, in the spring of 1939. Olaf Hosted, chairman of the district board, was named superintendent of the project and has succeeded in building what is generally considered to be the outstanding district nursery of the country. Visiting students and technicians, some from as far away as Mexico, Chile, and Iceland, say that some of the successful methods used are original and are being copied by other nurseries. Among these are the protection of germinating seedlings from bird damage and from damping off, and growing of seedlings without shading. The first self-propelled seeding transplanter was made for this nursery, and is still in use, though with many changes and modifications. Altogether about 8,000,000 trees have been distributed from this nursery. Cooperators appreciate the fact that they can come here almost any time during the planting season and secure fresh stock not damaged by packing or shipping.

SOIL LOSS DEMONSTRATION PLOTS

A demonstration of soil loss from different methods of cropping was set up in 1944 by the district.

They consist of six plots, each one 6 feet by 72 feet, measuring one one-hundredth of an acre, on a 6 percent slope. The soil is Isabella clay loam. Catch basins are provided so that the loss of soil and water from each separate plot can be measured. Each plot is cropped and cultivated according to a predetermined method of rotation.

The United States Weather Bureau has furnished a rain gauge so that rainfall can be measured and correlated with soil and water losses.

This is one of the two soil-loss demonstrations operated by soil districts in Michigan. It has been visited by many groups of farmers, students, and conservationists from all over the State. It has proved invaluable in showing the results of controlled and uncontrolled water run-offs.

PUBLIC LANDS

During the scavenger tax sales of 1940–41 approximately 6,000 acres of the poorest lands in the district were acquired by the county, townships, and schools, for forest and recreational purposes.

Practically all these tracts are under agreements with the district and in most cases the plans have been carried out. Most of the open areas have been reforested, and many of the units have already received revenue through oil leases, sale of pulpwood, Christmas trees, etc.

Thirty-five schools in this district now have school forests ranging in size from 10 acres to 240 acres. All have held one or more planting bees, in each of which from 10 to 50 students have participated. Many schools use their land for other conservation activities and recreation.

LAND-UTILIZATION PROJECT

During the year 1942 the Soil Conservation Service purchased 600 acres of land consisting mostly of tracts on which were open sand blows, generally in absent ownership, and whose owners could not or would not do the necessary stabilization and reforestation. This work has since been done by the Service with hired labor and is virtually completed. The project has been turned over to the district for management.

REFORESTATION

Since establishment of the district some 5,000 acres of idle land have been planted to trees. About half of this is on public land and half on private land. As most of the public land is now reforested, future plantings will have to be done by private owners unless additional land should be acquired by public units.

A great deal of natural restocking has occurred where land has been protected from fire and grazing. The area so restocked probably exceeds that which has been artificially reforested.

At least 40 percent of the plantings have been made on areas formerly classed as blows and which at that time were an eyesore and a menace to surrounding fields but have now become beauty spots, in many instances producing revenue. Sandstorms which at one time were a regular accompaniment of spring winds are now virtually a thing of the past.

Though not to be measured in dollars and cents, the esthetic value of forest plantings is very large. It is without doubt the most noticeable of the soil-conservation practices used in this district.

Probably nowhere else in the world does such a striking pattern of evergreen plantations exist as in the tree-planting districts of western Michigan.

FOREST-FIRE CONTROL

The district has consistently worked with other agencies for the control and prevention of forest fires. In general it can be said to have been successful. Only one really extensive fire has occurred during the life of the district. However, fire is always a dangerous enemy, and efforts are regularly being made to improve the control organization.

The State conservation department station located on the causeway is the official fire-fighting organization, but the district maintains a supplementary organization of its own, with key men and equipment located at danger spots. Through this set-up several fires have been suppressed before they could make headway.

Seventy-five Indian fire pumps have been purchased by the district, some of which have been resold to other units.

At the tree nursery a trailer loaded with fire-fighting equipment is kept ready for instant use during the fire-danger season.

MARL

For 2 years the district board operated a marl distribution project, and upward of 10,000 yards of marl were delivered to cooperators. When the ACA adopted this program, the project was turned over to them.

TVA FERTILIZERS

For several years the district assisted the Tennessee Valley Authority in its superphosphate experiments. Shortage of help forced the relinquishment of this project, but not before sufficient data for the experiment had been accumulated.

WOODS COOPERATIVE

The district assisted a number of woodlot owners in forming a cooperative for the selective harvesting and marketing of their wood products. Several hundred thousand board feet of lumber were marketed in this way at considerably higher prices than would ordinarily have been received.

TREE-PLANTING MACHINE

The district assisted two cooperators, Howard Hunt and John Kass, in developing a tree-planting machine. This machine combines the best features of other tree planters, with the addition of a planting wheel which spaces the trees uniformly without special effort on the part of the operator. As it is much faster than hand planting, it should help to speed up the process of reforestation.

WILDLIFE

The district has recently assisted the State conservation department in the location of sites and the planting of wildlife food and shelter patches. We believe that the establishment of the regular soil-conservation practices is the best assistance that can be given to wildlife.

PULPWOOD

Through the efforts of district directors and technicians, about 300 standard cords of pulpwood, crate bolts, and fuel wood have been marketed from school and township lands.

Mr. Speaker, those are a few of the specific highlights from the South Muskegon District's 10-year report. Even so the group is not content to rest on its laurels, worthy as they may be. It knows that much good work remains ahead. Here is what it has outlined for itself: Stabilize 300 acres sand blow; plant 34,000,000 trees; plant 910 miles windbreaks; establish 700,000 lineal feet sod waterway; establish 12,200 acres of wind-strip cropping, and establish 8,700 acres of contour strip cropping.

If the past is any criterion, and of course it is, this new record will be accomplished. It is a tribute to the present board of directors, presently made up of Chairman Olaf Hostad, Alwin Woodard, Kenneth Bull, Edward Bossett, and Victor Anderson.

What this program means in terms of actual soil improvement in an area which so badly needs such improvement is of course incalculable. We still have a long way to go but the important thing is that we have made the big decision to stand and fight, rather than to retreat annually in the face of growing soil depletion. I am tremendously proud of the South Muskegon District, and all others like it. It is a real milestone that we can now have reports covering a 10-year period of planned-soil progress. I pledge my continued assistance in that program in every reasonable way.

Address of Hon. Irving M. Ives, of New York

EXTENSION OF REMARKS
OF

HON. WILLIAM L. PFEIFFER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1949

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under permission to extend my remarks, I include the following address by United States Senator IRVING M. IVES upon occasion of commencement ceremony at Syracuse University, Syracuse, N. Y., January 30, 1949:

The other day I received an invitation to make an address on the role of the liberal in modern politics. Because of a very heavy schedule, I was obliged to decline the invitation. But if I had accepted it, I should have been hard pressed in preparing the speech. I am not at all sure that I know the meaning of the word "liberal" as it is commonly employed nowadays; it seems to mean all things to all people and to be a convenient term to apply to political proposals in order to make them attractive in an intangible sort of way. It rather casts an aura of glamour about them, which tends to deceive the unwary and sometimes to annoy the forthright.

But from the title of my suggested address, I got an idea for my remarks today. I shall speak to you on "the role of the citizen in modern politics." Perhaps a better title would be "the role of youth in modern politics."

I suspect that, as has been true in the case of most college graduating classes since 1945, a sizable percentage of you who are receiving degrees today are veterans of the last war, with deep convictions and strong ideas regarding the great issues and problems which confront our Nation and the world. I am sure that all of you have more than a casual interest in these matters. The recent impact of war and the present turmoil of its aftermath, which have brought dislocations affecting all of us, have made us deeply conscious of the world in which we live.

I suspect that some of you—I hope many of you—are intensely interested in our Government and in the political parties which make its operation possible. Some of you may be Democrats; others of your number may be Republicans; still others Socialists perchance. I hope that not one of you is a Communist. I would hazard a guess that many of you are not affiliated with any political party and are groping to find what the parties stand for in order that you may determine whether to join one of them or to remain aloof as independents. I assume that most of you are at least slightly confused by this whole situation, and I should be surprised if you are not confused by it. It seems to be causing some confusion within each of the major political parties at the present time, although because of it the Republicans appear to be the greater sufferers.

Add to this condition the fact that most of you can't remember a Republican national administration during your lifetime and that your only taste of Republican control at the national level was the Eightieth Congress, and it becomes still less surprising if some of you may wonder at the function of or need for an opposition party in our National Government. And yet, when any of you think twice, you quickly realize that a one-party government over a protracted period of time would destroy freedom in Amer-

ica. The day is long past when the people of any country with only one political party can remain free.

This is the fateful record of history in this twentieth century. It is one of the consequences of the social and economic revolution which has been gripping the world since late in the last century.

Some say that this revolution is a continuation of the industrial revolution. Some call it an aftermath of or sequel to the industrial revolution. Whatever its origin, its form is unmistakable. It is the upsurge of the ordinary man to seize his place in the sun. It is a part of or has followed his struggle to be free.

Now, this ordinary man is generally a mighty fine fellow. He is any one of us. For the most part, he demands personal freedom, equality of opportunity, a decent standard of living for himself and his family, an adequate education for his children, and protection against economic insecurity because of sickness and disability and old age.

In his upsurge the ordinary man has pressed along different paths in different countries and in different parts of the world. He hasn't always been prudent in his decisions; sometimes he has followed false gods and sold his birthright of freedom for a mess of pottage; too often until too late, he has traded his freedom for security, failing to realize that security without freedom is worse than insecurity.

Evidences of the present revolution are everywhere. In fact, all human life today is affected directly or indirectly by it.

Communism in Russia, nazism in Germany, fascism in Italy—these phenomena have been part of the revolution. World War I and World War II were violent explosions which it produced. It has assumed a more recent form in the Socialist Government of Great Britain. Analysis will show that it is basic in today's crisis in China. Ominous rumblings are already heard in India. Even in South America there appears to be a seething undercurrent which threatens the peace and stability of all Latin America.

Here in the United States we are experiencing the same revolution. When it began with us is uncertain, but our economic collapse at the end of the 1920's and the resultant depression in the 1930's quickened its pace. It is now primarily responsible for five successive Democratic administrations in Washington, although the present Republican predicament is due in part to Republican blindness and ineptness. As a result of prolonged and continuous one-party control in this country, the opposition is now threatened with extinction, and the American people are threatened with the unhappy fate which has overtaken other free peoples of the world.

I make this statement in no narrow partisan sense. I do not make it as a Republican trying to defend a party record which in some ways does not deserve defense. Neither do I make it in criticism of the ordinary man. I am in full sympathy with the ordinary man in his desires and hopes and demands. Rather do I speak as one who, realizing the justice in the ordinary man's demands, recognizes also the Republican Party's responsibility for his welfare.

If the present revolution has shown one thing above all else, it has revealed that the ordinary man has not yet demonstrated an ability so to govern himself that he can obtain security and freedom at the same time. Not comprehending that collectively, while free, he is the government, he has saddled upon it burdens which have been more than he or it could bear. The consequence has been collapse, disaster, and slavery for himself when, in desperation, he has succumbed finally to the wiles of some demagogue and tyrant.

So today in the United States this same kind of danger confronts us. Here, too, there has been and is a tendency to place an ever greater burden on government and an ever greater responsibility in government. Here, also, the ordinary man in seeking legitimate objectives may overload his government through thoughtlessness and selfishness to the point of catastrophe. And it is right here that he is in greatest need of an alternative medium for self-expression and action through an alternative major political party.

This is the challenge which faces the Republican Party. It is not a question of "outdealing the New Deal" or of "me too, only I can do it better." Nor is it a matter of denying to the ordinary man his right to achieve the objectives he is seeking. Assuming he cherishes his freedom and wants to preserve it—and I am sure this is still a basic desire among most Americans—the problem is how to obtain for him the greatest possible economic security without jeopardizing his freedom.

How great a load can a free government carry without breaking down? Where is the point in government control beyond which our free economy ceases to be free? At what point in his demand on government will the ordinary man lose his personal freedom? And with respect to any of these questions, have we yet reached or passed the danger point? To these and other vital questions affecting our national welfare answers as nearly accurate as possible must be found.

The situation is made far more difficult because of Soviet Russia's apparent intent to conquer the world. Capitalizing on the revolution of the ordinary man, the Communist leaders of Russia have tricked and bludgeoned him into slavery to serve their own diabolical ends.

To meet the Communist menace, to find the answers to the questions I have posed—these are obligations of both major political parties, and they are of particular concern to the Republican Party if that party is to function effectively and constructively as the opposition—an opposition not solely to oppose, but mainly to propose. Only by recognizing and accepting the preponderant mandate of the people themselves can the opposition provide the creative approach to the solution to grave problems which is essential to achievement. Moreover, only by showing that its chief interest is in the welfare of the ordinary man can the opposition win the support of the ordinary man.

I suppose that some of you are now thinking: "Uh-huh, just another Republican speech by another Republican." Well, if you have been following me, you will have noted that I have not criticized the Democratic Party; you will have noted, moreover, that whatever criticism I may have made has been directed toward the Republican Party. Naturally I am interested in the Republican Party, and naturally I should be delighted if all of you were in it. But my primary concern is that there shall be in our Nation an effective party of opposition, and I hope, indeed, that the Republican Party will be able adequately to fill the role of opposition.

"Well," someone will say, "if the situation is as you describe, why bother with the Republican Party? Why not a new party?" My reply to these perfectly appropriate questions is that, regardless of any merit in such a proposal, there isn't time. At the earliest, from 4 to 6 years would be required for the establishment of a new major party, and we need desperately a strong, competent opposition now; 4 or 6 years hence would be too late. Furthermore, the same lines of cleavage and disagreement which trouble Republicans would appear immediately in any substitute party of opposition.

"Well then," someone else will say, "Why not two new parties and a truly realistic party alinement?" Replying to this suggestion, I submit a very practical observation—the supporters of the present Democratic Party would seem in no mood at this time to abandon their party and to turn to something else whose future would be most uncertain and unpredictable.

I know that for some years there has been growing agitation in favor of a new alinement in our two-party system—with two new major parties to reflect more accurately the social and economic conflicts within our American society. I am well aware also that nowadays there exist greater differences of opinion within each of the major parties than are such differences between them; the substance of the party platforms, in contrast to voting records in the Congress, reveals this striking anomaly. I accept the charge as true that present party alinements are artificial and not genuine. I insist, however, that even though it might be possible to realine the two parties on a more realistic ideological basis, such rearrangement, at best, would be certain to stir up class consciousness and class conflict and easily might cause more harm than benefit.

Today the natural variations in American social and economic thought and political philosophy largely follow geographical lines and areas. Two political parties based on these demarcations would tend to be fundamentally sectional and might soon be splintered by differences arising within the several areas and sections. Bloc government, irresponsible government, would be the consequence of these multiplying differences and divisions. The end result of this process might be political chaos followed by political dictatorship.

For the time being and for the foreseeable future, we should probably be better off to retain our present political establishment and to try to make it work successfully. I have stated that this course furnishes a mighty challenge to the Republican Party. But it contains almost as great a challenge to the Democratic Party, and it definitely holds a most fateful challenge to every American citizen.

Much is written and spoken of the grass roots, of grass-roots sentiment, and of the influence of the grass roots on the outcome of elections. Beyond question grass-roots sentiment in the aggregate forms public opinion, and public opinion ultimately determines American policy. But grass-roots sentiment is created by the force and expression of leadership in thousands of American communities, and its nature reflects the accuracy or quality of the information which may be available to the people. It has been said, you will recall, that when the American people know all the facts about an issue they never make a mistake in deciding it. So it is that news commentators and columnists and those occupying positions of responsibility in public life should exercise the utmost scrupulousness in broadcasting or proclaiming personal opinion and ideas. And so it is that those whom circumstance has most favored by educational advantage or cultural attainment have an especial obligation in the shaping of community opinion. Of such is national character formed and national destiny determined.

Therefore, today I call upon you, members of this class of 1949, to recognize civic obligation and to accept civic responsibility as you may enter upon the calling or profession, for which the degree you receive denotes your qualification.

I congratulate you most sincerely upon the mark of accomplishment and distinction which this occasion holds for you. I extend to each one of you best wishes for good health and happiness and continuing success. But I urge upon you an awareness of your duty to your community, your State, your Nation and the world.

In the perhaps too-gloomy picture I have painted of our country and the world as I view them today, I have endeavored, nevertheless to be objective and unprejudiced. The outlook, I confess, is not a happy one. But only the weak and faint-hearted will regard it as hopeless. For the strong and

courageous it offers the most challenging opportunity of all the ages.

So I say to you, my young friends—go forth, confident in the knowledge you have attained and in the preparation which is behind you. Enter upon the new life that lies ahead of you, conscious of your duty to your community and your fellow men. Whenever and wherever your work and chance permit, go into the field of politics and help to make of politics the highly honorable profession it must be if we are to have the America we want. Go forth, believing in the dignity of man and in the brotherhood of man. And, as you go forth, may you be ever mindful of your responsibility for the welfare of the ordinary man, always remembering that his welfare is the welfare of America; for in America every man is the ordinary man.

Repeal of Wartime Excise Taxes

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following resolution of the New York City Federation of Women's Clubs, Inc., urging repeal of the Federal excise taxes on luxuries:

Resolution 2

Resolution of the New York City Federation of Women's Clubs, Inc., urging repeal of the Federal excise tax on luxuries

Whereas the 20-percent Federal excise tax on so-called luxury commodities was enacted during the war emergency for the purposes of raising revenue and discouraging the manufacture of nonessential items in favor of the manufacture of necessary war goods; and

Whereas the conditions that brought about the imposition of this form of taxation have changed; and

Whereas many of the taxable luxury items, such as pocketbooks and other leather goods, drugs, cosmetics, toilet articles, furs, jewelry, and similar items are regarded as actual necessities rather than luxuries by both producer and consumer; and

Whereas business leaders have protested that the existing luxury taxes have created a dangerous buyer resistance, placing several large industries in jeopardy; and

Whereas manufacturer, retailer, labor, and consumer groups are in agreement that the repeal of this form of nuisance tax would be in the best interests of labor, capital, and the consumer; and

Whereas according to figures published in the press, this form of tax, in 1948, brought only slightly more than 1 percent of the total revenue collected by the Federal Government in taxes: Now, therefore, be it

Resolved, That the New York City Federation of Women's Clubs, Inc., in convention assembled this 4th day of February 1949, does hereby call upon the Congress of the United States to repeal the excise tax on luxuries; and be it further

Resolved, That the New York City Federation of Women's Clubs urges the Members of Congress from the city of New York to work for the repeal of the excise tax on so-called luxuries; and be it further

Resolved, That copies of this resolution be forwarded to the President of the United States, the majority and minority leaders of the Senate and House of Representatives, the Speakers of both Houses, the chairmen of the appropriate congressional committees, the Representatives in Congress from the city of New York, the Secretary of the Senate and the Clerk of the House of Representatives, and any other appropriate officials.

Decentralization of Death Cases, Veterans' Administration

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. ELLIOTT. Mr. Speaker, a great citizen and unselfish patriot of Alabama, Mr. George W. Cameron, director of claims service for the State department of veterans' affairs, has just called to my attention, by letter, a matter that I think will be of interest to the Members of this House. It pertains to the method in which Veterans' Administration handles its files in death cases, and to my mind presents a strong case for the change advocated by Mr. Cameron.

Mr. Cameron has devoted his life to solving the problems of veterans, their widows and orphans. In 1941 he served as chairman of the national convention rehabilitation committee of the American Legion and he has for many years served as department rehabilitation chairman of the American Legion of Alabama. He is an outstanding expert on veterans' problems. I am including Mr. Cameron's letter as a part of my remarks:

STATE OF ALABAMA,
DEPARTMENT OF VETERANS' AFFAIRS,
Montgomery, Ala., February 11, 1949.

Hon. CARL ELLIOTT,
House of Representatives,
Washington, D. C.

DEAR CARL: For more than 2 years, service officers of veterans' organizations throughout the country have been urging the Veterans' Administration to decentralize death cases. This has been deemed necessary in order that the claims of widows and dependents might be rated in regional offices of the Veterans' Administration rather than in district offices where they are presently being adjudicated.

At its national conventions for the past 2 years, the American Legion has unanimously passed resolutions urging that these cases be decentralized to the regional offices of the Veterans' Administration. In December of last year, at the work clinic held in Atlanta, Ga., the service officers recommended to the Veterans' Administration that they change existing regulations so as to permit the temporary transfer of these XC files to the regional offices for review and development when requested by the claimant or the accredited representative of the claimant. In making this recommendation or request, we realized that the Veterans' Administration was reluctant to decentralize death cases permanently to regional offices, but we did feel that they should be willing at least to permit us to make a review of the records in each case in order that we might determine whether or not it was possible to secure new evidence and develop the case further, or to determine whether or not the claim had been correctly rated in the district office. Our recommendation has been disapproved.

Learning of this, I immediately addressed a letter to the Members of Congress from Alabama, urging that they lend their assistance toward helping us to have these files at least temporarily decentralized to regional offices for review and development. Every Member of the Congressional Delegation from Alabama immediately called this situation to the attention of the Administrator of Veterans' Affairs.

In a letter dated January 17, 1949, addressed to Hon. LISTER HILL, United States Senator, and signed by Maj. O. W. Clark, Executive Assistant Administrator, Veterans' Administration, Washington, D. C., the position of the Veterans' Administration in this matter is defended, and I am afraid there is much misinformation in the letter to Senator HILL from Major Clark.

In the second paragraph of his letter to Senator HILL, Major Clark states that the decentralization of death cases to branch office level was in furtherance of the major objective of rendering the maximum service to dependents of deceased veterans, and that by establishing permanent jurisdiction in the branch office, it was considered that more expeditious service would be available.

I am sure that Major Clark knows that these cases were not decentralized to the branch offices, but that they were actually recentralized. I believe that the records will show that from May 1, 1939, to July 1946, a period of more than 7 years, these cases were rated in the regional offices, and during that entire period they were handled most satisfactorily. There has been no decentralization of these cases, but, as a matter of fact, they have been recentralized.

With reference to the cost of handling XC files in the regional offices, I am informed by an official of the Veterans' Administration who certainly knows what he is talking about, that with a maximum addition of 10 employees at this regional office at Montgomery, Ala., all death claims could be expeditiously handled. I am sure that the same situation exists in other regional offices and that the decentralization of these cases to the regional offices would actually result in a saving of money to the taxpayers.

In his letter to Senator HILL, Major Clark further points out that in order to expeditiously adjudicate claims there should be a minimum movement of XC folders after jurisdiction has once been established. I am sure that Major Clark knows that no accredited service officer would want to delay the adjudication of a claim by requesting the temporary transfer of the folder from the district office to a regional office for review and development. It is only in those cases where the claim has already been adjudicated by the district office and benefits denied that we would want to make a review of the records in the XC folder to determine whether or not it would be possible to secure any evidence to further develop the claim or whether or not we believe the decision of the dependents pension board in district office to be correct and in line with the facts in the case.

With reference to the temporary transfer of files to regional offices for development and review, it is a well established and recognized fact that much more accurate information can be secured by the service officer by a review of the actual records than could be furnished him through correspondence. In most instances, letters written to claimants of deceased veterans by the district office are form letters and give little or no information which would be helpful in any further development of the claim.

There are also cases in which we believe the Dependents Pension Board has been wrong in their decisions. To illustrate this point, I recently handled the case of a deceased World War I veteran (XC–1,129,544) in which it was shown from the records that the veteran had service connection on a lung condition diagnosed as bronchiectasis. He was hospitalized in the veterans' hospital, Montgomery, Ala., and was reported to have died with lobar pneumonia, right

upper and middle lobes. A claim was filed by the widow for death compensation, it being her contention that the service-connected disability of bronchiectasis materially contributed to the cause of death. The claim was denied in the district office of the Veterans' Administration in Atlanta, Ga. We were not able to have the file temporarily transferred to the Montgomery regional office for our review, but we were confident that if we could see the file we could find enough evidence of record to justify our taking issue with the decision. We were successful, however, in having the file forwarded to central office of the Veterans' Administration in Washington, and Dr. H. D. Shapiro, senior medical consultant, national rehabilitation commission, the American Legion, had an opportunity to review the file. The first thing that Dr. Shapiro discovered was that an autopsy was performed after death in the case, but that the dependents pension board in district office in Atlanta had not taken the trouble to secure a report of autopsy. At Dr. Shapiro's request, that report of autopsy was secured, and it was found from reading the autopsy report that the veteran did not die of lobar pneumonia but that he actually died from his service-connected bronchiectasis. I quote herewith from the autopsy report: "The most remarkable finding in this case is the presence of a localized bronchiectasis involving the right upper lobe." The pathologist further stated: "The course of the disease in the right upper lobe indicates the presence of a long-standing chronic inflammatory process, which in the later stages of the patient's illness led to the formulation of an abscess with surrounding complete consolidation of the lung parenchyma. Evidently this caused the patient's death."

I feel that we have been very patient with the Veterans' Administration in our request that they give consideration to decentralizing these cases back to the regional offices of the Veterans' Administration where they belong. I am afraid that there is within the Veterans' Administration a group of men who are in key positions and who are of the opinion that nothing can be done right unless it is done in Washington. I do know that for many years the American Legion fought consistently for decentralization of death cases to regional offices, and when this was finally accomplished on May 1, 1939, there were many officials of the Veterans' Administration who predicted that the decentralization of these cases to the regional offices would end in confusion and that they would be centralized back in Washington within 6 months. In spite of these predictions, however, it is shown from the records that the regional offices did adjudicate these cases just as expeditiously and just as correctly as could be done in central office, and I believe the records will show that in most instances the adjudication was accomplished much sooner in the regional offices than had been accomplished in the central office in Washington.

I believe that the widows, orphans, and dependent parents of deceased veterans have just as much right to appear before a rating board handling their claim as the veteran has while he is living. Unfortunately, most of these dependents of deceased veterans are without funds and they are not able to travel to a district office or to a branch office of the Veterans' Administration.

If the Veterans' Administration persists in its attitude of refusing to decentralize these cases to the regional offices, then I believe the only remedy we have left would be to ask that the Congress act and that a law be enacted which would make it mandatory that the original adjudication of these claims would have to be in regional offices of the Veterans' Administration.

Very truly yours,

GEORGE W. CAMERON,
Chief, Claims Service.

Resistance to Unjust Laws

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. GORSKI of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Buffalo Evening News, Buffalo, N. Y., of February 15, 1949:

PONTIFF MAPS UNITED FRONT AGAINST REDS—BISHOPS ARE BOUND TO RESIST UNJUST LAWS, HE TELLS CONSISTORY IN COMMENTING ON CASE OF CARDINAL MINDSZENTY

(By Frank O'Brien)

VATICAN CITY, February 14.—His Holiness Pope Pius XII declared today that when a civil government contradicts divine and human rights, "bishops and the faithful themselves are bound by their conscience to resist unjust laws."

Addressing a secret and extraordinary Consistory of the College of Cardinals on the case of His Eminence Josef Cardinal Mindszenty, the Pontiff asked prayers to the end that:

"Those who rashly trample upon the liberty of the church and the rights of human conscience may at length understand that no civil society can endure when religion has been suppressed and God, as it were, driven into exile."

High Vatican circles said that in the secret debate which followed the papal address, plans were mapped for a "united front" of all Christians, not Catholics alone, to resist the tide of "atheistic communism."

TRIAL NOT FAIRLY REPORTED

The Pope said "our soul is crushed with most bitter grief" by the trial and condemnation of the Hungarian primate.

In a brief speech to 16 cardinals closeted with him in the consistorial hall of the Apostolic Palace, the Pointiff declared the Hungarian primate's trial had not been fairly reported.

"The principal object of the trial," the Pope said, "was to disrupt the Catholic Church in Hungary and precisely for the purpose set forth in the sacred Scripture: " 'I shall strike the shepherd and the sheep of the flock shall be dispersed.' " (Matthew xxvi: 31.)

The Pope declared Cardinal Mindszenty's physical condition during the trial was "inexplicable except as the result of secret influences which may not be publicly revealed; to prove this, there is the fact that a man endowed with the full vigor of a forceful nature suddenly appears weak and mentally unbalanced." (There have been reports that the cardinal was induced to sign a confession after being drugged.)

DOING WHAT RIGHTS DEMAND

The Pontiff branded "completely false" the Hungarian Government's assertion that "the whole question at issue was that this Apostolic See, in furtherance of plans for political domination of nations, gave instructions to oppose the Republic of Hungary and its rulers."

"We are doing," the Pontiff told the cardinals, "what the outraged rights of the church and the dignity of the human person clearly demand."

It was a speech phrased in sorrow rather than anger. The Holy Father called the imprisonment of the Hungarian cardinal "a most serious outrage which inflicts a deep wound not only on your distinguished college and on the church but also on every upholder of the dignity and liberty of man."

He declared "everybody knows the Catholic Church does not act through worldly motives, and she accepts any and every form of civil government, provided it be not inconsistent with divine and human rights."

Thirty-first Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 16, 1949

Mr. RODINO. Mr. Speaker, today marks the thirty-first anniversary of the declaration of independence of the people of Lithuania. The occasion is one commemorated not only by our citizens of Lithuanian ancestry but by all freedom-loving people. For, although Lithuania is again under the ruthless domination of the Russian bear, the United States still considers Lithuania an independent state.

On February 16, 1918, after approximately 160 years under the Russian Czarist rule, Lithuania declared itself free and independent and broke the terrible yoke. This free and independent status was formally recognized by Soviet Russia. However, this was not for long, for in June 1940 the Russian pattern of treachery again went to work. Russia in violation of its treaty of 1926, moved in its troops.

Today Lithuania lies prostrate under the oppressors' heels. Of her 3,000,000 people, 700,000 have been deported to Siberia and other frozen wastes of Russia in an attempt at mass liquidation. Religious persecution goes on with unabated force. Of 10 Lithuanian bishops, only 4 are known to be alive in the world. Of 1,600 priests, there are only 700 alive, the rest having been killed, tortured, and deported to Siberia. Over 80,000 of its people have fled from their homeland and from those they love in order to be alive and to continue their fight for the liberation of their homeland elsewhere.

Although today, on the anniversary of their independence, the Americans of Lithuanian origin are saddened of heart, as are the hearts of their racial brothers and sisters in Europe, their liberty-loving spirit still burns with a hopeful flame. They still carry on their fight for liberation. The secret Russian police cannot shackle the hopes and aspirations which glow in every Lithuanian heart and mind as they silently rededicate themselves on this day to the eventual liberation of their homeland.

The people of America, who respect the dignity of man, his right to independence, his right to freedom—are taking stock.

They know the story of other trampled countries; they know the tragic fate of Lithuania. They know and are shocked at the fate of Cardinal Mindszenty; at the arrest of the Protestant ministers in Bulgaria. They know that

the treacherous hand of communism is at work in all these cases. And they will not forget, for the finger of accusation points.

We all look forward to the day when the march of communistic rule is stopped, and on that day a new proclamation of liberty shall again bring joy to the heart of Lithuania and her freedom-loving people who, like us, believe in the principle that inalienable to everyone, everywhere, is the right of life, liberty, and the pursuit of happiness.

Founder's Day Address at Temple University by Hon. Robert C. Hendrickson, of New Jersey

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, February 17, 1949

Mr. SMITH of New Jersey. Mr. President, on February 12 my distinguished colleague the junior Senator from New Jersey [Mr. HENDRICKSON] delivered the founder's day address at the founder's day ceremonies at Temple University in Philadelphia. I ask that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, members of the Alumni Association of Temple University, distinguished guests, fellow Americans, the moral and physical destruction wrought by the recent war has made itself felt today in every home the world over, even to the outposts of our civilization. Of course, it has been devastating. Despite its tragic effect, however, our own Nation has continued to enjoy precious liberties, freedom, justice, the relatively unmolested right of the pursuit of happiness and social equalities on a level which exists nowhere else in the world. Yet, we find here in this precious land of ours today threats of disloyalty and disunity, even of rebellion against our cherished way of life. To me this is beyond comprehension—it is unforgivable and must be dealt with under our system of justice promptly, firmly, and, wherever necessary, severely. We cannot continue to tolerate in this haven of freedom, men and women who would enjoy and exploit the blessings of this land on the one hand, and on the other "sell short" the basic principles which have enabled us all to enjoy God's blessings in such fullness. To those of us in America today who truly cherish the term "liberty and justice" there is an overwhelming challenge—it is to first answer with complete honesty, by positive action, these questions. Do we today, pay only lip service to those words or are we willing to make them once more a living dynamic force as they were in those days when the patriots here in America and over yonder in France were laying the foundations and establishing the patterns whereunder the term "liberty and justice" could become a reality under well-ordered law? Are we willing to sacrifice our all and die for these words, if necessary, or has the modern totalitarian influence in the world today so softened our regard and respect for them to the extent that we are about to concede that the individual is the servant rather than the master of the state—that the Government must plan, direct, and control the lives of all of us? To answer these questions best, we might draw some startling comparisons; for example, here in America today we see luxuries and comforts in all classes of our society which, in contrast to the poverty and distress of the rest of the world, is well-nigh inconceivable and this despite the burdens of two world wars which have taxed our resources beyond any parallel in history. There is no comparison; there is only a clear and bright beacon light to guide us.

"Liberty and justice," as we know the term, is responsible for our free enterprise system in America—one is responsible for the other and together they have given our people equal opportunities in all things, our critics from within and without to the contrary notwithstanding.

No one can honestly question this statement and support his contention with sound facts. Yet with our magnificent advances in all fields far beyond any comparative effort in the world's history, there are those who, for purely selfish advancement or for some other ulterior motive or purpose, would lead us to "new and uncertain ways of life." What, I ask, my fellow citizens, should be our answer to these people? May I summarize the answer with a few personal observations:

Several weeks ago, I received a handsomely bound book entitled, "The Medal of Honor," published by the Government under the direction of the President to describe those actions which earned a select company of men of our Nation the Congressional Medal of Honor. Because of the high esteem in which I have always held our Nation's heroes, I immediately explored its pages with care and, as I read of the exploits of each of those patriots who were awarded the Nation's highest honor for their deeds of "personal bravery above and beyond the call of duty in the face of the enemy," I thought of the many who have justly earned that award but never felt the exultation which comes from its attainment. Among them were men and women whose services were given in times of peace, but they, too, served with distinction. While I was pondering on the history of the Medal of Honor, I became convinced that, if our Nation is to survive with all of its rich heritages and blessings in this confused, frustrated, and war-weary world, it will need more and more men and women who have the courage and patriotism of those comparatively few who received the Congressional Medal of Honor.

In the foreword to this volume, our President has written: "May the courage and heroism of which this medal is a symbol always remind us of our duty to these men, and clearly point to the personal responsibility which every American has today to share in the work of helping to build a healthy and peaceful world." I could not read these words without feeling a grave challenge—a challenge to join in a great crusade—a crusade to maintain the advances which have been won by such men.

Since I have been through the nightmare of war twice, I know the extent to which these men gave of themselves that their principles, their ideals, their love of home and family might survive. Without qualification or reservation, these heroes dedicated themselves "all out" to God and country—otherwise their almost impossible accomplishments would never have succeeded. Let us then remember that only by taking stock of our own weaknesses and our frailties in contrast to their strength and devotion can we secure for ourselves and our posterity, the precious heritages and institutions for which they fought and died.

There is no better time to do this than now. This gathering is one which can lead in a movement toward the reaffirmation of those principles which have motivated American heroes in peace and war throughout the Nation's history. We meet tonight on the anniversary of the birth of Abraham Lincoln—quite the most unselfish and, from my point of view, the greatest of all Americans. We meet not only to pay tribute to him, but also to honor one of his distinguished contemporaries, Russell H. Conwell, soldier, writer, preacher, and philosopher, and founder of this university. Can we, I ask, honor these great figures of a past era (an era which gave us national unity and prosperity beyond their fondest dreams) by mere words? No review of their accomplishments, however eloquent, would do either of them justice. But, if we do truly appreciate their inestimable contributions to our present-day comforts and happiness, we can pay them a lasting tribute which will honor their memories forever by rededicating our lives to their principles.

As we do this, however, it is fitting and proper that we should remind ourselves of the problems of the day—that we are living in a world divided—a world divided by two very different political ideologies. On the one hand we have those who believe in human liberty under free representative government; on the other, we have those who believe the state supreme to all things—even to the things of God.

Our own United States is the last strong bulwark—nearly the last citadel of human freedom—of free justice—of true liberty under law to which oppressed people everywhere can still look with some hope. As long as we justify those hopes by the maintenance of well-ordered freedom for the individual and by the continuance of our private enterprise system, our country will be free and wholesome—its independence assured and its economy sound.

In such condition, the United States will always inspire the peoples of the world who are not yet able to see the wisdom of following our example of federation to avoid war and to insure peace. That I will live to see the day when there is a real federation of world states is my fondest hope. In its present position of world leadership, the United States has a grave responsibility of guiding the rest of the world to a way of peace—not a mere armistice or a temporary cessation of armed hostility but a way of permanent peace. The United Nations is, of course, a forward step in that direction, but even on paper it fails to provide a sufficient formula to enable the great powers which were its sponsors to keep the peace. What pattern then must we establish to lead the people of the world in the ways of peace? The answer to this question is not difficult to find. It can only be done through a revised United Nations Charter which looks to a world federation of nations. Nothing short of a world government can adequately deal with the removal of the atomic threat or initiate a just and equitable program of world disarmament. By what name we call this system of international security is unimportant—what is important and indeed vital to the world is that we provide world law which will prevent man from destroying himself and all that he has labored to achieve down through the centuries of his existence. To continue with the present inept structure of the United Nations is only to repeat the errors which grew out of the League of Nations. We must revise the Charter promptly for, in this fast-moving world, time is of the essence.

This revision should look, first, to the elimination of unrestricted veto. It should provide an impartial World Court. It should

treat forcefully with prevention of armaments for aggressive warfare. It should treat squarely and courageously with the use of atomic weapons to remove the atomic threat and then it should provide for a strong internal contingent of military forces under proper direction and control to enforce its mandates. Without a strong international police force, a world government would be as weak and helpless as was our own Government under the Articles of Confederation, but should this federation of nations be given a charter, patterned somewhat in the fashion and spirit of our own—with power of enforcement—the hopes of countless millions can be realized and a sound and lasting peace will be well on its way. If we turn our backs on this opportunity—if we continue to muddle on as we have through the past 3 years of precious time, treating with war as something inevitable, then we must take the risk which goes with frustration, apathy, and despair.

There is no easy way to attain this objective, demanding as it does strength, courage, vision, and the highest degree of effort—but attained it must be. In fact, there are only two alternatives: first, the long and tortuous democratic path which is full of pitfalls and temporary set-backs; and second, world unity through might, conquest, and domination by the mailed fist. The latter is the more rapid and certain, but I feel sure that no nation would ever choose that way if the highroad of peace were presented to it in an intelligent manner.

In a recently published book, Gen. Claire L. Chennault, of Flying Tiger fame, makes the following statements based on his experiences:

"As a practicing warrior for many years, I am convinced of the complete futility of war. It settles only problems of the past and creates the new problems of the future. There is no place in the world today for the narrow, competitive nationalism that sparks the tinder of war. My long experience as an airman has taught me the folly of the artificial borders of political states. The ease with which the airman passes them by with his load of peaceful commerce or atomic destruction should have served notice long since that they are no longer necessary.

"I am convinced that the people of this planet must ultimately and inevitably move toward a single form of world government if civilization is to survive. But it is our immediate task to see that this world government comes as a mutual federation of free peoples rather than through the ruthless domination of a master state enslaving all the others. In this struggle there are still many battles that cannot be avoided." This is an amazing admission from a man of war, but its truth is beyond the shadow of a doubt.

We can, if we but have the will, if we believe sufficiently in our own capabilities under divine guidance, fully meet every burden that world leadership and our own pressing needs impose upon us. On the other hand, if we continue to yield to the demagogic influences at work in the world today and swerve from our charted course, away from those fundamentals of a constitutional republic, if we depart from the tried and tested ways of private initiative which have built our economy, I predict that within another quarter of a century we will be a broken and divided people, stripped of the capacity either to guide the world on the course of peace or to manage competently our own internal affairs. It is a horrible and shocking thought that a country which has been able to feed and supply a broken and crippled world for over 3 years while still maintaining within its borders the highest standards of living ever known to man might yield to forces which lead only to moral bankruptcy and to complete collapse. However, history should teach us that more nations have been destroyed from within than by enemies from without. The ancient world bears mute but eloquent testimony to this fact. Examples in the modern world should be so fresh in our memories that there is no need to mention names. Suffice it to say that, sapped and drained from within, nation after nation in Europe succumbed to the ideologies which recognized the citizen as a ward of the state to be administered to and dominated by the state whenever the state chose to exercise its might and power.

Lest you think from my latter remarks that I am pessimistic about this great land of ours, let me say, emphatically, I am not. Nor am I pessimistic about the future of the world, for I see in America the power, the ability, and the vision to lead the world to better things and to happier days—but there is a warning I would sound.

Let me say to you tonight—you men and women who have enjoyed the rich fruits which come from hard labor exerted under a system of personal initiative and free enterprise—that because of our great idealism, our readiness to lend a helping hand whereever there is a need, we must be doubly on guard, doubly alert to those things which even tend to be false or misleading. This idealism, which has been the real key to our success thus far, now threatens to become our undoing—our tendon of Achilles—for through and by it we can readily dissipate our resources.

Thus, I repeat, we must become circumspect and cautious and yet retain all of those high and noble impulses with which God endowed us. We must temper justice with sound common sense and a true evaluation of our own economy.

As we appraise our Nation's grave responsibilities both at home and abroad in this solemn hour of the world's history, let us by our voices and our votes say to our leaders that we approve the generous spirit which has advanced us so far ahead of other nations on the road to political freedom and social equality. We ask that within reason and within our purse strings these advances be continued, but we insist that the formulas under which they are to be attained shall be free from governmental controls which would limit or subdue fair and open competition.

Further, let us say, with all of the meaning and purpose we possess, that we insist upon the retention of that system of checks and balances which has been provided so carefully and skillfully in our Constitution.

During the last century and a half, and particularly during the past two decades, a vast network of relationships among the Federal and State Governments has developed, a network astounding in its complexities and seemingly infinite in its scope. Interwoven in this web of overlapping and duplication of services there has emerged a most confused competitive system of taxation which is sapping the very foundation of our fiscal structure. A more orderly and less cumbersome system of fiscal relationships between the Federal and State levels of government must be found if free enterprise is to survive and the initiative of the individual is to be encouraged. We must not penalize progress and tax the future for momentary political gain. The cherished tradition of the founding fathers called for frugality, initiative, and hard work. Modern technology has developed no other formula which would better serve us if we are to remain the inspiration for all the people of the world. It is within our power to chart the course we will pursue.

Let us then plead with our leaders to restore, wherever possible, the sovereignty and dignity of our several States, giving unto them those controls which are historically and inherently the rights of the State. All our progress has been attained within the framework of the Constitution, which was so ably defended by the men we honor tonight. It has not only been our guide but in a large measure it has been the inspiration of all our accomplishments. Thus, I say to you tonight that if we are truly in search of a just and lasting peace and security for all mankind (and I think we are) then all we need to do, mindful always of the will of God, is to make ourselves strong and competent under that Constitution. Let us be so strong, so powerful, and so right that no national leadership anywhere in the world will dare to oppose us and expect to survive.

Economic Facts in Relation to Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, February 17, 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a summary of remarks made by the Senator from Minnesota [Mr. HUMPHREY] before the Committee on Labor and Public Welfare, in regard to the Taft-Hartley Act.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The question of labor-management relations does not exist in a vacuum. To understand the bills we are discussing—the Taft-Hartley Act and the bill that will replace it, the Thomas Act—we must deal with it in relation to the whole economy and the entire community. To understand these laws we must keep in mind the whole history of American trade-unionism and the whole picture of American business.

Further, we must look deeply into the matter of community and social relationships, beyond the matters of dollars and cents. Nowhere, as I recall, has this committee or any of its witnesses brought to mind the important function that American trade-unionism has already achieved. Through their unions the workers of America have attained their rightful status in the community—they have become an equal part of the community—equal with management, equal with the farmer. They are, through their unions, represented on Government boards and commissions, on radio programs and religious and patriotic occasions, on local committees and community councils. They have achieved social equality—real democracy.

But it is with the economic aspect of the labor-relations picture that I want to deal right now, for I think we have lost sight of it here. Let us look back to that immediate postwar of labor friction and disputes and see what exactly the economy looked like at that time. Let me quote the Economic Report of the President transmitted to Congress in January 1949. Here is the record of corporate profits after taxes:

1940	$6,400,000,000
1941	9,400,000,000
1942	9,400,000,000
1943	10,000,000,000
1944	10,800,000,000
1945	8,700,000,000
1946	12,800,000,000
1947	18,100,000,000
1948	20,800,000,000

A total of $106,700,000,000 profits for corporations in 8 years. Corporation war profits totaled $48,000,000,000.

Now, we had a labor-management emergency in coal soon after the war. Let us investigate the industry as carefully as we have looked into the union.

In hard coal, an industry that had gone 8 years without profit, after-taxes profits leaped from $6,000,000 in 1940 to $16,000,000 in 1944, $9,000,000 in 1945, and $14,000,000 in 1946. The profits for each of the years from 1941 through 1947 far exceeded the profits in the boom year of 1929. In soft coal, the picture was even more spectacular. In an industry that earned $9,000,000 in 1929, profits averaged over $38,000,000 in each of the 7 years from 1941 to 1947. What were the mine owners getting out of those tremendous profits? In coal and petroleum industries corporations were earning the fantastic profits of 14 percent on investment in 1947, which leaped to 23.2 percent in the first quarter of 1948, 20 percent in the second quarter, and 18 percent in the third. That's the corporation earnings after taxes—15 to 20 cents a year for every dollar invested in these million-dollar industries.

Other industries were making similar profits. Lumber and wood products, which will have a witness here, earned 19.2 percent on investment the third quarter of 1948 and nearly 25 percent on investment in the first quarter of last year. Iron and steel neared 15 percent and automobiles earned over 21 percent.

What was happening to wages at this time? Well, during the time from 1945 to 1946, when profits shot up 47 percent, average weekly wages in manufacturing actually dropped more than 1 percent. The next year profits rose again, this time 41 percent, and weekly wages limped a sickly 12 percent. The next year profits rose 13 percent and wages increased only 10 percent. Weekly earnings in other industries than manufacturing rose at about the same rate.

Those are pretty prosperous surroundings for management, and probably reminded them of the open-shop days of the twenties, and it is my contention that they felt their oats and began the campaign against labor that resulted in the Taft-Hartley Act.

I would like to remind you of the lengthy strikes in the auto industries following the war—and remind you further that at that time profits in the auto industry broke all records in terms of percentage profit on investment. The same was true of steel.

In that period of labor disputes in 1945 and 1946—disputes the Taft-Hartley Act was supposed to remedy—we find a strange correlation. Just as you find between disease and slums, you will find the relationship between strikes and profits right down the line. And the Eightieth Congress that looked for a solution to labor-management troubles of 1945 and 1946 did nothing to get at the real causes.

While the incomes of our citizens began to spread apart more and more and wealth began to concentrate once more, while real profits rose and real wages dropped, the Republicans decided that the workers were getting too strong. This contrary analysis brought on Taft-Hartley, and brought on the Knutson tax-cut bill. Neither Mr. Hartley nor Mr. Knutson are with us today in Congress.

Thanks to Knutson, income in the higher brackets was increased from tax cuts, while the infinitesimal tax relief of the workers was immediately swallowed in another round of price rises.

And while Taft-Hartley made union organizing harder, the same Republicans were cracking down on the unorganized worker by refusing to raise minimum wages to anywhere near a sensible level. So, today, after only 2 years of a Republican view of proper labor relations, we have a drop in real wages, a rise in real corporate profits, a law making union organizing tougher, and a totally ineffective minimum wage law to help the unorganized. To top it off, the rich were given an extra cut of cake by a completely distorted tax-cut measure.

Is it any wonder, gentlemen, that labor strife has begun to increase since Taft-Hartley? Are you surprised that latest estimates show strikes increased 14 percent in the last half of 1948 over the last half of 1947? Can you blame the workers who lost 2 percent more man-days through strikes in the last 6 months of 1948 over the second half of 1947?

Let's go on to some other points. We have heard at these hearings many vague references to unions getting too big. Let's look at the facts again. Now, at the peak of our employment in this country, in August 1948, we had 63,186,000 in our civilian labor force, and, of that, 52,800,000 were in nonagricultural pursuits.

How many members do we have in organized labor? About 15,500,000 to a maximum of 16,000,000.

It seems to me that unions aren't so big. As a matter of fact, the labor movement has not been able to organize 50 percent of the gainfully employed workers in this country. Actually only 27.5 percent of our workers are organized into unions. Yet, as the distinguished Senator from Florida has pointed out, 2 percent of American corporations hire 60 percent of our industrial workers.

We have heard a great deal about labor's bargaining power growing too great. Let me refer to the facts again. Could workers have too much bargaining power when, in 1948, 31 percent of our families still have incomes under $2,000 a year? Let's get over this monkey-business of bludgeoning poor, innocent management, when average weekly income of all workers falls far short of the estimated budget of absolute minimum living standards for our families, and when 31 percent of our families earn under $2,000 a year. While, in the meantime, corporate profits hit an all-time high.

I think that if this committee looked more deeply into the economic reports and less time-consumingly at a handful of legalistic examples of minor infractions of court orders, we would discover the real causes of labor disputes. We would discover that the number one reason for postwar strikes has been the unusual rise in the cost of living plus the exorbitant profits of American industry. And those profits are going up yet, even as unemployment sets in, even as farm prices come down, even as our dairy farmers are being taken to the cleaners, and our cattle farmers find their market breaking. And what do we find in industry? We find profits going right up.

As a matter of fact, profits went up in the third quarter of 1948 at a 5 percent greater average than they had in any other quarter in the Nation's history.

Now, let me ask some questions of the gentleman now testifying before this committee (Prof. David A. McCabe, Princeton University, Department of Economics):

Mr. McCabe, would the history of American business indicate that the employers, without unions or with unions weakened or unions standing as they are, would openly give fair wages and good working conditions to the working people?

Mr. McCABE. I do not think they would give them any more than they were forced to give them by the unions.

Senator HUMPHREY. Do you think it is important for the high standards of American living that the individual incomes of our workers be elevated throughout the United States?

Mr. McCABE. Yes, I do.

Senator HUMPHREY. Would you say that the Taft-Hartley Act has hindered unionization in areas of this country where there is a great need for the elevation of the standard of living?

Mr. McCABE. I think that the net result of the passage of the Taft-Hartley Act was to make it more difficult to increase union membership.

Senator HUMPHREY. With 31 percent of our families trying to get along on less than $2,000 a year, do you think it ought to be made more difficult to raise their standards of living or ought it to be the policy of the Congress of the United States to make it easier for them to raise their standards of living?

Mr. McCABE. I think it ought to be made easier for them to raise their standards of living.

Senator HUMPHREY. Do you think unions serve a function in raising the wages of people?

Mr. McCABE. Of course.

Senator HUMPHREY. Is it better for this to be done in the free play of the free market and by collective bargaining or is it better to be done by what I call congressional action and then bureaucratic control?

Mr. McCABE. Well, If I understand you, I think it is far better that it should be done by free action, but where free action is inadequate, then I would supplement it by Government action.

Senator HUMPHREY. All I want to point out to you and to the committee—and I trust my assumptions about this meet with your approval—is that the labor movement has been one of the great mechanisms in this country for raising the entire standard of living of the United States, making possible our grand national income and such profits as I have recited above.

I can also point out that in the areas of America where there is a weak labor movement the people are impoverished and industry is still living back in the days of the robber barons. I have watched, as you have, great segments of industry leave the New England States, in search of cheaper labor. Now who does that help? Does that help me buy a cheaper shirt? Not at all. As a matter of fact, we pay as much for a shirt whether it comes out of Mississippi or from New Hampshire or Vermont, though wages are a good deal different. And the standard of living of the whole section is reflected in these low wages.

Well, this is the picture I wanted to present to the committee, because these are the basic facts we must constantly have in mind when we write a labor-relations law.

It is in the framework of the whole society and the whole economy that we must work.

Disagreements Among Supreme Court Justices

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 17, 1949

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very challenging address on the subject of disagreements in opinions among Justices of the Supreme Court, delivered by Mr. Justice William O. Douglas before the section of judicial administration of the American Bar Association, Seattle, Wash., on September 8, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

All of us in recent years have heard and read many criticisms of the dissenting or concurring opinion. Separate opinions have often been deplored. Courts have been severely criticized for tolerating them. And that is why I rise to their defense.

About 10 years ago when I took my seat on the bench, Chief Justice Hughes said this to me: "I think you will find after you have been on the bench for awhile that in a great majority of the cases, perhaps in two-thirds of them, the judges will ultimately reach agreement and announce opinions that are unanimous. But in at least a third of the cases agreement will not be possible. In those cases there will be dissents—no matter how carefully the judges were chosen—whether one President or several Presidents selected them."

Chief Justice Hughes spoke from a long experience both at the bar and in the conference room. In these days of uneasiness and confusion what he said to me is important not only to judges and lawyers but to everyone. It is indeed only when the meaning of his words is clear that the true nature of the judicial process is brought home to the community.

Holmes, perhaps better than anyone either before or after him, pointed out how illusory was the lawyer's search for certainty. Law is not what has been or is—law in the lawyer's sense is the prediction of things to come, the prediction of what decree will be written by designated judges on specified facts. In laymen's language law is the prediction of what will happen to you if you do certain things. This was the lesson Holmes taught; and every lawyer on reflection knows that it is sound.

There are many reasons why this is so. No matter how clear and precise the code or other legal rule may be, the proof may be surrounded with doubt. And even though the proof is clear to the advocate, the credibility of the witnesses may raise serious questions for judge or jury. Uncertainty is increased when new and difficult problems under ambiguous statutes arise. And when constitutional questions emerge, the case is, as we lawyers say, "at large." For the Federal Constitution, like most State constitutions, is not a code but a rule of action—a statement of philosophy and point of view, a summation of general principles, a delineation of the broad outlines of a regime which the fathers designed for us.

These are the things that Holmes summed up when he described the lawyer's continuing and uncertain search for certainty. They indeed suggest why philosophers of the democratic faith will rejoice in the uncertainty of the law and find strength and glory in it.

Certainty and unanimity in the law are possible both under the Fascist and Communist systems. They are not only possible, they are indispensable. For complete subservience to the political regime is a sine qua non to judicial survival under either system. One cannot imagine the courts of Hitler engaged in a public debate over the principles of Der Fuehrer, with a minority of one or four deploring or denouncing the principles themselves. One cannot imagine a judge of a Communist court dissenting against the decrees of the Kremlin.

Disagreement among judges is as true to the character of democracy as freedom of speech itself. The dissenting opinion is as genuinely American as Otis' denunciation of the general warrants, as Thomas Paine's, Thomas Jefferson's, or James Madison's briefs for civil liberties.

Democracy, like religion, is full of sects and schisms. Every political campaign demonstrates it. Every session of a legislature proves it. No man or group of men has a monopoly on truth, wisdom, or virtue. An idea, once advanced for public acceptance, divides like an amoeba. The ifs and buts and howevers each claim a part; and what was once a whole is soon carved into many separate pieces, some of which are larger than the original itself.

Those who have followed the legislative process can produce examples on end. That process is one of compromise—of qualifying absolutes, of creating exceptions to general rules. At times the process of compromise or conciliation involves well-nigh impossible adjustments. The clash of ideas may be so violent that a meeting of the minds seems out of the question. Where such cleavage is great and involves major issues, it may even tear a society apart. By the same token it can stop the legislative process or render it impotent, and thus deprive society of lawful and nonviolent means and methods of solving its problems. When the breach between the pros and cons is not too great, the legislative process functions. Even then, the compromise between competing ideas that emerges in the final legislation may be more apparent than real. For the legislative solution is often to write two opposing ideas into a statute. Without that solution enactment of the measure might, indeed, be impossible.

And so the bill becomes the law and the law arrives before judges for interpretation. The battle that raged before the legislature is now transferred to the court. The passage of the legislation quieted the conflict only temporarily. It breaks out anew in the process of interpretation in the courts. A storm hits the courtroom, and the advocates take up the fight where the legislators left off. The same cleavage that appeared in legislative halls now shows up among the judges. Each side has eminent authority for its view since two conflicting ideas found their way into the legislation. It is therefore easy for judge or lawyer or editor to accuse the judge, who takes the opposing view, of usurping the role of the legislature. A more honest, a more objective view would concede that interpretation has legislative as well as judicial characteristics. It cannot be otherwise where the legislature has left the choice of competing theories or ideas to the judges.

The legislative process breeds dissension among judges in other ways. An hiatus may be left in a law. The crucial matter may have been too explosive for the legislators to handle. For that or for other reasons they passed it over entirely or left it vague and undefined. The necessity to fill in the gap is then presented to the court. And the judges are left at large in a field that the legislature lacked capacity to define. To a degree the same problem is presented to the judiciary when vague and general language is employed like the words "fair" or "just" or "equitable." The law is not a series of calculating machines where definitions and answers come tumbling out when the right levers are pushed. A judge's reaction to vague statutory language is bound to be like his reaction to the generalities of constitutional clauses. The language that he construes gathers meaning and overtones, significance, and relevancy in terms of his own life and experience, his personal set of values, his training and education, and the genes of the blood stream of his ancestors. It would be as futile to argue that judges are not human, as it would to prove that politics and legislatures can be divorced.

When we move to constitutional questions, uncertainty necessarily increases. A judge who is asked to construe or interpret the Constitution often rejects the gloss which his predecessors have put on it. For the gloss may, in his view, offend the spirit of the Constitution or do violence to it. That has been the experience of this generation and of all those that have preceded. It will likewise be the experience of those who follow. And so it should be. For it is the Constitution which we have sworn to defend, not some predecessor's interpretation of it. Stare decisis has small place in constitutional law. The Constitution was written for all time and all ages. It would lose its great character and become feeble, if it were allowed to become encrusted with narrow, legalistic notions that dominated the thinking of one generation.

So it is that the law will always teem with uncertainty. It has always been the case—and it always will remain that way under the democratic scheme of things. The truth is that the law is the highest form of compromise between competing interests; it is a substitute for force and violence—the only path to peace man has yet devised. It is the product of attempted reconciliation between the many diverse groups in a society. The reconciliation is not entirely a legislative function. The judiciary is also inescapably involved. When judges do not agree, it is a sign that they are dealing with problems on which society itself is divided. It is the democratic way to express dissident views. Judges are to be honored rather than criticized for following that tradition, for proclaiming their articles of faith so that all may read.

Chief Justice Hughes had this to say about the dissenting opinion:

"There are some who think it desirable that dissents should not be disclosed as they detract from the force of the judgment. Undoubtedly, they do. When unanimity can be obtained without sacrifice or coercion, it strongly commends the decision to public confidence. But unanimity which is merely formal, which is recorded at the expense of strong conflicting views, is not desirable in a court of last resort, whatever may be the effect upon public opinion at the time This is so because what must ultimately sustain the court in public confidence is the character and independence of the judges. They are not there simply to decide cases, but to decide them as they think they should be decided, and while it may be regrettable that they cannot always agree, it is better that their independence should be maintained and recognized than that unanimity should be secured through its sacrifice. * * * A dissent in a court of last resort is an appeal to the brooding spirit of the law, to the intelligence of a future day, when a later decision may possibly correct the error into which the dissenting judge believes the court to have been betrayed."

That view was in the tradition of Thomas Jefferson, who believed that the English practice of seriatim opinions was the desirable one. He thought each judge should write an opinion in every case so as to "throw himself in each case on God and his country; both will excuse him for error and value him for honesty."

The crises that face a democratic country under the stresses and strains of modern society are shared by judges. The judiciary is a coordinate branch of government, bearing great responsibilities. The judge that writes his own predilections into the law in disregard of constitutional principles or the legislative or executive edicts that he interprets is not worthy of the great traditions of the bench. The judge that quavers or retreats before an impending crisis of the day and finds haven in dialectics or weasel words or surrenders his own conviction for a passing expediency is likewise not born for the woolsack. We must expect of judges the fortitude and courage that we demand of all other servants who man our public posts. If they are true to their responsibilities and traditions, they will not hesitate to speak frankly and plainly on the great issues coming before them. They will prove their worth by showing their independence and fortitude. Their

dissents or concurring opinions may salvage for tomorrow the principle that was sacrificed or forgotten today. Their discussion and propagation of the great principles of our Charter may keep the democratic ideal alive in days of regression, uncertainty, and despair. Indeed what they do and say may in the manner of Holmes and Brandeis and Hughes have a more profound effect on the character of our Government and the future of our country than the deeds of any other public servant. Moreover, their cool detachment and courageous objectivity can set the fashion of a day and stamp an era with a distinctive character.

Archibald MacLeish recently wrote of this age:

"What's changed is freedom in this age—
What great men dared to choose
Small men now dare neither win nor lose."

Judges, like other leaders of thought, must be free to choose—and, being free, must have the daring to let their inner conscience cast their votes. They must be free to speak their minds—and the legal profession must help create an atmosphere of understanding and tolerance for their efforts.

In these critical days leaders in every walk of life must dare choose, publicly and with pride, our constitutional scheme of things in all its applications. They must dare choose it above all lesser things and reject the easy invitation of expediency or complacency. When the leaders make that choice, men of lesser stature and affairs will dare stake their all for freedom.

Farmers Still at the Crossroads

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. GROSS. Mr. Speaker, the question of whether the farmers of this nation are to be made the victims of another depression—whether they are once again to be put through the wringer of bankruptcy—is still a most vital and unanswered question. It is a question that must be faced in this present session of Congress and the only satisfactory answer that can be given is that the farmers, after all these years, must be recognized for what they are—the producers of the essential food and fiber for this country and much of the world. Recognizing that fact, then we must recognize that the time is long past due for a long-range program that will guarantee simple justice to the farmers in the nature of prices for their products, used in domestic consumption, that will enable them to purchase the products of industry and still retain for themselves reasonable profits.

Mr. Speaker, I believe the following letter on this subject is worthy of the consideration of all Members of Congress:

MASON CITY, IOWA, *February 12, 1949.*
Hon. H. R. GROSS,
House Office Building,
Washington, D. C.

DEAR SIR: After giving considerable thought to the question of the hour, i. e., that of a 90-percent or a 60-to-90-percent flexible parity for agriculture, I would like to present my views. I have tried to consider it from the angle of what is fair and just; keeping in mind the interests of all men, and my answer is: I fail to see any fairness or justice in a 60-percent parity, and only a special few would profit from such a system.

In the first place, the farmer has never had a voice in the price he receives nor in the price he pays. It is questionable whether or not he receives a square deal, even in the years on which parity is based. About that time a neighbor of ours asked a local butcher, "Why is it, that when live hogs go up, meat prices go up; but when hog prices come down, meat prices do not come down?" The answer he received was this: "When the farmer runs our business, it is time for us to quit."

How any farmer can make ends meet with a 90-cent dollar when crops are poor and a 60-cent dollar when crops are good is beyond my comprehension.

The argument put forth by some "friends" of the farmer that 60 percent of parity would cause farmers to produce more butter and meat, etc., instead of the crops supported by 90 percent of parity is absolutely unsound. Why? First of all, butter has been scarce and the price prohibitive in the minds of many, but has it been unreasonable? According to our State agricultural college, it takes 31 hours of labor to produce 1,000 pounds of milk. If we figure the butterfat content at 3.5 percent, we have 35 pounds of butterfat, which, based on the rate of 72 cents per pound, brings $25.20 for 31 hours' labor, or approximately 81 cents per hour gross income. He therefore would have to invest several thousand dollars in land, buildings, livestock, machinery; pay all expenses such as repairs on buildings, machinery depreciation, etc., insurance, taxes, gas, fuel oils, and all other expenses in order to receive a gross income of 81 cents per hour.

Under the 1948 Farm Act, milk and hogs are not under a support price. As soon as a surplus is in sight, butter prices will go down, but, if we figure present prices at parity with a bottom of 60 percent, butter could not go below 48 cents per pound. What would the farmer's wages be? He would be receiving a gross income of 54 cents per hour and then be expected to pay all the above mentioned expenses before his net income could be figured. It is too ridiculous to even try to figure net income.

The meat producer faces the same facts. In the past, the price of pork has been figured by taking the number of bushels of corn required to produce 100 pounds of pork times the price per bushel. But nothing has been allowed for extra labor, risks, and investments. Therefore, if corn prices dropped to 60 percent, causing a surplus of pork with no support price for hogs, the pork producer would still be selling his corn for 60 percent less.

Furthermore, in the event of a short corn crop and a 90 percent parity price for corn with a surplus of pork, the pork producer would be selling his corn for less than market price. And in case he had to buy his corn, he would market it, through his hogs, at a loss.

The dairyman or meat producer cannot start or stop production instantaneously.

Many times he has to keep on producing at a loss or quit altogether. The farmer who has gotten a large check for his produce receives front page publicity, but his costs or losses are not mentioned. The only reason he has received this large check is that he continued to produce at a loss until many of his fellow farmers were forced to quit, thereby creating a scarcity.

Who profits by flexible prices or a flexible production caused by flexible prices? Surely not the poor man who has to sell his crop at a 60-cent dollar, when interest, rent, taxes, repairs, machinery, gas, etc., have to be paid, but the fellow who has money to invest on a 60 percent of parity and hold it until a short crop; then sell for a 90-percent price and so make 50 percent on his money. In other words, the man who has not contributed one drop of sweat to produce for society. Namely, the speculator, the grain gambler, and the processor; who, out of one side of his mouth, talks surplus to the farmer to beat prices down, and, out of the other side, talks scarcity to the consumer to force prices up. This we have seen in recent months with farm machinery, automobiles, etc.

If industry and labor will produce to meet the needs of today for a 100-cent dollar under a 90-percent parity, the farmer agrees to accept a 90-cent dollar in exchange and if they reduce their price by a full production, the farmer's price goes down accordingly.

In conclusion, someone may say that I have not painted a true picture of the farmer's condition by the facts and figures given. To that I will submit the following undeniable facts as "proof positive." Who is buying the land?

If Cerro Gordo County, Iowa, and especially that section between Mason City and Nora Springs, is a fair representation of conditions, here is what you will find:

First, a very large majority of the land purchased and paid for in recent years was not purchased by farmers, but by business and professional men.

Second, the farms that are owned by farmers, in most cases, represent an estate, a part or all of which was inherited, and depicts a purchase price much lower than the prices of recent years.

Third, the land owned by farmers in a large majority of cases is represented in one farm. While there are a few cases where one who might be called a farmer owns several farms, his profits were not made from tilling the soil, but from dealing in livestock or some other side line.

Sincerely,

FRANK L. EMMERT.

Dr. Stephen B. L. Penrose

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include an article by Grace Bassett from the Spokane Spokesman Review of February 13.

We're proud of "Binks" Penrose out in the State of Washington. This article will tell you why:

YOUNG MAN FROM THE NORTHWEST IS PROVIDING CULTURAL LEADERSHIP IN THE TROUBLE ZONE OF THE MIDDLE EAST

Dr. Stephen B. L. Penrose has meant a pioneering college president for over a half century to the Pacific Northwest. Now the name has the same significance throughout the Middle East. A son promises to enhance his father's contribution to education.

A young graduate of Williams, Ripon, and Yale colleges took over the presidency of Whitman College in Walla Walla in 1894. This oldest college in the State had a great historic tradition and a record of scholarly

endeavor for 35 years. But only three wooden buildings stood on the campus. A debt of $12,000 faced the administration. The retiring president left a note saying that "school will not open in September."

The late Dr. Penrose gave a personal note for the debt, enlarged the faculty and opened the college doors in the fall. He served for 40 years, in total blindness for the last 10. He enriched the lives of thousands of young men and women. The reputation of one of the West's leading small colleges was established during his administration.

His son, Dr. Stephen B. L. Penrose, Jr., was inaugurated as president of the American University and International College in Beirut, Lebanon, last fall.

The Washington man became a cultural leader in an area seething with unrest. Lebanon's neighbor to the south was Palestine. Jews and Arabs had been fighting there for nearly a year over the United Nations partition. Both factions were smuggling soldiers and supplies into Beirut, a leading seaport, and across the republic's border. Citizens lived in dread that Israel would really go on the warpath against Lebanon and the governments in other Arab league nations.

About 2,500 men with conflicting creeds of 40 nationalities made up the university student body. They had confidence that the college could widen their scope and enable them to work their way out of their present dilemma.

Dr. Penrose's position was unique. His university had promised to produce men of knowledge and moral fiber. It worked daily to realize its goal of a better-informed America on middle eastern subjects.

President Penrose is a man qualified by background, training, and experience to oversee the job.

The 40-year-old executive has had a record of college and government service.

He gained respect early. At 15 he was chosen commander of the student cadet corps, the most sought after honor in Walla Walla High School.

Whitman students recognized him before he entered college as the wiry, active boy who played tennis on the campus courts and shot baskets in the gymnasium. They all had called him "Binks" since he was a toddler in the president's home. Origin of the name probably dates back to a childish mispronunciation.

His college friends have never forgotten two characteristics—he was hard driving like his father, and unlike the senior Penrose, he had ears that were always too big for his head.

"Binks" was president of the associated students at Whitman and a member of Phi Beta Kappa. He found time to sing a strong bass in college operas, become campus tennis champ, and play intramural football.

Beta Theta Pi was his fraternity. His continued interest was evidenced years later when he was district chief of New England collegiate chapters of the fraternity from Maine to Connecticut.

"Binks" was only 20 when his father awarded him a Whitman bachelor's degree with honors in 1928. So he lived at home for another year and studied additional courses.

Then his connection with the Near East began. He went to Beirut as a professor of physics and mathematics. Later the professor returned to his Washington alma mater to teach philosophy. He was also an instructor at Rockford College in Illinois.

Dr. Penrose received his doctorate from Columbia University in 1934. From 1938 to 1942 he was associate director of the American Near East College Association with headquarters in New York. During the war he served as Director of the Office of Strategic Services in the Middle East.

Queen Wilhelmina of the Netherlands has decorated him as a commander of the Order of Orange-Nassau for his OSS record.

He was special adviser on budgetary matters to Secretary of Defense James Forrestal before his appointment as president of American University.

Dr. Penrose has always been outspoken and sure of himself. So was his father. The faith of both men in the individual seemed to form the basis of their personal and educational theories.

Whenever he thought improvements were at a standstill at Whitman, he submitted his resignation. He would return only under certain conditions. Trustees recognized the inspiration of his leadership and retained him.

His son's viewpoints have been targets of national criticism. Almost the only strong clear voice in support of the Arabs in the Palestine controversy has been that of Dr. Stephen B. L. Penrose, Jr.

It is interesting to note that Secretary Forrestal has also been attacked for his pro-Arab stands. He has been called anti-Zionist for his public insistence that oil from the Middle East is essential to the success of the European recovery program. He must have leaned heavily on his advisers who had lived, as Dr. Penrose had, among the people of the Middle East.

"Partition is a negation of principles of democracy and self-determination. It was imposed on a country, the majority of whose residents, opposed it," Dr. Penrose was quoted in leading eastern newspapers last year.

He courted disfavor of his fellow Americans by loudly recommending reconsideration of the partition plan. He wanted the World Court to question legality of the UN partition. He thought states of the world should be opened to immigration for displaced Jews.

"This is a two-sided, not a one-sided question," he pleaded. Armenians and other minority groups in the Middle East want land, too. Establishment of a Jewish state might be the beginning of a ring of puppet nations similar to those behind the iron curtain, he feared.

Those were unpopular ideas for an adviser to a Cabinet member to voice at the time of President Truman's recognition of the Zionist state. But Dr. Penrose firmly believed that the success of American foreign aid and the happiness of a people he understood depended upon a reversal of Palestine policy.

His words on inauguration day, October 1, in Lebanon could have been echoes of his father's teaching, reinforced to meet an explosive tension in the Middle East.

Long ago the elder Penrose had dedicated his life to the principle that a small college, by choice not weakness, could transmit personality to a student.

"We want graduates who will not think as they are told to think, not dream as they are told to dream. I believe in an individualizing, humanizing education," he had declared.

Those remarks were basic in what Dr. Penrose, Jr., said in Beirut to alumni and world leaders. He talked about that same individual threatened by government ideologies and misunderstanding of scientific fact.

The university president attacked the social atrophy of today's people.

"By permitting the state to assume their personal functions, citizens fail to realize that governments are made up of individuals whose human frailties may be intensified by their opportunity for power and privilege. If powerful men lose their awareness that their strength comes to them from other men, they can wreak havoc both at home and abroad."

Dr. Penrose indicated that the Middle East, where the great spiritual development of mankind had been fostered, has much to give the west.

The west can contribute information and techniques to civilization. The east can give knowledge and experience in interpreting human and divine values, the president said.

That is the two-way channel of information Dr. Penrose visualizes in Beirut. Already the Smithsonian Institution, the Library of Congress, and the Carnegie Foundation are looking to the American university as a source of information about the Middle East.

The new president must have felt some pride as a representative from Whitman College took his place at the inauguration ceremonies beside delegates from Yale, Harvard, MIT, Columbia, Oberlin, Wellesley and Vassar, ecclesiastical dignitaries, and governmental officials.

His wife and two daughters, Margaret Dale, 11, and Mary Shipman, 7, were also symbols of the West in an academic tradition of the East that had existed since 1866 when the university was founded.

One blond 4-year-old in the audience was probably unimpressed. Yet his is the heritage, more than any other person's, of two generations of unselfish service to education. Friends in the Northwest will be watching the little boy. He is Stephen B. L. Penrose III.

Electrification of Rural America

EXTENSION OF REMARKS
OF
HON. CHARLES W. TOBEY
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, February 17, 1949

Mr. TOBEY. Mr. President, on behalf of my friend and colleague, the senior Senator from Vermont [Mr. AIKEN], I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by him before the National Rural Electric Cooperative Association of New York, on February 2, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The attendance here today indicates that this organization has come a long ways since I attended the first meeting in St. Louis in 1943.

It also clearly reflects the progress that has been made in electrifying rural America.

The word "electrifying" means to me something that is exciting, stirring, and memorable. I am sure that this interpretation is familiar to those of you who have watched the faces of farm families when the switch was thrown, bringing electric power for the first time to their farms.

This flick of the switch—when the kilowatts become the chore boys—often marks the transition from drudgery to better living and more efficient farming.

The rural electrification program is one which produces tangible results in the form of modernized equipment and better living conveniences.

In appraising the achievements of this electrification program, I am mindful also of the effort, the heartache, and the struggle that has gone into it.

Our measure of success has not come easily.

Likewise, the road ahead, as you well know, is beset by pitfalls, detours, and even barricades.

These obstacles we must overcome as we have overcome others of equal portent in the past.

The one problem that dwarfs all others—shortage of electricity—is not a new one. It has been with us since the rural electrification program first got under way in 1935.

This problem is still with us and is even more acute now than it was back in those days.

The utility people have been telling us for several years that we were just around the corner from a power surplus.

During the wartime shortage, we were told that shortly after the fighting stopped we would be faced with a surplus of electric energy—that the utilities could produce more power than the country could possibly use in peacetime.

It was recalled that the production of electric energy had virtually doubled since the late thirties and that the 228,000,000,000 kilowatt-hour output of 1944 was a wartime peak that would not be needed in postwar years.

Yet in 1948, the production of electricity reached approximately 282,000,000,000 kilowatt-hours and that was not enough.

Still the utilities are sticking to that same old story that if they are given a little more time they will produce enough power to meet demand. They point to the fact that their plans call for greatly expanded output.

That is the way they attempt to lull us into complacency about the future growth of our Nation; that is the way they hope to stall off the development of our water resources; that is the propaganda line they use against the development of the St. Lawrence seaway and power project, and other river resources.

The St. Lawrence River which forms the Northeastern border of our great Nation constitutes an undefended boundary between ourselves and our good neighbor Canada. The waters of this river represent the greatest remaining undeveloped resource—both navigation and waterpower—on the North American Continent.

A relatively small amount of dredging in the St. Lawrence River and in the connecting channels of the Great Lakes would complete nature's work of providing an inland seaway, 27 feet deep, reaching 2,350 miles into the heart of the continent, and connecting our Midwest with the sea lanes of the world.

This seaway would mean cheaper transportation for agricultural products, particularly grain, to overseas points; it would provide a channel for bringing in high-grade ore which is needed to maintain the steel industry along the Great Lakes; it would enable the Midwest to import and export products to and from both the Atlantic and Pacific coasts and foreign countries. It would aid in strengthening our national security by providing sheltered shipping lanes and by assuring protected waters for the construction of ships.

Interest in the development of the seaway dates from the early settlement of the North American Continent. To the navigational aspirations of the early settlers has been added the twentieth-century incentive to harness and utilize the enormous volume of potential electric power latent in the rapids of the St. Lawrence River.

The first serious interest in this project on the part of the Government was shown in 1916, when the Congress ordered an investigation of its possibilities. Since that time it has been before Congress several times; every President from Wilson to Truman has urged it. In case anyone here aspires to the highest office in this land, let me remind him that in the last 40 years no one opposed to the St. Lawrence development has been elected President.

Innumerable studies of the project have been made by governmental agencies and by private interests, and every impartial report has been favorable.

This project has been literally studied to death. In fact, the opposition's chief weapon for delaying it has been to call for still more studies.

Last year, in view of the Federal Government's failure to obtain approval of the project, the Power Authority of the State of New York filed an application with the Federal Power Commission for a license to develop only the power phase of the project. Because this involves an international boundary, it is necessary for the international joint commission to pass on the application. However, the State Department on December 16 made public a letter announcing that the matter would not be referred to the joint commission, and that it was "desirable to renew the request to Congress for approval of the 1941 agreement between the United States and Canada for construction of the seaway and power project."

President Truman, in his state of the Union message on January 5, renewed his pledge of support of the project, and urged congressional action.

Several bills have already been introduced in the House for the approval of the 1941 agreement between the United States and Canada to develop both the navigation and power phases of the St. Lawrence Basin.

It is my understanding that a bill is now being prepared for early introduction in the Senate.

I shall continue to do all within my power to secure approval for the construction of this project that would mean so much to the people of the Northeast and to the rural-electrification program. Time is important. We are in desperate need of more power now.

If the St. Lawrence is not developed, I don't know where this part of the country will get the power it needs at reasonable rates.

The proposed St. Lawrence power facilities at Massena, N. Y., would have a capacity of 2,200,000 horsepower, with an average annual output of 13,000,000,000 kilowatt-hours. This power would be shared equally by the United States and Canada.

The single dam at Massena will generate more power than all of the hydroelectric developments of the Tennessee Valley area, and at lower cost than any plant in America, with the possible exception of Niagara.

The feasible transmission range for this huge block of low-cost power would include part of New Jersey, most of New York State, and most of New England. All of these areas are notably lacking in other sources of energy. All of these areas are paying excessively high rates for what power is available today.

Water power is of especial importance to any section of the country, whether it has other sources of power or not, because, unlike fuels, falling water meets our energy requirements without impoverishing our resources for the future. It would take 41,000,000 barrels of oil annually to generate the potential power output of the Massena Dam.

Not only is more power needed in New York and New England, but it also is needed throughout the rest of the country if we are to go forward in the development of our Nation.

An unmistakable lesson of history is that the strength of nations, for peace or for war, is measured largely in terms of their capacity to produce energy and turn it to productive purposes.

Electric power has played its vital role in the development of urban America. The availability of electricity accounts in a large measure for the advantages city people have had in the past over country people in living standards and conveniences.

Now, under the rural-electrification program, rural people, through their own efforts and with the aid of their Government, are catching up with city people in living standards. In addition, farmers are finding their work less burdensome and more profitable.

As a result, rural young people are encouraged to stay on the farm. To hold its young people on the land is one of the most serious challenges facing our Nation today. Any program which helps to meet this challenge provides a noble service to rural America.

Moreover, the availability of electricity in rural areas encourages the establishment of industrial plants which in turn means new employment and prosperity to rural communities.

Failure to provide adequate power supplies in any area of the country can seriously hamper or retard growth and development in that area.

The shortage and high cost of power in New England have been a serious handicap to that area.

During the war, for example, the Northeast was eliminated from consideration in the location of new plants and industries because of the lack of sufficient power, and plants were located in areas where power was more available.

The gravitation of new industries to such places as the TVA area and the Pacific Northwest has been due in large measure to the availability of power in those areas.

As a result of that gravitation, those areas are reaching the saturation point and are now facing power shortages themselves. As a matter of fact, the power situation in the Pacific Northwest has become one of the most serious power problems in the country.

So far as the Northeast is concerned, the threat of further loss of industry through moving to other areas is even more serious now than was the failure of industry to locate here during the war.

I would like to stress further my concern over the general power situation throughout the country. The Federal Power Commission has issued a report on Estimated Curtailment of Electric Power Loads in 1947. Of the 184 utility systems reporting, 64 showed load reductions. This is approximately 35 percent of all class-1 systems in the country.

The methods of curtailment included: Lowering voltage, shifting of load to off-peak periods, voluntary customer curtailment, and curtailments of service to interruptible customers.

The estimated load reductions occurring throughout the year of 1947 totaled approximately 1,278,000 kilowatts.

The National Security Resources Board issued a report last December which points out that "in several areas it is necessary for utilities and the governmental agencies concerned to call upon the consumers for voluntary conservation or load shifting during the hours of peak demand."

You and I know of many cases where rural electric co-ops have had their current cut off at great inconvenience and expense to the co-ops and to the farmers served by them.

Even the utilities reporting to the National Security Resources Board admit that there will be a power shortage through 1951, but contend that by that time the margins available for reserves and growth will be adequate, provided, and this is important, provided actual power demand does not exceed their estimates.

I say with all candor that I hope the estimates of the utilities will prove to be better this time than they have been in the past. Let no one be lulled into a sense of false security by these musty, moth-eaten, mirages of the power interests, which never have and never will come true.

It is interesting to note that the utilities did not even want to admit that there was a power shortage in the Northeast during the war. I had quite an exchange of letters with the president of the Connecticut Light & Power Co. on this subject. In support of my contention, I was able to obtain a map prepared by the War Production Board showing areas of power scarcity and surplus in the United States. This map showed that the area around Niagara Falls, N. Y., had the most critical power shortage at that time,

1942, and virtually all of New England was classified in the category of the next most critical area.

I mention this to point up the fact that in the Northeast there is available in the St. Lawrence River a tremendous power potential that was not utilized during the war, and certain groups are trying desperately now to keep the Nation from taking advantage of it during peacetime.

This opposition causes one to wonder how long a little group of utility officials, railroad officials, and shipping officials, aided and abetted by a small number of misguided labor leaders, can exert enough influence to stop the development of such an important resource for the benefit of the people, and the security of the Nation.

The opposition has been vocal, united, extravagantly financed, and, I must admit, effective, even though it hasn't made sense in logic or in fact.

For some time, our opponents said that they were not opposed to the development of the power part of the St. Lawrence project but that they were opposed to the seaway. Then when the New York Power Authority went before the Federal Power Commission last year for permission to develop the power alone, the same old opponents were ably represented by counsel in bitter protest against the power development.

As usual they resorted to a legal technicality, basing their contention on the ground that since only half of the proposed dam would be in the United States, the other half being on Canadian territory; that half a dam is no dam at all, and it would be unconstitutional for American money to be spent on such a project.

That is the kind of costly legal nonsense that the supporters of the St. Lawrence have been confronted with for years.

The opposition also attacks the St. Lawrence project on the ground that it would cost too much; and has always said that the proper time for proceeding with it was not at hand. They have been saying that for years—in peacetime and in wartime.

What they do not say is that the excessive cost of power above TVA rates made against the people of New York and New England amounts to about $400,000,000 annually. This excess charge against the people of the Northeast would pay the entire cost of the development both for navigation and for power in 2-years time.

In the interest of farmers and in the interest of the national economy, it is urgent that the St. Lawrence project be developed at the earliest possible moment. The former Chief of Staff and the former Secretary of State, George C. Marshall, testified that the St. Lawrence is needed in the interest of national security. He was speaking of both navigation and power.

An important feature of the St. Lawrence is the low cost of the power which can be developed there. It is estimated that this power will cost about 1 mill per kilowatt-hour. The existing high cost of power in the Northeast is an old, old story.

I am informed that the national average cost of power to REA co-ops is around 9 mills per kilowatt-hour. For New York and New England, the average rate was 1.26 cents per kilowatt-hour during the 1948 fiscal year.

In other words, the co-ops in the Northeast paid about 40 percent above the national average for the power they bought from commercial power companies.

They paid more than twice as much as they would have paid at TVA rates, and more than three times as much as the Bonneville Power Administration would have charged them.

It is clear that we must proceed, without further delay, to develop the tremendous volume of unharnessed hydroelectric power that is going to waste in the St. Lawrence and the other great rivers of our country.

We must do this in the interest of rural America, in the interest of an expanding national economy, and in the interest of our national security.

Electric energy is the lifeblood of the aluminum industry; it also is an essential raw material for munitions.

I hate to think of what would have happened if we had not had the TVA, Hoover, and Bonneville projects during the last war. God forbid that we should be plunged into another war, but if that should happen, we must not be caught short of power.

Our ability to produce is the key to our future success and safety as a nation, and electricity in ever-increasing volume is the vital force needed to turn the wheels of an expanding economy.

Our failure to develop and use our inexhaustible resources such as the St. Lawrence River is just as short-sighted and just as wasteful as it is to squander our exhaustible natural wealth.

For centuries the forces of progress have waged a running battle with the forces of reaction.

The apostles of scarcity and high prices fought the Tennessee Valley Authority and were defeated.

They fought the REA and were defeated.

They fought the development of low-cost power wherever it might be.

In some cases they have been defeated and in others they have won.

The time has come now when America, for the sake of its own welfare and security, must not let this little group of self-centered men defeat the development of the St. Lawrence, the Missouri, and other great rivers.

The battle for the St. Lawrence is not one which affects New York and New England alone. It affects all America. To win it we must have the support of red-blooded and patriotic Americans everywhere.

The welfare of each of the 48 States in our Union is linked with the welfare of all.

Through united action we can win the victory which will carry us on to a greater, more prosperous, and more secure Nation.

The Reclamation Program

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, February 17, 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "What We May Expect Out of Washington," delivered by me before the Nebraska Reclamation Association at Lincoln, Nebr., on February 10, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies, and gentlemen, I am very glad to be here with you today. I am always glad of the chance to come back to Nebraska and talk to Nebraska people about reclamation. Fortunately, this Congress does not yet have before it a great deal of important legislation this early in the session. Most of the more important measures are still being worked on in committee. For that reason I was particularly happy when your invitation to speak arrived, and I could have the opportunity to meet with you.

It is customary on this type of occasion for a Member of Congress addressing a group like this to tell you how strongly and earnestly he supports the objectives of your group. Perhaps it will not surprise you if I tell you that I am for reclamation of all of the acreage that we can possibly bring under water. I was pretty enthusiastic about this proposition before I ever thought of running for the Senate, and 8 years of experience in the National Congress have not yet dulled my enthusiasm. Every time I have spoken on the subject, I have pledged myself to work for just as rapid a development of this program as possible. I believe I have lived up to those pledges, and, of course, they still stand for the future.

Just giving a pledge of support to the reclamation program does not tell you very much. Almost all of us from this part of the country and all the West are enthusiastic supporters of reclamation. I don't suppose you will find over 10 percent of the population of this State who are not in favor of expanding reclamation. When we have all decided that we are for reclamation, however, we have not decided very much. The real problems come when we get down to specific questions and try to determine what reclamation policies will be best in the long run, and just how this program is to be carried out. The reclamation program is moving along fairly smoothly, but there are plenty of tough questions still to be settled in carrying out the program. In my experience, intelligent and sincere men may have honest and sincere differences of opinion on many of these questions. Some of them will take some hard thinking and hard work before we reach a solution.

To name only a few, there is the question of the type of contract that water users should be asked to sign with the Bureau of Reclamation. There is the question of the form of organization; whether we should continue with the Pick-Sloan plan which is now being carried out so successfully, or change over to some other kind of administrative framework and employ a different agency of the Federal Government to do the work. There is a question which is hot in this State, relating to the diversion of water from one watershed to another. There is the question of construction of pen stocks for the production of power at dams that are primarily for irrigation purposes. Related to that, there are the questions of what contributions power revenues could or should make to the financial feasibility of our projects, and the level of power rates that should be set. There is always the question of reconciling the desires of those who are most interested in navigation or flood control or power with the needs of those who are primarily interested in bringing water to the land.

It would be impossible to discuss all these questions in one address, and I would not be in position to go into all the technical details on them, even if I had time. I would like to touch on one or two of them in this address.

Some of you may be aware of the difficulty we have had in reaching decisions as to the form of contracts that should be signed by the organizations of water users in some of the districts. This question has been a difficult one in some parts of the country for several years. It had not given us any particular trouble in Nebraska until about a year or so ago, but last year we really had to face that question. It is not entirely settled yet, but I believe we are making progress, and I should like to give you some of the principal developments in this controversy.

By way of background, you may be interested to know that as of the end of this fiscal year, there will have been appropriated and spent by the Bureau of Reclamation around $1,500,000,000 since the organization of the Reclamation Service in 1902. In the earlier years, the Government first undertook those projects where the cost of construction would be comparatively slight in comparison with

the benefits to be obtained. In other words, the earliest projects were those which were the most feasible, that is, the most profitable, to construct. Originally, the funds available for this program were limited to receipts into the Federal Reclamation Fund, which were not very great by modern standards.

In those earlier years, therefore, the first projects were constructed on the theory that the water users could and would repay the costs in 10 years. For some projects, that basis was entirely practical. It all depended, of course, on the cost of construction of the project applied to the number of acres benefited.

As additional projects became more complicated and, consequently, more costly, the time for repayment was increased to 20 years. Later on, the time of payment was again extended to 40 years, and then a 10-year development period was added which could be applied to projects under certain conditions. Only in recent years, however, have reclamation projects been conceived and planned where the structures served many purposes. Since 1935 the Bureau of Reclamation has constructed projects which provide flood control, navigation improvements, salinity control and prevention, soil conservation, power, municipal water supply, and irrigation. I might add to these purposes three others which very recently have been recognized, namely, silt storage and control, recreational development, and improvement of fish and wildlife conditions.

This list has included 10 different purposes, and I am not sure but what others might be added. Evidently we have moved far from the day when reclamation was purely a matter of developing irrigation. Almost every dam today is a multipurpose dam. Evidently, as we have moved forward, the problems have become more complex from an engineering standpoint, from the point of view of administration, and from the point of view of handling the financial side. To use a term from industry, we have developed so many byproducts, that on some dams it is hard to tell which is the principal product and which are the byproducts. Just as in an industry, such as meat packing, the byproducts must carry a large part of the cost of operation, so with our dams, the byproducts must contribute toward the financial feasibility of the whole program in one way or another.

There is a difference in the way that these benefits have been handled, financially speaking. For a great many years, the United States Government has also been building extensive works to improve navigation, to provide harbor facilities, and to control floods. Under the terms "flood control" and "rivers and harbors" appropriations there has been appropriated to date about $6,125,000,000 for these purposes. Many of our great seaports, for example, have been substantially improved with Federal funds in this manner. You will note that the $6,125,000,000 spent to date on flood control and rivers and harbors is about four times as much as has been spent for reclamation.

On checking the records, I find that only $33,000,000 of these flood control and rivers and harbors appropriations has been appropriated for works in Nebraska. Wyoming, our neighboring State to the west, has received under these headings no appropriations whatever. Colorado, our other neighbor to the west, has received about $31,000,000. To make this picture complete, I should mention the fact that there have been reclamation appropriations for both Wyoming and Nebraska which include some allocations to flood control, just as there have been appropriations to flood control which include amounts allocated to irrigation. These amounts have been comparatively small.

Federal appropriations for rivers and harbors and for flood control, however, are nonreimbursable as to local beneficiaries. Those who receive the protection from floods and those who benefit from improved navigation facilities are not required to sign contracts with the Federal Government to repay the costs. They are not required to repay anything. This is an important fact because large expenditures for flood control have preserved and benefited agricultural areas without any cost to the land owner and without any restrictions as to land use and ownership.

In a way, flood control is very similar to reclamation. The purpose of flood control works is to keep flood waters from overflowing agricultural and other lands and to maintain the value and productivity of that property. The purpose of irrigation works is to bring water to agricultural lands and thereby to create value and increase productivity. In both cases, economic wealth is protected and enhanced.

In establishing the feasibility of a flood control project where agricultural lands have been periodically flooded, the actual valuation of the various crops endangered by flooding are computed. The benefit of the proposed program is worked out on an acreage basis just the same as are the benefits from water brought to arid and semiarid lands for irrigation. The point I want to make is that in both cases economic productivity is benefited by the investment of Government funds. This should be taken into consideration in determining the financial obligations to be accepted by the two classes of beneficiaries, those preserved from flooding and those supplied with irrigation water.

Although flood control benefits are nonreimbursable, irrigation benefits must be repaid at least up to the ability of the water user to repay. I am not by any means suggesting that the irrigator should receive these benefits on a nonreimbursable basis. The point I am making is that there should be a limit to the amount that farmers should be required to repay for a supply of irrigation water.

Under the present basic legislation, the standard period of repayment is 40 years, plus a development period of 10 years. This 50-year period encompasses the entire adult life of a man, even if he lives to the Biblical threescore and ten, and the life insurance companies tell us that that is above the average. I believe that the repayment period should be limited to the life of the average man—40 years, plus the 10-year development period. Repayment obligations should not be handed down to his heirs and the heirs of his heirs forever.

Most of our early districts in the West and in Nebraska which contracted for water with the Government before 1930 are making repayment in a 40-year period. We are now confronted by a new situation. Within the last few years, several irrigation districts have been formed in Nebraska for the purpose of contracting for a water supply from the Bureau of Reclamation. The districts I have in mind were informed through regular and approved channels of information that the customary 40-year period for repayment would be sufficient in their case. Whether it was known when this information was given out that it was inaccurate, I do not know. The fact is that one of these districts was recently told that the period required for repayment would be—not 40 years—but 140 years. That situation means this to these farmers. If the Reclamation Bureau is to continue the construction of the project, the note which the water users will have to sign will be about three and one-half times as much per acre as the original plans called for.

Now in these cases, we are doing either one of two things. We are building irrigation works at costs which are fantastic and beyond reason and are thereby undertaking impossible financial burdens. Either that, or we are hoping that some kind providence will rescue us from about 70 percent of this debt. No kind providence has been written into the statute book as yet. I do not believe that our farmers should be forced to undertake an obligation on which their grandchildren's grandchildren will still be making payments. I am going to continue to support all feasible projects for my State with all the energy I have, looking toward the general national benefit which will result. I believe, however, that after a 40-or 50-year repayment period, at rates which represent the farmers ability to repay, the unpaid balance—the unfeasible balance, in other words—might as well be written off the books, assuming that the benefit to the Nation as a whole from expanding power, increasing productive acreage, and creating wealth made the project feasible in the first place.

If this is not done, the farmer will never become the owner of the irrigation works. He will merely be a tenant of the United States Government, subject to its rules and regulations affecting the use and occupancy of his lands over many generations.

The benefits which come to the cities and counties of our State and of the Nation from a successful irrigation project are great and are unusually dependable. In towns and cities in an irrigated area, you will find an enormous increase in property values and in business prosperity. The biggest cut of all, of course, goes to the Federal Bureau of Internal Revenue. The owners of the businesses and the Federal Government benefit immensely by virtue of the work done by the farmer. I do not believe that the farmer should pay in perpetuity while no one else pays anything. I believe that the irrigator deserves at least some consideration, which is regularly given to the man who farms in a region protected, free of cost, from floods by the Federal Government.

There was some difficulty a year or so ago in the Republican River Valley in connection with a contract which had been offered one of the irrigation districts out there, and, as chairman of the Senate Committee on Interior and Insular Affairs at that time, I felt it my duty to lend my assistance to the water users in an endeavor to secure a better contract. I am happy to say that my efforts in securing a better contract were largely successful. The water users appear to be satisfied with the changes that have been made. The contract which the district will get, however, is not really a repayment contract but a rental type, which never vests in the water users ownership of project works or water rights. This question of the type of contract has received considerable study by congressional committees during the last year or two, although no new legislation has been passed as yet dealing with it.

Since the end of the session, further work has been done on the question by interested groups in discussions with officials of the Bureau of Reclamation. I am not today prepared to predict what type of legislation will come out. In my judgment, Congress should enact legislation which would provide that long-term contracts also be repayment contracts, and that water obtained by means of them would run with the land and become appurtenant thereto. I will be opposed to any legislation on this subject which does not clearly vest the water right in the hands of the water user.

Before I leave this subject, I would like to mention one further point in connection with developments which would take such an extremely long period to repay. I would like to see an analysis of the over-all benefits to the Nation as a whole from irrigation devel-

opment, taking into consideration the growth in productive capacity, the security of our food supply, and the increase in Federal tax receipts. Upon the basis of such an analysis, I believe we would be in better position to determine which projects are desirable and just how long we should ask a farmer to pay all he can afford to. I believe the community and the Nation, which share the benefits with the farmer, should contribute through the general taxes they pay to the Federal Treasury their fair share toward the cost of the development. The city cannot afford to load the entire repayment burden on the farmer, and the East, in its own interest, cannot afford to load the entire cost on the West.

In my opening statement I mentioned half a dozen problems which I said would require some very serious study to solve. I am certainly not going to discuss them all, but you might be interested in recent Washington developments on that old stand-by issue, the proposed Missouri Valley Authority. Most of you will recall that this issue was heard before congressional committees very thoroughly several years ago. Since then, of course, we have adopted the Pick-Sloan plan which is progressing very satisfactorily. During recent weeks there has been a renewal of the drive to again bring the Missouri Valley Authority up for further consideration. This drive has apparently been spark-plugged by Senator HUMPHREY, of Minnesota, and Senator MURRAY, of Montana. They and others are working actively to recruit support. They are also revising the old Missouri Valley Authority bill, so as to eliminate some of those provisions which have aroused the most criticism. As this is written, the new revised bill has not yet been introduced for consideration, although I have been advised informally of some of the proposed changes.

One of the changes which is rather interesting would give it a new name, the Missouri Valley Administration, rather than a Missouri Valley Authority. Obviously, this is a distinction without a difference. The important thing is not the title at the top of a bill, but the fine print underneath. If nothing else is changed, it will not be worth while to change the name of the proposed agency. If a Missouri Valley Administration would be good, a Missouri Valley Authority would have been just as good. If a Missouri Valley Authority would be bad, so would a Missouri Valley Administration, if nothing else is to be changed. Shakespeare reminded us many years ago that a rose by any other name would smell as sweet.

Other changes in the old MVA proposal are also to be made. Apparently the new plan also provides a place for the Governors of the States, and would leave the construction job to the Army engineers and other existing agencies. Apparently other concessions are also to be made to the existing plan. I do not know in detail how far the changes will go. Perhaps when these changes in the proposed MVA are completed, we shall find that the MVA has come back to where the Pick-Sloan plan already is. Perhaps when the MVA has been given its "new look," it will be found that there is nothing much really new about the whole proposal except a reexamination of the existing program by a new board of men with a fresh outlook. Of course, there may be more of a change than that; as I said, the new proposal has not yet been reintroduced.

Before we take up this question in Congress again, I want to make one or two suggestions, drawn largely from our experience to date with the Pick-Sloan plan. I do not like to sound unsympathetic to the efforts of sincere men to improve on our present program, whether those proposals have the name of an MVA or something else. It might easily be worth while to have a fresh engineering survey of the present plan. I don't want to approach a new proposal in a spirit of antagonism to it, merely because it sounds like another addition to the Washington alphabetical soup. Certainly we shall have to make changes in the administrative machinery from time to time. No system of government organization ever was perfect; they can all be improved; we might as well admit that frankly.

In any talk about changing or improving our present Pick-Sloan plan, it is worth while to remind ourselves of a few fundamentals which, I feel, we should adhere to firmly. First of these is the supremacy of the water laws of the States in which the development takes place. I will remind you of the existing controversy regarding the diversion of the waters of one river into the watershed of another, as contemplated by the plan of the Bureau of Reclamation for the Lower Platte. Regardless of what the Reclamation Bureau may plan for the Lower Platte, under the present Federal reclamation laws State law will still be supreme. There will be no diversion of water from one river into the watershed of another, unless the State legislature says there may. Another example is the controversy as regards the water rights of the water users. Federal policies should and must fit in with State water laws. I do not believe this country has moved so far toward centralization that we can afford to have Washington write our water laws for each State.

Of equal importance fundamentally is the position of the governors of the States affected in determining policy on the development. At present, the States through their governors are represented directly on the interagency committee. I do not want to see the governors of the States shunted into a position where they could do nothing but advise an all-powerful board holding long-term appointments from Washington.

Recurring again to our present system, a series of hearings has just been conducted on the Bureau's proposals for the Lower Platte. At those hearings every interested organization and individual has had an opportunity to present his views, to criticize the proposals, and to present counter-proposals. The whole program has received a thorough airing, and the comments of interested citizens will without doubt be given full consideration by the governor when he presents his views as the representative of the people of this State. Under any system, we certainly want to retain as much local autonomy as possible.

One other point I want to mention, and I feel it is very important. That is the congressional control over both the policies followed and the funds spent, through detailed basic legislation written by the legislative committees, and through the annual review of operations and of the need for funds by the Appropriations Committees. Without that, I do not see how you can have any real local control over the progress of construction and operation. I have had a little personal experience with that problem, in which you might be interested.

Some of you may be aware that I was the author of the Government Corporation Control Act, which for the first time required all Government corporations to secure their charters from Congress, to accept limitations on their authority based on the authorizing language written into their enabling acts by Congress, and to come before the Appropriations Committees of Congress each year with a full picture of their past financial operations and their plans for the future. That act covered the Tennessee Valley Authority, as well as other semi-independent Government corporations and agencies. At the time that legislation was being prepared, the only agency that gave us any real trouble was the TVA. Practically all the others were perfectly willing to accept whatever limitations Congress felt it desirable to impose. Only the TVA wanted to be different, to continue to frame its own policies and to spend Government money as it saw fit, without answering to anyone. Despite that opposition, I am glad to say that it was possible to pass the bill in a very satisfactory form. Since its enactment, it has been widely commended by outstanding authorities as a notable step forward in budget procedure.

That point is not mentioned with any intention of criticizing the TVA or its present methods of operation. It simply illustrates the danger of letting any agency get too far away from control by the people or their elected representatives. If we are to keep our representative democracy, we must continue to respect the authority and responsibility of our National Legislature, the Congress.

Other points of importance might be mentioned, but I have given about four of the more important ones. I believe it may be in order for me to give this frank warning to those who advocate sweeping changes in our present program. Any proposal which does not adequately recognize the rights and interests of the people affected and the proper functions of their State legislatures, of their governors, and of the Congress, has precious little chance of receiving support from the people of this Missouri River Basin. Construction on the basis of the Pick-Sloan plan is already proceeding satisfactorily. Constructive changes are always in order, but proposals to take away our rights are not.

While I am talking here frankly to friends of the present program, I might just drop you this hint, parenthetically. So long as the Pick-Sloan plan moves forward rapidly and successfully, there is very little likelihood of any fundamental change in the administrative framework. To those of you who believe strongly in the Pick-Sloan plan, I will say that it is up to you to make it work. You all know that the plan represents to some extent a reconciliation of divergent interests—navigation, power, irrigation, etc. The plan has been formally adopted by Congress and is being rapidly developed. Appropriations have, by and large, been generous, and we shall be receiving tremendous benefits from it within a reasonable time. Even so, we have had to contend all along with snipers, those who didn't like this or didn't like that about the program. Certainly much of this type of criticism is sincere, but some of it undoubtedly comes from those who would like to scuttle the plan entirely. Some of the sponsors of the new MVA seem willing to take advantage of this feeling, where it exists, and to try to mobilize the disgruntled ones behind their new dream picture called MVA.

A banana soon gets skinned after it leaves the bunch. The flood-control, irrigation, soil-conservation, navigation, and power-development interests are now united in the valley. All of these groups have been working together to date, and we are making the plan a success by such cooperation. There are those who, like the ancient Romans, would divide and conquer. Let us watch out for them.

It has been a real pleasure to be here with you and talk to you. I hope you all feel that you are free to write me or visit me and talk to me about these questions at any time. I have stated before that I am for the Pick-Sloan plan with all my heart. While I see no need for any fundamental changes, still I am certainly not dogmatic about retaining every comma in it. I am always willing to discuss necessary and desirable changes. That is still my position.

Thank you.

Address by William M. Boyle, Jr., Before Truman Victory Dinner at Kansas City, Mo.

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 17, 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by William M. Boyle, Jr., assistant to the chairman of the Democratic National Committee, before the Truman victory dinner at Kansas City, Mo., on December 7, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, fellow Democrats, it sure is good to be home.

Before I left Washington the President asked me to deliver a message to you. He regrets very much that he cannot be present here tonight.

He asked me to extend his greetings to you and to extend to each of you neighbors and friends his sincere thanks for your faith and support.

I can tell you that all during the campaign, whenever President Truman spoke of Missouri, his face lighted up with pleasure. As he went all over the country, waging the most courageous and most remarkable of all political campaigns, I know that he was sustained by the thought that he had the support of his homefolks—by the thought that you who knew him best trusted him most.

And the people of Missouri did not let him down.

While the President has taken his victory with a spirit of humility, I know everyone will understand that there were many things about the election that have given him great pleasure. And I think that nothing has given him more pleasure than the splendid majorities you gave him right here at home.

I am overwhelmed by a feeling of inadequacy in finding words to express the sentiments that I know are in the hearts and minds of President Truman's friends who are present here and who are better able than I am to describe the great stature of our most distinguished friend and neighbor.

The Democratic victory of November 2 was above all else a personal tribute to Harry Truman. I believe that the Democratic Party was revitalized and rebuilt into an effective enthusiastic functioning organization on election day by the fighting campaign that he waged.

I believe that the foundation of the Democratic Party is sounder and stronger today than it has been in the past 20 years and I believe that this foundation rests squarely on the sturdy shoulders of our President.

Of course, the election was a sweeping endorsement of the Democratic Party, its platform, its record, its candidates all over the country; but it all depended on Harry Truman's personal leadership.

True—his leadership was supported by many men and women. I know the President was always heartened and encouraged by the magnificent support given him by his old friend and teammate, ALBEN W. BARKLEY, one of the outstanding Americans of our time.

Then—there were the millions of men and women all over this country who had an unwavering faith and confidence in President Truman. Then—there were the Democratic Party leaders and workers in every State, county, city, town, ward, and precinct—loyal people like those present here. There was great help given by organized labor—by farmers who realized that President Truman was their best friend. Then there were the candidates, Truman, Barkley, Smith, Blair, Irving, Bolling, and all the others that individually and collectively made up the finest slate of candidates ever presented for approval of the voters of America.

Then there were the leaders and workers on the district, county, and State committees.

And those on the Democratic National Committee, led by Chairman J. HOWARD MCGRATH.

I particularly want to pay due tribute to Matthew J. Connelly, President Truman's faithful, loyal, and efficient secretary; to Charlie Ross, Clark Clifford, Charles Murphy, and to all the others of the Presidential staff.

These are the men I worked with and I know something about the work they did.

They worked on a 24-hour schedule. Those on the train kept in touch with us constantly at national headquarters and at the White House by telephone and wireless telegraph.

We in Washington were in personal contact with the Democratic leaders in every State where the President was scheduled to appear. In that way we were able to keep the President informed as to the issues of most interest to the people.

For my own part the only credit that I claim is loyalty to President Truman and to the Democratic ideals and to the Democratic Party that he leads. I am happy and proud to have had the opportunity to labor in his service.

Now, I'll tell you who really did more than anybody else to help the President win the election. Everywhere he went Mrs. Truman and Margaret went with him. The people saw the President and liked him. They saw Mrs. Truman and liked her. They saw Margaret and liked her. And when they voted for Truman they voted for the whole family. It was a fine choice, too.

But again I say that over, above, and beyond all of us there was always the smiling, courageous, fighting figure of Harry Truman.

This is one of the happiest moments of my life. I guess you all know which was the happiest—the morning of last November 3d right here in the Muehlebach.

But tonight is almost as great an occasion because we have met here to celebrate the victory of a very great American in one of the most important elections in our history.

Now, I am not much at writing history.

But let me say one thing: It is a source of great personal pride with me to have had the privilege of serving with all of the people in helping a man like Harry Truman make the kind of history he made in this last campaign—when everybody said that he did not have a chance—when the newspapers agreed that he was a "gone goose"—and when the columnists and the commentators announced that the election was in the bag for Dewey and Warren and the Republican party.

A minute ago I said "a man like Harry Truman." Now, I stop and ask myself what kind of a man our leader is.

There is no doubt in my mind—and there can be no doubt in your mind—that he is worthy to stand in the ranks of our greatest Presidents.

Let me tell you what I see in this man whom we have chosen to lead us at this turning point in the history of mankind.

In periods of crisis, America has always been fortunate in having the right man for President:

Washington and Jefferson,
Lincoln and Jackson,
Wilson and Roosevelt,
and now, Truman.

Future historians will list these men as the seven greatest Presidents to this time in American history. If Harry Truman were present here tonight he would be the first to protest against calling him one of the seven greatest Presidents. But his modesty and humility only add to his stature.

I have said that he had shown that he belongs in the ranks of our greatest Presidents. Let me try to spell that out.

George Washington?

Harry Truman has much of the largeness of soul and the calm faith that carried Washington through the hard years to prosperity and peace for America.

Thomas Jefferson?

Harry Truman shares Jefferson's unfaltering faith in the average American and Jefferson's unequaled willingness to let the people make their own decisions and determine their own destiny.

Andrew Jackson?

Well, we all know that Andy Jackson was a fighter—a fighter for the people—a man who challenged the gluttons of privilege in his day and age, and who built the Democratic Party into what it has again become—a great middle-of-the-road party of farmers and industry workers, small business and professional men—the party of all the people. Harry Truman is that kind of fighter.

Like Abraham Lincoln, our President is a man of uncompromising integrity—a man of common sense—humble and reverent.

And like Woodrow Wilson, and Franklin D. Roosevelt, Harry Truman believes in political leadership for the people by the Democratic Party. Like them, he is a good party leader who is President of all the people because he follows faithfully the principles of popular sovereignty and representative Government.

Like Wilson and Roosevelt, Harry Truman is not afraid to stand alone when he knows that he is right and to fight wholeheartedly for the things he believes to be right.

But there is more—much more—to our President, friend and neighbor than a list of great qualities and noble comparisons. There is something about him which we all—even the Republicans—like and love. We all feel that he is one of us. We know that there is no envy, hatred, malice or uncharitableness in him. He has given himself with all his heart and soul, to the service of all the people—rich and poor alike—without discrimination. It is this devotion to the people that has made him one of the great campaigners in American politics. The cause of the people has made him—not an orator—but something far greater—a speaker who can convince others by his sincerity and devotion to the truth.

And here's another thing we ought to remember. After he won, there was no anger and bitterness against our opponents or among them. It was as though even the Republicans realized that in Harry Truman the American people had chosen an honest advocate and a wise champion who would seek to bind up the Nation's political wounds and lead us forward to prosperity and peace.

As I said a little earlier. it is an honor to work with such a man and I am deeply proud to have worked with the devoted band of those who did not forget that they were Democrats before the votes were counted.

It is an honor. It is also a great responsibility to have taken part in imposing upon such a man four more years of hard and often thankless servitude in the White House.

We did not fight this election just to keep Truman's job for him. We would all far rather have had him here with us. We fought to keep the Presidency of the United States for the American people. We fought to prevent special interests from taking over the Government of the United States.

That justified what we did when we told Harry Truman to go back to Washington and to stay there and work for us.

I think the history writers will agree that the election of 1948 is one of the three most important elections in American history, and perhaps the most important of them all.

Certainly, the only two others that bear comparison with 1948 are Jefferson's election in 1800, and Lincoln's in 1860.

Jefferson gave the country, under the Democratic Party, a firm political foundation on which 40 years of peace and progress were built.

Lincoln carried the burden and the tragedy of the Civil War.

Now, thanks to Harry S. Truman, of Independence, Mo., by the will of God and the votes of the American people we once more can build solidly and wisely for our future.

We can build for the future because we know—and the world knows—that 1948 marked the beginning of another long and productive tenure of power by the American democracy.

We know what are the goals that we seek to attain.

We seek independent security, public welfare, and respect for human rights at home.

And we seek honorable peace, national security, and world stability abroad.

The peoples of the world are with the American people in these goals. And thanks to the courage and convictions of the modest, unassuming man whom we honor tonight, the peoples of the world now realize that we can attain them.

If Truman's administration must be given a nickname, it should be called the Era of Common Sense. Common sense is so much appreciated in public life because it is so uncommonly found. Truman has it—he always has had it—he always will have it.

As to courage, Truman proved his physical courage in World War I. He has proved his spiritual courage by his daily life in following the Golden Rule. He has proved his mental courage and capacity by mastering the multitude of figures and details in the conduct of the world's biggest business—the Government of the United States of America.

In this connection the newspapers last week carried a picture of President Truman carrying his brief case across Pennsylvania Avenue from the temporary residence at Blair House to the White House office. That brief case contained a large number of papers and official documents full of facts and figures which President Truman had read and mastered. It is this type of mental courage, devotion to duty, and remarkable memory which enables him to astound the heads of the Government departments, generals, admirals, and world diplomats with his grasp of the many subjects involved in the daily conduct of this gigantic enterprise.

We folks here in Jackson County were fortunate enough to have shared a truly wonderful experience in knowing Harry Truman's mother. It was my pleasure and privilege to know her quite well through the years of my close association with Harry Truman. Having known that remarkable woman, I can see in her son the reflection of her strength and character and of her belief in the right and of her unwavering faith in God. I know that in many of the decisions that the President is called upon to make he asks himself "What would my mother think of this?"

I have been asked to mention some of the human-interest background of the campaign. The most interesting thing to me and, as it turned out, the most important, was what President Truman told me at the very beginning of the campaign. He said, "Bill, we're going to win because we are right and they are wrong."

The Republicans were defeated in two of their main purposes, the plan of which began to appear evident as early as last February.

First, a concerted effort to discredit the President was begun through public relations, commentators, and columnists.

Second, propaganda was spread that Truman could not win. That propaganda may have fooled the Republican politicians but it failed in its purpose to fool the American people.

By daily contacts with Democratic leaders throughout every State, which were accelerated during the last few weeks of the campaign, and especially on election day, I knew that we had an enthusiastic, hard-working Democratic organization, Nation-wide in extent, built up and revitalized by the fighting campaign of President Truman. On election day our people were enthusiastic and encouraged and they came through with the hard work that was necessary to win.

I again want to pay tribute to the workers and leaders who participated in this campaign. I had personal experience working with most of them in the 1944 campaign and I want to say that the reports turned in by these leaders and workers over every part of the country were accurate to an uncanny degree, and I so reported to the President. It was on such information obtained personally and directly from the leaders in every State that we based our calculations and our expectations of victory.

A large number of defeated candidates, disappointed newspapers, and discredited columnists, commentators, and pollsters profess to be astonished by the victory. They call it a miracle. There is a much more simple explanation which can be stated in one word, "faith."

President Truman never lost faith in the American people and the American people never lost faith in him.

The pollsters were talking while they should have been listening. They should have listened to the people as the President and those in his party did on the most extensive Presidential campaign in American political history—about 350 stops on tours exceeding 32,000 miles.

Will Rogers said that he never met a man he didn't like. I say that Harry Truman never met a man who didn't like him at first sight and who didn't trust him when they got to know each other. The problem which had to be solved in this campaign, therefore, was to get President Truman together with the greatest possible number of Americans over the widest possible area of the country. There was no doubt that once Harry S. Truman and John Q. Public got together, they would like each other and trust each other.

Our belief that the Democrats could win crystallized into a firm conviction that they would win after the President made his fighting speech at the Philadelphia convention and received a tumultuous ovation from the delegates. Shortly after the convention we marked out on the map every State carried by Hoover in 1932, Landon in 1936, Willkie in 1940, and Dewey in 1944. We tentatively conceded those States together with three Dixiecrat States: Alabama, Mississippi, and South Carolina. We found that President Truman could lose all of the 193 electoral votes represented by that list of States and still have 338 electoral votes left, or 72 votes more than the 266 necessary to win.

After accompanying the President on the first of the campaign tours, we began the formation of our forecast which finally came very close to predicting the States which would go Democratic. Finally on October 31 we closed the forecast. We included California, Illinois, and even Iowa, and, believe it or not, Ohio, in the Truman-Barkley column. In fact, the only State which upset an otherwise perfect score was Maryland, where we had expected a Truman majority.

Thus it was with unbounded elation, but certainly without astonishment, that I had the greatest thrill of my life in being the man who personally informed the President that Governor Dewey had conceded the election. This took place at 10:15 a. m. central standard time, Wednesday, November 3, in the Presidential suite of this hotel where, with Matt Connelly and others, we had spent a 48-hour vigil in hundreds of telephone conversations to Democratic leaders throughout the country.

Let me say one final word about the President's schedule. It would have killed an ordinary man. As a matter of fact, he did almost wear out all of his staff. But President Truman was just as chipper and in as good physical condition at the end of the campaign as when he started. He has heart and stamina.

And when it was all over the same newsmen who had been jeering finally agreed that our campaign was more carefully planned, more carefully thought out, than that of our opponents.

But in the aggregate it was President Truman in the greatest campaign in history, who brought about the great Democratic victory.

The campaign was fundamentally based on his conviction that if the people were told the truth they would understand and do the right thing.

He told the people the truth.

They did understand.

And they did the right thing.

The election now lies behind us. The factors which were vital in the days leading up to November 2 are now history.

History, with the exception of the pledges which were made by the President to the voters of the United States.

One of the vital reasons for the President's election was the bold affirmative program which he advanced as the program of the Democratic Party.

That program must be carried out. There can be no evasion of responsibility. There will be no failure to act, for President Truman will act. And the great mass of people in the Democratic Party across the Nation will back him up in the future as they have in the past.

With your support, with the support of organized democracy behind him and the Democratic Eighty-first Congress we will go forward with a program of progressive liberalism.

But we cannot relax in our fight.

The election didn't win it.

It merely gave us the opportunity to carry on.

We will carry on.

There is just one thought I should like to leave with you in conclusion. You can usually judge a man by his friends. I would like to say that I have never known or worked with a more loyal, unselfish, and competent group than the men and women who worked and fought to help the President win his battle for the American people. They were a wonderful team and they were politically effective, because we had a great captain and the right cause and we knew that, with that combination, we could not and must not fail.

We did not fail you—just as our President did not fail you—and I cannot help but believe that this was the work of more than human hands and plans. I think it was because with Harry Truman, we were the agents—the human agents of the workings of providence and the will of Almighty God.

Curbing the Octopus

EXTENSION OF REMARKS
OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, February 17, 1949

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "Curbing the Octopus," which I delivered over the Mutual Network on February 15.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I speak to you tonight on the subject Curbing the Octopus. And I refer to the octopus which sprawls over governmental agencies and which has grown in costs of Government, in overlapping of duties and operations, and thereby built up a force of employees, which is the greatest in our history, with a cost that is staggering, when one becomes aware of its scope and magnitude.

Every so often in past decades, realizing the dangers involved, men have sought to remedy the situation but never with much success.

Right now we have the best brains in the country tackling the proposition and the matter is before Congress.

Let me give you some facts.

We are all conscious, as Americans, that our Government is threatening to outgrow us. In 20 short years it has increased tenfold in size and cost. It employs 2,100,000 people—more than the population of Philadelphia, our third largest city. It consists of 1,816 departments, boards, bureaus, agencies, services, administrations, commissions, corporations, and other subdivisions.

Some of these agencies are bigger than the whole Government was 20 years ago. And the total cost of all agencies has risen from $4,000,000,000 a year to $42,000,000,000 in 20 years. This is one-fifth of the national income—one dollar in five of all the wealth which Americans, as citizens and workers, produce. And it means a burden of debt, equal to about $7,500 per average family. This is not a vague abstraction. This is a real debt, which we, as Americans, have promised to pay. It is a mortgage on our future as a Nation.

Now it is hardly necessary to argue the wisdom of having a big Government. Depression, war, new needs for defense, and vast responsibilities in world affairs, have placed our Government on a wholly new footing. We expect a great deal of Government too. We all want military protection, postal deliveries and other basic services. And most of us want special services of some sort as well.

But there comes a certain point at which any government can become, through sheer magnitude, a threat to the national welfare. Its cost can break down the productivity of its economic machine.

The Government has many huge agencies and they all have their faults. Taken together they can literally break us, unless they are well-managed in the public interest. There is more, much more, than mere billions at stake in this. An over-bearing bureaucracy is a definite menace to our very freedom. I have lived in and with Government for many years, and I believe that the vast majority of Government employees, legislators, and officials realize this danger, and would like to do something about it.

At any rate, it was an act of Congress which brought the Hoover Commission into being. In July 1947, by unanimous vote of both House and Senate, the Commission on Organization of the Executive Branch of the Government was created, and it was assigned the task of seeking ways of streamlining the Government, and putting it on a more businesslike basis.

The Commission was conceived on a high plane. It was set up on a bi-partisan basis, with 6 of its 12 members from each major party. Four members each were chosen by the President of the Senate, the Speaker of the House, and the President of the United States. It was President Truman who chose Mr. Hoover who, in turn, was promptly named chairman by the group. Its members are: Secretary of State Dean Acheson, Vice Chairman; Senator George D. Aiken of Vermont; Congressman Clarence Brown of Ohio; President Arthur S. Flemming of Ohio Wesleyan University; Secretary of Defense James Forrestal; the Honorable Joseph P. Kennedy; Senator John L. McClellan; the Honorable Carter Manasco, of Alabama; the Honorable George H. Meade, of Dayton, Ohio; Prof. James K. Pollock, of the University of Michigan; and former Assistant United States Attorney General, James Rowe, Jr.

The names alone inspire our confidence. The choice of Mr. Hoover as chairman, was, of course, superb. He knows and understands the problems of Government. As our only living former President, he has carried the crushing administrative burden, which every President must bear. Above all, his long record of unselfish public service has won the trust and admiration of millions throughout the world. Mr. Hoover has always answered the call to serve, whether it be in Government, in charity, or in the broad field of world famine relief. For decades he has given greatly of his time, effort, and high abilities—asking, literally, nothing for himself.

When the Hoover Commission was formed, it created 24 research task forces to dig deeply into the facts about our Government. Twenty-four of these task forces were formed. Each studied some special topic such as the post office, the armed services, the State Department, agriculture, and the like. The members of the task forces were eminent experts in their field. They included some 300 outstanding persons in all. Among them are 2 former Cabinet officers, 13 former Under Secretaries and Assistant Secretaries of Government departments, 3 former United States Senators, 5 former governors of States, 10 major university presidents, and many executives with special experience in business.

The task forces worked for periods from 10 to 14 months. They brought back no less than 2,000,000 words of facts and figures and presented the Commission with the most comprehensive study of Government in all history, hammering out a broad pattern for an orderly, effective, well-run Government. Last Monday the first of the Commission's official reports was delivered to Congress.

Before we consider the contents of the Commission's report, I must ask you to bear in mind the constructive spirit of the Commission's approach to its task. It is not interested in superficial witch-hunting. It is not out to rip, slash, tear, or abolish the agencies of Government, blindly or thoughtlessly. As it went along it found good work being done, good services being performed. But as the evidence came in, it found also that endless confusion has resulted from the pell-mell growth of Government. It found waste of money and waste of human effort. And it was forced to conclude—I quote:

"The Nation is paying heavily for a lack of order, a lack of clear lines of authority and responsibility, and a lack of effective organization in the executive branch. It has found that great improvements can be made in the effectiveness with which the Government can serve the people, if its organization and administration is overhauled."

The report discloses that aside from multiplicity and overlapping of many agencies, their officials are enmeshed by thousands of strands of red tape, accumulated by legislative and executive action over half a century, which paralyzes the efforts of the best of them.

As a result of this lack of organization, the Commission and its task forces have found antiquated methods in practice throughout the Government. For example, the paperwork involved in processing a Government purchase order costs more than $10 per order, yet half of the 3,000,000 purchase orders which the civilian branches of the Government execute are for items costing less than $10. In other words, on a purchase of a $1 item the cost of purchase may be 10 times its worth. Elsewhere it was found that the Government today has goods in storage, whose total value is estimated at $27,000,000,000, although no one agency or department has all facts about this huge inventory of supplies. Elsewhere it was found that the cost of maintaining a single filing cabinet could be cut $29 a year to $2.50 a year simply by moving it to a cheaper container in less expensive storage space. The Government maintains 18,000,000 cubic feet of records and documents—enough to fill six Pentagon buildings.

But those are minor items. They apply to the so-called housekeeping functions of Government. They need straightening out, of course, and millions could be saved by simply installing better methods. But consider the waste, high into the billions, that can come about through duplication of effort and competition among bureaus.

Some of the early research findings indicate what can be accomplished in better government, if the Nation really wants it. Just the other day, therefore, two congressional committees called on Mr. Hoover to ask his views as to the best method to proceed.

Mr. Hoover told the Senate committee that the necessary first step in reorganizaion was the passage of the bill which would give President Truman a free hand in reshaping the agencies under his direction. As things stand, the President has approximately 65 major departments and agencies reporting directly to him. If he gave but 1 hour of his time per week to each of these agencies he would have no time left for the broad responsibilities of his office. Mr. Hoover has therefore suggested that, through this bill, the President be given the authority to regroup these agencies so that there will be only 20 or 22 operating heads reporting directly to him, and making direct claims on his time.

It seems to me to be a very sensible plan. It would reduce what is called in business the span of authority, so that the responsible executive can maintain a line of authority and responsibility, and at the same time have time for matters of broad policy. It would not in any sense be a dictatorship or give the President any more authority than he needs to do his job properly.

This bill, known as the Reorganization Act of 1949, deserves the full support of every citizen. It should pass Congress without amendment.

But as Hamlet said, "Aye, there's the rub." Reorganization bills have been passed before. But each time they were loaded with so many exemptions that they were practically useless. One bureau or agency after another would step forward and say, in effect, "It is fine to reorganize the rest of the Government, but please have it stated in the bill that my bureau is not to be touched or changed in any way."

One by one, under pressure, exemptions would be made, until finally they would number as many as 30—enough to make impossible any real reorganization of the Government. The sad fact of the matter is that the individual heads of Government agen-

cies usually think that their function and their own little corner of the Government is being very efficiently and economically performed. This is human and natural. Resistance to change is not a monopoly of civil servants by any means—I have seen it operate many times in private industry.

The vital fact remains that resistance to change is the very thing we have got to overcome. Exemptions must not be written into this bill. As Mr. Hoover said in the hearings, the whole effectiveness of the reorganization bill can be destroyed by little grasshopper bites of exemptions here and exemptions there. Many agencies and bureaus have already begun to work to get exemptions concerning themselves written into the reorganization bill. Some of them are putting a great deal of pressure on our legislators now. One hesitates to say that any Government agency is maintaining a lobby, for that is supposed to be against the law. The fact remains, however, that some of these agencies have a suspiciously large number of very active friends working in their behalf.

No Government bureau should consider its operations perfect, or itself above reproach. Yet tremendous pressure is being put upon the Members of Congress by the friends of various agencies. Floods of telegrams are being received by individual Members of Congress, demanding that their particular agency be exempted from the Reorganization Act. These telegrams come from associations and groups of people with personal interests in special areas. They fail to see the over-all picture clearly or, I feel sure, they would be as eager as anyone else to put the entire Government on a businesslike footing.

There is a great similarity among all these telegrams that are being received and the arguments they set forth are very much the same.

There is no one to speak out for the individual American taxpayer against the strident demands of the pressure groups, who insist that their favorite bureaus and agencies be exempted from reorganization. Yet, unless reorganization is effectively accomplished, the present governmental set-up will continue to cost the taxpayer billions in unnecessary expenditures. These billions literally mean dollars out of your pockets. You pay taxes whether you are rich or poor. Reorganization of the Government is in your interest.

The present pay roll of the Government runs about $6,500,000,000 a year. Competent men figure that, if this reorganization bill can become law, at least $3,000,000,000 can be saved annually. Much of this saving will come from avoidance of duplication of work, consolidation of agencies, and from greater efficiency.

I urge you, I challenge you, to write or wire your own Representatives in Congress and demand that the reorganization bill be adopted, without exemptions of any sort. Remind them that this is an urgent recommendation of the Hoover Commission, that the Commission was created by Congress itself, and further that President Truman is fully in concurrence. It is you, as a citizen, who in the last analysis will decide whether the United States Government is to be organized on a businesslike basis or left to flounder, as a huge octopus, a dangerous encumbrance on our economy. Millions and millions of people, acting on their own behalf, should make themselves heard above the voices of the pressure groups. This is your big chance—and it may be the last one—to insure lasting good government for the people of America, and to do something constructive toward reducing the cost of government. This has everything to do with our future freedom and prosperity. Once again, I urge you to tell your Representatives in Congress that you want the Reorganization Act of 1949 to be passed, without exemptions of any sort.

Let the people speak up in their own interests and demonstrate anew that government of the people, by the people, and for the people has not perished from the earth.

Lincoln Day Address by Hon. Eugene D. Millikin, of Colorado

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, February 17, 1949

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address in honor of Abraham Lincoln, delivered by our distinguished Republican colleague, the Senator from Colorado [Mr. MILLIKIN], before the Lincoln Club of Denver, on February 12 last. The Members of the Senate, and others, will find the address very interesting and helpful in carrying forward our Government along the course so well marked by the immortal Lincoln.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Emerging from a humiliating defeat, we have been salving our wounds with recrimination. The catastrophe was so needless and the sense of personal guilt was so great in so many of us that we have been taking the natural escape of attributing our own faults to the other fellow.

I doubt whether there are many Republicans who would deny on honor that the most of their present wisdom is the result of backsight and, more important, who would state on honor that they did everything within their personal power to help the party win last November.

The angry outbursts have perhaps served a wholesome purpose. But, I suggest, that it is time to get off of the psychologist's couch. We have all purged ourselves of guilt by its transference to those equally guilty.

The mandate to be derived from the last election was to the Republican Party, not to the opposition. It was to get the lead out of our shoes, to come alive, to wake up, to give the people who would like to support us and have not done so a campaign based on accomplishment, issues, and constructive purposes.

To the shiverers, to those who do not have the power of rebound, to those who whine under the shock of adversity, who have no appetite for conflict, we say step aside and clear the road for those who have reshouldered the pack and are moving into battle.

We must never again allow the accomplishments of the Republican Party, current, recent, or historic, to go unexplained and undefended.

In 1946 we won our first important victory since before 1932. We captured the Congress on a definite program which was good for this country, and we shall capture the Congress in 1950 in exactly the same way.

In the campaign of 1946 we promised to reduce taxes and did so.

We promised to balance the budget and did so.

We promised to end the OPA regimentations of our daily lives and did so.

We promised to stay the headlong rush at Washington toward national socialism and did so.

We promised to do all in our power to drive Communists and their stooges out of the executive department of the Government and did so.

We promised to improve the Wagner Labor Relations Act and did so. We promised to make corrections and further improvements as indicated by experience and we shall cooperate in doing so.

Those pledges were in response to clamorous public demand for action along those lines. We were in step with the people. We did what they wanted us to do. And yet we placidly allowed ourselves to be reviled out of credit for those and other outstanding accomplishments of the Eightieth Congress.

Instead of dominating the campaign with confidence from successful performance we asked for a man's job without revealing the tested muscles which were there to back up the ambition.

All over this country there is a powerful ferment working for the reactivation of our party. This is evident from the enthusiastic interest in our Lincoln Day meetings.

We see it in the precincts and counties where aggressive steps are being taken to prevent repetition of the errors of the last campaign.

What would we do with a reactivated organization? In figuring what we are going to do, we necessarily eliminate that which we should not do.

Coming to it bluntly. There are Republicans who are already addling their brains with little schemes for the Presidential race 4 years from now.

Let me make this respectful suggestion. No one can say today what the Presidential issues will be four years from now, or, with certainty, who will be the candidates four years from now, or who among the candidates four years from now, will be best fitted to sustain the issues of that day and lead us to victory.

Surely these obvious facts dictate that in the best interests of our party we concentrate on the immediate business at hand. This cannot stand dissipation of energy, it cannot afford bleeding or distortion by being subordinated to more remote and now unpredictable objectives.

The business at hand is to restore to Republican control our courthouses, our statehouses, and the Congress of the United States in 1950.

Here we have an objective which is achievable and on which we can unite and that fight will soon be upon us. Let us put everything that we have into the job of 1950 and allow the operation of time, with its revelation of now shrouded events, an opportunity to illuminate the tasks of 1952.

I have been talking about a reactivated organization with which to win in 1950, but I would not recommend the effort merely to aid in winning at all costs.

We hear sly voices which would insinuate that doctrine into our party. We are asked to accept, as an end sufficient to itself, imitation and outbidding of the opposition for the people's favor with the people's money.

The answer on this day of remembrance of Lincoln and everyday while we shall live should be that it is our undeviating moral and political purpose to operate our organization so that it may help to save this country, not to destroy it.

The answer of a Republican who loves his country is that he would rather see his party go out of existence than to shrink from drawing and bravely fighting the real issue. This in ultimate terms is, Shall be have sound progressive Republican government with freedom for all or shall we have the national socialism offered by the opposition

with its liberty-destroying insolvencies and regimentations?

Here we should refuse to temper our actions with any kind of opportunism. We should reaffirm our basic article of faith that the right when fully disclosed will prevail and the party standing for the right will receive the confidence of the people.

If debauchery of public opinion ever proceeds to a point where this principle no longer has power enough to surmount temporary befuddlement, then citizenship in this country shall have lost its precious values and the serf's bleak horizons shall bound our further progress.

The answer to the "win at all costs" advocates is that it is not our party's purpose and it will not be its shameful fate to put a helping hand on a plunging knife into the liberties of our people.

We do not want our party to play a Kerensky prelude for the advent of any form of totalitarianism. We do not want our party to achieve victory so that it may lend morbid dignity at the burial of our country.

Last June at Philadelphia, a white-haired man, now in his seventies, an earlier target for political calumnies almost as vile as those heaped on Lincoln in his lifetime, and who happily has outlived them to enjoy again the respect and affection of his countrymen, stood before the Republican Convention and offered advice which by its simple, eloquent sincerity brought into that hall the brooding presence of the Emancipator. The speaker was Herbert Hoover. In closing his remarks to the convention he said:

"If you will calculate what will please this or that little segment of our population, and satisfy this or that pressure group or sectional interest, you will be betraying your opportunity and tragically missing the call of your time. If you temporize with collectivism, you will stimulate its growth and the defeat of free men. If, on the other hand, as a mature and inspired political party you face the truth that we are in a critical battle to safeguard our Nation and civilization which, under God, have brought to us a life of liberty, then you will be guided in every step to restore the foundations of faith, of morals, and of right thinking. If you choose your leadership with full recognition that only those can lead you who believe in your ideals, who seek not only victory but the opportunity to serve the right, then you will issue from this hall a clarion call, in as pure a note, in as full a tone as that call to arms which your political ancestors issued at Ripon, Wis., when this party was born to make all men free. And so I bespeak to you tonight to make yourselves worthy of the victory."

To that let us say "Amen" and "Glory be to God."

What right have we to claim a special interest in the preservation and advancement of human liberty? The answer is by our works from the inception of our party to the present day. And the need for this special interest is found in the works of the opposition.

When Lincoln, our first great leader, freed the slaves our party received the reason for its being and for its ceaseless devotion from that day to this to the cause of human freedom wherever the issue has manifested itself.

Let us take a brief look at some of the highlights of the record. Under national policies established by the Republican Party in all of the territory that came to us as a result of our victory over Spain which made us a world power, we ended the oppressions which had shocked the conscience of mankind and set the liberated on the road to freedom.

In contrast, at Yalta, Teheran, and Potsdam, leaders of the executive department of this Government entered into agreements, some of them secret, and, I emphasize without Republican participation or approval, which put the Communists in position in Poland, in the Baltic regions, in eastern Germany, in the Balkans, and in China to subject to their murderously perverse brand of freedoms hundreds of millions of human beings including the peoples of friendly and Allied nations. And put the Communists in position to menace the rest of the world.

Even the servants of God have not been spared.

It was Republican Senator ARTHUR VANDENBERG, with the support of his party, who finally prevailed upon the executive department of this Government to stand against further enslavement of the peoples and the beaten-down remnants of civilization in western Europe and to do the things necessary to make our stand effective.

Evidence pops up from time to time that the opposition's conversion is an uneasy one. We see indications of its abandonment of bipartisan cooperation in foreign affairs.

That which happened to Poland, to eastern Germany, to the satellite Balkan countries, to Baltic nations, and to China resulted from face-to-face conferences with Stalin.

And charting Stalin's progress at those face-to-face meetings there is considerable ground for the fear which is felt by many of our citizens that one more of them and the whole world will have been delivered to communism.

Republican offers of cooperation to take the "stitch in time" in China were rejected by the same administration. Indeed, those offers could not have been accepted because the executive department of this Government, to its everlasting shame, had actually sent emissaries to pressure Chiang Kai-shek into admitting communism into the Chinese Government.

This Nation under Republican government ended the freedom-stultifying overlordships of foreign countries in China by putting into effect the open door.

The open door remained open until it was slammed shut by Communist Russia.

The executive department of this Government put Communist Russia in position to do this and to conquer our ally and friend.

And here at home it is equally easy to judge between the parties to determine which is the most dependable guardian of human freedom by examining some of the measures bearing the opposition's hallmark and which have received its most fervent supporting activity. And I add the most resolute opposition of Republican Members of Congress.

It is not necessary to go back very far. Leaders of the opposition tried to destroy the freedom of the Supreme Court by packing it. They tried to destroy the freedom of Congress by purging it.

Since the war they asked and fought for a law that would have put striking workers in the Army so as to force them to work with bayonets at their backs.

Right now they are trying to destroy the freeman's right to a hearing by steam rollering bills through their heavily packed committees of Congress.

Right now they wish to deprive the Congress of its lawmaking power by claiming for the President the inherent right, reeking of the divine right of kings, to the use of injunctions in labor disputes.

Right now they are proposing taxes and expenditures of such fantastic magnitude that if authorized there would be little left of the citizen's freedom, already gravely enfeebled, to control his own pocketbook.

Right now the cheap stuffing of the fraudulent package which they sold to the people last November is breaking out all over the place.

Lacking a sense of responsibility, everything was promised to everybody and they cannot make good.

They have no integrated program and, because of the deep divisions in their own ranks which are the same now as they were before the election, they cannot make one.

They are actually running filibusters against each other and against their own party programs.

Out of the inspiration of a pigeon bespattered convention last summer they called us into a special session to enact the Truman program in 15 days. At the end of the first 15 days of this, their own Eighty-first Congress, they had done nothing but raise the President's salary.

The principal purpose of that special session, so it was claimed, was to reimpose the OPA controls to prevent further inflation. What did they do about that? Just a day or two before I left Washington to come home, their own Eighty-first Congress—you put your own label on it—extended the voluntary control system passed by the Eightieth Republican Congress.

They were going to repeal outright and right away the Taft-Hartley Act. Although in control of Congress they haven't got the votes to do it, and are in heated disputes with each other as to the foxiest way to reenact the most of it while appearing to repeal it.

We have had enough New Deals. We are sickening of square deals. What we need is an honest deal from a fresh pack by honest dealers.

As a minority party we are performing our proper function. We will try to improve that which if improved would be worth saving. We shall try to kill everything that is hopelessly bad. We shall resist all claimed mandates to make either a clown or a tyrant out of our Federal Government. We shall try to bring every measure into harmony with the preservation of human freedom. Out of our experiences to come and out of those already had we shall develop constructive programs for 1952.

If any of my listeners are clinging to their melancholies of last November 3, cheer up, for already it is becoming clear that 1950 will give us a thumping repeat of 1946.

We all have a sharp understanding of the loss of human dignity and freedom associated with the most lurid and degenerate aspects of totalitarian government such as the banishments, the purges, the studied techniques of terror, the torturings, the concentration camps, the slave labor, the forced mass migrations of peoples from their homes to strange and inhospitable lands.

But we miss the point if we do not keep this in mind: These horrible dramas are the final aggravated symptoms of stealthy, inch-by-inching encroachments on individual freedom which are apt to escape timely observation and correction because of false propaganda and temporary belly and pocketbook benefits.

Those who set up our Government had the whole course of recorded history before them and they chose a system for us so balanced in power between the States and the Federal Government and between the legislative, executive, and judicial branches of the Federal Government which, barring our own foolishness, will keep us free.

The Republican Party believes in that system. We recognize that the final and firmest assurance of individual freedom is not to be found in Washington bureaucracy but rather in our city halls, our courthouses, and State capitols. This, for the easily understood reason, that at the city halls, courthouses, and State capitols the individual has the direct, on-the-ground opportunity for influencing the enactment or defeat of proposed measures which would affect his pocketbook, his mode of life, where and how he wants to live, what he wants to do, and where and under what conditions he wants to do it.

We recognize that in Washington the Congress can legislate, but the enforcement, and a considerable part of the content of that to be enforced, is largely in the hands of tens of thousands of anonymous persons beyond the reach of the electorate. Therefore, we cannot look to those persons with assurance to protect our liberties at home, which in the last analysis is the only place where we can keep or lose them.

But this does not relegate the Federal Government to a static and sterile role. There is a vast field of service for advancing the national welfare and the national citizenship which is the inseparable companion of our State citizenship.

The power of Congress to legislate for the national welfare is not limited to conceptions bounded by conditions of bygone eras. There is room and challenge for sound progress. Lincoln, in his second annual message to Congress on December 1, 1862, put it this way:

"The dogmas of the quiet past are inadequate to the stormy present.

"The occasion is piled high with difficulty and we must rise with the occasion. As our case is new, so we must think anew and act anew."

For example, health, education, housing, and security are the proper concern of our Federal Government and of the Republican Party.

But as to these and other proposals for Federal action we conserve freedom by making certain that the content and the manner of doing it do not usurp functions, responsibilities, and rights which by their nature and under our plan of government are local.

We must make certain that in whatever we do nationally in these fields we are not destroying the abilities of the States and local governments to tend to their own proper business.

We must make certain that we are not eroding individual human freedom or the ability of the economy to carry the loads which we would put upon it.

When you are in Washington you will notice that on one side of the White House is the old War and Navy Department building and on the other side the Treasury building. This symbolizes that there are two imperatives always resting on our Federal Government which override all others. They are—keep this country safe—keep this country solvent. All other activities and programs must cut their patterns to fit.

The conqueror does not bestow freedom on the vanquished and freedom and security do not ride with worthless wages, worthless savings, worthless pensions, worthless life insurance, or stricken business.

In our effort to contain the blunders of the opposition at Teheran, Yalta, and Potsdam we are spending in these theoretical times of peace more than $20,000,000,000 a year for foreign aid and back-stop military preparation. We are spending another $20,000,000,000 a year for other purposes.

The President now comes up with a spending program as a mere starter of $42,000,000,000 for the fiscal year 1950 commencing next July 1. This represents 1 year's spending by the Federal Government equal to about 35 times the appraised value of the State of Colorado.

This is only an opener for disclosed, undisclosed, and hinted-at things to come.

Supplemental requests for appropriations of sizable amounts never fail to materialize and make a farce out of sound budgetary procedure.

Then, until peace is assured, there will probably be additional annual expenditures which might run into billions to support lease-lend to the nations of the proposed North Atlantic alliance. No one knows even approximately how much and no one now knows for how long.

The normal expansion of present activities and new ones with their relatively modest and unalarming beginnings would within the next few years enormously magnify the present Federal budget.

Universal military training, if we should come to it, will cost several billions a year.

The debacle in China may lead to more and yet undisclosed expenditures.

The 70-group air force advocates have strong support and they may win their cause and this will add heavily to the estimated expenditures for our military establishment.

Taxes for proposed welfare programs can grow into a staggering number of billions of dollars.

The minimum of prudence requires that we always keep in mind the possibility of turning from cold to hot war with its mountainous jump in spending.

Inflation has turned to recession. The speed of orderly recession under the influence of fear and lack of confidence and the developing instabilities in our economy can quickly change to a panicky flight into depression. That cannot be allowed to happen, and it would probably involve a lot of Government spending to stop it.

Moreover, we should not blink the unpleasant fact that we have a debt of $250,000,000,000 which will have to be paid off out of taxes.

It is folly to blink the unpleasant fact that we are in a state of sharp and possibly dangerous domestic and international crisis.

This requires that all of us act with an alert sense of responsibility which spurns all fakeries.

The aspects are different, but we again have Lincoln's job of saving the Union. If we arise to our duty we shall have another fine hour in history.

If we would keep recession from tobogganing into depression it is necessary that we remove and certainly should not enlarge the stagnating influences operating on our economy.

This means that we cannot add the further discouragement of higher taxes to capital formation for new plants, new machines, new technologies which spell new and revitalized pay rolls.

It means that most careful attention must be given to determine the danger points on pay roll deductions for taxes.

There should be new reviews and eliminations and reductions of exactions which directly retard the volume of business and pay-roll-making activity such as may be found in the field of excise taxes.

In my opinion the boundless Truman programs for spending and taxing would reverse the rosiest of times. They are suicidal under the present turn of our economy.

The essentials of the Truman budget should be brought within the understanding of every citizen.

Its impacts on individual human liberty, on individual and national security, on the performance of our local responsibilities and the enjoyment of our local rights must be made known in terms which can be readily understood.

Let me illustrate with a home-State and home-town example:

Colorado is not a large State in terms of population. About 1,200,000 people enjoy the blessing of living there.

The Truman budget of $42,000,000,000 would exact frrom the people of this State, as a starter, about $340,000,000 per year.

This is about four times as much as the annual cost of our State government.

The Truman starting budget will exact from the people of Denver, our largest city, about $144,000,000 per year.

This is about 15 times as much as Denver spends annually for its schools and about 9 times as much as it spends for all of its other municipal activities.

My listeners, wherever they may be, will be well advised to make local applications of the Truman starting budget of $42,000,000,000.

Now, of course, all of this money which goes to Washington is not lost to us. A part of it comes back after having been heavily nicked by the Federal Government's overhead, but it may not come back in the way that you want it to. You have been deprived of your free choice as to what you want to do with your own money and that is a substantial deprivation of individual human liberty.

This will give you a graphic explanation of why many communities all over this Nation find themselves unable to keep up or to expand their proper functions.

This will explain the process which I have described and the degree of its growth whereby the Federal Government usurps local functions and local freedom.

This will make it clear that unless we reverse direction we are close to the point where State and local governments will simply become administrative agencies for an ever more gluttonous Washington bureaucracy.

It makes it clear, I hope, that we should not be talking about increasing our Federal tax burden, that we should eliminate waste in the Federal Government, that we should reduce expenditures wherever possible without imperiling our security or other vital functions.

We must do these things in these times of domestic and world crises so that we may conserve our strength to meet fully the overriding imperatives of the Federal Government: Keep this country safe; keep this country solvent.

The Challenge to Western Civilization

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, February 17, 1949

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "The Challenge to Western Civilization," delivered by Dr. Burton L. French, professor emeritus, department of government, Miami University, Oxford, Ohio, on January 9, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Our world is well within the fourth year following VE- and VJ-days, yet as we survey the international situation we must be aware that in spite of tremendous sacrifice of life and treasure and other losses beyond all power to appraise—in spite of our high resolves—in spite of the UN, not only are we challenged to prevent another war, but as never before are we challenged lest the civilization that we know shall perish.

One nation alone stands athwart the way of attaining measurable peace. That nation is Soviet Russia. Not the people of Russia, but Soviet Russia, dominated by the dictators of goodless communism, dictators as merciless, and following, if they did not devise, the pattern of Hitler. Hence the subject: The Challenge to Western Civilization.

Communism always seeks world domination. Thirty years ago, Lenin said: "The

existence of the Soviet Republic side by side with the imperialist states for a long time is unthinkable. In the end one or the other will conquer." Over and over Stalin quotes those words. More than that, they seem to constitute the mainspring for his actions.

Said President Truman in Kansas City 2 weeks ago: "Christianity and all other religions * * * are based on justice and fair dealing. * * * our great ally to the north has a system of morals that are not moral. Contracts are not sacred with the Soviet Government. I made certain specific agreements at Potsdam, none of which have been kept. Certain agreements were made at Yalta, none of which have been kept."

Soviet Russia, together with all the other great powers and most of the lesser nations, entered into the pact that we call the United Nations. The other nations subscribed to the pact for the purpose of bringing about understanding and accord; the Kremlin for the purpose of chaos. Soviet Russia alone has prevented the UN from functioning by refusing to cooperate, by bringing frustration by the use of the veto, by falsehood in specific areas, by force of arms or the threat of arms against weaker nations, by violating the covenant in the internal affairs of conquered and other nations. By following this policy she has brought under her domination, and thus under communism, three-fourths of Europe and vast areas of Asia.

One of the oldest and most fundamental tenets of international law is that nations shall respect the internal affairs of other friendly nations. Soviet Russia, while inordinately resentful of visits of alien people to her domain even in spite of strictest surveillance, assumes to practice the role of superdictator in attempting to penetrate into the affairs of other states. Witness her conduct when the mask was torn off and her perfidy exposed in Canada, in France, in Italy, and in the United States.

Only less in venality is the penetration of Soviet agents into labor or other civil organizations of friendly neighbors for the purpose of spying on activities, slowing down or stopping or speeding up production, directing or stopping shipping, all in the interest, not of the friendly nations, but of Russia. They take their directions from the Kremlin and they report to the Kremlin as to a master.

We dare not forget that communism and Soviet Russia are one. They are intertwined, and wherever and whenever you find a Communist, there you find an agent of the Kremlin. With the purpose of confusing the issue, communism becomes at once the listening post and the voice of Stalin. Through communism, Soviet Russia professes devotion to humanity; in practice, Soviet Russia is a pyramid of tyranny.

That is why communism can thrive only in darkness.

That is why the freedoms of speech and press are blotted out.

That is why such desperate efforts are made to silence the radio voice of America.

That is why important newspapers of free countries are denied admission to Russia.

That is why you may not travel in Russia save under a chaperone—you may not know it in your naïveté, but the NKVD is giving you full attention.

That is why the repeated purges in Russia.

That is why Russian soldiers who have served on the western front are scattered widely upon discharge—this, lest they talk and be believed.

That is why families of Russians who have escaped are held as hostages—it becomes a way of stilling the voices of some who have escaped.

That is why Russia makes desperate effort to prevent her citizens fleeing to foreign lands.

That is why the Russian teacher, Oksana Kasenkina, who leaped to freedom, and Victor Kravchenko, the author of I Chose Freedom, and thousands more are in constant danger—they know too much.

That is why Communists operate under cover—why they go underground—why they deny membership even when proven beyond doubt—why they deny that their fellow members are members at all—why every Communist of any importance has several names.

That is why Communist cards are turned in when members are placed in certain responsible positions—or maybe no card at all is issued.

In brief, that is why the iron curtain.

Over and over the question is asked of me: "How do Communists operate?" What is their technique? First of all, there are schools and camps for the training of Communists within the United States. Not a few, but many, and everything is taught from the technique of creating and leading a mob and the making of a bomb for direct action, to the more refined processes of propaganda. Russia, of course, is the great center of training, and there are enough Russian-trained Communists in the United States today to staff a university of 16,000 students, upon the basis of not more than 20 students for every instructor.

How do they operate? By every propaganda means under the sun.

By personal contact in the home; by seeking out centers of misery; by arousing class and race warfare.

By denying that they are Communists; by denying the truth about Russia or communism.

By infiltration into groups of all kinds and seeking and attaining offices and control. In Government positions they become the pipe lines to the Kremlin.

By infiltration into offices of nation, and state, and city. By way of illustration, in 1941, the American Federation of Teachers found it necessary to expel three teachers' unions of New York City, with 8,000 members, because these unions were Communist controlled.

They operate by working through gullible people wherever they may be found.

They rejoice when they find a respected member of a public-school faculty or university who in his innocence teaches that communism is just another political party; that it has no allegiance to a foreign power; that it does not stand for lawless means of action; or who, if not these things, will just keep still.

The same rejoicing occurs when they discover an editor, or lecturer, or member of a pulpit who will follow the same line.

And as Communists within their cells they teach the doctrine of Marx and Lenin and Stalin of lawful or unlawful means, of force and violence in the attainment of their ends.

As we stand upon the threshold of the new year, thoughtful people must recognize the threat that is immediate to western civilization.

Let me illustrate: Just recently I received a letter from one of my former students of Miami University who this year is doing graduate work with her husband in another great university. Let me quote a few lines. "It is nearly 1 o'clock at night. We have just gotten rid of a couple who all evening have spoken as the mouthpiece of Stalin. My husband is across the table preparing his assignment for tomorrow. But I am scared because of what we have listened to all evening. And it's all your fault! If I hadn't had that course in government with you I suppose I shouldn't care at all. But thank Heaven, I had the course." This former student didn't need any coaching from me; but she had been shocked and she wanted just a little confirmation for what she had said.

As I have just referred to these apostles of communism and the Kremlin, may I not fail to say that many similar men and women in our country are now on their way back following their excursion into this godless experience.

They were drawn in, maybe through love of the bizarre and adventure, maybe through a passion for mistaken reform. They have been disillusioned, and they are turning their steps back to loyalty in government, back to wholesome living, back to opportunity for service. They have my deep sympathy.

Some of them have come to me to share their dilemma. Just recently a fine Negro lad still in his twenties told me of his problem. A veteran of nearly 3 years—his life spared, though brushed by the angel of death—born in the South, now a resident of a northern city, married and three children, asked to attend a group meeting, race question discussed, lynching, discrimination, then another meeting, asked to say a few words, applauded, other meetings, more applause, then a young woman came to him and said, "You're one of our kind," and she handed him a Communist card. A few more meetings. This young man has had enough. He is withdrawing in the bold way; he has torn his card to shreds.

Another young man, parents born in Europe, joined a Communist cell via a trade-union, disillusioned, but seemingly afraid to withdraw, stayed on for 2 years. Now on the way back, as he hopes, without it being known. I trust he may succeed. He is lacking in courage. I purposely omit names. These men have had grief enough.

To examine a problem is to be on the way of meeting it. That is why I have asked you to glimpse with me the challenge of communism through Soviet Russia to all that we hold dear in western civilization.

We propose to defend the blessed heritage of self-government, together with the ideals of freedom in speech, in discussion, in press, in religious thought, and in the application of simple justice between man and man.

Good government implies vigilance—vigilance not only upon the part of the state itself, but upon the part of the citizen. This means that the individual and the state are specially charged with seeking and preserving the highest well-being of all our people; of hunting out wrongs and seeking their correction; and acquainting our people, and more especially the youth of our land, with the meaning of democracy, the present challenge, and the responsibility that rests upon us all. Students react, and they are proud to have a part.

Address by J. Finley Wilson at Rally To End Segregation and Discrimination

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 17, 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Hon. J. Finley Wilson, grand exalted ruler of the Improved Benevolent and Protective Order of Elks of the World, at a rally to end segregation and discrimination, held in Washington, D. C., on February 11, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Greeting: Our call for those assembled to meet here today has the endorsement of the members of the fraternity which we repre-

sent, the Improved Benevolent and Protective Order of Elks of the World.

In this District of Columbia they are 10,000 strong, men and women.

They are united in this legislative assembly, or town meeting, to discuss segregation and discrimination with those in authority in our National Government and in the local government of the Nation's Capital.

They expect to meet with certain Members of Congress who legislate for the District of Columbia, and for the Nation at large.

Our call has stated that we rally here to end segregation and discrimination.

The framework of our discussion of segregation and discrimination, we trust, shall be clearly defined. Segregation and discrimination are evil. They degrade not only the victims, but also the perpetrators. They debase the honor of our Nation in the eyes of the world.

So long as segregation and discrimination exist as the official practice of our Government, we shall look askance at pronouncements about our democratic intentions before the United Nations, in Europe, Asia, Africa, Latin America, or any other place in God's green earth.

Our purpose is in the best tradition and interest of American democracy. This Nation cannot thrive, nor flourish, nor prosper so long as unpunished lynching may be the reward for the laudable effort of an American citizen to cast his ballot because he is a citizen of color in the State of Georgia.

Racial discrimination has been denounced by our President, Harry S. Truman, although it is rampant in our armed forces and in our Federal employment. It has been denounced by the President's Committee on Civil Rights, by the United Nations in its Declaration of Human Rights, by the World Council of Churches at its Amsterdam session, and by the Republicans, Democrats, and Progressives at their national party conventions.

While we are here to commemorate the birthday of our great emancipator, we shall be pleased to have you take note that we have purchased the farm of John Brown, of Ossawatomie, at Harpers Ferry, and that we shall proceed to erect there, near the battlefield of Antietam, a tower to his memory. This tower shall be built in part with the rugged stones and rocks from the castle of John B. Henderson, of Missouri, author of the thirteenth amendment to the Constitution, abolishing slavery.

It shall commemorate the lives of John Brown, whose soul still marches on, and John B. Henderson, for whom Harry S. Truman has named February 1 as Freedom Day.

The castle, an old landmark, has been turned over to the wrecking crew. It is located here, at Sixteenth Street and Florida Avenue NW., in the District of Columbia, where black men are now being employed to tear down this temple of freedom. Perhaps some of us may find time, before this session ends, to visit the site and say a prayer for the meaning of freedom, as comprehended by both these valiant sons of Missouri.

Like John Brown, like Abraham Lincoln, like Frederick Douglass, we are here as real men and women, willing to labor unto death, if need be, to reestablish faith in our fundamental rights—in the equal rights of men and women—in the equal rights of nations, large and small—regardless of continental origin, or race, or creed, or color.

We have come here because we are men and women ready to die, if need be, that our children may have a safe and fair tomorrow.

We are here because we know that wherever freedom exists, men and women have fought and sacrificed and died for it.

We are here because we concur with Frederick Douglass, who said: "Power concedes nothing without a demand. It never has, and never will."

The ideas for which we stand are those of freedom of the individual, in body, mind, and soul.

We shall contend for the right to go hither and yon, wherever public enterprise is licensed, or by public thoroughfare, or common carrier, in identical compartments with other free citizens, privileged as to public domain, and as to licensed public service.

We shall contend for freedom of all here assembled to think their own thoughts, to investigate, to seek the truth—freedom to debate among ourselves all questions, with the purpose to acquire unity of thought, and concord in cooperation, or in disagreement. That is freedom of the mind. It provides a faith for those who seek truth.

In that faith we hope to find freedom of the soul—freedom to walk with God in His green acres—freedom to seek God's love in the faces of all mankind and all womankind—and to reciprocate that feeling in our countenances and in our hearts—as an inalienable right of all created equal before our Maker.

We believe that, in this Nation, there exists no longer a division of free States and slave States.

There is no longer any danger that slave States shall secede from the Union.

But there is grave danger that the United States of America may secede from the principles of right and justice, and fair play for all, regardless of race, or color, or national origin.

In recognition of the fact that this Nation has already seceded from those principles, Harry S. Truman has installed the Fair Deal policy of national administration.

This policy has been installed, I take it, that this Nation, under God, and in the eyes of other nations of this earth, may come back to the great principles of the Declaration of Independence, the Golden Rule, the Ten Commandments, and the Sermon on the Mount.

If this United States of America cannot stomach a national Fair Employment Practices Act, a national antilynching bill, a national anti-poll-tax bill as against the poll tax as a prerequisite for voting, then this Nation stands before the United Nations of the world in a covenant with death and an agreement with hell.

Long have we loved to call this America a free country.

We recognize, however, that to be free, a nation must be free by the entirety.

There is no free America as long as there exists the Ku Klux Klan, the Red Shirts Brigade, revised constitutions with grandfather clauses, Jim Crow car legislation, lynch law, and rank disfranchisement of colored citizens and their relegation to second-class citizenship.

The outstanding meaning of that new birth of freedom for which we contend today is the standing together fast in the faith.

We know that, born in America, we are free citizens.

In this faith, we know that we are entitled to all the rights and privileges of any other citizen of this great Republic.

God grant that we may ever stand fast in that faith, nor give it up, nor allow anyone, black or white, or brown, or yellow, or red, whether he be friend or foe, to make us retreat, even the first step, from this position. With William Lloyd Garrison we say, We shall not equivocate, we shall not compromise, we shall be heard.

No one of us is free who is not fighting free.

The man who sits down in sweet content, and does not fight, is not a freeman. He is a satisfied simpleton.

We, as freedom-loving men and women, have come here to stand up for all our rights.

We have come here to engage in a continual struggle and contention, as long as mankind is human, and until he is divine.

We are prepared to keep up a constant agitation for the triumph of right, and the downfall of wrong.

We are determined to awaken sleeping justice and keep her awake.

We shall keep up a continual noise about her altar and never, by our silence, give consent to injustice prevailing.

We ask that God may grant America, most especially in its Nation's Capital, through its sense of fair play for all, that larger view of humanity, that greater concept of human duty which is the meaning of freedom in our lives.

In this concept we have assembled.

In this concept we have gathered together in His name.

May the spirit of one free world so enrich our hearts, so harmonize and subdue every discordant passion among us, that we may, at this time, in our deliberations and actions to end segregation and discrimination, our un-American heritage, most humbly reflect that divine order and beauty that reign ever and eternally before the throne of God, our Maker, in whom we have honor and glory, forever and ever.

Monte Cassino

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Thursday, February 17, 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief article entitled "Monte Cassino," by Mr. Isaac Don Levine, editor of Plain Talk, which was recently read on the Justice for Poland hour, station WSPR, Springfield, Mass.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONTE CASSINO

(By Isaac Don Levine, editor of Plain Talk)

In this series of talks on the tragedy of Poland, I want to speak to you today not of the fearful suffering of her people under a foreign yoke, nor of the suppression of their freedom by a tyranny imposed from abroad. Of these torments, which Poland shares with large portions of the human race, we have all heard a great deal and are bound to hear more.

What I want to talk about is a debt, a very recently acquired debt, which we owe to the sons of Poland. It is a story of glory and of shame. The glory is Poland's and the shame is ours. We owe it to ourselves, to America, not to forget the debt of Monte Cassino, contracted only 4½ years ago, and sealed with the blood of true martyrs.

How many Americans, indeed, how many veterans of World War II, remember the words of President Franklin Delano Roosevelt, uttered on the occasion of the pact sealed at Monte Cassino? These words were in the form of a citation by the President—the Commander in Chief of the United States armed forces—to General Anders, who commanded the Polish troops at Monte Cassino. Here is what Roosevelt said:

"Wladyslaw Anders, lieutenant general, Polish Army, for exceptionally meritorious conduct in the performance of outstanding services to the United States and the Allied Nations in Italy from October 1943 to July 1944. As commanding general of the Second Polish Corps, General Anders brilliantly led his men in the final overwhelming drive that

resulted in the retreat of the German Army from strongly defended Cassino. This point of stubborn resistance was captured when General Anders guided his troops in a coordinated and inspired Allied drive into the bitterly contested vantage point of the enemy. Later, continuing in the eastern sector of Italy on the Adriatic coast, General Anders again led his men in the capture of the important port of Ancona. The outstanding leadership and tactical ability displayed by General Anders were primary contributions to the success of Allied forces in the Italian campaign."

General Anders has recently published in Europe the almost incredible story of his wartime career. It is a story which every American should read, yet it has been difficult even to get it published in this country. It has been printed in Belgium and in France and is on the way to being published in England. In the Paris edition of the New York Herald Tribune, George Slocombe, one of the veteran laborite correspondents in Europe, has called the Anders autobiography "a passionate saga of Polish patriotism" but it is really a passionate saga of American blindness and of the perfidity of Allied diplomacy.

The story of General Anders sheds more light on Soviet patterns of behavior and is more useful to our proper handling of Stalin than all the reports of all our ambassadors to Russia, and all the columns of our leading commentators, since Pearl Harbor.

But let us bypass on this occasion what General Anders has to say about Stalin and Soviet Russia and about Churchill and our diplomacy at Teheran and Yalta. Let us turn back to Monte Cassino and to his account of the operation which opened up the road to Rome. As we all know, the Germans themselves called Monte Cassino the gate to Rome, and held it with crack troops of special training. The Americans, the British, and the French were stopped in their advance by this impregnable Nazi bastion.

It was in this impasse that the supreme Allied command called upon General Anders to take Monte Cassino. Anders was in command of the second Polish Army Corps. The vast majority of these men had come from Poland, via the inhuman concentration camps of Siberia, to Iran where the flame of seeing their native land liberated from the Nazi invader forged them into fighting men out of the gaunt skeletons that they were. This legion of crusaders made its mark in Tobruk. Thence they moved on to Italy, hoping to complete across its mountainous terrain a vast circuit which would bring them back to a free Poland.

Such were the men led by General Anders. They were men of the stuff of whom mythology is made and ballads are composed and sung down the ages. Homer and Julius Caesar and Sienkiewicz never dealt with nobler and tougher human fiber.

"The task assigned to us will cover with glory the name of the Polish soldier all over the world," General Anders proclaimed on May 11, 1944, in his order of the day, on the eve of the historic assault on Monte Cassino. And here is what General Anders now writes in his book about the event:

"I had often seen pictures of famous battles, with the general in command, field glasses to his eyes, watching the progress of his troops and giving orders. How different was this from present day reality, when battles, for the most part, are fought out of sight of the commanding officers. At Monte Cassino the darkness of night and smoke prevented anything being seen more than a few steps ahead. Our soldiers, frequently diving to take cover from fire, even had great difficulty in keeping contact with each other. Officer after officer was killed, and his place taken by the next in seniority. The battle formed part of a wide coherent action, part of a general plan, but unexpected obstacles and resistance from the enemy where it was not anticipated, caused, as is always the case, local adjustments and alterations to be made. It is accordingly not easy to describe an action made up of the experiences of individual detachments, sections, and even of single soldiers. It was a collection of small epics, many of which can never be told, for their heroes took to their graves the secret of their exploits. The dauntless will of the Polish soldier and his self-sacrifice were the key to a battle in which each man had perforce to play a lonely but heroic part; each minute brought its dreadful experiences, and the sum of them was victory.

"The attacking troops were under a constant hail of projectiles from all directions. Enemy reserves would suddenly emerge from concealment in caves to make a series of powerful counterattacks, which were supported by accurate fire from guns that had been trained on the targets during previous fighting. Our troops, on the other hand, could get little support from our artillery, partly because these latter themselves suffered heavy losses and party because of the complex nature of the ground. The lack of direct reconnaissance of the terrain before the battle, due to the need to preserve secrecy, also caused difficulties. * * *

"The white and red flag of Poland was hoisted over the ruins of Monte Cassino monastery at 10:20 on the morning of May 18 by a patrol of the twelfth Lancers. The fortress that had so long blocked the road to Rome had fallen. Victory had ben won by the gallantry of the Polish soldiers and the joint effort of the Allied armies. * * *

"The battlefield presented a dreary sight. There were enormous dumps of unused ammunition and here and there heaps of land mines. Corpses of Polish and German soldiers, sometimes entangled in a deathly embrace, lay everywhere and the air was full of the stench of rotting bodies. There were overturned tanks with broken caterpillars and others standing as if ready for an attack, with their guns still pointing toward the monastery. The slopes of the hills, particularly where the fire had been less intense, were covered with poppies in incredible number, their red flowers weirdly appropriate to the scene. * * *

"Gen. Sir Oliver Leese, commander of the Eighth Army, was the first to express his appreciation. When leaving me he noticed a great number of foreign correspondents, and said to them: "I am glad to see you here today. I want to tell you that the capture of Monte Cassino was entirely an achievement of the Poles. I am glad that you are here on this historic day for Poland, when Monte Cassino has been taken by the soldiers of the Second Polish Army Corps."

When General Alexander, in the name of His Majesty, George VI, King of Great Britain, conferred upon General Anders the Order of the Bath, he said:

"My sovereign has decorated the commander of the Second Army Corps for his excellent leadership, and also by it expressed his appreciation for the extreme gallantry and great spirit of self-sacrifice shown by the Polish soldiers during the battle of Monte Cassino. It was a day of great glory for Poland when you took this stronghold the Germans themselves considered to be impregnable. It was the first stage of a major battle that you went through for the European fortress. It is not merely a brilliant beginning, it is a signpost showing the way to the future. * * *

"Soldiers of the Second Polish Army Corps, if it had been given to me to choose the soldiers I would like to command, I would have chosen the Poles."

The signpost to the future, of which General Alexander spoke so feelingly on the fresh field of battle, became for Poland a signpost to oblivion. The victory which the Poles helped win for the Allies became a signpost of defeat for Poland, not in the open field, but in the secret chambers of diplomacy. The price of gallantry at Monte Cassino was treachery at Yalta. The glory of men who survived the horrors of Arctic penal colonies, to fight and die for their freedom at Monte Cassino, turned into our shame.

Monte Cassino will remain the signpost of a debt which we must never allow our children to forget. Unless and until we discharge that debt to the full we shall never redeem our shame and shall never achieve the peace with honor under which alone civilization can thrive and mankind go forward to a happier future.

Republican Party Policy

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, February 17, 1949

Mr. BUTLER. Mr. President, on behalf of the junior Senator from Nebraska [Mr. WHERRY], who is necessarily absent, and myself, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial column appearing in the Lincoln (Nebr.) Journal for February 13, 1949, discussing Republican Party policy and entitled "Who Was a Coward?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHO WAS A COWARD?

(If political moderation is cowardice, Lincoln was a coward, the editor of the Lincoln Journal maintains in the following editorial reply to a widely reprinted Omaha editorial, "God Hates a Coward," in which was urged on the Republican Party a doctrine of militant extremism.)

Those of you who are Republicans have been told lately, in the press and on the air, that God hates a coward.

You have been told that the American people likewise hate a coward.

You have heard it suggested that God and the American people take a dim view of the Republican Party because it has been the worst kind of coward, a moral coward. Too cowardly to stand up against the swift trend of the omnipotent state. Too cowardly to stand up and fight for the free Republic of the founding fathers. Too cowardly to champion the traditional glorious American creed. Too cowardly to face the foul intruder who bears the black banner of absolutism and wears the tainted label of the Democratic Party, and drive him back into the Dark Ages.

This cowardly party has lacked the courage to say what its rank and file believe, you have been told, and all because shamefully, hypocritically, it has been pleading for the votes of the rank and file.

The voice that has been telling you this is a voice that has been heard since the Republican Party began.

It does not sound like the voice of the rank and file. It does not sound like the voice of the people. For the voice of the people speaks in many tongues and many accents. It speaks in the spare words of the farmer, the hurried chopped phrase of the city man. It speaks as the housewife speaks, and the student, the teacher, the shopkeeper, the man who works with his hands, or his mind, the doctor, the nurse, the banker, the borrower. And speaking in many accents, it is not heard as harsh and resounding extremes, in shrill and impassioned unison.

It is heard rather—when it is heard—as a harmony of moderation that comes through compromise.

This voice, that designs to speak for God and His judgment, is the voice of the extremist who would destroy the democratic process of compromise and the national unity that compromise makes possible by dashing it on the sharp rock of principle as the extremist himself, and his few companions, not the people at large, conceive it.

It is the voice of the true radical.

It is the voice of the radical who would nurture the political garden by pulling the plants up by their roots.

It is the voice of the radical distrustful of the wisdom of the people on whom democracy is founded, impatient of the slowness of masses of people to reach sharp moral judgments.

It is the voice of the radical whose eye sees things only in blacks and whites, and never sees the white in gray.

It was said this past week by a man who claims titular leadership of your party that the Republican Party is divided. That was hailed as a new truth.

It has been divided since its earliest days. Today they call the factions progressives, or liberals, on the one hand, and reactionaries, or conservatives, on the other.

But in the party's earliest days—and finest hours—they called things by other names. They had their conservatives and radicals—the other way around.

They called Abraham Lincoln a conservative. Lincoln was steeped in the philosophy and ideals of Thomas Jefferson. Lincoln loved and trusted humanity, and expounded the idea that government should be not of the people, by the people, only, but of the people, by the people, for the people. Not of some people, by some people, for some people, but of, by, and for all.

Yet, deep as were his moral roots, broad as was his compassion for his fellow man, humble as was his instinct, and sure his ear for what the people thought and felt, Lincoln clung to one ideal above all others, and that was that the success and conservation of the American experiment in self-government was paramount. To this end, he was willing to let his larger moral principles bide their time.

This conservative was called a weakling of rosewater for not screwing to the sticking point, at every opportunity, his principles that told him slavery was wrong. He was called a cringing hushaby baby, and one who trailed the proud principles of the Republican Party in the dust before the foul intruder of human slavery, because he chose not to try to force events. He was accused of crawling in bed with the southern Democrats, the traitorous rebels, because he sought to foster and to preserve the essentials of broad national unity. He was called a coward because he preferred to adjust problems, even problems where high principles were at stake, rather than to force drastic divisive solutions.

And because he was a moderate conservative, lacking in crusading zeal in the face of the great issue of human freedom against human slavery, because he refused to see the traitorous southerners as all black, because he believed true freedom would be long and slow in coming and could not be forced, but should be fostered in a revengeless spirit by long, sometimes devious compromise, this me-too Republican in the White House was called a moral coward.

It was men in his own party who called this man Lincoln all that, and a great deal more. Some people called these rock-ribbed zealots who plagued Lincoln Jacobins, after that little clique whose narrow zeal for the ideals of freedom in the French Revolution had clabbered into the bloody Reign of Terror. Usually they were called radicals, and that is how history knows them.

But there were still more people in his party, in his time, and these were the rank and file, who gave Lincoln a place in their hearts for his humility and his patience, his reluctance to force events, however festering, to a head, his willingness to ally himself with God's good time, to move with it, and to abide by it.

And God's time, which he tried neither to force ahead nor to turn back, has done well by Abraham Lincoln.

Let us ask these present-day Republican radicals this:

Do the American people hate Abraham Lincoln? Does God?

And of the rank and file:

To which, in the American tradition, do you give the place of greater glory? The brittle, narrow radicalism of the fighting extremist, whose counsels divide and tear down? Or the firm counsel of moderation, anxious for the widows and fatherless in their affliction, meek with the humblest among you, patiently seeking to bind the Nation's wounds, and to further the cherished ideals of Americans, all as the ideals of one undivided people?

—RAYMOND A. MCCONNELL, Jr.

A Defense of Senator Taft

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES

Thursday, February 17, 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article headed "Defends TAFT as no ogre," by Edwin A. Lahey, published in the January 31, 1949, edition of the Chicago Daily News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEFENDS TAFT AS NO OGRE

(By Edwin A. Lahey)

WASHINGTON.—Some labor leaders have announced that they intend to knock off Senator ROBERT A. TAFT politically when he comes up for reelection in Ohio in 1950.

This is silly talk. Organized labor has been sadly kidded by the loose left-wing folklore about TAFT, who has been built up as a demon of cold reaction.

The labor leaders would do well to worry about the counterfeits in public life who profess to be their friends, and to respect TAFT for his honest refusal to talk out of both sides of his mouth.

I have myself been victimized by this folklore of the TAFT ogre, and I'd like to tell how I discovered my own delusion.

In September 1947 I was preparing to go to the west coast with TAFT, on a political trip.

Like most people who accept myths without examining them, I supposed that TAFT had destroyed the OPA, and that he had promised the people, as had other Republicans, that prices would adjust themselves if all price control were removed.

For my own background, I went to the Library of Congress and read everything that TAFT had said on the floor of the Senate about price control. It was a shock to learn that he had been bum rapped, and that I had accepted the rap as true. An afternoon with the CONGRESSIONAL RECORD proved that TAFT had never once urged the repeal of price controls. He fought for a gradual liquidation of controls. He wanted price controls abandoned selectively, and only when in particular industries there was a normal relationship between supply and demand.

This was plain horse sense and economic wisdom. TAFT was fighting for orderly liquidation of controls when the clowns around President Truman in 1946 were actually sabotaging the OPA.

The most outrageous bum rap against TAFT is his supposed hatred for workers. President Truman in his campaign, with more political guile than honesty, helped build up this myth.

Yet, when Truman in 1946 tried to get a law to draft the railroad strikers, it was TAFT and TAFT alone who blocked this police-state measure. (It is to the everlasting shame of Governor Dewey that when he recalled the railroad strike crisis, he said that the Republicans had stopped the Truman repression. Dewey completely ignored TAFT's individual contribution on that issue.)

These are only samples of the misrepresentation that TAFT has suffered.

Why doesn't he do something about this? Mainly because he's a complete wash-out in the field of public relations. He won't truckle, he won't explain, he won't polish apples with any group. He says what he's for, and he says what he's against, without quibble or condition, and if anybody misunderstands or misrepresents his position, he won't bother to straighten out the record.

Maybe labor can knock off TAFT in 1950. His margin was pretty thin in 1944. But labor will have little to boast of when they knock off an honest, independent conservative whose greatest weakness is his inability or his unwillingness to cope with the TAFT myth that the left-wing has created.

Presley D. Bowen

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Thursday, February 17, 1949

Mr. O'CONOR. Mr. President, one of the less publicized but important functions of the Federal Government, I dare say, is that of the Federal Assay Commission, established under the Bureau of the Mint, the duties of which consist in supervising the check of the Nation's mints and their products.

Its first official act was the selection of a chairman; and it is gratifying to report that from the entire membership, this representative group from different parts of the United States selected an outstanding citizen of Maryland, Presley D. Bowen, of Baltimore, as its chairman. Mr. Bowen is a successful and highly respected insurance executive, and he presided over the sessions of the Assay Commission in his usual efficient manner.

The Commission has just concluded its meetings in Philadelphia. I ask unanimous consent to have inserted in the Appendix of the RECORD the report of those meetings as published in the press.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOWEN CHECKS THE MINT, FINDS COINAGE UP TO PAR

(By Jacob Hay)

PHILADELPHIA, February 10.—If Baltimore's nickels, dimes, and quarters aren't up to snuff during the coming year, Presley D.

Bowen had better head for the swamps and fens of the eastern shore.

Mr. Bowen, who supplies the name Bowen to one of Baltimore's larger insurance agencies, was yesterday named chairman of the Federal Assay Commission, a group which has the job of checking up on the Nation's mints and their production.

The assay commission met in the Philadelphia Mint at the order of President Truman, who appoints its members.

A SHORT CHECK

Their job, which began yesterday and is scheduled to be completed today, was explained to the commission members by Mrs. Nellie Tayloe Ross, Director of the Mint. After the explanation, Mrs. Ross introduced the members to one another. Mr. Bowen's election to the chair followed.

The commission met in a vast and ornately decorated chamber in the mint and conducted its business under the stern eyes of some two dozen oil portraits of past directors of the Nation's coinage.

Back in the bad, old days the commissioners would have been able to enjoy some real sport, for they were once empowered to recommend the death penalty for crooked mint officials. The "to-suffer-death" clause was removed a number of years ago when it became apparent that the people who run the country's mints were painfully honest.

A NOTABLE COLLECTION

Working with Mr. Bowen were such persons as Dr. Edward U. Condon, Director of the Bureau of Standards, and Mrs. Pearl Mesta, the Washington lady who has gained no small fame as a giver of notable parties.

There was also an assortment of women civic leaders and gentlemen civic leaders from far-off places like Kansas City, Mo., and Bernardsville, N. J.

Dr. Condon brought along the standard weights against which the coins to be checked were weighed.

Arriving several minutes late, the doctor, who wears a crew cut and blue serge suits, told Mrs. Ross that this was the first time he had ever judged coins and that he did not know whether he would enjoy himself.

A BRAKE ON WORRYING

The idea is, Mrs. Ross told the commissioners that the public won't get to worrying about whether their coins are worth anything—a common cause of depression in countries like Bulgaria and Pakistan, where there are no Federal assay commissions.

Americans don't go around biting their coins, Mrs. Ross said, because they know that some leading citizens gather every year to make sure that the mint officials haven't been slipping in old tin cans instead of honest silver.

Set up in the Commission's meeting chamber were a counting machine and a balance. It was Mr. Bowen's job to divide his group into three committees: one to count the coins to be tested, one to weigh the coins, and another to watch the actual assaying.

TOUGHER THAN INSURANCE

"This," muttered Mr. Bowen at one stage in the proceedings, "is tougher than the insurance business. Also it is the last thing I expected."

From every 10,000 coins minted in the country's three mints, at Philadelphia, San Francisco and Denver, the mint superintendents pick one at random. This is sealed in an envelope and sent to Philadelphia for the annual check.

This year's total amounted to 74 half dollars of the regular variety and six Booker T. Washington commemorative half dollars, 6,896 quarters and 16,332 dimes.

157 YEARS IN THE CLEAR

The Assay Commission picks coins at random from these and checks them for fineness and weight. In the 157 years since the Assay Commission was established, nobody has ever found any funny business going on in the mints, Mrs. Ross said.

Carrying his office like a true Baltimorean, Mr. Bowen never wilted his collar in yesterday's bustle, and at the end of the proceedings, his natty gray business suit bore its knife-edge creases as freshly as when the day began.

"Somewhere along the line," he said to Mrs. Ross, "we're related to Alexander Hamilton, but I never thought it would come to this."

A MESSY BUSINESS

Mrs. Mesta, who wore a black dress and a fur hat for the occasion, began looking bored shortly before noon but brightened considerably when one of the mint officials suggested that she might enjoy watching the test coins being melted down.

A lady commissioner who had attached herself to Mrs. Mesta for the day said: "My, but we're in a messy business." Mrs. Mesta nodded.

Today's session sees the Commission's report on last year's coinage completed and signed. When the commissioners have signed, they are given a medallion commemorating the event.

In addition, they receive $10 for each day's service. Plus, of course, the honor and a great little story to tell the grandchildren.

Annual Report of Madison County Soil Conservation District

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. TRIMBLE. Mr. Speaker, I have received the following report from Ewell E. Boyd, secretary of the board of supervisors, Madison County Soil Conservation District, and under leave to extend my remarks in the RECORD, I insert this report:

MADISON COUNTY SUPERVISORS' ANNUAL REPORT, 1948

The Madison County supervisors have had one or more members present for each of the 12 monthly meetings. There have been 6 meetings with quorums to perform the necessary new business that might come up that would require a quorum.

In June a conservation tour was made with only one supervisor present, namely, A. H. Berry. The visits included some very creditable conservation work on farms under district agreement.

The outstanding piece of work done by the supervisors was the soil and soul Sunday program. Each took his responsibility and helped to make this a very creditable day for conservation. Much material was distributed to the preachers of the district which was of value to them in preparing their conservation sermons. The articles that were given to the ministers consisted of the following: No Man Layeth It to Heart, The Earth Is the Lord's, and The Lord's Land.

On Monday, November 15, the Bermuda sprig sodding machine was demonstrated at Harrison, Ark. Mr. J. M. Parker, chairman of the board attended with the work unit conservationist and other invited guests.

Mr. Jim Anderson was the only supervisor to attend the State supervisors' meeting in Little Rock on December 3.

Unfortunately, two supervisors in this district have resigned during the year. Mr. Afton Wheeler, secretary-treasurer of the board of supervisors, has moved out of the district and Mr. Jim Anderson's health was such that he was unable to attend the meetings and carry on his work as a supervisor.

The Conservation Leaders' Training Day held at the American Legion hut on February 24 and which is held annually was a very successful meeting this year. (See exhibit A.)

The district received from the Soil Conservation Service technical assistance in the amount of 56 percent in 1948 of that received in 1947. This was brought about by two causes. First, additional districts being organized in the State; second, reduction in funds received for the Soil Conservation Service. This is regrettable and we hope that additional personnel may be forthcoming in the near future.

SEED HARVESTED

The supervisors of the Madison County Soil Conservation District, realizing the need for more vegetative cover and the shortage of seed on the market, have encouraged the farmers of the district to harvest seeds for the purpose of seeding additional acreages on their own farms and for furnishing seed to their neighbors. During the year 1948 cooperators with the district harvested the following seed: 35,582 pounds of orchard grass; 95,445 pounds of Korean lespedeza; 20,000 pounds of Sericea lespedeza; 1,400 pounds of red clover; 1,316 pounds of hairy vetch; 200 bushels of rye and vetch mixture; and 800 bushels of traveler winter oats. Noncooperators within the district harvested: 5,516 pounds of orchard grass; 23,535 pounds of Korean lespedeza; and 2,420 pounds of red clover. Supervisors harvested 4,000 pounds of Korean lespedeza. All this is thrasher- or combine-run seed.

Supervisors practice what they preach. The following is a report of work being done on the farm of A. H. Berry, supervisor of the Madison County soil conservation district:

"My home is at Hindsville, Ark. My wife and I live on a small farm here, where we have lived for the past 30 years, having reared our two sons on this farm. They now have families and homes of their own, joining our home and farm, so we all work together and are trying to save and preserve the soil on these three farms (now in one) as best we can.

"These farms were all in badly eroded condition when we took over, and needed much conservation attention. We all have agreements with our soil conservation district and have been greatly helped by its advice and service. We have terraced some of the fields, have constructed two ponds as part of our soil-conservation program, but want and need more terracing and two more ponds—mainly on the last farm purchased, joining my home on the east.

"We keep most of our land, 290 acres, in grass. We have a small herd of Hereford cattle which is raising some 20 head of calves each year and it takes grass and hay for them. Our pasture grasses have been mostly lespedeza, orchard grass, and rye grass. We grow a little wheat some years and several acres of oats each year, this we feed the calves and other stock that need grain. Some years we grow a small acreage of corn to help feed out the meat hogs—had some 3 acres in 1948, farmed on the contour and gathered over 150 bushels.

"A good portion of the land was limed the past year and we fertilize all seeded small grain crops, also the meadows, and find it pays well.

"Eleven acres were sown to alfalfa and orchard grass last fall and some fifty-odd acres were sown to orchard grass which will also be overseeded to lespedeza.

"We thrashed some 4,000 pounds of lespedeza seed last fall from 10 acres and will reseed all pastures this spring with it and orchard grass. We also seeded 2½ acres to Kentucky Fescue the past fall and are look-

ing forward to the possibilities of this new grass.

"The Soil Conservation Service and the triple A advise mowing pastures, so we do. I mowed some 100 acres of pasture in 1948.

"These are some of the things being done on our farm. By our better farming, our neighbors and most all in the community are falling in line trying to comply with the needed conservation program for their farms and appreciate the Soil Conservation Service for their help in our district work.

"A. H. BERRY,
"Member, Board of Supervisors, Madison County Soil Conservation District."

STORIES OF ACCOMPLISHMENTS IN THE MADISON COUNTY SOIL-CONSERVATION DISTRICT IN 1940

Eugene Holloway, of the Alabam community, and a cooperator with the Madison County soil-conservation district, bought an abandoned farm about 3 years ago, and now has it in fair production shape with a prospect of reaching top producing levels in the near future.

Mr. Holloway is a World War II veteran and, like many ex-GI's, came home with new ideas and a determination to make his home as convenient, his farm as attractive and productive as those he had seen in other places.

One field on the farm consisted of about 12 acres and was badly damaged by sheet and gully erosion. Some of these gullies were as much as 5 to 6 feet deep and 10 to 12 feet wide. Mr. Holloway made application to the Soil Conservation Service for assistance and advice in working out a soil-conservation program for his farm. A technician was sent out and, together with Mr. Holloway, planned a complete conservation program for his entire farm.

The large field presented a difficult problem. The soil was of a loose, sandy nature that is easy to erode, yet there was very little slope to the land. It was decided that the field should be terraced. The first thing Mr. Holloway did was to take his team and start plowing in the gully banks. After this he spread barnyard manure over the entire area and seeded it to Balboa rye, hairy vetch, orchard grass, and lespedeza which are all very good soil-building crops.

The next year, however, he got a very poor stand and very little growth, so he decided that building terraces was the only solution to his problem. With the small tractor he had purchased in the meantime, he again started plowing in the gully banks, sloping them to fill in the center as much as possible. Then the terraces were started with large terrace fills across the gullies. From the lack of moisture in plowing up the terraces, the soil became quite loose, thus preventing completion of the terraces before spring work came along. So he applied 200 pounds of 4–12–4 fertilizer per acre and seeded the field to meadow grasses. We had a very good season and the terraces helped to hold the moisture on this field so an excellent growth was secured for a first-year seeding. He harvested 1½ tons of hay per acre, where the year before he had harvested only 1 ton of hay from 6 acres. This spring Mr. Holloway expects to complete the present terraces and construct several more in the lower part of the field.

Paul Smith, of Hindsville community, who owns and operates 760 acres of land and operates 320 acres more all in the Hindsville Valley, is a cooperator with the Madison County Soil Conservation District.

Mr. Smith has what might be called a grass farm; however, he does raise some grain crops. When old meadows are plowed up, he usually puts it in corn on the contour, followed by barley overseeded with orchard grass and alfalfa. Paul likes to have a perennial legume with his orchard grass, because the nitrogen added to the soil by this legume crop increases the growth of his orchard grass and in turn increases the amount of seed he is able to harvest. The orchard grass and alfalfa stand will last from 5 to 10 years. The corn is usually cut off early to fill his pit silo, allowing early planting of the barley which makes an excellent green cover crop throughout the winter and spring months.

Mr. Smith has 500 acres planned for permanent pasture. Grasses used in the permanent pasture are Bermuda grass, orchard grass, red top, blue grass, Korean lespedeza, hop clover, white clover, and Sericea lespedeza. To date he has sodded approximately 60 acres of Bermuda as a permanent base grass, the most of which has been sodded with corn planted on the contour. He also has about 300 acres in grass and legume for hay and seed harvest. Paul's interest in Sericea lespedeza has grown after 2 or 3 years of experience with this relatively new crop in the Madison County Soil Conservation District. He seeded 20 acres about 6 years ago. For the first two seasons he threatened to plow it under, but after serious consideration he decided to give it one more chance. The third season he got one hay crop and a good seed crop from it. This started Mr. Smith to praising Sericea, and now he has increased his acreage to about 70 acres. He tells the following story and swears by it:

"My hired hand who was feeding a group of Black Angus steers told me that the steers ate the Sericea lespedeza better than they did the alfalfa. I couldn't believe it so I went over to the barn at feeding time to see for myself. The barn has feeding sheds on both sides. On one side we had alfalfa and on the other we had Sericea lespedeza hay. Grain was also fed along with the hay. As soon as the grain on the alfalfa side was eaten the steers moved to the side where the Sericea lespedeza was being fed and would clean up every bit of it before they would touch the alfalfa." Now Paul says that Sericea cut and put up at the proper stage is hard to beat.

In 1948 Mr. Smith harvested approximately 1,000 bushels of orchard grass seed, 20,000 pounds of Sericea lespedeza seed, and approximately 20,000 bales of hay. Besides this cash income he has ready for market around 100 head of White Face steers, which have utilized the good pasture and hay produced on his farm, along with 200 head of hogs each year.

Mr. Smith is also a firm believer in the use of fertilizer and lime. He has limed practically all of his land and is a consistent user of commercial fertilizer, and spreads many tons of barnyard manure each winter from the corrals where his steers have been fed.

We cannot emphasize too much the fact that feeding the land is as important as feeding your cows and hogs, and using soil-conservation practices just as you would build a fence or corral to keep your cattle where they belong.

Flood Control, Soil and Water Conservation

I have for the last 15 years been learning my A B C's on the above subject, but the last year, I believe, has taught me some things that may some day get me out of kindergarten. There is so much to learn and so little time to practice it and put into effect what we take a lifetime—no, generations—to learn. If this were not so and our forefathers had seen what we now know to be hard facts, we would not be so hard pressed for time in which to correct what should never have been allowed to happen.

We are told in the Bible that God created the heavens and the earth and after that man to dwell thereon. He divided the land and the sea that we might have abundance of soil and water, but how well we have taken care of the trust placed in us is becoming clearer every season as we see our land disappearing into the sea never to return to us.

In my lifetime of over a half century, I cannot remember how many millions of Chinese have starved to death every year. As a child I thought it awful and could not understand how any country would allow such things to happen. Later I took it for granted, but only in the last decade has it come to most of us that it was impossible to raise enough food there to feed them. Why? It being one of the oldest countries on the face of the earth to be cultivated and their having no thought of the soil—of conserving their own source of subsistence—came to grief early in terms of our own civilization.

We are, or have been until recently, following in their footsteps and will, unless and until we wake up, have our own diet to worry about, not mentioning what will happen to our children, grandchildren, and others.

We have all heard the expression that we are the victims of our own folly. I think this applies very well to our time and conditions. We are told that the world population is increasing at a more rapid rate than ever before. This is due to several factors. First, so many countries are at their lowest ebb in years in the bare necessities of life and we are told that this makes for more births. Second, in the case of the United States there is always an increase of births during war years, also science has added something over 20 years to our life expectancy through medical science. Because of more population we have to produce more food. Since our own country was not torn to shreds by World War II, it has fallen on us to assume the burden of feeding, or helping to feed, the larger part of the world and hence our land has and is being taxed as never before. True we have lived up to that assignment but at what cost. Our land is being plowed in many cases to produce the most now without regard to the future. Examples: dust storms and erosion by water on sloping lands that should never have been plowed in the first place.

In my active participation the past year in flood control as a member of the Arkansas Basin Association, several things have become much clearer to me. We worked at first for river navigation, we have found that it will take power dams to do that. All right, then we worked on power dams and find that if not supported by silt dams they will, in time, be rendered useless by filling up with silt. Then we began to see what would be the locations best suited to place these silt dams and complete our program of navigation but, lo and behold, why would not these silt dams fill up? We had to start all over again on how to protect the silt dams. It led us right back to the top of the hills at the headwaters of our streams, but that was not enough. There was a watershed that included little branches coming into creeks or directly out of our own fields and pastures. But this was not enough. We found that all of our farms sloped somewhere. Now, we were beginning to get to the top of the proposition rather than to the bottom of it. We are now above all feasibility of dams to hold the soil. It is now a difference of procedure. We must include the building of terraces or, where not so steep a slope, contouring, planting of grasses to hold the soil, or the planting of trees.

To me, this is a sound program, but it is a lot of idle talk unless we are all going to do our part, for this means every acre of every farm is affected if we expect our offsprings to survive.

It is an established fact that one-third of our topsoil has already been depleted, having gone downstream and can never be recovered. In other words, out of the average of 9 inches of topsoil over the United States, we have an average of 6 inches left. That don't mean that all of our land has just 6 inches, as some has far more than that, but it also means that some of our land is already completely denuded of any topsoil, which is worse than if we all had the 6 inches, for then all of the land would produce, providing we could hold

it at that figure, but since some has no soil we have to overproduce the good soil left.

If we get busy now and start at the top and make this our slogan: "Keep the soil where it is and the water where it falls," we can, within a far shorter period than you realize, stop silt from silting our small dams, thereby stopping our power dams from filling up and thereby stop the silting of our Gulf port. We will not be losing the equivalent of a $10,000 farm every 30 minutes of the day and night. Neither will our port city have to ask again for hundreds of millions of dollars to open 100 miles by dredging to be able to reach a gulf that has wandered that far from home by our neglect in letting it get away in the first place. I don't want to help build any more silt lands in the Gulf of Mexico. I am a stingy guy.

F. C. HOWARD,
Chairman, Madison County Committee, Arkansas Basin Association; Executive Director of Arkansas-White River Basin Association.

EXHIBIT A

TENTATIVE PROGRAM, MADISON COUNTY SOIL CONSERVATION DISTRICT

Conservation leaders' training day, February 24, 1948

Legion Hut, Huntsville, Ark. Jim Parker, chairman, board of supervisors, presiding.

10 a. m.: Meeting called to order, Jim Parker, chairman. Invocation, Rev. R. W. Jones, Baptist minister. Welcome, Afton Wheeler, secretary-treasurer.

10:15 a. m.: Flood Control, Soil and Water Conservation, F. C. Howard, chairman, Madison County Flood Control Association.

10:45 a. m.: Motion picture.

11:15 a. m.: What Are We Spending for Conservation? John I. Smith, secretary-treasurer, National Farm Loan Association, Fayetteville.

11:45 a. m.: Announcements.

12 noon: Lunch.

1:30 p. m.: Discussion of conservation problems and experiences led by A. H. Berry, supervisor.

2 p. m.: Conservation Job Ahead, Lloyd J. White, work unit conservationist.

2:30 p. m.: Motion picture.

3 p. m.: Summarizing high points of the day, J. E. Critz, district conservationist.

3:30 p. m.: Benediction, Kermit Vanzant, Methodist minister.

Adjournment.

WORK RECORD

District: Madison County. Soil conservation district 28. State: Arkansas.

Headquarters: Huntsville, Ark. Period from January 1 to December 31, 1948.

RESOLUTIONS

We, the board of supervisors of the Madison County Soil Conservation District, have today, February 8, 1949, passed a resolution approving the material herewith submitted as the annual report of the Madison County Soil Conservation District supervisors for the year 1948.

Respectfully submitted.

EWELL E. BOYD,
Secretary.

Approved:

JAS. M. PARKER,
Chairman.

Other member:

A. H. BERRY.

Appointment of Negro to Raleigh (N. C.) School Board

EXTENSION OF REMARKS
OF
HON. J. MELVILLE BROUGHTON
OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, February 17, 1949

Mr. BROUGHTON. Mr. President, 2 days ago the commissioners of the city of Raleigh, the capital of North Carolina and my native city, elected a Negro as a member of its school board. As an indication of how we are solving the race problem without Federal action or outside interference, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Raleigh News and Observer giving an account of the appointment.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEGRO ATTORNEY NAMED TO BOARD—F. J. CARNAGE PICKED BY CITY COUNCIL AS FIRST NEGRO MEMBER OF SCHOOL BOARD

(By Bryan Haislip)

F. J. Carnage, local Negro attorney, yesterday was unanimously chosen by the Raleigh City Council to serve a 6-year term as a member of the city school board.

It marked the first time in the city's history that a Negro has been appointed to such a position, city officials said. State education officials, while they could not be certain, expressed the belief that Carnage would be the first member of his race to serve on a school board in North Carolina.

Mayor P. D. Snipes recommended the lawyer for the position to succeed Mrs. W. B. Aycock, whose term expires on March 1. Mrs. Aycock, Mayor Snipes said, had stated that she will be unable to serve another term on the board. Mrs. W. C. Pressly, whose present term also is expiring, was named to succeed herself.

Mayor Snipes, who serves as an ex officio member of the school body, said that the board felt there should be a Negro representative among the group. "He has the respect and confidence of both races and is thoroughly capable," Snipes said. "I believe that he will make a most successful board member."

Council members favored the recommendation, presented in a motion by Joe S. Correll, and approved it unanimously.

Carnage, a native of Thomasville, Ga., has lived in Raleigh since his graduation with a law degree from Howard University in Washington, D. C., in 1926. He has been active in civic affairs and ran for a position on the city council in the election of 1947, reaching the final run-off. He is a member of the Lucille Hunter School PTA, where his 9-year-old daughter, Lillian Elizabeth, is in the third grade.

Several city Negro organizations have pressed for representation on the school board. Carnage had the recommendation of both organizations and individuals, Snipes said.

"I am highly honored," Carnage said when informed of his appointment. "I shall certainly do my best to live up to the honor and serve the people of Raleigh."

He is the second Negro to serve in an appointive official municipal capacity. P. R. Jervey, Negro newspaperman, was chosen as a member of the city recreation commission in 1947. He was succeeded by Dean Nelson Harris, Negro citizen, on July 1, 1948.

Other members of the Raleigh School Board are J. D. Clark and H. C. Gillis, whose terms expire in 1951, and Lewis H. Powell and Mayor Snipes, who will serve until 1953. The terms of Carnage and Mrs. Pressly will run until March 1, 1955.

Council Member Fred Fletcher hailed the assignment of Negroes to further responsibility in civic affairs and predicted that Carnage would make a successful start in that direction. Other members expressed satisfaction with the appointment.

The 49-year-old attorney has practiced law here for more than 15 years. His wife, Mrs. Mary E. Carnage, is a former teacher of home economics at St. Augustine's College here, and they live at 1117 East Martin Street.

Senator at Large

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, February 17, 1949

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senator-at-Large," published in the Boston Post of February 16, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR-AT-LARGE

Unnoted and unmarked, an interesting, if not important anniversary occurred in Boston yesterday. Just 125 years ago, in famous Faneuil Hall, John Quincy Adams was nominated by the Federalists as their candidate for President of the United States.

Adams, one of the most brilliant men ever to sit in the White House, was opposed in the election by Andrew Jackson. Jackson received more electoral votes but not enough to win. The election was thrown into the House of Representatives and Adams became the sixth Chief Executive of the Nation.

As President, Mr. Adams was independent in his thinking. One term was all that he could obtain. Therefore, he returned to Quincy, to write in his study and prune the trees on the Adams farm. He was full of honors. He had been President, United States Senator, Secretary of State under Monroe, as well as envoy to the courts of the Netherlands, Russia, France, and England.

Yet 3 years of the bucolic life was enough. He heeded the call of constituents, ran for and was elected to the National House of Representatives. He served there 17 years, his span terminated when he died of a stroke in the House at 80. During those 17 years his vast wisdom and experience proved invaluable to fellow legislators.

Adams was not the only ex-President who returned to Washington. Seven years after Andrew Johnson completed the second term of Abraham Lincoln as President, he was elected United States Senator from Tennessee. He was willing to serve. But after a few months death cut short his political career.

Pending at the moment before Congress are two bills, one introduced by Senator BREWSTER, of Maine, and one by Representative CANFIELD, of New Jersey. The bills have the blessing of Senator TAFT, of Ohio, and Senator SMITH of Maine. Both would automatically make an ex-President a Senator-at-Large without a vote.

Theodore Roosevelt became an ex-President when he was 49. Grant was 54. Hoover was 58. Cleveland was 59. Washington was 61. Coolidge was 56. These men being willing, did the Nation lose the benefit of their experience and counsel when they might have served as elder statesmen in Congress? Today, at 75, ex-President Hoover is doing a momentous and invaluable job of reorganizing the Government.

The proposal of Senator-at-Large is revolutionary in our governmental system, but so was the popular election of Senators and the limitation of a President to two terms, which is now nearing passage. When Churchill stepped down as Prime Minister of Great Britain, he did not retire. As a member of Commons his nation still has the aid of his eloquence and training. Senator-at-Large for the United States has merit. It warrants consideration and support.

The Law Profession and General Education

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, February 17, 1949

Mr. PEPPER. Mr. President, one of my very able friends and one of the prominent and distinguished citizens of Florida, Hon. J. Velma Keen, of the Tallahassee bar, delivered an address entitled "The Law Profession and General Education," which I believe to be so meritorious that it might well be read by all those who have access to the CONGRESSIONAL RECORD. So I ask unanimous consent that this very profound address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LAW PROFESSION AND GENERAL EDUCATION

(By J. Velma Keen, of the Tallahassee bar)

General education has the responsibility of developing the pattern of conduct of the person who would be a member of the law profession, furnishing the background information and the broad outline of aims and objectives for the productive life of the lawyer. It is not, however, the responsibility of general education to provide the technical and professional information necessary to practice law.

We inquire as to the qualities that should be possessed by one who aspires to wear the mantle of the law profession.

First. He must believe with great zeal that his status in society imposes upon him the opportunity and duty to protect and nurture the democratic way of life. He must entertain the strongest possible respect for the civil, economic, social, and religious rights of the individual in his person and his property. He must be tolerant of others and their errors without sacrificing the high principles of democracy. Making and acquiring money must be secondary to his social responsibility. Money will flow to him from the proper pursuit of his profession. He who would amass a fortune should avoid being a member of the law profession. It is often said that the successful lawyer works extremely hard, lives well, and dies poor.

We believe in democracy and the freedom of the individual that attends its practice. The importance of each individual in our society is often pointed to as a primary characteristic of our form of Government. We are not all created equal, but democracy in its best American tradition guarantees to each individual an equal opportunity to make the most of our unequal talents and abilities.

Six democracies of the past have been destroyed by internal causes but only two have expired at the violent hand of the invader, The citizens of Rome voted away their liberties in the age of Augustus. Florence by strictly constitutional methods placed the Medici family in complete power, thus insuring the speedy demise of Florentine democracy. In Venice a small group of powerful citizens, through the practice of fraud, corruptly purchased enough votes in the popular legislative body to turn the country peacefully over to a dictator. The First Republic of France naively invited Napoleon Bonaparte to become Consul and Emperor under the false hope that this dictatorship would save the democracy. The citizens of Italy with wild expressions of joy marched to the polls to fling away their democracy in exchange for the dictatorship of Mussolini. The voters of the Weimar Republic of Germany, by an overwhelming vote at the polls, destroyed what little democracy they had and invited the horrors of Hitler in the hope of better economic and social conditions. Only Athens and the Third Republic of France succumbed to violence from outside and then principally because of their weakened internal conditions. The Macedonians overran Athens and Hitler the Third Republic of France.

History points to the tragic fact that in times of great economic stress enemies of democracies have too often been successful in persuading its citizens to exchange liberty for proposed security. Hunger demands bread, not platitudes. Democracy cannot operate without intelligent direction from its leaders. With appropriate modesty it can be said that lawyers are generally as well or better equipped to render this service than any other group of citizens. Therefore, the lawyers have much greater responsibility in this respect than do other members of a democracy. It is a solemn duty of one who would become a lawyer to recognize and accept this grave responsibility early in his prelaw training.

Democracy in our country, particularly in times of economic dislocation, is more vulnerable to death by vote of the people than by the strength of a foreign conqueror.

He who would fulfill the highest duty of the lawyer must understand democratic practices, its precepts, and be willing to give freely of his talents, time, worldly goods, and best thought to protecting it and insuring its sound and sturdy growth.

Second. He must develop the ability to work well and effectively with other people. This assumes independence of thought with tolerance for the views of others, social ability, emotional stability, self-reliance, reliability, adaptability, industry, honesty, and good sportsmanship. Great learning and lofty ideals will be of little value to a person without the capacity and ability to translate them into accomplishments through contacts with other people.

Third. He must have good health. Effective living is greatly diminished by a sick and ailing body. It is generally agreed that the physical condition of a person materially influences his thinking and conduct. The temple that houses a good mind and a noble spirit deserves the best care and consideration. The strenuous and exacting life of a lawyer demands a well body with an almost inexhaustive supply of energy.

Fourth. We must have an inquiring attitude. The desire for truth should be high on his list of essentials. Refusing to accept

theories or statements without sound proof or logic, yet tolerant of the views and beliefs of others, he must be willing and ready to toil long hours to satisfy his desire for truth. Curiosity may have caused the demise of the cat but we have no record of a lawyer dying from this cause.

Fifth. He must have such specific information and skill as can be acquired during his general education period which will contribute to his profession. For example, the lawyer needs basic accounting and public speaking.

Sixth. He must be a person of deep human sympathies and understanding. His work and conduct should be directed to serving human beings. Institutions and systems are of importance only when their use improves the lot of individuals. Progress in this direction is often discouragingly slow because of ignorance or selfishness or both. The bright light of faith in the value of man must burn vigorously in the breast of the lawyer. The lawyer is called upon to be a skilled practitioner and is frequently expected to act as business doctor, adviser on intimate marital relations, and consultant on public relations. His knowledge of history and human experience must be broad and his sympathies attuned to mental and spiritual misery and misunderstanding. Such a man is humble and tolerant, but a tower of strength for those whom he serves.

Seventh. He must have an analytical mind. He must have the ability to analyze facts in terms of their origin and their present and future significance, at least to the extent of his experience and learning.

Eighth. He must know and understand the use of the English language. A large part of the work of a lawyer is expressed in speaking and writing, both of which require the use of the English language. The success or failure of the lawyer, perhaps more than other man, is measured by his ability to effectively use the English language.

Ninth. He should be a religious man. The lesson of history is that those who have influenced humanity, or segments of humanity, for good have been religious men. To have a satisfactory life a person must know, and at least at intervals, experience inward tranquility. This comes only to the person who feels a unity with God. Great strength and power is his who knows and practices this inner tranquility.

How can general education best serve the person who aspires to be a lawyer?

First. Aptitude tests and examining board.

Every person who would be a lawyer is not properly equipped educationally, temperamentally, mentally, or morally to enter the profession. The successful lawyer must have certain definite characteristics, as we have already indicated. If the prelaw student does not, at least, have the capacity to develop these characteristics, to the minimum degree necessary for a reasonably successful career, it would be the part of wisdom to so advise him and thus save the time and money, if nothing more valuable, of the student and the university. This could be accomplished by adequate aptitude tests and a careful examination by a board composed of competent and sympathetic persons. The members of such a board might be an outstanding psychologist, lawyer, judge, clergyman, and businessman. In addition to being an examining board it could also furnish guidance for the improvement of the applicant and student. If the applicant is recommended by the board, he would be admitted to the courses designed to further develop the desired characteristics. This board or another board would make such additional examinations of the student from time to time as might be found desirable, with a required final examination immediately before the student is scheduled to enter law school.

Second. Courses designed to develop a love for and understanding of democracy, and to define and promote the common good.

Courses in world political, social, and economic history, with emphasis on the democracies and the other specific forms of government, as well as courses in political science and economics, should be required. The theory of each type of government and its practice should be thoroughly understood and compared. The economics of a country influence its form of government and therefore should be studied by the prelaw student. Citizens haunted by the fearful specter of economic insecurity are an easy prey for those who promise immediate relief. The democratic way of life can be quickly exchanged for apparent security and an autocratic government. The mechanics of the service of a citizen in a democracy should be taught with a view of inspiring the student with the desire to take an active part in the operation and preservation of a democratic government when he becomes a lawyer. Freedom can best be preserved by one who understands its functions and the attendant evils of its loss. The properly trained lawyer is preeminently qualified to furnish leadership in this field. His knowledge and understanding of the value of democracy as compared with all other forms of government and his zeal for its perpetuation should come primarily from his prelaw training.

Third. Efficient use of the English language.

Every lawyer should be able to use language effectively. The prelaw training should encompass a general knowledge of the origin of our language—Latin, Anglo-Saxon, and Norman French—and a thorough understanding of English grammar, reading, spelling, poetry, public speaking, logic, and the great literature of the world, with emphasis on American and English literature. Most prelaw students are deficient in their ability to read and many are not good spellers. These are defects that must be corrected in prelaw training. The ability to think and express thoughts logically is an indispensable tool of the lawyer. In addition to speaking and writing correct English, a student should be taught to speak and write interestingly. Bare facts are often not enough. Even the dry bones of the law may be brought to life in a vivid description of their dust. Interest should be added to English courses by the study of the lives and speeches of great lawyers and important opinions by great jurists. The English courses should be given a place of first importance and should be pursued with vigor throughout the prelaw period. An intimate knowledge of the great poetry of the world is a mark of the educated man. The poet often sees and expresses in clear and interesting form the fundamental truths, hopes and aspirations of the human race. Prose writing never reach the height of imagination, beauty, and grandeur of great poetry. All human experience and ambitions find their highest and most poignant expression in poetry. The lawyer will find in the poets an ally and in poetry an arsenal for ready and effective use for important occasions. Personal pleasure and exercise in flights of the imagination are his who consorts with the poets. If he would "lift wing—fly—clutch great battlements, and walk legendary floors he must know and love poetry. (Sonnet from Beauty in Exile, by Arthur Davidson Ficke.)

Fourth. Courses designed to develop ability to work with others.

Courses in psychology and its practical daily application should be required of the prelaw student. Individual and group reactions should be understood and the rules applied in actual living. Good manners are based on a genuine consideration for others and should be taught in every class and activity. The student should have good manners when he enters the university, but the fact is that many do not. This condition must be recognized and corrected in the courses designed to help the student get along well with other people. The lawyer must be a salesman of high ability. He sells to other people. Clients do not seek out the misfits, the contentious and contrary, the selfish and the bad-mannered lawyer. With equal ability, the lawyer who has an attractive personality and inspires confidence will succeed when the recluse, the ill-adjusted, the contentious, and the bad-mannered will fail dismally. In the prelaw courses emphasis must be placed on developing a good personality. Much practice in applying the rules will be gained from clubs, forums, games, and other student activities. Encouragement should be furnished each student to take an active part in student activities. Careful supervision of these activities will accelerate the learning process, particularly in the field of satisfactory human relations. The prelaw student who completes his course without the ability to get along reasonably well with and inspire confidence in others should look elsewhere than the law for his vocation.

Fifth. Good health is essential to the lawyer.

Blackstone spoke from deep experience when he said, "The law is a jealous mistress." The quotation applies to the health of the lawyer as well as to his intellectual interests. No person can adequately serve the law who has a sick or unsound body. Well-directed courses in physical education, including the effect of emotions and food on human health, will give the prelaw student necessary information and develop habits that will insure a healthy body for vigorous living.

Sixth. Skills for the profession.

General education can furnish the student with certain skills and general technical information that will be useful to him as a lawyer. Examples are:

1. The ability to speak well in public.
2. The ability to reason and to think.
3. Basic accounting.
4. History and general practices of management—labor relations.
5. General principles of business management, including the corporate mechanisms.
6. General principles of various types of insurance. Aside from the skill in public speaking and in reasoning and thinking, the training should be of general nature and should not cover more than two quarters of a school year and preferably one quarter.

Seventh. An inquiring attitude and analytical mind.

Every lawyer should have an inquiring mind and enjoy intellectual pursuits. Thorough investigation of the subject is a characteristic of the good lawyer, an eagerness to exhaust the sources of knowledge in the matter under consideration is one of the hallmarks of a careful practitioner. This inquiring mind is sometimes referred to as the scientific mind; one that takes nothing for granted but measures all facts by the scientific yardstick. The courses of the prelaw student should develop these characteristic. Perhaps courses in biology, physics, or chemistry, and courses in logic and in analyzing problems of human conduct would develop the ability to analyze facts in terms of their origin and their present and future significance, as well as help develop the inquiring mind.

Eighth. The development of human sympathy and understanding.

All courses, to some extent, contribute to development of human sympathy and understanding. The social sciences, with emphasis on sociology, should assume first place in obtaining this objective. Some of the specific matters to be considered are:

1. Community relationships such as the individual and: (a) the local government; (b) civic clubs; (c) chamber of commerce; (d) church and school.

2. Christian ethics. Personally I would recommend a course in Bible, with particular emphasis on the book of Proverbs. The study

of a course in Bible may not be practical in a State institution, but there can hardly be objections to a course in Christian ethics. This training I consider basic.

3. Family relations.
4. Social effects of taxation.
5. Social effect of advertising.
6. Housing.
7. Social security.
8. Minority groups.

Ninth. Religious development.

Here again many courses of the prelaw student will furnish help. The world's great literature and art bear evidence of the faith of the human race in God as a source of power beyond the individual. Science carries forward this faith. The social sciences spring largely from the influence of the religious impulses of man. Philosophy in the main is the effort of man to discover a satisfactory system of daily living. If it is not necessary to have specific courses on this subject, then related courses should be designed to make it possible for the student to develop a closer relationship with God. Inward tranquillity is "the pearl of great price" and is more to be desired for satisfactory living than great riches.

Industrializing and Exporting to Nonindustrialized Areas

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, February 14, 1949

Mr. FLANDERS. Mr. President, President Truman in his inaugural address made some proposals looking toward the exportation of American industrial ability and equipment to the undeveloped parts of the earth. I think, therefore, it would be very useful to have printed in the Appendix of the RECORD a highly intelligent article by Mr. George H. Houston, entitled "Industrializing Nonindustrialized Areas of the World." I ask unanimous consent that the article may be printed in the Appendix of the RECORD. Senators may wish also to refer to an earlier article by the same author entitled "Postwar Exportation of Capital Goods to Nonindustrialized Areas of the World," a copy of which can be obtained from the Machinery and Allied Products Institute, Barr Building, Washington, D. C.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDUSTRIALIZING NONINDUSTRIALIZED AREAS OF THE WORLD

(By George H. Houston)

The subject assigned to me today is far too vast and intricate for adequate presentation in the brief time at our disposal. I shall endeavor, however, to give you a bird's-eye view of what is to me one of the great economic movements of modern times and to indicate how the United States and particularly the capital-goods industries can participate in it constructively.

In the remarks I had the pleasure of making before this organization some years ago, of which your president has so very kindly spoken, I undertook to show how the postwar industrialization of various areas of the world is really a continuation of the industrial revolution that began much more than a century ago. Industrial development in the modern sense began, following the invention of the steam engine, in a small area, probably not more than 1,000 miles in diameter, comprising parts of western Europe and Britain. It was organized generally along lines of what I would call European capitalism, based primarily upon the proposition of monopoly. This development was the natural outgrowth of feudalism and of the mercantile system from which it sprang. History shows that many venturesome undertakings of those times were initiated by monopolistic grants from the sovereign to individuals or groups of indiviuals; also the guilds of the mercantile age were highly monopolistic in their operations. These practices appear to have had a great influence upon the concepts and practices of European capitalism as it evolved from these origins.

The industrial development of the United States, starting early in the nineteenth century, caused the first break in this tight ring of industrial monopoly. During this early period, enterprises sprang up rapidly in the northeastern part of the United States in competition with European industry. Subsequently occurred the phenomenon of European capitalism supporting with capital and leadership this American development because Europeans found it not only inevitable, but, with many exceptions, very profitable. Later on, this industrial development moved westward and then southward in the United States. During this period industrial development started in other parts of the world, but in much smaller volume, all tending, however, toward the one inevitable objective of converting and manufacturing raw materials into finished products at the points of greatest over-all convenience and economy in the natural flow of such raw materials from their sources to the areas of their consumption as finished products.

Following World War I we saw a further surge of this character in the Soviet Union, as well as further industrial activity in Latin America, South Africa, and other parts of the world. Following World War II we see these trends resumed with pressures increasing steadily, particularly in Latin America, looking toward the general industrial development of many different localities.

I do not see how these trends can be stopped, although they can be retarded. I do not believe, however, that it is to the advantage of the developed areas of the world to attempt to retard them. In fact, I think the true interests of such developed areas lie in encouraging these developing areas in every practicable and reasonable manner to accomplish their objectives of industrial development. It is my observation that most people in the United States are in sympathy with these developments, except that some question whether they will not reduce our own foreign markets for manufactured goods. This is a fallacy carried over into our present-day thinking from nineteenth century Europe which wished to hold much of the world in what has been called a condition of colonial economy, engaged in extracting raw materials, raising agricultural products, sending them to western Europe for manufacture and then taking them back, in part, as finished products.

The buying power of any country, from foreign sources, is obviously dependent upon the foreign exchange and foreign credit that is available to it with which to pay for what it buys. Do not let there be any mistake about the fact that the industrial development of undeveloped areas of the world will increase and not decrease their ability and desire to buy and import goods of foreign make. The best market that western Europe and Britain have ever had in all their history is the United States of America, a market that was created in spite of the initial opposition of the Old World. By the same token, our best markets in the future will be the areas of the world that have the highest standard of living. These are the areas that will have the greatest volume of needs to satisfy by foreign purchases together with the greatest resources with which to pay for them. Our poorest markets always will be those which are living a subsistence existence, producing what they consume and being required to live largely on the consumer goods they can produce.

It is imperative for the future well-being of developed areas that the standard of living of these undeveloped areas be raised by every practical, proper, and effective means. The populations in these areas are growing rapidly, some of them more rapidly than at any time in their history. These populations cannot be confined in their activities to the old colonial concepts of economic servitude to the developed areas. They must be given the opportunity to use their own labor in converting their own raw materials into finished products with which to satisfy their own wants. Hence, it is of importance to understand the problems involved in these world-wide trends toward industrial development, and to participate to the best of our ability in the great undertakings involved in carrying them forward.

The questions remain, however, as to the nature of this industrialization process and as to how it can be constructively supported and assisted by the people of the United States.

In my earlier remarks on this subject I called attention to the fact that this process involved not only the procurement of the required capital goods but also, and of equal importance, the procurement and assimilation of the techniques pertaining to the design and use of the products to be produced and to the processing of their manufacture by the use of the capital goods provided, as well as the acquisition and assimilation of the managerial arts applicable to production and distribution in these new undertakings.

Without successfully acquiring and assimilating these techniques and managerial arts, progress in the effective use of new capital goods, especially in new lines of product, will be extremely slow and surprisingly expensive. These techniques and managerial arts cannot be imported into a given locality, packaged and earmarked as a commodity. Rather, after all the textbooks and written records available have been studied and assimilated, there is a vast area of interpretation, explanation, adjustment, amplification, and actual application which can be accomplished only by individual human effort and contact.

It will be appreciated, of course, that processing techniques must, to a substantial degree, follow the characteristics of the capital equipment used; also that the use and maintenance techniques applicable to the products made must to a large extent follow the performance and design characteristics embodied in the construction of the related products. Even the managerial arts and practices used in a given situation must follow to a degree the characteristics of the equipment used. An automatic plant making a given product requires quite a very different plan of organization for its successful operation as well as a different type of individual supervisor from one making the same product by processes which are not automatic. It will be apparent from these brief comments that there must be a continuous, close, and intimate relation between the products made, the production equipment used, and the related techniques and managerial activities. All too frequently, however, these relations are neither close nor intimate and sometimes are most apparent by their absence.

Technicians and industrial managers in these undeveloped localities are almost

wholly absent, beyond the areas of agriculture and lumbering and the extraction industries. Mr. McLain (Chester A. McLain, general counsel, International Bank for Reconstruction and Development) spoke very interestingly about the lack of manpower in these localities. It has not been my observation that there is a general shortage of worker manpower in many of these localities or that the worker lacks inherent ability. I have observed, however, an incredible lack of competent personnel in the classifications of workers between the mass of manual workers on the one hand and on the other, the promotional and financial leaders of these ventures. In most of these countries there is almost a total lack of this middle class of business people, the thing which has made the United States and Germany great industrial countries. This deficiency is not going to be quickly satisfied; it is probably the greatest single deterrent to the industrial development of these areas, which development can go forward only so fast as this type of manpower can be developed and maintained.

Before pursuing this question further, I want to speak for a moment about worker capability. I have had some experience in training large numbers of workers without previous experience in industry of any kind. In the Appalachian Mountains of the United States I have seen thousands of people employed in the metalworking industries who never before had seen the inside of a workshop. I have seen these people with proper and adequate supervision made into good workers in a short time, and I have seen them, both men and women, become deeply interested in the acquisition of skill and craftsmanship. I have seen workers from many privitive groups in the West Indies—Cubans, Jamaicans, Dominicans, and Haitians, employed in large numbers, and except where these people are not adequately fed, I have found it quite possible to make them into good manual workers, provided the undertaking is properly organized to teach and train them, and the tasks are broken down to start with, into relatively simple operations. Under these conditions I have seen these workers grow rapidly toward competence in the manual crafts. The successful employment in industry of inexperienced and unskilled labor involves intensive, high-grade supervision and careful, exact, forward planning.

With respect to the intermediate group of technicians, administrators, supervisors, and managers of which I was speaking, there are only three ways I know of by which they can be procured and developed by any locality in which they are lacking. One is by the process of internal development by trial and error without outside assistance. This process is extremely slow. Of necessity it was used in western Europe in the early days of its industrial development, because it had no developed locality to draw from, but it took a century to develop anything approaching modern concepts of competence in these fields. We cannot recommend this process except as one facet of the over-all development. The second method is to send personnel from these developing areas into developed areas like the United States for training. This is faster, but still is slow. Industry in the United States does not expect to put men into important technical or supervisory positions until they have had years of actual experience. How many countries are going to send their men abroad in large numbers for years of training in actual business? As a rule, they expect to accomplish the required objectives in about as many months of actual experience as our industry requires in years.

The third method is to import into these developing areas technicians, managers, and supervisors from developed areas to provide the required leadership in the use of the capital equipment provided. This importation must be accomplished primarily by the bringing in of trained individuals competent not only to practice what they know but to transmit it to others by training, teaching, and demonstration. Such individuals must be adaptable and accommodating to their new environment without sacrifice of their technical principles or essential practices. They must be competent at all times to separate the nonessential from the essential, and to modify and adapt the nonessential without impairment of the essential. Such individuals are difficult to find, but when competent and properly placed and supported, they can make a very valuable contribution to the desired objective of industrial progress. This is the most effective method of developing rapidly and soundly in new localities the essential staff for industrial development, but it must be coupled at all times with training and development of local personnel, gradually to supersede in part at least such outside personnel. Many undeveloped localities welcome incoming personnel of this type, realizing that they bring with them assets of great value; unfortunately, however, all too many communities fear and resent such newcomers as dangerous competitors for the opportunities that may arise, and make their way difficult and thorny. Frequently such antagonisms are the result of conflicting personalities and thus are more or less inevitable, but I believe it to be essential that localities seeking industrial development must come to realize that they can learn only from those who know and can teach them, and that they lose much more by rejecting the assistance of an individual who is competent than he does by being forced to return to the environment from which he came. I have seen this process of rejection by prejudice and jealousy at work over a long period and in many different situations, and it is a condition that requires continual thought and attention to prevent.

The ultimate solution of this problem of manpower for leadership must be achieved by a combination of these three methods starting first with the importation by developing areas of foreign personnel; proceeding at the same time with the sending of their own personnel into developed areas for training not just for a few months, but frequently for years; and finally by the training of local personnel at home as rapidly and as thoroughly as is possible. This matter of competent technical, administrative, and supervisory personnel is an acute problem and, except as it is dealt with intelligently, sympathetically, and understandingly, the desired industrial development will proceed exceedingly slowly and with many heartbreaking disappointments because of lack of this vital ingredient in the industrial equation.

The exportation of capital goods from the United States has proceeded at a high rate since the end of the war and it looks as though this condition will continue for an indeterminate period (a) for the rebuilding of Europe, (b) for the continued development of unindustrialized areas, the extent of this latter development depending, of course, upon many factors some of which lie wholly outside of the control of American business but many of which are at least partially responsive to American business leadership.

I have had the temerity to attempt to form some idea of the size of this world movement toward industrial development, but it is exceedingly difficult. I will give you one example, however, as an indication. If by 1980 the Republic of Mexico is to have a degree of industrial development per capita equal to the per capita development of the United States in 1930, there must be found for use in Mexico in connection with this development machinery and equipment of an aggregate value of about $8,000,000,000, at 1929 price levels. This is without consideration of any increase in population and the Mexican population is increasing rapidly. Further, it is without the inclusion of any form of construction or real estate improvements which would be undertaken with internal labor and materials and thus does not enter into the question of importation.

The greater part of this machinery and equipment would have to be imported, particularly during the early part of this period, as the production of capital goods, particularly machinery and equipment, should not be an early objective in any such industrial undertaking. You will find in my remarks of some years ago a discussion of the sequence in which such industrial development might best be undertaken. I will not attempt to repeat it here, except to say that the production of machinery and equipment does not fit well into its early stages. This would mean an annual input of capital equipment in terms of about $275,000,000, United States, possibly diminishing in future years as the production of machinery and equipment expanded within the country. If 1929 price levels are adjusted to prospective costs in nearby periods, some idea will be gotten as to the cost of the capital goods required in this one area. Yet, if the man on the street is asked "Should not a country like Mexico look forward to an industrial development equivalent to that of the United States 50 years earlier?" I think you would find the almost universal reply that this would be expected. To accomplish this objective involves this enormous input of capital goods. Multiply this one instance by all the areas in the world seeking industrial development, and you will have some measure of the size of this world movement. Mr. McLain very well pointed out that not all areas seeking industrial development are qualified for it. Probably some never will be ready for it, but even those that are represent undertakings that will require many years for realization.

The financial problems involved in these undertakings are those which frequently come to mind first, although I do not believe they are as important as the problems of leadership personnel of which we have spoken, for if these projects succeed, the financial problems will progressively become easier, but if these projects fail, if we have a repetition of much of our experience following World War I, then I believe this movement will be set back for many years. Success or failure will be determined by the leadership, technical and managerial, given to these undertakings, more nearly than by any other one factor. It seems to me that in considering the financial problems involved in undertakings of this character, we must break down available and potential resources into four distinct phases.

The first consists of the internal savings of the community seeking development, together with its ability prudently to expand its internal credit, available for long-time investment. This buying power, however, has no value for financing imports of capital goods, unless it is accompanied by the second phase, namely, the availability of foreign exchange arising primarily out of the volume of exports in excess of imports of other things than the capital goods sought for. Neither is effective for the acquisition of large volumes of capital goods, without the other.

Third, is the importation of permanent venture capital of which Mr. McLain has spoken. The United States in the nineteenth century benefited enormously from the importation of venture capital from Europe, particularly following the American Civil War. It probably moved the economic development of this country forward from 50 to 100 years.

Finally is the development of long-term foreign credits.

Much of the internal savings and available credit of these developing areas must be consumed, not in the importation of machinery and equipment, but in the type of capital expenditures that will be made with internal

materials and labor, such as buildings and all kinds of real-estate improvements. Only a portion of these internal financial resources can be looked for to finance the importation of capital goods from abroad.

As Mr. McLain has pointed out, the fundamental requirement for the free importation of foreign venture capital into these developing areas is confidence, confidence in the fact that the hazard to the capital will be confined to the venture itself, and will not be increased by political or social conditions in the community, unfavorable to its conservation. There must be confidence also as to fair and impartial treatment of this capital within the locality and, ultimately, confidence as to the ability of the investor freely to take out of the country the fruits arising from the use of his capital. As Mr. McLain said, much of the earnings from such venture capital will remain permanently within the country, but if it remains under compulsion, the fact that there is compulsion will be a very serious detriment to the encouragement of the movement of new capital into these developing communities.

Another very vital need, from the point of view of the American investor, is the revision of the United States income tax law so as to relieve capital thus invested in foreign countries from tax burdens identical with those that such capital has to bear when invested at home. Unless the United States Government gives recognition to the fact that such capital is subject to greater hazards abroad, while performing a useful and necessary function in these developing areas, and gives it this relief, I do not believe there will be anything like the necessary movement of venture capital from the United States into these developing areas that the economic conditions will warrant and justify. This venture capital is in turn of two distinct types. One is what I would call corporate capital, that is, capital of existing United States corporations used in the building and developing of branch plants throughout these developing areas. The other is the private capital of individual investors seeking venturesome opportunities for profit. They each need the United States tax advantage that I speak of, as an encouragement to move in the volume that otherwise is justified. Such venture capital incurs risks, sometimes very great risks, and it is entitled to a corresponding reward. Naturally, such rewards are higher in communities where capital is scarce and where opportunity for development is great than in the older industrialized localities. Even this increased opportunity for reward will be insufficient, however, to draw venture capital from the United States in adequate volume in the absence of the tax relief referred to.

The various financial resources here discussed will not be sufficient, however, to provide the capital needed, and particularly the foreign exchange, to finance the undertakings now pressing for realization. In addition to these resources, we must look also to long-time foreign credits. Many projects that are necessary to the industrial development of these areas are not suitable for venture capital—foreign or domestic. We must recognize that practically all of these developing areas throughout the world are organized politically as mixed economies; that is, government is intervening more or less intimately in the business activities of the community. I know of no country in which the concept of private enterprise that prevailed in the United States during the nineteenth century now exists. Practically all of them have some degree of economic planning by Government for the development of the country and some degree of governmental intervention in business. Many projects essential to the development of the country such as water conservation, irrigation, and highways are by their nature unsuited to venture capital and must be financed largely by Government credits. These long-time credits are likely to include, in the long run, government-to-government loans which already exist in some instances, and which probably will exist in larger amounts in the future: loans from the International Bank which we heard Mr. McLain discuss so ably a while ago; and Export-Import Bank credits to finance the export of capital equipment, which credits generally will be of intermediate term.

Finally, there is need for the use of the capital markets of the United States for the procurement of private capital through security distributions; I say finally, because, in my opinion, the use of the capital markets generally for foreign investments of this character will be practicable in volume only in the later stages of these developments. I know of two issues of securities of Mexican companies that have been sold in the United States in the last few years, but I think that such issues will be relatively infrequent until these developing localities and individual ventures have more fully proven their ability to support effectively the securities they wish to distribute abroad.

All of these financing resources will be needed. Probably the greatest of them, speaking for the long term, will be the exportation of venture capital in large part through the sale of securities on our United States security markets.

There are serious defects, however, in many of the practices now being followed in the promotion, financing, and development of new ventures in these developing areas. These defects arise out of an inadequate understanding frequently of the conditions under which a new enterprise must operate, conditions of marketing, of raw material supply, of availability of equipment, and of availability of technicians and management. Frequently there is entirely inadequate advance investigation in connection with such new undertakings.

This investigation is sometimes very difficult, due to the fact that the areas under development lack organized statistical information, and business is carried on under the old European concept of secrecy where it is considered very detrimental to disclose information and where much of the information that is disclosed is misleading. The American idea of laying on the table much of what is being done is completely foreign to the mental processes of many of the people who must be looked to in order to get a clear understanding of what a given venture is all about.

In general, the outstanding characteristic of many of these new ventures is overoptimism. Similar conditions existed in the early days of the United States. All one has to do is read the history of many things that went on in the United States from the sixties to World War I, to see the tendency to overoptimism at work. The fact that those conditions are now being duplicated in these developing areas does not, however, simplify the problems that arise in dealing with them.

As a result of this overoptimism, initial financing is almost always inadequate and too much of it all too frequently is provided by debt securities rather than by capital stocks, so that many of these ventures face failure before they get started through inability to carry the heavy load of fixed charges. The thinking in these areas is almost always on a short-term basis. There is one industrial leader from continental Europe now operating in Latin America who has said many times that no new venture should be undertaken in these countries in expectation of putting it on a profitable operating basis in less than 5 years and in some cases even 10 years. All too many of the plans that have been attempted must have profits in a few months or else they must collapse, or be refinanced. These defects in promotional set-ups and financial structures must be recognized and prevented. They are vital to the effectiveness of this movement. While we know they are growing pains, and more experience will help to cure them, yet they are serious while they last and are detrimental to progress.

In conclusion I would again emphasize that this industrial development of undeveloped areas is a wide and deep surge toward a better economic organization of the world. This movement is of supreme importance to economic stability and particularly to pan-American prosperity. Except as it is encouraged and assisted, peaceful, orderly development will be difficult in many areas seeking profitable employment for rapidly growing populations. The standards of living in these areas must be improved. This can be accomplished only by such areas producing more of what they need to consume. It is to the best interests of the people of the United States to contribute constructively to this movement with equipment, with techniques and management, with sound planning and with capital—not by granting every loan asked for or by always saying yes, but by genuinely constructive aid in planning and execution.

Great wealth will be created through this process over the next two or three generations. There are some areas of Latin America that in my opinion face a future development similar to that experienced in the United States following the close of the Civil War and in the southern and western parts of the United States at a later date. Other areas will not experience a growth of this character, but we cannot escape the fact that some are now ready. When the people of the United States participate in these undertakings, they are entitled to participate also in the benefits fairly gained from them by sound business practices and without improper exploitation. It seems to me that there is a growing recognition of this right of the industrialist, the entrepreneur, and the creditor to benefit from the gains arising from the use of their knowledge and resources in these developments. I look forward to great benefits accruing to the people of the United States from these developments, but only as we proceed realistically and carefully, but with enterprise and initiative, and as we contribute to them soundly and to the best of our intelligence and ability.

New Johnsonville Steam-Generating Plant

REMARKS

OF

HON. JOHN JENNINGS, JR.

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. JENNINGS. Mr. Speaker, this week, in all probability, the House will vote upon a proposal to authorize the construction of a steam-generating plant at New Johnsonville, Tenn., to supplement the output of hydroelectric power by the Tennessee Valley Authority. This steam power is absolutely necessary if that agency is to furnish its customers, who are the farmers, the wives of the farmers, the working people, the veterans, and all business establishments and all industries in that area, with sufficient power, because there are periods of drought when the hydroelectric installations cannot furnish an adequate supply of power.

There has come to my desk this week, and I assume to the desks of all other

Members of the House, a letter from Pursell Smith, who receives $65,000 a year plus an unlimited expense account, and this letter included a pamphlet which reeks with falsehood and misrepresentation. During the debate on this measure I shall point out specifically the falsehoods in that lobbyist's pamphlet, which he makes bold to send to the Members of this House.

Food for Europe

EXTENSION OF REMARKS
OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, February 17, 1949

Mr. ANDERSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting article, entitled "Food for Europe, But With an If," written by Nathan Koenig and published in the January 1949 issue of Survey. I have submitted the article to the Public Printer and have obtained an estimate of the cost of printing it. The estimated cost is $177.50.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOOD FOR EUROPE, BUT WITH AN IF

(By Nathan Koenig)

All through the summer and into the fall the land in Europe was green—a healthy, vigorous green. Mother Nature it seemed was making amends for the disastrous effects of last year's drought.

And in quite the same way, the spirit of hope that I found in the hearts of western European people during the trip from which I returned in September was in strong contrast to the despair I saw there in the summers of 1946 and 1947.

Despite shortages of fertilizer, farm equipment, and other essentials for production, this year's crops have been good in nearly all European countries; and European farmers are filled with real satisfaction for a job well done. They are looking ahead with greater confidence in the future, for they know that with more grain available throughout the world they can begin laying plans for more desirable patterns of production, with the increases in livestock essential to a balanced agriculture. They know, too, that with more food the people in the cities will be able to produce more of the consumer and industrial goods needed by everyone and the interdependence between country and city will again find expression in the exchange of goods and services.

Aside from the role played by favorable weather in crop production, much credit for this improvement must certainly go also to the European recovery program. This help from the United States is beginning to make itself felt in concrete terms of increased production of the basic sources of industrial energy. Now, with a good harvest in hand and with the people of Europe—for the first time since the end of the war—in a position to count on enough bread in the world to see them through until the next harvest, continued progress is underwritten at least for the months immediately ahead.

But this encouraging picture leaves no room for complacency on our part. For even though an adequate supply of the two basic elements of diet—bread and potatoes—is in sight until the next harvest, the fear of hunger still dominates the minds of western Europe's 280,000,000 people.

As 1949 begins to unfold, the eyes of these people are already searching for signs that will further bolster their spirits and strengthen their recovery efforts in the new year. Their anxiety centers around many complex questions including these two: Will the next harvest yield enough food to keep up the human energies needed for additional recovery gains? What will the United States Congress do to provide for the second year of help under the European Recovery Program? Little by little during the next 6 months the answers to these particular questions will become apparent. In the meantime, however, these people are starting the new year with hope and prayer.

Another harvest aproaching the size of the last one is urgently needed to raise low ration allowances, to increase the meager stocks, and to consolidate the gains currently being made under ERP. Substantial increases in the output of raw and finished goods have been achieved through this program and the pace of economic activity is rising. The countries taking part in this program are hopeful that the results being attained will merit a decision by the United States to provide adequately for the second year of its operation.

Most of the countries of western Europe cannot produce all of the food they need to keep their people reasonably well fed—with heavy population and amount of land available for agricultural uses definitely limited. Their problem is to increase industrial production to provide an exportable supply of goods above domestic needs in a volume that will return the foreign exchange needed to pay for imports.

I could not escape the conclusion that the food-deficit countries of western Europe are paying more and more attention to increasing further their own production largely in order to become less dependent on outside sources. This trend is being accelerated by the shortage of dollars, which is forcing curtailment of imports from the United States and other dollar-trading areas. Whether this is to become a permanent trend remains to be seen. But—obviously—unless these countries are in position to get hold of dollars through exports they will follow it willy-nilly, for they will not have the dollars to pay for imports.

Among the food-importing countries, France, the United Kingdom, Switzerland, and Sweden are definitely reorienting their production (mainly through extensive use of subsidies) so as to be less dependent for their food and feed requirements. This raises a serious question of whether the deficit food-producing areas of Europe are embarking on a course which in the long run means abandonment of the old idea of each producing what it is best adapted to and of obtaining through international trade the products more advantageously produced elsewhere.

In the case of the United Kingdom, for example, no one questions her need for more food. The fact is that the United Kingdom, being primarily an industrial area, has long relied on manufacturing for export to provide through imports the bulk of the food and feed for home consumption. During the war she was forced to expand food production and elaborate government machinery was organized for that purpose. Now, even though world food prospects are greatly improved and promise further improvement in the future, there is to be no let-up in the home effort.

I found the British vigorously pushing a newly announced agricultural program which—if translated into output available for sale and adjusted for requirements of imported feedstuffs—would raise food and feed production 50 percent above prewar by 1951–52, or 15 percent above the wartime peak of 1943–44. This is to be accomplished by higher minimum prices to farmers together with extensive subsidies to raise total returns to producers. The British frankly admitted that the emphasis has been deliberately placed on saving dollars, especially on livestock products and cereals, in marked contrast with wartime when the emphasis was on saving ships.

Efforts of other countries to become more self-sufficient follow the same dollar-saving emphasis, although in each case there is the further desire of achieving greater security in their food supply. At the same time, many of the more important European food-exporting countries, such as Denmark, the Netherlands, Italy, and Poland, along with others behind the iron curtain, are not only aiming to restore their prewar levels of production but to expand them for even greater exports. If these objectives of increased production are achieved by both groups, serious economic disruptions are almost certain to follow.

Already some of the agricultural exporting countries of Europe are having difficulty in finding outlets for all of their products. This past summer, Italy and Holland had surpluses of fresh fruits and vegetables which could not readily be sold because importing countries either lacked the money to pay or else had ample supplies due to the season's good growing conditions. Similarly, Turkey and Greece now have surpluses of dried fruits and tobacco literally begging for markets. And in Germany—in the area which we are supplying with thousands of tons of necessary foods in order to maintain a minimum diet—I heard farmers actually complaining against imports on the ground that prices for their own good crops were being depressed.

I observed, too, that the Communists were not slow in taking advantage of this. In all the countries where farmers are facing marketing problems—and throughout Europe, for that matter—the Communists are spreading the idea that the European recovery program is simply a means by which the United States hopes to solve some of its own problems. European farmers are being told that the United States foresees huge agricultural surpluses and that it is using the ERP solely as a means of dumping these surpluses. In countries where surpluses do exist, it is not surprising that this argument is finding some receptive ears and is arousing the antagonism against the United States that its proponents hope for.

On the whole, however, the good crops this year have weakened the force of Communist arguments relating to food. One French farmer summed it up this way: "Farm workers and city people listen to the Communists more readily during poor seasons, such as in 1947. Then they can agitate and make the people dissatisfied. But this is hard to do when crops are good."

Although fruits and vegetables were high in price, they were rather plentiful in most countries of Europe during the past summer. On the other hand, meats, cheese, eggs continue in short supply along with fats and oils, especially butter. Prices for these latter items are for the most part beyond reach of the great mass of people in many of the countries. A good cut of meat in France retails from 400 to over 500 francs per kilogram, or from 65 to over 85 cents a pound. Compared with current dollar prices in the United States this may not appear to be high for meat. But to the average French worker who earns around 5,000 francs a week it is a very high price, since the purchase of, say, 2.2 pounds of meat for his family would take about 10 percent of his weekly wages.

Talk to the average European about food today and his biggest complaint will be about high prices. Since the masses of people are paid low wages, the skyrocketed prices leave only the simpler rationed food

within the workingman's reach. A prosperous French businessman with whom I had discussed food problems on previous visits to Europe told me:

People with money have no trouble getting food. What we can't buy on the legal market we can buy on the black market. You can get any kind of food you want on the black market—but it takes a lot of money. But for the wage earner, it is different. He has little money and so must live off what he is able to get from the ration.

In view of this year's supply prospects for food grains in many of the European countries, there has been marked improvement in the quality of bread permitted to be distributed and an increase of the bread rations. Farmers also were encouraged to market their wheat to the flour mills rather than feed the year's increase to livestock. In France, for example, the price for wheat was raised by nearly 30 percent, the increase being paid by the government to avoid boosting the price of bread.

This year's wheat crop in France is just short of prewar level, and under ordinary circumstances the crop of from seven to seven and one-half million tons would not have required any imports. Under present conditions, however, with the shortage of other foods, France will probably have to import one to one and one-half million tons of either wheat or coarse grains in order to make sure of an ample bread supply. Moreover, there is reason to fear that even with this year's big wheat crop it will be impossible for the Government to collect all the grain that it should. France needs a minimum of 5,000,000 tons of wheat for food alone and it is estimated that around 4,000,000 tons will be collected. Out of last year's drought-stricken output it collected only a totally inadequate 2,000,000 tons. Thus, even with the price increase, it is expected the farmers will hold back on deliveries so as to feed livestock or to sell on the black market.

All over Europe there is an almost inescapable incentive for farmers to feed part of their grain since the excessively high prices for meat and other livestock products make it exceedingly profitable to feed as much grain as one can safely hold out. This meat shortage throughout most of Europe is a result of the wartime need to use grain for direct human consumption instead of as livestock feed. A further liquidation was forced by the 1947 drought, which burned pastures and sharply reduced production.

Livestock, moreover, is basic to the type of agriculture carried on in most countries of Europe. The animals, especially cattle, not only provide food products and draft power but also the manure which is a precious fertilizer. This is particularly true in Germany, where a definite program is under way to increase livestock to the prewar level—a reversal of the policy dictated so far by the need for more grain for direct human consumption.

In Germany, also, I found other signs of healthy economic activity that were missing in the two previous years. It seemed as if a frozen corpse had suddenly come to life. Where before stores were meagerly stocked with pitifully crude goods, they now had many household and personal items. People stood in front of the store windows feasting their eyes on the displays; it had been years since they had seen such things. For the first time, too, a real start is being made in private repair and construction of buildings, although with the shortage of material it will, of course, take many years to overcome the war damage. Also black-market operations have been greatly reduced.

The German people with whom I talked were far more optimistic and hopeful. One factor behind the tremendous transformation was the currency reform measure which put into effect the new Deutsche mark with a conversion ratio of 10 to 1 for the exchange of old money for new. The action has provided a currency in which the people of Germany could have confidence. As soon as the new currency was issued, vast stores of goods came out of hiding to stock empty store shelves.

From the standpoint of Germany's food supply problem the currency reform came at a very appropriate time—a little in advance of harvest. It made farmers more eager to market their products through legitimate channels, a great improvement in the availability and distribution of foodstuffs to the German people.

The combination of good crops and sounder currency is contributing much to the economic rehabilitation of the German economy. At best, however, progress is going to be very slow and a great deal of patience will be required not only by the Germans themselves but by the world as well. The fact that the Germans do not as yet have a central government makes it difficult not only to fix responsibility (which is now so likely to be evaded) but also to provide the machinery essential to the operation of an economy.

There is, for example, the problem of agricultural credit. Being short of the new currency, German farmers with good crops on hand now find themselves in need of an agricultural credit system which can make loans so as to encourage orderly marketing as well as help finance future production. Since the beginning of this year's harvest, it was apparent that the storageable crops were being marketed off the farms too fast because farmers could not get loans to tide them through until their products could be sold on a more orderly basis. Also, the late summer and fall is the time when German farmers buy their fertilizer and other supplies for the next crop year. Lack of means for financing has slowed the early movement of production essentials. For fertilizer alone it was estimated that loans of 1,000,000,000 Deutsche marks, or $300,000,000, would be needed.

Wherever one travels through Europe there is a tremendous amount of interest in how things are done in the United States. I talked with farmers in France, Germany, Denmark, and England and practically all of them were genuinely hungry for information on production techniques used by American farmers. A German agricultural scientist bemoaned the fact that for 9 years the farmers of his country have had no contact with the outside world.

The European farmer has long been recognized as a good farmer, one who tills his soil with great care to preserve its fertility and at the same time obtain maximum yields. Yet many of his methods are primitive and inefficient by our standards. The human being still remains the major source of work power in European agriculture. One reason for this backwardness was the abundant supply of labor available to farmers before the war. The war has changed this in many respects, so that now in many areas there actually is a shortage of farm workers and the combination of a shortened labor supply and a relatively improved farm income has brought on a great interest in mechanization—creating other problems.

On some farms I visited, the number of tractors and horses, and in some cases oxen, were far in excess of the draft power an American farmer would use for producing the same crops. In addition, these farms had more labor than appeared necessary for efficient operation.

One of the more progressive large farms I visited in France, about 24 miles from Paris, has 800 acres of land which I was told had been cultivated for the last six or seven centuries. This year's crops included 275 acres of wheat, 100 acres each of oats, sugar beets, and mangels for livestock, a little over 60 acres each of potatoes, alfalfa hay, and green peas for canning, plus a total of 25 acres in barley and mustard seed. Livestock included 12 cows to supply milk and dairy products for farm use, 400 sheep, and 1,000 chickens. Draft power was supplied by three horses, eight oxen, and six tractors, three of which were American made, the others being Swedish, French, and German. Labor was supplied by 23 families living on the farm in addition to 14 German war prisoners.

This case is illustrative of other mixed situations I found. While great emphasis has been placed on the acquisition of tractors, some countries of Europe still are unable to cultivate all of their land because of the continuing shortages of draft power brought about by the war. There are other countries with considerably more draft animals than before the war. Still others have increased their tractors to a point where total mechanical and animal draft power is materially above prewar.

The high preference is for American-made farm machinery. European farmers like the ease with which such equipment can be handled and they marvel at its efficiency. The one complaint of these farmers is that they are unable to get all of the American farm machinery they would like. This difficulty is due in part to their shortage of dollars and in part to the legal limitation on farm machinery exports. Congress earlier this year forbade the shipment of this product abroad in excess of a total of $75,000,000.

Congress will probably need to reexamine this provision to determine whether it is desirable from our own national standpoint. It was obvious in Europe that farm machinery actually needed from the United States could very well exceed the limit and with careful distribution would be very helpful to economic restoration. There is and will continue to be a definite market in Europe for American-made farm equipment, and it might be detrimental to us in the long run if by our unwillingness to meet the need now we forced European countries into this production.

It should be noted, however, that mechanization of much of western Europe agriculture is not possible. A large proportion of Europe's farms are barely large enough to provide a fair living for the family even with very intensive operation. Most of the farms are under 20 acres and are in the main owner-operated. In many areas the landholdings of an individual farmer are widely scattered parcels grown smaller and smaller as they were handed down through the generations.

I talked to the owner of one such farm in Germany, a woman whose husband had been killed during the war. She operates with the aid of hired help and her two young sons. The 15 hectares, or 38 acres, she owns consist of 60 plots of land, the nearest being located within 10 minutes walk from the village, where she has her home and barns, the farthest being about 30 minutes walk away. The one major piece of farm equipment, aside from the necessary plow and similar tools, is an American-made grain binder over 20 years old. When I visited the place it was being used by her sons. In addition to wheat, oats, and some barley, the 15 hectares produce potatoes, sugar beets, and hay—which was cut green for cattle feeding. The livestock included 12 head of dairy cows and four draft horses.

In Switzerland I visited a farm of 10 hectares or nearly 25 acres operated by the owner and his three married sons, all of whom worked and lived on the place. The principal crops were grain, potatoes, and grass and hay. This farm was stocked with nine milking cows, three heifers, three sows, one horse for draft power. I saw on the wall of the barn a battery of eight scythes bearing signs of heavy use in cutting grass. In sharp

contrast was the newly acquired one-cylinder self-propelled grass cutter with a 5-foot cutting bar in front. It was the first piece of mechanized equipment ever owned on this farm, which had been in the same family for generations, and the owner showed it with pride.

Although from an economic standpoint the European farmer is far better off than the man in the city, he is not the free individualist we in the United States consider our farmers to be. In each country of Europe the farmer is subject to direct government controls in practically every phase of his work. He is bogged down with the necessity of making frequent reports to government agencies and he carries a high tax burden.

At the same time, the governments are inclined to cater to the needs of their farmers because those in power recognize the important role of an adequate food supply in preventing political upheaval. The danger now cropping up—and which I mentioned earlier—is that western Europe will go to such an extreme in promoting further increases in food production to achieve greater self-sufficiency that it may actually lower the standard of living for the people.

For right now the emphasis is on bringing agricultural and industrial production up to a level where western Europe can trade within itself. This emphasis not only overlooks the mutual advantages of trade with the rest of the world but also disregards the extremely disruptive fact that eastern Europe, a natural surplus food-producing area, may in the next year or two be forced to seek markets outside of the Russian sphere of influence. If the necessary markets are available, these countries in turn can buy the surplus manufactured goods for which western Europe may by then require outlets.

Further, this emphasis disregards the interest of the United States and other Western Hemisphere countries in a goodly volume of trade with western Europe from a long-time standpoint. True, during and since the war, the United States has had to ship to these countries vast quantities of grain and other foods far beyond normal world trade. But if the countries of western Europe are to become self-supporting and make their contribution to world peace, then certainly some part of their exportable commodities—and of ours—must find a place on that broad two-way avenue of world trade that lies between our shores and theirs.

Which thought brings me home with a concluding moral for ourselves: We in the United States, along with the others, must remember that ships crossing the Atlantic move both ways—that if we want to export we must be willing to import. Only in this way can we provide the exchange necessary to keep the cargoes moving. For in the final summing up, the efforts now being made to get production up under the European recovery program will be to no avail unless the resulting goods find outlets and meet human wants.

California Celebrates Its One Hundredth Anniversary

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. McDONOUGH. Mr. Speaker, in 1950 the glorious fabulous State of California will celebrate the one hundredth anniversary of its admission to the Union. A great centennial celebration in honor of this event began in 1948 on the anniversary of the discovery of gold in California and will continue through 1950.

The California Centennials Commission, under the cochairmanship of P. G. Winnet of Bullocks, Los Angeles, and Joseph R. Knowland, publisher of the Oakland Tribune, has prepared a comprehensive program in cooperation with local communities and organizations in California which will include the reenactment of the Portola exploration of California in 1769, the cultural Centennials of Art and Literature, the Historical Caravan, and a great historical pageant planned for the Los Angeles Coliseum.

While the centennial celebration is in progress, we should remember the events which brought this great land of California from wilderness to empire, and the following article prepared by the California Centennials Commission outlines the outstanding events in the romantic and picturesque history of California:

"California, land of gold * * * at the right hand of the Indies * * * close to the terrestrial paradise." So wrote Ordones de Montalvo, Spanish teller of tales, in a chivalric romance of the fifteenth century. Thus a myth came into being which was to be transformed into reality.

Hernando Cortes seized the Aztec kingdom of Mexico in 1521 and sent out troops in search of further spoil. An expedition, led by Fortun Jimenez, crossed the gulf and discovered the peninsula of Lower California. Jiminez was slain by Indians but his followers returned with tales of a new land of high mountains and rugged coasts which they believed to be that fabled country of which Montalvo had written, California, the land of gold.

In 1542 came Juan Rodrigues Cabrillo who sailed up the coast of Lower California and discovered a port which he called San Miguel (now San Diego). He continued northward, paused at the Channel Islands and Santa Barbara, but failed to find harbors of consequence beyond Point Concepcion.

In 1579 Sir Francis Drake, commander of the *Goulden Hinde*, landed on the northern coast of California on his voyage around the world. He was hospitably received by the Indians and, in solemn ceremony, took possession of the country in the name of Queen Elizabeth of England. He called the white cliffed harbor New Albion and returned to Britain with glowing reports of a new empire where there is no part of the earth to be taken up wherein there is not some likelihood of gold or silver.

Sebastian Vizcaino led a Spanish expedition in 1602 which founded San Diego and Monterey and, late in the eighteenth century, came Father Junipero Serra, Gaspar de Portola, Juan Bautista de Anza, Juan Manuel de Ayala, and others, all seeking to extend the conquest of church and state in the New World.

Missions were soon established along El Camino Real—the King's Highway—one day's march apart from San Diego to Sonoma. Presidios were built to guard the many harbors and the air of old Spain clung about the rambling adobe walls of the haciendas. The early explorers were disappointed in their search for the fabled gold and precious stones with which the western wilderness was said to abound but many a settler found life easy and profitable in raising cattle and sheep and in various forms of agriculture.

The years from 1782 down to the time of the American occupation have been called by historians "the romantic period of California." This was the era of the Dons, great landowners, whose Castilian hospitality was a byword. It was the day of hidalgo and vaquero, caballero, and conquistador, of the thrilling rodeo and gay fiesta. It was during this period that other nations began to take a greater interest in California. Russians, who had established trading posts in Alaska, secured a tract of land on the Sonoma coast and constructed a settlement known as Fort Ross, which consisted of a stockade enclosing a church and several other structures, and a number of buildings located outside the enclosure. For 30 years they remained, but hunting and trade finally ceased to be profitiable and they disposed of their holdings to Capt. John A. Sutter (later referred to as general), George Vancouver, English explorer, on his visit to California, revived the claims of Drake. Ships of many lands called frequently at the ports of the western coast.

Across the Rockies, too, there was a growing curiosity about the West. Trappers had found wealth in the fur trade; merchants from Boston had come around Cape Horn. John A. Sutter, of German birth but a Swiss national, reached California in 1839 and received permission from Governor Alvarado to establish a colony and build a fort on the Sacramento River. He gave it the name of New Helvetia. Fremont describes the fort as a quadrangular structure of adobe, mounting 12 pieces of artillery and capable of admitting a garrison of 1,000 men; this at present consists of 40 Indians in uniform, one of whom is always on duty at the gate. The whites in the employ of Sutter number 30 men. The inner wall is formed into buildings comprising the common quarters, with a blacksmith and other workships, the dwelling house with a large distillery, and other buildings occupying more the center of the area.

On April 11, 1822, Spanish rule in Alta California had come to an end. Mexican governors replaced the Spaniards, the missions were secularized and gradually fell into decay. By 1840 there was an increasing influx of immigrants from the "States" and organized parties braved the hardships of the plains and mountains to seek out this new land of promise.

The United States Government sent Lt. Charles Wilkes and John C. Fremont to explore the country. President Andrew Jackson sought to acquire both Texas and California by purchase from Mexico, without success. President John Tyler continued these efforts. In 1842 Commodore Thomas Jones, commander of the Pacific squadron of the United States Navy, was anchored in Peruvian waters when he received word that war had broken out between Mexico and the United States. Fearful that some foreign power might take this as an excuse to seize California, Commodore Jones sailed to Monterey Bay and called on the port authorities to surrender. The American flag was raised only to be lowered when it was found that the war rumor was false.

Meanwhile, Daniel Webster, Secretary of State in Tyler's Cabinet, had proposed a three-point plan which included the acquisition of California, the satisfaction of claims of American citizens against Mexico and the settlement of the Oregon boundary dispute with Great Britain.

As overland migration from the "States" rapidly increased, the Government at Washington felt the need of a source of information on the development of political matters in the West. President Tyler therefore appointed Thomas O. Larkin, a Monterey merchant, as American consul. Larkin had come to California in 1835. The new consul did his work well, keeping Washington informed on the activities of the Mexican leaders and supplying eastern periodicals with an abundance of material on the opportunities for settlers on the Pacific coast.

President James K. Polk was inaugurated in March 1845, and immediately began the renewal of negotiations for the purchase of California. When these attempts again failed, Consul Larkin was advised:

"Whilst the President will make no effort and use no influence to induce California to become one of the free and independent States of the Union, yet if the people should desire to unite their destiny with ours, they would be received as brethren, whenever this can be done without affording Mexico just cause for complaint."

Larkin proceeded to win the cooperation of leading citizens in the cause of California's independence. Among these were Gen. Mariano Vallejo and Gen. Jose Castro, Jacob P. Leese of Sonoma; J. J. Warner of San Diego, and Don Abel Stearns of Los Angeles. There were other forces at work, however, seeking the same objective. John C. Fremont, on a Government exploring expedition with a considerable army of followers, was also eager to play a part. On June 14, 1846, at dawn, a small band of American settlers under the leadership of Ezekiel Merritt, surrounded the house of General Vallejo at Sonoma and the General soon found himself a prisoner of war. "To whom are we to surrender?" asked the wife of General Vallejo. Then it was found that there were no definite orders from Fremont and many wished to back out of the affair. Benjamin Ide, however, stepped forward and assumed the leadership. The Bear Flag, symbol of the independence of California, was raised, and Vallejo and his companions were sent in custody to Sutter's Fort.

William L. Todd, a member of the revolutionary party, later described the making of the Bear Flag: "We procured in the house where we made our headquarters, a piece of new unbleached cotton domestic, not quite a yard wide, with stripes of red flannel about 4 inches wide * * * on the lower side of the canvas. On the upper left-hand corner was a star, and in the center was the image made to represent a grizzly bear, so common in the country at that time. The bear and star were painted with paint made of linseed oil and Venetian red or Spanish brown. Underneath the bear were the words 'California Republic.' "

Whether Fremont was responsible for the uprising is a matter of historical debate, but at least he accepted the result and turned over the prisoners to a member of his company with explicit instructions on their care:

"You will retain Messrs. Vallejo, Preuxdon, Leese, and Carillo at the fort, of which you are hereby placed in full command. * * * Iron and confine any person who shall disobey your orders; if necessary, shoot any person who shall endanger the safety of the place."

The California Republic was short-lived, for, on July 9, Fremont received word by courier that war with Mexico had been declared and that Commodore John Sloat had raised the American flag at Monterey on July 7.

The members of the Bear Flag Battalion were immediately sworn in as volunteers in the United States Army, and Fremont was given a major's commission. San Diego and Los Angeles were occupied, at first without opposition, but later the native Californians rallied a small body of armed men and skirmishes ensued in which many were killed and wounded. American forces reoccupied Los Angeles on January 10, 1847, and 3 days later Fremont and Andres Pico signed the "Cahuenga Capitulation," which ended hostilities. The Treaty of Guadalupe Hidalgo, which ceded California to the United States and officially ended the war, was signed a year later, on February 2, 1848.

Only a week before James Marshall, who was constructing a sawmill for John A. Sutter on the south fork of the American River, had found some shining metallic particles in the millrace. He gathered about 3 ounces of the substance and hurried to Sacramento, where he and Captain Sutter tested it and decided that it must be gold. They tried to keep the discovery secret, but the news spread, and the trails were soon crowded with the rush of prospectors bound for the treasure area.

It was not long before the whole world learned of the new El Dorado. Immigrants set out by the tens of thousands. Some came by sea around Cape Horn and others across the Isthmus of Panama; still others came by oxcart or horseback across the Plains. Many met death at the hands of the Indians or in the snow-clad Rockies and Sierra. Disaster had befallen the Donner party in 1846 and struck again as the Manly expedition toiled over the barren wastes of Death Valley in 1849. But the crowds still came in ever-increasing numbers, all seeking a land of promise where the stream beds were said to be lined with gold.

From 1846 to 1849, California had almost as many governors as under Mexican rule. Commodore John D. Sloat, who had assumed command with the seizure of Monterey of July 7, 1846, resigned and Commodore Robert F. Stockton took over the administration. In January 1847 Stockton appointed Capt. John C. Fremont as military governor. Fremont was replaced in 60 days by Gen. Stephen W. Kearney, who 60 days later was succeeded by Col. Richard B. Mason. Mason served until the appointment of Gen. Bennet Riley on April 12, 1849. The government during this period was described as "part military and part civil and part no government at all * * * the laws were most variant and variously conceived * * * and the courts were as unique as the government and the laws. They were American-Mexican, military-civil, with a good degree of the vigilante."

Meanwhile Congress delayed organization of a territorial government until the citizens of California took matters into their own hands. Brig. Gen. Bennet Riley, the military governor, called a general election for a State constitutional convention. The delegates met on September 1 in Colton Hall, a Monterey schoolhouse, and, on October 13, 1849, the convention completed its deliberations. A month later the constitution was ratified by 12,000 votes.

More delays ensued while Congress debated, but finally a bill for the admission of California into the Union was passed, and President Millard Fillmore affixed his signature to the measure on September 9, 1850.

So the myth of the fifteenth century had become a reality. California entered into statehood and a century of progress, to fulfill her destiny as "a land of gold, near the terrestrial paradise."

The Mr. Winant I Knew

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, February 17, 1949

Mr. TOBEY. Mr. President, the late John Gilbert Winant, of Concord, N. H., who was Governor of New Hampshire for 3 terms, later became our Ambassador to Great Britain, and held several important positions in the interim. After his death his friends here and abroad have written eulogies of the man, because of the great services he rendered to his country and to humanity while he lived, and in memory of him after his death. I ask unanimous consent that an article entitled "The Mr. Winant I Knew," by Ethel M. Johnson, reprinted from the South Atlantic Quarterly of January 1949, be printed in the Appendix of the RECORD.

Notwithstanding an estimate from the Government Printing Office indicates that the manuscript will exceed two printed pages of the RECORD and cost $248.50, I consider it to possess such value that its printing is more than justified.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MR. WINANT I KNEW

(By Ethel M. Johnson)

In some respects John Gilbert Winant was a paradox: an aristocrat who was devoted to service of the underdog; a Republican who embraced the New Deal and became an ardent admirer and close personal friend of President Roosevelt; a politician with the qualities of a statesman, or a statesman who knew his way in politics, as one may choose. He was an unusual man, a man whom many would call great, a man who possessed exceptional ability and rare personal charm, a man who exerted a remarkable influence over others. He was born in New York, February 23, 1889; studied at Princeton; taught history at St. Paul's school for boys in Concord, N. H.; married Constance Rivington Russell and made his home with her and their three children—Constance, John, Jr., and Rivington—in a lovely spot not far from St. Paul's. There was little in these things to distinguish him from other successful young men of prosperous families. He left St. Paul's during World War I to enlist with the First Aero Squadron of the American Expeditionary Force and was honorably discharged in April 1919 with the rank of captain.

In his public service, however, the flame which burned within him gave an outer light. His three terms (1917, 1921, 1925) in the New Hampshire Legislature—a ponderous body corresponding in size to the Congress of the United States—suggested the idea that human problems were not being met by antiquated laws and horse-and-buggy methods and were not likely to be met if selfish interests were permitted to control the State. Hence he decided to run for Governor. He had a natural flair for politics and a genuine interest in people and their problems. He went about the State meeting people and making friends. They liked his frank and pleasant manner, his honesty and sincerity. His success in interviews and conferences and his effective organization offset the poor impression he made as a public speaker. The working people, the women, the young men—whether young in years or in spirit—were with him. Harlan Pierson, who belonged to the latter category and helped in managing his campaigns, used to worry over Mr. Winant's platform appearances. "We should have trained him better," he would say regretfully after a public speech. Despite this handicap, which he never overcame, he won the election. In fact, he shattered precedent by serving three terms as governor; whereas one term had formerly been the rule. He defeated as astute a politician as Frank Knox and bucked the powerful Moses organization.

He was a hard-working executive and a reformer. He used his powers of persuasion, his personal charm, and his political skill on the legislature to secure the enactment of a number of social-welfare measures. He was in fact responsible for much of the legislation in the State providing for such things as shorter hours of labor, minimum-wage machinery, and unemployment insurance. He improved the State's financial methods, reorganized the welfare work, tried

to bring the antiquated workmen's compensation law into conformity with good practice and to modernize the creaking labor bureau. He organized the New Hampshire Commission on Unemployment Reserves, which drafted the unemployment insurance measure later enacted into law. He formed the New Hampshire Commission on Interstate Compacts Affecting Labor and Industry. Lacking a staff of trained investigators, he induced the Women's Bureau of the United States Department of Labor to make a study of the boot-and-shoe industry in the State. At his request, the United States Bureau of Labor Statistics conducted an intensive survey of family expenditures in New Hampshire cities to help in establishing a base for a cost-of-living index. He participated in the Eastern Interstate Conference on Labor Legislation and was represented at the National Conferences of the States convened by the United States Secretary of Labor. In an effort to meet the current social problems, he virtually started a little New Deal of his own in New Hampshire, perhaps one reason why he so readily embraced the Roosevelt New Deal. His innate loyalty, his desire to alleviate human suffering, and his feeling that in a crisis the demands of the Nation were above those of party were, however, the compelling motives.

He came to be known throughout the country as a progressive young executive, who was loved by the plain people of his State and feared by the old-line politicians. One reason why the politicians distrusted him was his practice of appointing persons from outside the State to positions in the public service when he could not find properly qualified candidates in New Hampshire, though he naturally tried to find an acceptable appointee within the State. For example, he secured a former city manager to revamp the State's financial system. He employed an expert from another State to study the labor bureau and draw up a plan for a modern department of labor. Another foreign expert was placed, in a somewhat extralegal fashion, in charge of the administration of some of the labor laws.

Nevertheless, Mr. Winant possessed unusual political acumen and understood what makes the politician tick, knowledge which he used with remarkable singleness of purpose in the service of the people of his State. He never willingly antagonized the legislature or the political party leaders. Rather, he sought their cooperation, though he did not hesitate, if necessary, to incur their wrath and that of powerful interests when he was convinced that to do so was essential for the well-being of the public. Some of his achievements for the public welfare were virtually put over on an unsuspecting General Court. He once laughingly said that he had been obliged to do illegally all the good he had been able to do for the people of New Hampshire. Though an exaggeration, this statement had some basis in fact. An official of an employers' association, explaining its opposition to an appropriation for the minimum-wage law, said in all seriousness that his association did not object to having labor laws enacted, but did object to having the laws enforced. Governor Winant was interested both in having progressive legislation enacted and in securing competent officials for enforcement even if he had to go outside the State to find them.

The Labor Commissioner whom he had inherited from his predecessors was fonder of talk than action. Inspections were few and far between. Many industrial establishments went uninspected, and there were flagrant violations of the labor laws. Governor Winant tried to replace the Commissioner, but found him too firmly entrenched with the legislature and the Executive Council. Failing to get approval for his proposed change, the Governor assigned some of the Commissioner's functions to others and permitted him to dangle without a reappointment, which made the Commissioner more amenable to suggestions from the executive office. The legislature had seen to it that the administration of Winant's minimum-wage law was vested in the Labor Commissioner. The Governor, however, engineered an arrangement by which the Commissioner abdicated his authority in favor of an appointee of the Governor.

Since the State salary scale was modest, to put it mildly, and the legislature extremely conservative with respect to innovations, Mr. Winant sometimes personally paid the "outsiders" he brought in to help with special studies; sometimes he supplemented the official stipend from his own pocket. He might also invite the "outsiders" to stay at his home until they could find satisfactory living arrangements in Concord. This disposition to think of the comfort and well-being of others inspired a friend to say in jest to Mr. Winant, "I wonder how it would seem to be a fairy prince like you." "Ah," he sighed, "if I only had the money to enable me to do the things I would like to do." Of himself he took far too little thought or care. He wore the plainest of clothes and worked indefatigably. He practically never took a vacation.

From early manhood he carried the problems and burdens of others. The tragic death of his youngest brother, whom he dearly loved, left its mark. He had business and financial worries. Money meant little to him except as a means of helping others. Many who had no rightful claim upon him poured their troubles into his ears, wrung his heart, and received his assistance. Some of the problems he met as governor taxed his time and ingenuity, though not his patience. For example, he was told by a friend of the troubles of some girls who worked in a factory in Rochester. They wished a conference with the governor, but, being employed during the week, they could come to Concord only on Sunday. Mr. Winant agreed to meet with them in the council chamber on Sunday afternoon. The girls came dressed in their holiday best, put on to impress the Governor. The leader of the group, a young woman in her early twenties, wore a silk frock, a picture hat, and narrow, high-heeled patent-leather pumps, scarcely an outfit that suggested the need for higher wages; but Mr. Winant understood. He listened patiently while the girls told their stories, asked questions, explained what could and what could not be done under the existing laws, and told them what he was trying to do in order to improve wages and working conditions in the State. He promised to send a representative to the factory as though on a routine inspection, so that the girls would not be implicated, in an endeavor to correct some of the conditions of which they complained. After the conference, which took practically the entire afternoon, the group leader went into raptures over the Governor. "He is so handsome, so gentlemanly, so sympathetic and kind," she said, "and he has such a beautiful voice * * * I could have sat all day and listened to him if my shoes hadn't pinched my feet so."

Some of his problems as governor stirred him deeply. A condemned murderer appealed to him for clemency. There was no question of the man's guilt. The governor saw the man and talked with him; then he spent much of the night walking out of doors. In the morning he commuted the sentence to life imprisonment. He was sensitive, sympathetic, and generous—far too generous for his own good. This was true with respect to his sympathy and time as well as his money. He made it a rule as governor to see all who wanted to see him; his door was open to everyone in the State. As a result, the corridors at the Capitol were always crowded with persons waiting to speak with him. His sympathy with his callers and their difficulties tempted him not to hold them to the 10 or 15 minutes his secretaries had allotted. In consequence, he was almost invariably behind his schedule, sometimes hours behind. This despite the fact that he arrived at his office early, worked through the lunch period—sometimes he sent out for a sandwich and coffee; frequently he went without anything—and often remained late in the evening. He secured shorter hours for others, not for himself. After these long periods at the office he always took home a brief case filled with papers to go over at night. Sometimes he would return to his office after dinner and work until well past midnight. He had little sense of time. One wondered how Mrs. Winant managed about their dinners; he was absolutely unpredictable.

Once the governor sent word for an aide to come to his office in the late afternoon for a conference. The assistant went to the inner office at 5 o'clock, when the line of "mourners" on the corridor benches, as the staff called them, was beginning to thin out. The governor handed her some papers to look over and went into the outer office to speak with some of those still waiting to see him. From time to time he returned to exchange casual words, paced back and forth across the floor as he considered a problem that had been presented to him, took a long-distance call, or gave instructions to a secretary in the adjoining room. The dinner hour came and went. The time for a conference the governor had planned to attend if possible passed. The procedure continued—the interviews in the outer office, the restless pacing of the floor in the inner office, with occasionally a few words, more in the nature of a soliloquy than a conversation. Finally he came back and sat down in a chair by his assistant. He was tired after the endless stream of people who had come to tell their problems and to ask his help. He looked at his aide earnestly but absent-mindedly, and inquired, "What can I do for you?" In his exhaustion he had completely forgotten that he had sent for her and confused her momentarily with the applicants who had crowded his day and evening.

Again, at the International Labor Office in Washington, a secretary was working with him on a speech he was to give in a distant city the following night. They started just after dinner. The secretary determined for once not to remind him of the time in order to see how long he would go on before noticing the hour. Mr. Winant had the artist's feeling for words and always tried to find a phrase to convey the exact shade of meaning he intended. He could write beautifully. At its best his style was clear, direct, and arresting. There were times when it had something of the simplicity of Lincoln's. When composing he would pace the floor as if tracking down the elusive words he sought. In his refusal to accept any substitute for those that belonged in the pattern, he had a certain resemblance to Barrie's Sentimental Tommy, who, by devoting an entire examination period in English composition to a quest for one particular word, lost the prize to which he was rightfully entitled. A friend used to repeat this story to Mr. Winant, but he neither took offense nor changed his ways. The evening wore on. Mr. Winant smoked and paced the floor; at times he sat meditatively for a few minutes or discussed the general subject of his address. He dictated a paragraph or two, revised it, and continued his search for the perfect word. The secretary took notes; sometimes, unable to stand the strain, she made a suggestion. Occasionally Mr. Winant approved the contribution; more frequently he did not. Sometimes it upset his train of thought; though grieved when that happened, he was unfailingly patient. At length the secretary began to weaken as they worked on into the wee hours with no sign of let-up on Mr. Winant's part. He was completely

oblivious of time. Should she wait until the sun rose? Finally, she could stand it no longer. "Do you know what time it is?" she inquired. "No, what is it?" he asked. "Three-thirty a. m.," the secretary replied with a yawn she could not stifle. He was genuinely distressed and contrite.

Mr. Winant, to some observers, was not an efficient administrator. In a sense, that is probably true. He was not systematic. He could not keep to a rigid schedule. He was absent-minded; he was always losing his papers or borrowing papers from the files and forgetting to return them. He had his own personal filing system, which consisted in part in stuffing letters, telegrams, memos, and papers he considered especially important into his pockets. His staff used to watch with mingled consternation and amusement when he emptied his pockets in quest of a particular note. Once when governor he employed an expert to organize his office. The files were modernized and put in order, the official documents arranged; the staff duties studied and systematized. The expert, however, was not satisfied. To organize the office was not enough; what was really needed was to organize the Governor. If, however, the test of an executive is an endeavor to secure the most competent officials available to assist him, willingness to delegate authority to them and to support them even in unpopular policies if convinced they are right, an ability to inspire those working with him to put forth their best efforts and to strive for his objectives; if, in short, it is measured by his power to fire others with his own enthusiasm and ideals, then Mr. Winant was a great executive.

Long after he left the Social Security Board officials and staff members continued to express regret over the loss of his inspiring leadership. Under his guidance they were crusaders in a noble cause. Without him they were ordinary civil servants, engaged in a routine grind of monotonous daily details. Only a few months before Mr. Winant's tragic death, the wife of one of the officials at the International Labor Office in Geneva wrote to a friend in the United States expressing the longing of the staff for his return. His influence with others came from his own idealism, his magnetic personality, and his warm human interest in all who worked with him or came in contact with him. This interest included the higher officials, but also extended to the humblest employee. The cleaning women at the American Embassy in London went into raptures about the Ambassador. The matron who took care of his office used to tell American members of the staff in a strong cockney accent of his kindness and helpfulness to her. When her home was destroyed by bombs, he had temporary quarters fitted up for her in the basement at Number One Grosvenor Square. " 'E has such a beautiful voice, so soft and gentle," she would say, her eyes glowing with emotion. "And no matter 'ow busy 'e is, 'e always says 'Good evening' to me when 'e sees me and asks 'ow I am getting on." The doormen and night watchmen at the Embassy were likewise enthusiastic admirers of Mr. Winant. The employees at his home adored him.

One secret of his charm was the fact that he was always doing something for others. He was interested in causes; but he was also keenly interested in individuals. If they were in difficulty, he was eager to help them. At almost every interview his inquiry was, "What can I do for you?" From him this came not as a stereotyped question, but carried the assurance of action. When he was chairman of the Social Security Board, a boy holding a minor position on the staff received word that his father, who lived in a Western State, was dying. He could not possibly reach home in time if he went by train, nor could he afford the expense. Mr. Winant, learning of the matter, got a plane reservation for him, paying the fare himself, and so made it possible for the boy to see his father before his death. His sensitive nature made him acutely aware of the feelings of others. At receptions which he and Mrs. Winant gave when he was in public life, he sought out the guests who seemed shy and diffident and put them at ease by his informal and friendly manner. He had infinite patience with those who were in trouble, when one less charitable might have classified some of them as pests.

There were certain types of persons, however, whom he could not tolerate. He had no use for bores, professional propagandists, and lobbyists. Like all prominent men, he was plagued by individuals of this kind. As a means of self-protection and conservation of time, he developed effective techniques in avoiding them or in escaping their clutches when they lay in wait for him in hotel and office corridors, though he was tactful in his methods.

His own inner sadness was perhaps one reason Mr. Winant was so responsive to the suffering of others. He could not refuse a request for assistance, even from a complete stranger. One evening in Washington when he was walking with some members of his staff, a panhandler approached and asked for money. Without a question, Mr. Winant gave the man a bill. "You shouldn't have done that," his secretary protested. "We're warned not to give money to persons who beg on the streets." "Is that what the Bible teaches?" Mr. Winant inquired innocently. "I thought it said to give to those who ask of you." Much of Mr. Winant's giving was of a more constructive kind. He helped many young men and women complete their studies and start upon careers. He put more than one boy through college. He found positions for those out of work. He paid for medical aid in families that needed but could not afford the services of a specialist. Nor were his benefactions confined to those he knew personally. During the depression of the early thirties one of the radio stations gave time on the air to young men out of work to tell their stories and explain their needs. Mr. Winant, then Governor of New Hampshire, was impressed by the story of a youth who broadcast from another State. He sent for the boy, took him into his household, and made arrangements for him to go to the State university to complete his college course. Later he got a job for him; and, finding him a bright, agreeable young man, launched him on a successful public career.

Working for Mr. Winant was a rare and wonderful experience for those who had the privilege. If he had confidence in his assistants, he would let them do anything they wanted and would do anything in his power for them. At times, it is true, he made strenuous demands upon them. They understood this to be a part of the opportunity that was theirs. Carried away by his example, they, like him, even on occasion forgot that time existed.

When he made a hurried airplane trip from Geneva to the United States, his Washington office was alerted for action. He usually packed a week's work into 2 or 3 hectic days. His arrival had an electrical effect on the staff. All day dreaming and gossip stopped. Young men who had been working leisurely, tipped back in their chairs with their feet on their desks, snapped briskly to attention. The office, which had been proceeding at a moderate tempo, suddenly became a beehive of activity. Telephones rang. Typewriters banged. A stream of callers arrived as if by magic. The staff made appointments, took dictation, dispatched telegrams and cables, and attended to reservations for the return trip. Mr. Winant's departure was even more dramatic than his arrival. He always seemed to leave but a split second's margin for making his plane. One member of the staff would corral a taxi, which would wait honking impatiently in front of the office while Mr. Winant made a last-minute phone call or exchanged a few closing words with a late conferee. He appeared perfectly calm and cool, although the entire staff was jittery. When he finally left, someone would telephone Eastern Airlines to inform them that Mr. Winant was on his way and to ask that the plane be held so that he could make it. In some miraculous way he always did make it. Then the office would take a long breath and return to the humdrum existence of ordinary days.

Mr. Winant always insisted that the staff be given a generous amount of time off or extra pay for the additional hours they put in when he was present. When his program permitted, he would take members of the staff to lunch or dinner with him or even perhaps to the theater. He had the rare faculty of winning and holding the loyalty of the men and women who worked for him. One reason for this was his unwavering loyalty to them. He did not change as new honors came to him. His early friends remained his friends through life. His personal secretary in Concord continued as his secretary in Washington and Geneva. The young New Hampshire lawyer who advised him on legislative matters when he was Governor became one of the attorneys at the Social Security Board and later went with Mr. Winant to London. The man he employed to study the New Hampshire State labor bureau served as one of his assistants on the Social Security Board and then joined the International Labor Office staff in Montreal while Mr. Winant was Director. His economic counselor at the International Labor Office in Geneva and Montreal headed his staff of special assistants at the American Embassy in London and subsequently served as chief economist on Mr. Winant's personal staff in New York in connection with the Economic and Social Council of the United Nations.

Mr. Winant demonstrated his skill as a conciliator when President Roosevelt named him Chairman of the Federal Textile Inquiry Board in 1934. In this capacity he helped in settling strife in the industry, winning the respect and confidence of both the employer and employee members of the Board. Just after he completed his third term as governor of New Hampshire he met Harold Butler, Director of the International Labor Office. The United States had joined the International Labor Organization in 1934; and Mr. Butler was looking for an American Assistant Director. Mr. Winant's reputation, his ability, his interest in labor and social welfare problems, and his personality convinced Mr. Butler that he was the ideal choice for the position. This was the beginning of a friendship that lasted for the rest of Mr. Winant's life. He went to Geneva in May 1935, and remained through August of that year. As Assistant Director of the International Labor Office he soon made his influence felt. He initiated the First Regional Conference of American States Members of the ILO, held in Santiago de Chile in January 1936. He helped to broaden the objectives of ILO work.

Although he felt it his duty to accept President Roosevelt's call and return to Washington to serve as Chairman of the Social Security Board in 1935, his heart was still with the ILO. He hoped to return to Geneva after the social security program was organized and functioning successfully and retained his contacts with the International Labor Office. In the spring of 1937 he served as Chairman of the ILO Technical Tripartite Textile Conference, which was held in Washington. That summer he headed the United States delegation to the regular ILO Conference in Geneva. Later in 1937 he returned as Assistant Director. In 1938 Mr. Butler resigned, and the governing body of the International Labor Office elected Mr. Winant Director. It was a critical period, not only for

the Organization, but for Europe and the world. Mr. Winant remained in Geneva throughout the Munich crisis. When he assumed his new position as Director of the International Labor Office in January 1939, the war clouds were darkening over Europe.

Even in normal times the position of director of the International Labor Office and secretary-general of the International Labor Conference was an exceedingly difficult one, calling for exceptional qualities of leadership, skill, tact, and diplomacy. The Office when operating at capacity had a staff of several hundred from some 40 different nations. The Conference was made up of government, employer, and labor representatives from the countries which are members of the International Labor Organization, at that time more than 50 in number. There were conflicting national and group interests to be harmonized and a definite program of work to be executed. One by one the Continental member states were overrun by the Nazis. With the victims of Hitler's aggression unable to continue participation in the Organization, and other European countries fearful of offending the Germans, the problems of the ILO became increasingly grave. Mr. Winant realized that the fate of the Organization depended upon strengthened American contacts and service to the Americas. He therefore arranged the Second Regional Conference of American States Members of the ILO held in Habana, Cuba, in November and December 1939. With the assistance of the late Dr. Oswald Stein, an authority in the field of social insurance and a prominent ILO official, he organized at Lima, Peru, the Inter-American Conference on Social Security, which later was developed into the Inter-American Commission on Social Security. He loaned ILO experts to assist Latin-American countries in establishing a system of factory inspection, drafting a labor code, or developing a social insurance program. His transfer of the headquarters of the International Labor Office to the Western Hemisphere during the war was responsible for saving the organization.

In February 1941, he resigned as director of the International Labor Office to accept appointment as United States Ambassador to the Court of St. James. In peacetime the position is the chief diplomatic plum in the United States Foreign Service. In 1941, however, the role of Ambassador to a bombed and battered Britain, threatened daily with destruction, was a grim and dangerous business. It was not a job for a socialite or a cookie pusher, which was the reason Mr. Winant took it. He was modest and unassuming in his manner and did not care for titles. His immediate staff was always requested to call him simply "Mr. Winant." To business associates and political acquaintances he was "John Winant" or "John," depending upon the degree of intimacy. To a smaller group of personal friends, he was "Gilbert Winant" or "Gil." After the Senate confirmed his appointment and he had taken the oath of office, an enthusiastic member of his staff in Washington inquired, "Now may I call you 'Your Excellency'?" "The correct title," he replied, as he paced the floor of his office, "is 'Mr. Ambassador,' but," he added with a twinkle, "if you ever call me that, I'll spank you." And he continued to pace the floor.

Walking was for Mr. Winant a form of self-expression, of relief, of relaxation, as his mood might be. Always, under the stress of strong emotion he walked. As he dictated letters, he walked slowly back and forth in his office. When composing a speech he paced the floor. Often when talking to visitors he strode up and down the library in his attractive home in Concord. When he had a perplexing problem to consider, he frequently called a friend to go for a walk with him to discuss it. One evening in Washington he walked around and around the paths in Lafayette Park while pondering aloud whether or not to permit his name to go before the governing body of the ILO for election as Director. Sometimes he walked like a caged lion. Sometimes he walked slowly and thoughtfully. At times he walked for the freedom and joy of walking. One of the few pleasures he permitted himself in Geneva was walking home from the ILO office by the lake and through the woods. Sometimes he took members of his staff with him. Occasionally he walked the entire distance to the chateau where the Winants lived; frequently Mrs. Winant would meet him part way in the car. On rare occasions, on a Saturday afternoon or Sunday, there would be a drive to some attractive spot in France. Mr. Winant's wealth of information, his familiarity with many places of interest, and his knowledge of history made it a fascinating experience to be included in a family party of this nature. It was quiet trips like this—walking or driving in the country—that Mr. Winant most enjoyed.

During the last months in Geneva there was no time or inclination for recreation. Hitler's armies were streaming over Europe, surrounding Switzerland and isolating the International Labor Office. The Nazis wanted to gain control of the Office. Some of their men were planted among the staff. Geneva was full of spies. Mr. Winant's life was in constant danger. In the early summer of 1940 he decided to transfer the key personnel of the Office to Canada. By so doing he preserved the ILO as an independent agency. For financial and security reasons it was necessary to curtail the staff drastically. In fact, it was cut to one-tenth of its full size. This involved selecting the members to be transferred and explaining the situation to the others, who were given the option of resigning with a pension or accepting suspension without pay until such time as the Office would be in a position to reemploy them. This hard task fell upon Mr. Winant. Only those who knew him intimately understood the suffering it meant to him.

All of this with the previous years of overwork and worry affected his health. Thus he was not a well man when he went to London as Ambassador. Nevertheless, he threw himself unreservedly into the work. That he might be available at a moment's notice day or night at the Embassy, he took a modest apartment at Grosvenor Square in the Embassy building instead of using the mansion provided for the Ambassador at Princess Gate. No problem was too difficult or too dangerous for him. No question of personal comfort or convenience influenced him. Refusing to avail himself of his privileges as a diplomat, he restricted his household to the British wartime rations. Instead of driving the Embassy car—a luxurious high-powered automobile that took a generous amount of gasoline—he used a small car or one of the Army vehicles. When incendiary bombs were dropped near the Embassy, Mr. Winant went out and helped extinguish the fires. With officials of the British Government he visited bomb-shattered communities and assisted in maintaining morale.

Never perhaps have the reserved British people loved an ambassador as they loved Mr. Winant. He came to them in their hour of greatest need. He gave them sympathy, wise counsel, and effective help. He shared their privations and their danger. They liked his modesty, his unassuming manner, his genuineness. The fact that he was not an orator—in truth, a very poor public speaker—mattered not They probably liked him the more on that account His sincerity, his friendliness beneath a shy exterior endeared him to them They recognized in him a kind, astute, and understanding friend, a friend who interpreted their problems and their needs effectively to the President of the United States. They appreciated his knowledge of political and military strategy, his experience in international affairs, his skill in bringing about a better understanding between the United States and Great Britain. Those who heard the moving tributes paid to Mr. Winant in the speeches of Anthony Eden, Ernest Bevin, and Sir Walter Citrine at the farewell banquet given by the British Government in the spring of 1946 could have no doubt as to the esteem and deep affection in which he was held.

Mr. Winant's resignation in 1946 after the end of hostilities came as a shock to the British—officials, and ordinary people alike. Just before he left London, he showed some American friends a letter Anthony Eden had written on learning the news. It was an intimate, personal message, expressing Mr. Eden's affection and friendship and his sense of poignant personal loss in Mr. Winant's departure. He referred touchingly to the help and consolation Mr. Winant had given him when word came of the death of his son in the war. No one who read that letter could think of Englishmen as cold and unemotional. At the time, Mr. Winant was speaking words of comfort to British friends, his own soul was torn by fears for the fate of his son. He was pleased and proud that both of his boys had enlisted in the armed forces. Rivington, the younger, left school to join the Marines and served in the Pacific area. John, Jr., who, following his father's footsteps, had gone to Princeton, left to enter the Air Corps. While on a bombing mission over Germany he was shot down and reported missing. For anxious months Mr. Winant did not know whether or not he was still alive. Finally word came that he was a prisoner of the Germans. Near the close of the European phase of the war, the Nazis transferred him from one military camp to another, apparently intending to use him with other prominent prisoners as a hostage. Mr. Winant suffered agony of spirit until John was rescued. Yet he did not permit his personal grief to interrupt his work. He continued his indefatigable labors at the Embassy, his assistance to others, and his active participation in high-level strategy.

One afternoon in London in the late spring of 1946, just prior to his return to the United States, Mr. Winant showed his friends the medal of merit conferred upon him by the President in recognition of his wartime service as Ambassador to Great Britain. It pleased him very much; it probably would have meant even more to him could it have been presented by President Roosevelt, who had appointed him. The death of President Roosevelt was a heavy blow to Mr. Winant. An autographed photograph of the late President was among his treasured possessions, as were similarly autographed pictures of General Eisenhower, General Marshall, and Cordell Hull. At the memorial services for President Roosevelt, conducted jointly by the American Embassy and the British Government at St. Paul's Cathedral, Mr. Winant read the lesson from the Scriptures. Standing at a lectern placed high above the throng in a niche between two great columns, he looked, according to an enthusiastic admirer, like a Greek god. The Cathedral was packed with notables. The King and Queen, the Archbishop, the Prime Minister, and other high dignitaries of church and state were present. It was an impressive gathering. Some members of the Embassy staff, however, insisted that Mr. Winant was the most impressive, the most princely in bearing, and the handsomest of them all.

I have never been able to understand the adjectives employed by some writers in asserting a physical resemblance between Mr. Winant and Abraham Lincoln. Such terms,

for example, as uncouth, awkward, gaunt, ungainly were not appropriate in his case. Mr. Winant himself, a devoted admirer of Lincoln, was none too flattered by these comparisons. He once said that it always pleased him when there was suggestion of a spiritual resemblance; but when he was told that he looked like Lincoln, he always remembered that Lincoln was described as an exceedingly plain man. Mr. Winant was in reality a handsome man, tall and graceful, with a good figure, a fine sensitive face, and magnificent eyes. Perhaps his eyes gave him the closest physical likeness to Lincoln. They were deep set and piercing, sometimes sad and melancholy, sometimes humorous and whimsical, but always kindly and sympathetic. They reminded me of Franklin Lane's beautiful tribute to Lincoln's eyes written after seeing St. Gaduens' impressive statue in Chicago of the great emancipator. Mr. Winant loved and often quoted that passage.

Mr. Winant stood out in any gathering, often making a deep impression on persons who saw him for the first time. Once when he called at a hotel in Paris to see a friend, the manager who took the message either forgot his name or could not pronounce it. His description, however, left no doubt as to the identity of the caller: "A tall, handsome gentleman, with dark eyes and hair, an American with perfect manners and a beautiful voice, very distinguished looking." There was something magic, something magnetic about him. One felt his presence the moment he entered the room. One was conscious of it over the telephone on picking up the receiver and hearing his friendly, "Hello there." Many persons who had never met him were his devoted admirers because they had read something he had written or had heard him speak over the radio or had caught a glimpse of him at a meeting. Recently an acquaintance said, "Just to see him for a minute, to clasp his hand and hear his greeting gave one a spiritual lift and altered the entire day." It is inexpressively sad that a man who did so much for and meant so much to others, who had made so great a contribution through public service to his country and to the world, should in his illness and exhaustion come to feel that he was no longer of use. He had given of himself far too generously and had forgotten how to relax and rest. When he needed rest most, he was unable to find it.

After resigning as Ambassador, he accepted the position of United States Representative on the Economic and Social Council of the United Nations. Many would have liked to see him Secretary-General of the Organization. His diplomatic skill, his experience in international affairs, and his high idealism would have fitted him admirably for the post. Selection of the United States as headquarters for the agency, however, ruled out that possibility. He was offered an Assistant Secretaryship, but declined. He would have been interested in the position of Deputy Secretary-General had the post been authorized. It is said that an effort was made to set up such a post for Mr. Winant but that it was defeated by the objections of one of his countrymen. Partly because of failing health he resigned from the Economic and Social Council a few months after accepting appointment and started to write his memoirs. They were to have appeared in three volumes. He was working on the second volume at the time of his death. So great was his fatigue that sometimes, although he worked all day, he was unable to accomplish anything. On the evening of Monday, November 3, 1947, the end came.

He was a genius with some of the erratic characteristics of genius. He was an idealist and impractical in financial matters, as idealists frequently are. He was a rare public servant with selfless devotion to the public welfare combined with a shrewd knowledge of politics and the ways of politicians. He was a statesman, a diplomat, a leader in international affairs. But his memory will be treasured by thousands of persons in this country and abroad, not because of his genius, his fame, or his greatness, but rather because of his warm human sympathy, his capacity for friendship, his personal interest in and helpfulness to those in trouble. By the plain people, whom he loved, he will be cherished for those intangible values "that form the best portion of a good man's life—the little nameless, unremembered acts of kindness and love."

In December 1946, the British Government conferred the Honorary Order of Merit on Mr. Winant, the only American besides General Eisenhower to receive this distinction. November 19, 1947, the British people held another memorial service in St. Paul's this time in memory of former Ambassador Winant.

Veterans' Pensions

EXTENSION OF REMARKS
OF
HON. WALTER B. HUBER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

The action of the House Committee on Veterans' Affairs today, in approving H. R. 2681 to grant non-service-connected pensions to all World War I and II veterans, was bitterly criticized as a betrayal of thousands of aged and ailing veterans by the national legislative committee of the Veterans of Foreign Wars meeting in Washington.

Speaking for the disgusted and incensed members of the VFW committee, Chairman J. R. Klawans, of San Francisco, bluntly declared: "The mountain labored and brought forth a mouse." He described the legislation as an abortion that must have been railroaded through the committee. He challenged Chairman RANKIN to defend this bill as an answer to the needs of the great mass of aged and ailing veterans who must depend on pensions for a bare subsistence, but who have been completely ignored in this so-called pension program.

"As a matter of fact," Klawans said, "the only practical result of this bill is to enable those veterans who have reached age 65 to get on the pension rolls, even though they have not previously been eligible for such pensions because of income limitations in existing law. On the other hand," he said, "it does nothing whatever for totally disabled veterans who are under that age. This is an abortion, pure and simple."

Klawans emphasized that the VFW will continue to fight for an equitable and adequate pension program, particularly for those veterans who are not totally disabled and who have not reached age 65, but who, nonetheless, are in need of assistance.

The VFW spokesman questioned the intent or desire of the House Veterans' Committee to report out a bill which would answer the needs of veterans and still stay within the limits of reasonable economy. He suggested that if the committee did have this in mind it would have seriously considered H. R. 2512, proposed by the VFW, which would have taken care of the most needy veterans without costing more than a half-billion dollars in the first year.

Klawans explained that the VFW compromise bill would provide non-service-connected $90 a month pensions to World Wars I and II veterans for total disability as well as at age 65. "In addition, the bill would grant $75 a month to veterans with 75 percent or more disability and $50 a month to those with 50 percent or more disability," he said. "Unlike the bill reported out today by the House Veterans Committee, however, the VFW bill would establish income limitations of $2,000 a year for veterans with no dependents and $3,000 a year for veterans with dependents. Ex-servicemen would have to earn less than these amounts to qualify for the pension. We do not like any needs provisions, but would accept this reluctantly as probably necessary at this time."

Klawans clearly indicated that the VFW would fight for a bill which would reach the targets set forth in the VFW compromise bill, and declared that "the gesture noted today by the committee—if you can call it even a gesture—is nothing but a betrayal of thousands of aged and ailing veterans."

Communism Versus Church

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. HAND. Mr. Speaker, seldom in recent history has the conscience of the civilized world been more deeply shocked than it has been by the recent trial of Cardinal Mindszenty by the Hungarian authorities.

The entire life and character of this distinguished priest of the church is so wholly inconsistent with his statements and demeanor on the witness stand as to make it perfectly plain that he has been subjected to some form of overwhelming pressure.

The trial is a mockery of justice and has been deeply offensive to the sensibilities of everyone. Men of all religious faiths everywhere have joined in deploring it.

To illustrate the extent of indignation which has swept all over the world, the diplomatic representatives of 33 nations, just this week, have made representation on the subject, and extended their sympathy to Pope Pius.

The first semiofficial action taken on the matter was taken by the Republican conference of the House of Representatives, which unanimously passed a resolution denouncing the trial and urging prompt official action. I am glad to say this recommendation was immediately followed by the House, which passed a resolution urging immediate action through the United Nations or by other appropriate means.

If further evidence is needed that communism is a spreading cancer, surely this is it. No man of high or low degree, of any faith or political belief, anywhere in the world, is safe in a nation which has succumbed to the Red menace.

I hope the administration will swiftly take every appropriate action to rectify this deplorable and dangerous thing which has happened.

For the information of the thousands of my constituents who are interested, I append a copy of the resolution passed by the House on February 9, 1949.

House Concurrent Resolution 19

Whereas on September 18, 1946, Archbishop Aloysius Stepinatz, Roman Catholic Primate of Yugoslavia, was arrested on charges of committing "crimes against the people" and of "being the center of terrorist opposition" to the Government of Yugoslavia; and

Whereas on October 11, 1946, the said Archbishop Stepinatz was sentenced to imprisonment for a term of 16 years and deprived of his civil rights for 5 years; and

Whereas the conduct of the trial of the said Archbishop Stepinatz which resulted in such sentence was a travesty on justice and a violation of the fundamental rights of man; and

Whereas on December 26, 1948, Josef Cardinal Mindszenty, Roman Catholic primate of Hungary, was arrested on "suspicion of treason, attempting to overthrow the democratic regime, espionage, and foreign-currency abuses" and has been held incommunicado since such date; and

Whereas the charges upon which the said Cardinal Mindszenty was arrested constitute distortions of truth and justice: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that the arrest and imprisonment of the two eminent Roman Catholic primates, Archbishop Stepinatz of Yugoslavia and Cardinal Mindszenty of Hungary, (a) constitute persecution on account of political and religious beliefs, (b) violate the declaration in the preamble to the Charter of the United Nations, namely: "to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men * * *", and (c) violate the third purpose stated in article I of the Charter of the United Nations, namely: "To achieve international cooperation * * * in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion." It is further the sense of the Congress that these issues should be raised by the United States either in the United Nations or by such other means as may be most appropriate.

Lithuania

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1949

Mr. GARMATZ. Mr. Speaker, at a dinner in Baltimore last night, the members of the Council of Lithuanian Societies celebrated the thirty-first anniversary of the founding of the Republic of Lithuania. The consul general of Maryland, the Honorable Jonas Budrys, spoke in his native language.

I am confident that this group was but one of the many, all over the world, who paused to pay tribute to that great country and to express the fervent hope that in the not too distant future this brave nation will once again enjoy true liberty and freedom.

Those inside of Lithuania are fighting in a great underground movement, in an heroic effort to expel their oppressors. The Russians do not, of course, give this underground movement any publicity. But they are making reprisals, not only by subjecting the people to oppression and terrorism, but also by carrying out a program of extermination and deportation, in an effort to suppress the underground and reduce the Lithuanian population, and thus, the resistance.

Lithuanians outside of that country have been working hard to help their homeland regain its independence, and all Americans lend their strong moral support to their efforts and pray that the day of their liberation may not be far off.

Under leave to extend my remarks, I include a translation of the address delivered at the dinner by the Honorable Jonas Budrys, and also a resolution adopted by the Council of Lithuanian Societies:

ADDRESS BY HON. JONAS BUDRYS

The State of Maryland commemorates, every year, February the 16th as the Republic of Lithuania Day. I wish to assure you that this expression of Maryland's friendship to Lithuania has always been deeply appreciated and the sentiment fully reciprocated by the people of Lithuania. Particularly in these times of Lithuania's struggle for survival Maryland's observance of February 16 is a very real source of encouragement and inspiration to all Lithuanians.

Your magnificent State and your noble and foresighted statesmen will be inscribed in the annals of Lithuania and our entire Nation will remember gratefully the friendship shown by Maryland to Lithuania during its hours of distress.

Our Nation is leading a heroic fight for freedom because her children will not live enslaved. From the Right Reverend Monsignor Mykolas Krupavicius and Mr. Vaclovas Sidzikauskas, our two great statesmen and fighters for freedom, who spoke in Baltimore recently, you have already had the opportunity to hear about the tragedy of Lithuania and her efforts to regain liberty. But today it is not Lithuania's freedom alone that is at stake. The question is: Will the entire world be free or will totalitarianism and brute force win over democracy and justice?

In the recent war that was supposed to bring lasting freedom to humanity, the democratic world sacrificed hundreds of thousands of lives and incalculable wealth to defeat one dictator; but the rejoicing was short-lived, for another and no less inhuman dictator emerged as the real winner, bent upon conquering the world by force, terror, and deceit.

The three Baltic countries were the first to learn, some 30 years ago what Bolshevism represented and at what Moscow was really aiming. Only now is the rest of the world beginning to open its eyes, only now, when not the three small Baltic countries alone, but a number of others, too, have succumbed one after another and disappeared behind the iron curtain. Some of these countries are still indicated on the map as independent nations or else they are misleadingly termed satellites of the Soviet Union. But Mr. Stalin's recent suggestion that he and the President of the United States meet in one or another of these so-called independent states, without even bothering to ask the government involved for its permission and without being invited to hold the meeting in its territory, shows only too clearly—if any additional proof should be needed—that the NKVD is the sovereign master in those states.

Stalin allegedly proposes peace, but one who sincerely seeks peace would not use such methods as the Berlin blockade against his allies and comrades-in-arms of yesterday.

Now China with its immense human reserves is about to be devoured by the Red colossus. The very enormity of this new conquest will require 2 or 3 years of undisturbed absorption, which could be gained by further deceitful offers of peace with the consequent confusion among statesmen and the fruitless deliberations. Then, fortified by hundreds of millions of bolshevized Chinese, the Red dictator could resume his march toward further liberations—pressing on until he achieves his aim of world domination.

This goal of the Bolshevik dictatorship is no longer, or should no longer be, a secret. Little by little the danger has become pretty generally realized, and it is high time that the challenge be firmly met. The example of China demonstrates that the Red menace cannot be defeated by palliative measures. The enormous amounts of money and quantities of equipment that such methods have already entailed may prove to be completely wasted—worse, they may fall into Communist hands with the conquest of whatever country is receiving our aid. The policy of containment, although seemingly successful in Europe for the time being—if we forget the conquest of Lithuania and nearly all of eastern and central Europe—has suffered a terrible defeat in Asia, where Communist hordes, almost unopposed, are surging forward and threaten to submerge the entire continent.

The last 30 years of continuous Communist aggression have sufficiently proved that communism cannot be contained or restrained any more than can a beast of prey, unless it is destroyed, that patiently crouches in its lair, awaiting the opportune moment to pounce upon its next victim.

Let us hope that it will not be too late when the only logical and inescapable conclusion is reached—the realization that the menace of Bolshevik enslavement must be fought, not passively, but actively; that the world cannot endure half free and half slave, for the liberty of the free half will soon be lost if the other half remains enslaved.

Let the democratic world rally and proclaim its goal of liberty and justice for all. That is a purpose that is worth fighting for with an even greater determination and with even more forceful means than are now displayed by those who fight on the side of evil.

The whole world is weary of conflict and hopefully waiting for peace. All eyes are looking toward America as the strongest western nation, the leader of the democracies, which can defeat totalitarianism and save the world. Only when the last dictatorship has been ousted will the UN show what we can expect from her, only then will the various concepts of a European federation find a real foundation. Federation and cooperation are democratic ideals and their meanings are foreign to dictatorships. Only after a complete victory over totalitarianism will the world be really free; and in a free world all nations, without exceptions, will find their place. And then there will be a place for our own Lithuania.

RESOLUTION

We, citizens of Baltimore, assembled February 16, 1949, at Lithuanian Hall, under the sponsorship of the Council of Lithuanian Societies, to commemorate the thirty-first anniversary of the proclamation of the independence of Lithuania, declare:

Our wholehearted approbation of certain statements made by President Harry S. Truman on the occasion of his inauguration to the effect that the American people desire and are determined to work for a world in which all nations and all peoples are free to govern themselves as they see fit and to achieve a decent and satisfying life, and, above all else, our people desire and are determined to work for a just and lasting peace based on genuine agreement freely arrived at by equals, and that in pursuit of the abovementioned aims, the United States and other like-minded nations find themselves opposed by the Soviet, which has contrary aims and a totally different concept of life.

In view of the above pronouncement by our President, it is our earnest hope that

measures will be adopted to apply these principles to the Lithuanian situation before the planned liquidation, deportation, and dispersion of the Lithuanian people by Soviet Russia destroys the national entity of Lithuania; that no peace settlement will be entered into without the restoration of freedom and independence of Lithuania, Latvia, Estonia, and other nations finding themselves in a similar situation, and that in the interim more liberal legislation will be enacted by the Congress of the United States relative to the admission of displaced persons to this country.

COUNCIL OF LITHUANIAN SOCIETIES,
ANTHONY J. MICEIKA, *President.*
KONSTANT MATULIAUSKAS,
Secretary.

National Theater

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. JAVITS. Mr. Speaker, since its proposal, House Joint Resolution 104 to provide for a national theater, opera and ballet introduced by me in the House and by Senator IVES of New York—with Senator ELBERT THOMAS of Utah as a cosponsor—in the Senate, has been much praised and also attacked. Those who attack it as a bill for a national theater fail to recognize that it seeks only to bring about an assembly of the constituent elements of the theater, opera, and ballet to determine whether national establishments are possible and, if so, what are the bases upon which they can be set up, and to provide for direction and control by democratic processes. The appropriation sought of $250,000 is solely for purposes of convening the assembly and the amount, of course, is an estimate to be evaluated at the time of hearing on the bill.

The following articles by Charles Parmer from the Alexandria (Va.) Gazette and Richard L. Coe, drama critic of the Washington Post, discuss the resolution. Responding as it does to a cultural need of Americans, especially from broad areas of the country not now reached by living theater, opera, and ballet, these articles should prove of great interest to every Member.

[From the Alexandria (Va.) Gazette]

PARMER FROM WASHINGTON

(By Charles Parmer)

If you read Mr. Brooks Atkinson's theater column in the New York Times, you must have seen these words last Sunday:

"Although we Americans are constantly taking bows for our wealth, enterprise, and virtue, we are the only first-class nation that does not recognize art as an integral part of national life.

"* * * Apart from the Federal Theater, which was an emergency relief project, we have never regarded the support of art as a legitimate function of government.

"* * * Art has not yet been absorbed into the democratic way of life."

All of which is true—in the main. Now come two hard-headed legislators, Representative JACOB K. JAVITS and Senator IRVING M. IVES (both from New York) sponsoring bills in the Congress which could ultimately give us a national theater, opera, and ballet.

The bills would have the President summon practitioners of those three art forms to devise plans for national institutions in their chosen fields. In due course committees from Congress would review those plans; and if acceptable, would authorize funds for a national theater, national opera, and national ballet, respectively.

That is a skeletonized idea of the plan. A book can be written on implementing it. As to whether Congress is going to authorize even that first step—oh, well, if not, at least the idea will be broached abroad and at home—as I am doing now.

Too bad that Mr. Atkinson forgot to give credit to the Commonwealth of Virginia (for surely he knows of it) for sponsoring in part the now-famed Barter Theater, which has become an accepted part of Virginia's cultural life. Hard, cold politicians voted cold, hard cash for that propect. It has been a success; the South is not the Sahara of the arts, as testy Mencken once dubbed it.

Aside from governmental support, some of the finest experimental work for the theater has been conceived, born, and nurtured in the southland. A fact which would entitle southern art leaders to front-rank participation in any governmental discussion of nationally endowed art forms.

New Orleans has not only a Little Theater, but a Little Theater building that is nationally known; the work of Paul Green at Chapel Hill in North Carolina is famed. A few years ago the Drama Caravan in Nashville on the Cumberland, in Tennessee, made one of the unique presentations in modern theatrical history; producing a play of the soil on the very ground where it was laid—and shifting the audience and not the scenery.

It is an odd commentary that theatrical arts in America have had governmental support—wholly or partly so—in times of depression; while lawmakers won't look at such in days of prosperity. The erudite Mr. Atkinson may have something when he writes:

"Culturally we have never completely outgrown the nineteenth century attitude of regarding art as a respectable and harmless diversion that rich people magnanimously patronize, thereby acquiring some good marks redeemable in heaven."

A salute to Representative JAVITS and Senator IVES for having the courage to sponsor bills which would give government backing to forms near the pinnacle of the arts: the theater, the opera, the ballet.

[From the Washington Post]

WE CAN LEARN FROM THEATERS OF OTHER LANDS

(By Richard L. Coe)

Simply because other nations, great and small, have what are called national theaters is no particular reason why we should have one in the United States. But we have much to learn from these ventures of other lands.

How these theaters arose in other countries varies greatly. From Peru, Britain, France, Sweden, Czechoslovakia, the Soviet, way over to Egypt, the birth of governmental interest in promoting a national culture has followed no strict pattern. Each nation has worked out the matter according to its own particular demands.

The Peruvians, for instance, are newcomers to the national-theater status. Several years ago their Congress financed a theater and dramatic school by requiring every movie house and sports center to devote the value of one seat (bull rings giving the equivalent of a seat in the shade) for each performance to support a theater in Lima whose company would tour the provinces. Our O'Neill is popular down there, prizes are given by the organization to stimulate playwriting, and, while the theater is only in its infancy, the beginnings have been made in the land of the Incas.

BRITISH RENEWAL

The British surge toward a national theater in the past few years has been an astonishing wave, after generations of apathy. Indeed the reawakening to the pleasures and stimulus of all the lively arts has been one of the few heartening aspects on the world horizon.

This British renaissance resulted directly from the war, during which, to comfort a battered people, the Government promoted what became known as CEMA, the Council for the Encouragement of Music and the Arts. This sent dramatic, opera, and ballet companies from Land's End to John o' Groats.

Sparked by that financial wizard, the late Lord Keynes, this became the British Arts Council, which united the Old Vic with the Shakespeare Memorial National Theater Committee. Public support of the Old Vic's and other organization's tours has been so wholehearted that there have been no losses for the Government to underwrite. The arts council works under the treasury and last month one further stride forward was made when $4,000,000 was voted to increase the council's work.

That it has taken so long to evolve a national theater in Britain is but one of the anomalies of the case. After the restoration brought back the theater to Britain in 1660, it might have been expected that the court would sponsor such a movement as was then current in the France Charles II had only just left. Theaters did require a license (patent) from the Crown, a right to play that brought endless bickering to the world David Garrick knew, but the houses were privately run and it took a Second World War to bring fruition to the project leaders had been seeking several generations.

FRENCH THEATER

The French growth came in quite another manner. Francis I, of the sixteenth century, gave subsidies to the arts and artists of his day and the fourteenth Louis had his state company.

The Comedie Française rose shortly after Molière's death in 1673 and has remained to be one of the few stable factors of the Fourth Republic. Reorganized several times, it is now under jurisdiction of the Administration of Fine Arts of the Ministry of Public Instruction. Long devoted purely to the classics, the Comedie lately has gone into more modern fields, as have its sister state theaters, the Odeon, the Theater of the Republic, and the Popular Theater. (France also has two opera groups, the Opera and the Opera Comique.)

Apart from its national and international tours, the French National Theater has a noteworthy lesson for American actors. You may have noticed in French film credits, the line "Societaire de Comedie Française." This means that the player has the honor of being a member of the National Theater; other actors may make five times his salary in the purlieus of the Champs Elysee, but they are not permitted to make that honest boast.

SWEDISH FOUNDED IN 1788

Sweden's National Theater was founded in 1788 and while on a more modest scale than France's, it was under considerable French influence until, wi: the rise of August Strindberg (who has had such a great influence on O'Neill), a national lottery was organized to raise funds for a splendid new home opened in 1907. (Why not a Mrs. Hush contest to raise money for our national theater?)

From this Stockholm center, aided by Government grants, the Swedish National Theater has sent out touring plays and opened a dramatic academy, attended by such

embryonic stars as Greta Garbo, Ingrid Bergman, and Viveca Lindfors. Touring companies from the capital now go out to places that would be devoid of the lively art.

The birth of the Czechoslovakian theater is a different story. So long part of the Austro-Hungarian Empire, Czech patriots formed their own theater even before they achieved an autonomous state. The National Theater in Prague was one of the glories of middle Europe before 1939, playing as many as 450 performances a year. Generally restricted to Prague these days, its companies still tour many of the municipally owned theaters of the country.

The story of the Soviet theater is so vast it would take books to relate. So important is this medium deemed that the enormous U. S. S. R. has at least 850 state theaters, 10 theater institutes, and over 70 schools. Surely there is a lesson in this for the long-gone Romanoffs. The Communists have recognized that the culture deprived the people by the Czarist regime is something vital.

For all one hears of the axes over critical and playwright heads, American travelers in the Soviet are in remarkable agreement on the glories and largess of the Soviet theater.

EGYPT'S THEATER

As for Egypt, the Arab culture has produced next to nothing, but so great has the French and Italian influence been, there is a department of fine arts administering occasional theatricals as well as Cairo's famed opera house (built to celebrate the opening of the Suez Canal and for which Verdi composed Aida). Recent years have brought strong nationalist feelings in the most ancient of lands, and both the living theater and Arabic films are financially encouraged by the Government.

Those are but some of the world's national theaters, all of them, as I say, stemming from very different beginnings. Like them, the American theater and its people will have to find specific ways and means to bring to life the bill for a national theater lately introduced in Congress by Representative JACOB K. JAVITS. As illustrations of what lesser nations have done with a rich art, they serve as thought-fodder for those who've never had the time nor the inclination to consider what the living theater can mean to one's national pride.

Break-Even Points in Farming

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 17, 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Break-Even Points in Farming," by Sherman E. Johnson, appearing in the Agricultural Situation, a publication by the Bureau of Agricultural Economics of the United States Department of Agriculture, in its issue of January 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BREAK-EVEN POINTS IN FARMING

(By Sherman E. Johnson, Bureau of Agricultural Economics)

Farmers' costs climbed rapidly in 1948. The $18,200,000,000 farmers are estimated to have spent for production expenses is almost a billion and a half more than in 1947 and more than gross farm income in any year before 1942.

With prices of many farm products leveling off or declining last year, gross farm income increased only slightly from 1947. This was the first year in a decade that gross income failed to rise more than costs. As a result, farmers' net income fell below 1947.

Not only are farmers spending more for production items than ever before, but a much larger proportion are cash expenses than after World War I. Consequently, farmers can't reduce their cash outlays during a price squeeze in the same way that they did formerly.

For example, horses and mules fed largely from farm-produced feed furnished most of the farm power just after World War I. Today, fuel and oil and repairs for the farm tractor are out-of-pocket expenses. A larger share of family living costs also are cash expenses. Most farms now have electricity, and fuel for the farm furnace is delivered by the oil man or the coal dealer rather than being cut from the farm wood lot.

Farm real-estate taxes, another important cash cost, have been rising for four consecutive years. They are not likely to drop quickly in a period of declining farm prices. Land values for the country now average the highest in history and are two to three times higher than in 1935–39 in many States.

Inventory values of livestock and machinery are about three times their prewar levels. In this way, much of the income improvement of recent years has become capitalized into higher costs for the young man who is getting started in farming. He will have to invest two to three times as much for land, equipment, livestock, and supplies as before the war. As long as net farm incomes are high, this is not a serious obstacle to young farmers. But if prices and incomes turn down, heavy debt on such an investment could be an unbearable burden.

Farm mortgage debts are much lower now than in 1920 (they were about five billion in 1948, compared with over eight billion in 1920), but the debt load has been rising since 1946, and interest rates have stiffened during the past year. Information on the debts of individual farmers is not available, but many undoubtedly have a heavy load of both mortgage and short-term debts.

Although prices received for farm products have been going down in recent months they still average higher than prices paid. The parity index was 109 in December 1948 (1910–14 equals 100). But prices farmers pay for labor and materials used in production, except for farm-produced commodities like feed, show no signs of a downturn.

COSTS LAG ON DOWNTURN

Table 1 shows that in periods of rising prices farm products usually go up further and faster than farm costs. However, table 1 also indicates that when farmers' prices are declining, prices they pay tend to lag. Even when they do decline, they fall only about half as much as prices received.

If prices received by farmers should decline considerably, and cost rates lag as in the past, we would need to give considerable attention to break-even points in the farming industry.

FAMILY ABSORBS SQUEEZE

We hear a great deal about break-even points in other business but very little about them in farming. One reason is that on family farms a price-cost squeeze is frequently absorbed by the farm family accepting a lower return for its labor and investment. But this can be done only at the expense of family living and maintenance of the farm plan. On farms free of debt, the income left after paying cash operating expenses can be used for family living and upkeep of the farm. If the income falls, outlay for family living can be reduced and repairs and replacements to the farm plant held to a minimum. In such cases, the break-even point depends mainly on the extent to which the family is willing to lower its level of living in order to stay on the farm. On farms on which there is a large debt, the interest and amortization payments come out of what otherwise would be available for family living. Debt service and family living become competitive in low-income periods.

FIGURING BREAK-EVEN POINTS

Break-even points can be calculated for farms with varying amounts of debt by making a somewhat arbitrary allowance for family living. The break-even point will, of course, be different on every farm and it will vary a great deal among the different types of farming. But, as we have seen, the high proportion of cash expenses to total expenses and the tendency of costs to decline more slowly than prices of farm products affect farmers generally.

Suppose that prices received were to go down to 70 percent of their 1947 average; they would then be 195 percent of the 1910–14 average. Suppose also that prices paid, interest, and taxes dropped only half as much—about the same as in previous periods of declining prices. They would then average 196 percent of 1910–14 and the parity ratio would be only slightly below 100. If prices received declined to 60 percent of 1947 levels and again prices paid dropped only half as much, the parity ratio would be approximately 90, which is the upper level of present support-price legislation.

These illustrations are not a forecast that prices will fall to the levels indicated. And, of course, some commodities are protected by legislation against so large a drop. But table 2 shows what might happen to the income of farm families on midwestern hog-dairy farms if the prices those farmers receive for their products were to drop to 70 percent of 1947.

The net cash income in 1947 on Corn Belt farms of this type was $6,177 when rent and interest payments are excluded. These must come out before we can arrive at the income available for family living. If we assume that such a farm is operated by a young owner who owes $20,000 in the farm, livestock, and equipment, he would have to pay about $1,100 in interest and amortization payments. This would have left $5,077 for family living in 1947. But if prices for the products sold from this farm drop to 70 percent of 1947 levels, the income available for family living would be down to $2,432. Since the index of prices paid for family maintenance is now 220 percent of 1935–39 this would be equivalent to a prewar income of about $1,100.

IS INCOME ADEQUATE?

Is that the break-even point on this kind of a farm? The answer, of course, depends on whether farmers on these farms consider such an income adequate for family living. It also depends on whether the drop in income is temporary or more permanent. If farm prices remain at the lower levels for several years some of the costs might drop more than is indicated in table 2. But it would also be necessary to spend more for farm maintenance, which could be postponed if the low incomes for a year or two were followed with years of higher income.

What protection do farmers have against a possible price-cost squeeze? They do have price support legislation. But even high-level price supports cannot furnish complete protection because in a sagging market they would have to be combined with output restriction. That in turn would mean a smaller gross income, and probably higher costs per unit of product.

DEMAND WILL VARY

The best protection, of course, would be sustained demand for farm products, but some ups and downs are to be expected, at least in the transition period that we are now experiencing. Farmers cannot afford to shut up shop during a price drop if they depend on farming for a living. Some retrenchment is possible, of course. Some cash expenses can be cut but there is less opportunity for this on the highly commercialized farms of today than in 1920. Farmers who are free of debt and who have adequate financial reserves can adopt soil-maintaining rotations and relieve the pressure both on the farm plant and on the work load for the farm family. But most of them would be likely to maintain output if they thought that would mean higher incomes to them.

The farmers who are heavily in debt would be forced to produce at high levels in order to meet their fixed charges. Credit programs are geared to the expectancy of a stable rather than fluctuating farm income. Therefore, interest and amortization payments are a heavy load in years of adversity.

It may be possible to make the farmer's cost structure more flexible. In recent years we have experimented with variable payment and prepayment loan programs. Many leases are now written on a sliding scale, and it seems quite possible to do this generally. Landlords and tenants would then share both the ups and the downs. Some form of variable payment or prepayment might be adopted for taxes.

In periods of lower prices, farmers need to utilize every opportunity to reduce costs. Farmers canot influence a great deal the prices that they pay for labor and production supplies, but they can adopt improved practices that lower costs per unit of product. These practices become doubly significant if farmers are caught in a price-cost squeeze. Many improved practices involve additional current expenses or new investment that may not be feasible in periods of low prices, but if they greatly increase the output per worker they are also likely to result in higher net incomes to the farmers who adopt them, even in periods of adversity.

BUILD RESERVES NOW

Perhaps most important of all, however, is greater attention now to building up reserves from current incomes to tide farm families over any future periods of adversity. Farmers as a group have been reluctant to invest their savings in anything other than the farm plant. But other investments are available that could constitute safe and liquid reserves to help tide over low-income periods. Payment of debt is, of course, one of the best ways of building protection against financial adversity.

TABLE 1.—*Indexes of prices received and paid by farmers at various dates (August 1909–July 1914=100)*

Date	Prices received	Prices paid by farmers		
		For living and production, interest, and taxes	For production	For family maintenance
1920	211	202	174	222
1921	124	165	141	161
1929	149	167	147	159
1932	68	124	109	108
1939	95	125	122	120
1947	278	231	233	255
1948 [1]	287	249	255	271
Dec. 1948	268	247	250	270

[1] Preliminary.

TABLE 2.—*Investments, income, and expenses on family operated hog-dairy farms in the Corn Belt, 1947, and under possible condition of lower prices* [1]

Item	1947	Prices 70 percent of 1947
Acres in farm	144	144
Total cash receipts	$9,175	$6,423
Total cash expenses	2,998	[2] 2,891
Net cash income	6,177	3,532
Interest and amortization payments [3]	1,100	1,100
Available for family living	5,077	2,432

[1] Assuming the same output as in 1947.
[2] Feed, livestock, seed, and other supplies at 80 per cent of 1947 levels. Hired labor at same rates as in 1947, and machinery, building, taxes, telephone, electricity same as 1947.
[3] Assuming total debts of $20,000 and interest and amortization charges averaging 5½ percent.

Address of Hon. James A. Farley

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KIRWAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1949

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley, chairman of the board, the Coca-Cola Export Corp., at the luncheon of the Ohio Bottlers of Carbonated Beverages Convention, Cincinnati, Ohio, February 8, 1949:

LET US LOOK FORWARD

Mr. FARLEY. When Miss Marlay asked me to join you folks during this convention and talk to you I was quite pleased. On several occasions Miss Mary Lou has invited be, but both the pressure of other matters and my being out of the country made it impossible for me to accept until now.

Ohio is a great State, with seemingly unlimited possibilities. In other days when I drove through Ohio, selling stamps and soliciting support for Democratic nominees, I was always impressed not only with the natural beauty and the lush farm lands and industrial greatness, but also the proximity of your cities and towns to each other—you are almost the city of Ohio in many respects.

Before coming out here I looked into some of the background statistics concerning Ohio. I found that Ohio ranks thirty-fourth in area in the United States, and that in 1948 there were only four States, namely, New York, Pennsylvania, California, and Illinois, that outranked Ohio in population.

In 1947, for instance, it is reported that the retail sales in Ohio had increased 93 percent over 1941; and also in 1947 the effective buying income in Ohio had increased 91 percent since 1941. As of July 1948 there has been an increase since 1940 of 12.9 percent in the population of Ohio, while the increase for the United States is 11 percent. Of the five leading States in population, only California had an increase greater than the State of Ohio.

Of course, having been chairman of the National Democratic Committee for many years it would be useless for me to say anything about the importance of population and the increase in population.

America has demonstrated its great ability as a Nation of producers, but when we look at the unlimited opportunities for sales we see that we have a long way to go in perfecting the techniques of selling. We are ever reaching out for new and better methods of selling—those industries which reach out effectively, firmly, and vigorously get their fair share of the national income; those which do not reach out equally strongly and effectively must need to do so if they would get their fair share.

Aside from the actual selling, advertising, and marketing of a particular industry, the industry, as a group of businesses, lives and operates in an atmosphere or a climate. Each industry is surrounded by economic forces, which forces influence to a great degree the ability of the industry to expand, flourish, and grow.

A great deal of the climate surrounding an industry is beyond the ability of the industry to influence or control. Great national and international forces shape the economic surroundings in which our businesses must live, and we must make the best of those circumstances. However, much of the weather in which our businesses operate could be shaped by the efforts of the people making up the industry. There will always be disagreement and strong disbelief regarding announced policies, for, in order that there be progress, there must be a constant challenging.

America, for instance, could go isolationist; we could move our forces out of Europe; we could withdraw support from the Marshall plan and save the money and taxes involved, and there are many who would have us do so, but we must carry on. Thus as a Nation we hazard money and run great risks that the whole may be preserved, and in so doing we cut back, suffer, and give, so there are times in the life of an industry as well as in the life of a nation when the immediate requires sacrifice to attain the ultimate.

From a business standpoint, the farmer knows this better than most business people. He has learned from centuries of gambling against the weather and the fertility of the soil, and he has never been able to anticipate a full and bumper crop from year to year. He is conscious of the unsurmountable influences of flood, drought, and pests, and has adjusted his philosophy to this unbalance.

In spite of such disagreement there has emerged a national unity—a willingness to go along—so it must be with an industry. An industry must have unity in order to have strength; and industry must have unity if it is to exert the necessary molding influences on those external forces which surround its operation.

As I look at the structure of your great industry, I see it composed of National, State, and even local organizations, all tied in for a constructive purpose. However, associations cannot guarantee strength to businesses that make them up, but, on the contrary, the businesses that make up an association breathe strength and life into the association.

The problems of people within an industry vary greatly—as much as the products they produce vary, and it is not within the contemplation of an association to solve the problems of the individual businesses, nor the operating problems of the cumulative businesses, but it is the problem of the association to work for the creation of an atmosphere surrounding the businesses within the industry so they may more effectively capitalize on operating forces which they set in motion.

In the soft-drink business good will is a most important factor. Confidence is essential, for the market for soft drinks is 140,000,000 people in all walks of life and in all income brackets. Good will must be had

with the dealers and with the public, and as I think of the term public relations with regard to business, it plays a tremendous part in helping create the atmosphere that surrounds the entire industry. By public relations I do not necessarily mean publicity and press agentry, but rather the broad concept of public relations, which involves quality of product served; the kind and type of advertising used; the design and condition of the trucks that deliver the products; the uniforms and courtesy of the men driving those trucks; the condition of coolers in the dealers' stores, and many other things about this industry's operation which affect people's opinions.

People in the soft-drink industry have come a long way in their sales and advertising techniques, but there is a long way yet to go. It is in the realization of the road ahead and the goal ahead that I speak to you of unity. The products of this industry compete not necessarily against each other, but against the products of other industries which are competing for the same consumer attention. As we move along we are distracted and harassed, but as was so aptly said many years ago, "The winds and tides are on the side of the ablest navigator."

I have been informed that this industry was the thirty-first industry in dollar volume in the United States in 1939, which year was the last official census made by the Department of Commerce. This is an industry whose products are available in every square inch of territory in the United States of America, and I cannot help but see ahead greater and more glorious times—but they will not come by themselves—something must be done to bring them about.

In chatting with you today, I have somewhat of a background about what has gone on in the industry since rationing was removed in 1947. We are going through a serious period of transition—one that unquestionably requires severe readjustment; but to the ablest navigators the course is clear.

In the foreign operation of a business such as this, many of the same problems beset the operators, but they move ever forward in their attempt to create and satisfy markets such as you have available.

A business is limited by the vision of its management—a business without a goal—without an objective is not pointing in any direction; therefore, the soft-drink industry in Ohio is as great as the vision of you in this room, for you set its pace; you set its ceiling. This is a dynamic age, and we are constantly in the process of change. We must be equal to our opportunities and our problems.

What was sound and effective yesterday may require complete scrutiny today; and what was considered radical yesterday may be more conservative today. Self-analysis, self-evaluation, business analysis, and an analysis of the total industry operation are the first steps in the right direction under any and all circumstances when one is charged with the responsibility of guiding the destiny of a business.

This industry has many highly desirable characteristics. It is practically entirely locally owned, and the more than 6,000 plants in the industry are scattered fairly evenly, geographically, over the entire United States. It has overcome geography and climate, and the businesses have integrated themselves into the local community life, bringing pay rolls to the cities and towns in which the plants are located. A bottler of soft drinks is a leader in his community, and his business is an asset to that community.

Rationing was an economic illness; the recuperating period may not have been comfortable, but the will to live is what pulls the patient through, and the will to do is what pulls a business through, if the individual patient will do those things essential to his mode of living that will conserve his strength. If all businesses within the industry have unity in their approach to the over-all external problems which create the atmosphere in which the business of the industry must be done, I think it safe to say this industry will retain its leadership as a selling industry in the fraternity of selling industries.

In my experience with government it became quite common that when any segment of our national business life suffers from slings and arrows of strenuous fortune, it immediately turns, as the benighted seeking a savior, always to the Government; and no matter what is asked, the anomaly of the situation is that, even if the Government does intervene, it is only a short time, maybe a few months or a year, when the same group is contending that there is too much government in business.

My travels around the world only confirmed this opinion. Everywhere the area of government activity increases and the area of business freedom shrinks. Government in business is like the camel in the tent—easy to get in but hard to get out. Government in business may start out as help, but it always winds up as regulation.

The matter is more than ordinarily important now because, in common with all businesses, this industry has the problem of readjusting itself to the postwar era. Everywhere there are signs that the seller's market is over and that once again we are in a market where the buyer is king and the customer is right. For the first time in years the newspapers are full of the news that the cost of living is going down, commodity prices are receding, and their advertisements are full of bona fide sales. Last week's New York Times carried the news that food prices had gone down one-half of 1 percent and that mink coats were off 50 percent.

How are we going to adjust ourselves to the needs of these new marketing conditions?

The answer is the same answer that has brought this industry to its present importance. We will tackle the buyer's market with the same tools that have built us up in the past—namely, by self-reliance and promotion.

This industry has always depended upon promotion to such an extent that it has continually set standards for other industries to follow.

A moment's consideration will show why, important as promotion is to oil businesses, to the soft drinks industry it is vital.

If you need a new tire and don't buy it today, you are going to need it all the more tomorrow. If you need a new pair of shoes and you postpone the purchase, it only becomes all the more needed. You can postpone the purchase of a set of tires or a pair of shoes, but you cannot avoid it. Cars won't run without tires and you can't make a business call barefoot.

A soft drink, on the other hand, is an impulse purchase. If it is handy when the desire for it occurs, you will buy it—but if not you can forget it or have a drink of water. A sale missed in this industry is not a postponed sale—it is a sale that is lost forever.

More than for any other industry, therefore, to us promotion is necessary. We must continually work at and be ingenious about devising ways of going out to people, meeting them not half-way as most industries do, but nine-tenths of the way, making ourselves available any and everywhere and by fitting into their lives and habits whatever these may be.

In its origins the soft drinks industry was a humble one. It does not have the benefit of great scientific laboratories, huge production plants, or great engineering works in the sense that is true of the chemical or steel industries. It does not have the benefit of bringing out new models continually as is true of the automobile industry or the fashion field. In comparison with most industries, we produce a simple, stable, and permanent line of merchandise which is the same from day to day, and the job is to make that piece of merchandise permanently attractive and appealing.

It is in finding new ways to make itself attractive and appealing that the soft drinks industry has been particularly ingenious and it is this ingenuity that has built the soft drinks industry into a respected and important business.

As I have said, I think that all this is more important to us than ever before. With the problems of a buyer's market we must devise ways to increase our promotional effort rather than to allow it to decrease. We must see to it that the total promotional effort that we put forth in competing with other industries for the buyer's dollar becomes greater and not less. The one thing that can hurt us is that as an industry we should fail to sufficiently call ourselves to the attention of the public. Failure to make the public see us more strenuously and effectively than ever would reduce the importance of the industry in public eyes so that people would spend their money for the products of other industries rather than our own. That is a real danger.

While it is a danger, I have no doubt as to the abilities of the members of the soft-drinks industry, and particularly of the soft-drinks industry of Ohio, to surmount it. In a way, at the present time, Ohio is pointing the way in sales promotion. I think you know who I am talking about. I am referring to that estimable gentleman, Mr. William Veeck, owner of the Cleveland Indians. He has shown the whole world what can be done by ingenuity and alertness both in overcoming obstacles and in devising new ways to attract new customers. The average man could well be overwhelmed by Mr. Veeck's personal problems. Instead of succumbing, Mr. Veeck has not only overcome them but has found time to win a world championship, break all attendance records, and put together what is probably the most successful baseball operation of all time. In New York City today the Cleveland Indians get nearly as much publicity as the Yankees. That's what ingenuity and an indomitable spirit can do.

There are two great ideologies at work in this world today—democracy and communism. Typical of democracy, we have the free enterprise system; and if democracy and the free enterprise system are to be perpetuated they will be perpetuated, first, by the desire to have them, and, second, by the willingness to do something about them. There is no finer place to start than in the development of sound small locally owned businesses.

We have a lot to look back upon, but we have much more to look forward to—let's not look back—let's look forward.

Religious Persecutions

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1949

Mr. MILLER of Nebraska. Mr. Speaker, the Christian nations of the world cannot ignore the inhuman treatment during the fake trial of Cardinal Mindszenty. The entire Christian world has been shocked by this cruel and inhuman treatment. The arrest of Protestant religious leaders gives the signal for a complete crack-down on all religious

education and worship in Communist-dominated Europe and Russia. There is no question but what this Communist terror is now revealed in all of its nakedness and is a definite pattern set by the Communist-controlled countries to not only eliminate, but persecute all religions. These great religious leaders are symbols of all religions, of justice and decent living, and are now under attack. Their trials have been a mockery of justice. There is no question but what religion is being crucified on the altar of freedom. There is a great wave of moral indignation going up all over the country because of these attacks.

Communism has always been a ruthless tyrant and nothing will stand in its way. It is my humble opinion though that Christianity can never be destroyed. These savage assaults on religion and decency should help to weld together the Christian nations of the world and strengthen their faith and determination to carry on the banner of Christianity.

I have vigorously protested to the State Department and have urged them to take action against this godless communism that would throttle all religious freedom. The Christian world cannot ignore these violations against human freedoms. There must be some sanctions, either through the United Nations or through this country that will stop the persecutions of the Christian leaders.

Federal Deposit Insurance

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. MADDEN. Mr. Speaker, a few weeks ago the cashier of the First National Bank of Dyer defalcated with an estimated $300,000 of the bank's money. Plans were immediately made for the bank to be taken over by the Gary National Bank, with the Federal Deposit Insurance Corporation guaranteeing loans up to one million and assuming to pay loans at the end of a 6-month period.

If this situation happened before 1933, there would have been a run on this bank and it would be compelled to close its doors. If, at that time, business conditions were subnormal, it would have caused runs on banks in adjacent territories and possibly have brought financial chaos to a great area in that vicinity.

In the old days the Dyer bank would have to close its doors and go through long and costly proceedings of liquidation and receiverships. The depositors' money would have been tied up for a long period of time, and business in the whole community would have suffered. The depositors, at best, would have received only a gradual and partial return of their life savings over a period of years. The stockholders would have been assessed their 100-percent double liability and most of the bankers' assets would have been dissipated in attorney and receivers' fees, and so forth.

The Federal Deposit Insurance Corporation, which was created by a Democratic Congress under the so-called New Deal administration, has averted financial chaos to business in the area of Dyer, Ind. Depositors now know that their life savings and bank funds are protected by the Government up to $5,000. Under the protection of the FDIC, the Dyer bank continues to do business as usual.

I recollect back in the early days of the New Deal, when this legislation was enacted, how most of the banks and bankers in the country opposed the guaranty of bank deposits. Today the bankers realize and admit it was the greatest blessing that has come to their business. The bankers no longer endure constant worry, fearful of runs on their banks, which sometimes start from rumors without foundation.

The bankers opposed Government insurance because certain of their leaders told them that it would bankrupt the Government and be a first step toward causing Government control. Today it is difficult to find a banker in the country who is not wholeheartedly in favor of this Government insurance.

I call this to the attention of Congress because propaganda against Federal insurance of bank deposits was identical with the propaganda that was circulated against other progressive Democratic legislation, not only in the last 15 years but even today against progressive legislation in the Eighty-first Congress.

Let us profit today by the experience we have had in the past with unfair, misleading, and reactionary propaganda.

Look to Lithuania

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include an article entitled "Look to Lithuania," which recently appeared in the Worcester Telegram newspaper, of Worcester, Mass. The author is the distinguished international affairs authority, lecturer and professor, Dr. W. Elmer Ekblaw, of Clark University, Worcester, Mass.

Dr. Ekblaw poignantly reminds us that the principle of political independence, enunciated in the declaration by the United Nations and the Atlantic Charter, is a hollow mockery in the present suppression of the Lithuanian people, and the other small nations of the world.

The recent great conflict was fought with the clear understanding and pledged purpose that common victory should bring restoration of self-government and territorial integrity to the oppressed nations of the world. We cannot conceive of World War II being won until that pledge has been carried out.

As Dr. Ekblaw points out, it is high time this Government demonstrated, in unmistakable manner, our insistence that the Lithuanian people, and the other persecuted peoples, be permitted their inalienable right to govern their internal existence as they themselves see fit.

Dr. Ekblaw's article follows:

LOOK TO LITHUANIA

(By Dr. W. Elmer Ekblaw, Clark University)

Look to Lithuania for an example of Russia's treaties of nonaggression such as that Russia has just offered Norway. Look to Lithuania for an example of Russia's treatment of minorities. Look to Lithuania for an example of Russia's Communist improvement of economic standards. Look to Lithuania for an example of Russia's regards for the rights of man, for his freedom, for his social security. Look to Lithuania for an example of Russia's ruthless imperialism, both in territory and sovereignty. Look at Lithuania, and recognize once and for all the gruesome travesty upon democracy and liberal government that Russia's sovereignty represents.

With Lithuania as example it is easy to realize what China will become under Russian rule. With Lithuania as example it is easy to realize what would happen to the cultural standards of Sweden and Denmark if they submit to Russian dictation of their policies. With Lithuania as example it is easy to realize what is happening to German craftsmanship, German agriculture, German industry in the Russian zone of occupation. With Lithuania as example it is easy to realize the fate of Greece, Turkey, Palestine, Iraq, and Iran if they fall under Russian domination. With Lithuania as example it is easy to realize the ultimate submergence of Finland, the Baltic states, Poland, Czechoslovakia, Yugoslavia, Hungary, Rumania, and Bulgaria, perhaps even Austria, in the barbarous flood of Russian materialism, atheism, and totalitarian despotism.

The time has come, indeed, it is already past, when Americans and the rest of the democratic peoples of the world must doff their present tolerance and passive acceptance of Russian territorial and political aggression and imperialistic expansion of virtual sovereignty, and don the definite, unequivocal, and undeniable role of leader not only in militant opposition to further Russian encroachment upon the rights and sovereignties and territories of autonomous peoples still free, but also in militant leadership of restoration of rights, sovereignties, and territories to once free and autonomous peoples whom Russia has conquered. It is just as important that Lithuania and the Lithuanians, Poland and the Poles, Estonia and the Ests, Latvia and the Letts, and all the middle European peoples from the Baltic to the Black Sea that have fallen under the terror and horror of Russian tyranny should be freed of that enslavement and bondage, as it is that Finland and Greece, Turkey and all the Near East, China and Chosen, Scandinavia and Pakistan should be spared the dread and horror of further Russian expansion and debasement of economy and culture.

Under the guise of Christian humility, meekness, and pacifism, we and the rest of the democratic states are not only accepting the barbarous practices that characterize present Russian administration and institutions but also condoning the policies and activities by which that barbarism is achieved. We are appeasing a brutal imperialism that does not look to improvement of man's economic standards or to accelerating man's cultural progress, but to the establishment of a tyranny that will permit none of the "four freedoms," and that only prolongs the rule of force over the rule of reason in all man's efforts to rise from savagery to some degree of security, peace, and satisfactory living standards.

Since Lithuania's reincorporation into the Soviet state there has been only misery, humiliation, suffering, and death for the noble

Lithuanian folk. Their land has been expatriated and given to Russian veterans. Their industries have been despoiled and depreciated, and their means of integrated economy ruined. Their families, their communities, their institutions have been disrupted, even destroyed. Hundreds of thousands of the good Lithuanian folk have been slain, some by murder, some by being worked and starved to death, some by slavery in alien climates and lands to which they could not be acclimated.

Complacently and appeasingly, we, and the rest of the free, democratic, and presumably righteous folk of the world, have permitted the cruel devastation of a proud, free, enterprising Christian people and state, like Lithuania and her people, without ever effective protest. Only the Lithuanians themselves, and their emigrant relatives have dared to oppose and challenge Russia's ruthless might. It is time that we and our democratic allies bestirred ourselves.

Increased Federal Aid for National System of Interstate Highways Needed—and Now

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. YOUNG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Cleveland Press of February 14, 1949, upon a matter of utmost importance to the people of our Nation.

Without a doubt, construction of a national system of interstate highways should begin immediately and be planned to provide very rapid transportation and elimination of traffic bottlenecks in industrial cities of America.

Should war be forced upon us by the Soviet Union, acting as an aggressor nation, our great need would be apparent and immediate. If peace and prosperity continue, as we hope and pray will be the situation, the immediate need is evident for a scientifically planned system of highways to provide speedy and safe transportation through our great cities, as well as in the rural areas.

People are entitled to know how many miles have already been constructed under authority of the Public Roads Administration of the 40,000-mile national system of free highways. How much money has this agency spent to date upon this project? I seek answers to these questions.

I urge that my colleagues give this important matter their consideration.

The editorial from the Cleveland Press is as follows:

ALL OHIO CONGRESSMEN HAVE CHANCE TO PUSH HIGHWAY PLAN

All Ohio Congressmen who are interested in rebuilding the roads of this State should get behind Congressman at Large STEPHEN M. YOUNG'S proposal for construction of the national system of interstate highways. It is of particular interest to the metropolitan areas, for YOUNG seeks a start on the urban sections where the real bottlenecks of the system are. The plan recognizes the inability of the cities to raise large new matching funds from real-estate taxes.

Congress, under this plan, would assume most or even all the cost of this 40,000-mile national system of freeways, including rights-of-way. That would relieve Cleveland, for example, of $65,000,000 now asked as its share of the $240,000,000 freeway system here. Cincinnati, Toledo, Sandusky, Dayton, Akron, Columbus, Massillon, Canton, Youngstown, and other Ohio cities on the national highways also would be relieved of proportionate matching of funds.

This would be a tremendous lift to this State. Congressmen of both parties should be able to get together on a project so important to the entire State and all its people.

False Argument Against TVA

EXTENSION OF REMARKS
OF
HON. TOM MURRAY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. MURRAY of Tennessee. Mr. Speaker, I wish every Member of Congress who has been critical of the operations of the Tennessee Valley Authority would read the following editorial entitled "False Argument Against TVA," which appeared in the St. Louis Post-Dispatch and was reprinted in the Memphis Commercial Appeal on February 14, 1949.

It shows clearly and convincingly that so many of the arguments made by the National Association of Electric Companies under the guidance of that superlobbyist, Purcell L. Smith, against the construction of a steam-electric generating plant at New Johnsonville, Tenn., by the TVA, are misleading and false. It looks like the private power lobby will never learn a lesson from past experience. They are "fouling their own nest" by their unfair, unjust and misleading propaganda against TVA. They should profit by their mistakes in the past and should abandon their despicable tactics toward TVA.

The editorial follows:

FALSE ARGUMENT AGAINST TVA

TVA's urgent need for a new steam electric generating plant, and the fallacy of the private power lobby's arguments against it, are now amply shown.

An initial appropriation of $2,500,000 was recommended early this month by a House appropriations subcommittee.

The need itself, which the anti-TVA lobbyists have never denied, is documented in detail in a recent statement. In addition, the statement is a fine showing of the leadership which TVA is giving the country in making electricity the servant of the people. It is a notable accomplishment that the percentage of electrified farms in the Tennessee Valley has increased from 30 percent 4 years ago to nearly 60 percent today, and is increasing at the rate of 1 percent a month.

Alternatives to a new steam plant which the power lobby has suggested are that TVA buy power from private companies outside its area or that municipalities and industries build their own power plants.

These are not fair, sensible alternatives. Neighboring power companies are hard pressed to supply their present demands, and even if they had a surplus, the cost of transmitting it the long distances between their plants and TVA's customers would be prohibitive.

Municipalities might lack sites favorable to low production costs and industries in the Tennessee Valley would be unfairly penalized by not having the choice, enjoyed by industries elsewhere, of purchasing instead of producing their own power.

Altogether, it is a false argument which the power lobby, spearheaded by the National Association of Electric Companies, advances. In the telegram which that association's chief lobbyist, P. L. Smith, recently sent to the Post-Dispatch and other newspapers throughout the country, perhaps the trickiest assertion was that the New Johnsonville, Tenn., project "would be the first steam plant constructed by the Federal Government any time, any place, for commercial purposes."

TVA's statement pointed out that the Federal Government authorized TVA to buy all the steam plants of the Tennessee Electric Power Co. and to build a new steam plant of its own at Watts Bar, so that if there is a grain of truth in the statement that New Johnsonville "would be the first" it is based on a tricky use of words and not on the facts.

We think this misleading propaganda by the National Association of Electric Companies will react against it and to the advantage of TVA wherever it is met by a plain statement of the facts.

Declaration of Independence—Lithuania

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. KENNEDY. Mr. Speaker, yesterday, February 16, was the thirty-first anniversary of the declaration of independence by the people of Lithuania.

Today that declaration of independence of the free people of Lithuania exists only in their hearts, for, like the other Baltic nations, that country is isolated from other freedom-loving peoples by means of the Soviet iron curtain.

It is true that Russia has annexed the geographical unit called Lithuania, as well as the physical boundaries of her two Baltic neighbors, Latvia and Estonia. It is true that the oppressive measures of Soviet domination are wreaking havoc with the traditionally liberty-loving Lithuanians. It is not true, however, that Lithuania has been forever crushed, for at this moment a heroic armed resistance is carrying out the will of the people against their oppressor.

To the lasting credit of the United States, Russia's greedy annexation has not been recognized by this country.

Today I call to the attention of the Congress the fact that the spark of freedom still glows in Lithuania—crying out to us and all free peoples that the darkness of the iron curtain must be lifted and Lithuania must be allowed once more to walk in the sun with the other free nations of the world.

Medical Care and Health Insurance

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. HARRISON. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following editorial from the Washington Evening Star of February 15, 1949, and an article by Marquis Childs appearing in the Washington Post of February 16, 1949:

[From the Washington Evening Star of February 15, 1949]

PRESCRIPTION FROM THE DOCTORS

Probably the most significant thing about the American Medical Association's plan for the extension of medical care is that the AMA has offered one.

Up to this time the doctors have found themselves in a curiously untenable position. In the face of a growing popular demand for some governmental program that will make medical care more generally available and mitigate the financial catastrophe of illness, the doctors have relied too strongly on a purely negative opposition. Now they have come forward with a positive plan of their own which they are willing to push as vigorously throughout the country as the proponents of so-called socialized medicine have done in Washington.

This is a sound approach, from the standpoint of the doctors' own public relations and from the standpoint of the public that in the end will decide what it wants. It should lead to a debate that will get down to details and present to the people an opportunity to judge between the advantages to themselves of such schemes as compulsory health insurance, administered by the Federal Security Agency and financed by another pay-roll tax, and the voluntary insurance method advocated by the doctors with public assistance reserved for those who cannot help themselves.

Thus far the doctors have been conducting a sort of orderly retreat. In 1946 they were able to support the Hill-Burton Act for assistance to the States in hospital construction, while centering opposition to the much broader Murray-Dingell compulsory health-insurance measure. They have favored Senator TAFT'S bill for aid to the States in providing medical care for the indigent, which was not approved but which lessened pressure for the compulsory insurance plan in the Eightieth Congress. This year Senator TAFT is coming up with a new measure. But in the meantime the administration is pretty well committed to the Murray-Dingell bill, and now the doctors, under great pressure from the AMA's own membership, have brought out the plan announced yesterday in Chicago.

Its governing philosophy is encouragement of voluntary health insurance, which has come to assume substantial proportions, instead of a pay-roll tax-supported compulsory system. The Federal Government, through a new department under the professional administration of doctors, would assume direction of aid to States in other particulars as a substitute for administration by the Federal Security Agency.

The doctors are also active in the States and have lent their prestige and influence to numerous State plans which are being written in the legislatures. They will go further and faster if they drop such smear-terms as "socialized medicine" and "sprawling bureaucracy" and get busy educating the general public on how the public interest, not merely the interests of the medical profession, will best be served by taking what the doctors have now prescribed.

[From the Washington Post of February 16, 1949]

THE AMA AND HEALTH INSURANCE

(By Marquis Childs)

The health plan presented by the American Medical Association is tragically late. It is an eleventh-hour deathbed conversion, and because it is that the sincerity and the intention of the AMA will be questioned.

The plan was made public as the Truman administration is working on a comprehensive national health insurance scheme to recommend to Congress. The health insurance bill will go up to Capitol Hill in the near future with the President's O. K.

While they have heard propaganda on both sides, and particularly from the AMA, most Americans know little about health insurance. Whether there is any real sentiment in the country for such a widespread program is doubtful.

But what most Americans do know is this: Medical care is so costly that in any adequate form it is beyond the reach of millions. The very poor in cities where there are free clinics and free hospitals can be cared for without cost. The rich can pay their doctor and hospital bills.

In between is the broad band of middle-class Americans for whom a long illness may mean ruin. For millions too proud to accept charity, medical costs are prohibitively high. These are the Americans who have looked hopefully for some decent and honorable plan that would give them medical care at a price they could pay.

One method is the prepaid, group medical care plan. Families formed in voluntary groups each pay a fixed sum per month to cover doctor and hospital bills.

But the AMA has not encouraged such plans. The public has had the impression that the medical association has set itself against any change. Such a reasonable man as Gov. Earl Warren has been denounced for his proposed California State-wide health insurance plan.

In the absence of any concerted movement for a gradual betterment of health standards and a lowering of medical costs on a cooperative or group basis, a Federal measure was certain to be put forward. The tragedy is that the AMA might have pioneered in discovering a grass roots, voluntary, truly American way to meet the problem.

Instead, until the 12-point health plan of this week, the AMA has devoted its resources to attacking Federal health insurance as socialism. Agencies such as the National Physicians Committee, which was endorsed by the AMA house of delegates at the St. Louis meeting in December, have stooped to dubious, and what might even be called un-American, propaganda.

One example is the letter sent to all Protestant ministers and addressed to "Dear Christian American." Apparently through a blunder it was later sent to Roman Catholic clergy and to Jewish rabbis and produced a violent reaction. One passage in this extraordinary letter says:

"To the Christian who believed in the sanctity of life, nothing could be more dangerous than the spectacle of politicians arbitrarily juggling the birth rate, through the application of propaganda or compulsion by means of an abuse of political medicine. Once power over all medical services is concentrated in the hands of a few bureaucrats, it would be inevitable that—sooner or later—they would misuse it to establish quotas for the baby crop in the same way that the Agriculture Department theorists set quotas for farm production."

In a special note to members the National Physicians Committee said that the mailing of this Dan Gilbert Washington Letter had come out of conferences and contacts extending over a period of 2 years. The doctors were advised to take it up with your minister and the editor of your local newspaper.

AMA representatives say the association was not consulted at all about this letter. They seem to realize that this kind of propaganda can do far more harm than good.

The AMA is seeking to raise a fund to fight the Administration proposal by levying a $25 assessment on each of 140,000 members. There are growing signs of resistance to this assessment. Many doctors are acutely aware of the trouble their patients have in meeting medical costs.

Like the average middle-class American, they would go for a sensible proposal having as its base a voluntary and independent association of doctor and citizen. The Republicans are coming up with their own health and medical plan. They have a magnificent opportunity to show that the choice is not between do-nothingism, clinging to things as they are, and on the other hand, a Federal blanket covering all of medicine.

National Health Insurance

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. RHODES. Mr. Speaker, the following column by Mr. George Gallup, which appeared in the Washington Post February 6, 1949, is very pertinent in view of the current controversy over the enactment of national health insurance. Interestingly enough, it shows that the people questioned would be willing to pay an average of $3.10 a month for medical and hospital care under an insurance program. According to a 1946 American Medical Association survey, the Nation's health bill—including drugs and dental care—was about $40 per capita. In other words, the average person is willing to pay this sum in regular insurance payments if he can be assured of complete personal medical and hospital care. I include this column in the CONGRESSIONAL RECORD.

THE GALLUP POLL

HEALTH INSURANCE AT $3 A MONTH

(By George Gallup)

Within the next few weeks, hearings are scheduled to start in Congress on the national health-insurance bill. Bitterly opposed by the American Medical Association, which is raising a special fund to fight the measure, medical insurance promises to be one of the major controversies of the Truman Fair Deal.

At this stage of the fight, approximately three out of every five of the Nation's voters have heard or read about the idea of Government health insurance, Nation-wide questioning of voters shows.

The persons interviewed said they would be willing to pay, on the average, approximately $3 a month if they could be assured of complete personal medical and hospital care. Presumably they would be willing to pay somewhat more than this for medical and hospital coverage of the entire family, which is the plan envisioned in the Senate bill.

So far as the medical profession is concerned, a major issue in the controversy is whether health insurance ought to be handled by the Government or by private medical organizations similar to those now offering hospital insurance. Future surveys by the institute will test public attitudes on that point.

12 percent free

In today's survey, the following question was put to all persons, whether they had heard of the proposed national health insurance program or not:

"If you were assured complete medical and hospital care (excluding dental care) for yourself, how much would you be willing to pay per month for such service?"

The following table summarizes the results. The median average of all sums named was $3.10.

	Percent
Under $1 a month	2
$1–1.99	12
$2–2.99	15
$3–3.99	10
$4–4.99	5
$5–7.99	18
$8 or more	9
Not willing to pay anything	12
Don't know	17

The survey is not a test of the degree to which the voters approve or disapprove of Government health insurance, but simply a test of what the individuals questioned might be willing to pay for such a service if it were offered.

The medical insurance program proposed in Congress envisions a monthly rate, which would include the families of persons enrolled, of up to about $54 a year or $4.50 a month on the first $3,600 of wages, with the employer paying an equal amount. Discussion of the exact sums is still going on.

Physician choice

Future surveys by the institute are scheduled to probe public attitudes on many other aspects of the proposed program; to find out, for example, how well informed the average American is about the medical services he would get under the program if passed, and whether he thinks he would have free choice of physicians to treat him.

Meanwhile, a point of considerable interest in the medical profession is how much the average American now spends a year on medical and hospital services.

According to an estimate by the American Pharmaceutical Manufacturers Association, the per capita expenditure in 1947 for personal medical and hospital care was $38.74. According to a study by Frank G. Dickinson of the American Medical Association, the Nation's total health bill for 1946 was $5,600,000,000, which would be about $40 per capita. These figures are not confined to doctor and hospital services only, but include drugs and dental care.

Mr. Speaker, the following editorial from the New Leader, New York, is pertinent in view of the controversy over the Taft-Hartley law:

PUBLIC HEALTH AND SAFETY

The hearings on the repeal of the Taft-Hartley law have brought the leaders of the House and Senate up against a basic social problem to which, apparently, they are not prepared to give adequate attention. The question is: What powers are to be given to the President to enable him to deal with strikes or threats of strikes which endanger the public health and safety? The law adopted by the Eightieth Congress provided that the Government could prevent or end such outbreaks through the operation of injunctions. The President and many Democratic Congressmen are pledged to the repeal of this law.

It is now maintained by Senator TAFT and his followers that if the measure were repealed and for the present the Wagner Act without amendment were substituted for it, the Nation would be at the mercy of John L. Lewis or any other labor boss who might decide to tie up an industry or service upon which the public is dependent for its very life. The Republican Members of House and Senate, with the help of some Democrats, can be depended upon to make a vigorous fight in favor of salvaging the parts of the Taft-Hartley law applying to this problem.

This matter of defending the public against the cutting off of vital supplies and services is so important that it demands more serious consideration than can be given to it during the hearings preliminary to the changes which the Democratic administration is pledged to make. It involves the sort of study of labor relations which no congressional body has ever undertaken.

The leaders of labor would be among the first to acknowledge that the nation has a right to protect its existence. It has been taken for granted here and everywhere that a society can and must use whatever measures are necessary to ensure its continuation. Long before the Taft-Hartley Act was ever dreamed of, American Presidents found means—sometimes brutal and unjustified means—to end strikes which seemed to them to involve a threat to the nation's existence.

But since the days of Grover Cleveland and Theodore Roosevelt much progress has been made in this matter of handling labor problems. The idea has gradually been worked out that solutions should be sought through application of principles of justice rather than by the application of force. And we are admitting defeat if we acknowledge that strikes in vital areas cannot be settled in this way. What is needed, then, is not the use of court injunctions which may lead to the sending in of police or troops, but an agreement upon ways and means of settling differences which will lead to mutually acceptable solutions.

If the workers in any great area of employment are to be deprived of the advantages of a strike, they must receive compensation in the way of machinery for negotiation and arbitration which will ensure satisfactory solutions without the cessation of work. Any solution which is forced upon the workers, which leaves them suffering under a sense of injustice, cannot serve. In the end, any system based on such methods must break down.

But this whole area of discussion is so complicated and so important that it is impossible to do anything satisfactory about it during the present hurried hearings. After thorough investigation at some later date a law covering it should be perfected. In the meantime, the President and the Attorney General are obviously correct in saying that, no matter what happens to the provisions of the Taft-Hartley law, we are in no danger of suffering death at the hands of the terrible John L. Lewis or of anyone else.

Our Debt to Ohio

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. KEATING. Mr. Speaker, on February 15 I endeavored to insert in the CONGRESSIONAL RECORD an editorial entitled "Lady From Ohio," published in the Washington Post, but found that my colleague from Montana [Mr. MANSFIELD] had deprived me of this privilege by action taken the day before. His extension of remarks appear at page A769 of the Appendix of the RECORD.

A signal honor has come to our distinguished and beloved colleague from Ohio, FRANCES P. BOLTON. We rejoice with her and her constituents whom she serves with such unfailing devotion in this recognition of her outstanding qualities of mind and heart.

One of the great joys and priceless privileges of service in this body is the opportunity to know and work with men and women dedicated so completely to their country's services as FRANCES BOLTON.

The editorial commending our colleague is language to which, I am confident, we all subscribe enthusiastically.

Government Health Insurance

EXTENSION OF REMARKS
OF
HON. TOM MURRAY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. MURRAY of Tennessee. Mr. Speaker, I wish every Member of Congress would take the time to read the following editorial published on February 14, 1949, in the Paris Post-Intelligencer of Paris, Tenn., located in the congressional district which I have the honor to represent. It is one of the strongest, most convincing and most persuasive editorials that I have ever read against the evils of Government compulsory health insurance, State medicine, or socialized medicine. I am in full accord and complete agreement with the views expressed therein and I congratulate this splendid newspaper upon this timely editorial.

The editorial is as follows:

WHAT ABOUT GOVERNMENT HEALTH INSURANCE?

With our Eighty-first Congress being high-pressured so strenuously by the Fair Deal administration to enact its scheme for compulsory health insurance, it is imperative that we, the American public, recognize the proposal for what it is, and for what effect such legislation will have on our individual lives.

If there is any single feature of compulsory health insurance which reveals it to be fundamentally incongruous with the American way of life, it is epitomized in the first word of its title. If it is compulsory, then it is admittedly hostile to the principles of personal freedom, which is what democracy really amounts to. If it despises the right of the individual to take it or leave it, then it is un-American from its roots up.

We're not impressed, either, by Uncle Sam's sudden concern about health and medicine. We have plenty of confidence in the ability of our local doctors to take care of our community's health, and we like the way that both doctors and community cooperate in behalf of the underprivileged who need medical attention. By the same logic, we feel that our statesmen are capable of running the Government, but by no process of reasoning can we expect Uncle Sam to run the medical profession any more than we want our doctors to try their hands at administering the affairs of state.

The author and promoter of the administration's national health proposal is Oscar Ewing, who oddly enough has never attended a medical school. He is not a doctor, but, like Eleanor Roosevelt, a social reformer. The idea of a social reformer dabbling in medicine is no more inspiring than the thought of a business executive dabbling in his wife's biscuit dough. If the Nation's

health is turned over to bureaucrats in Washington, we urgently recommend that they be put through the gruelling experience of a medical education before they are allowed to operate on the American public.

Compulsory health insurance is particularly undesirable for the very fact that it is government insurance. Is there any one who thinks that any government can run an insurance agency as well as the rugged private companies that have blazed their own trails and helped build the nation during their individual struggles for survival? If Metropolitan and Prudential, for instance, had operated for just 1 year on the same basis as Federal old-age insurance, they too would have needed compulsion to keep their policyholders paying premiums. And only recently it was announced that millions of insurance dollars will be returned to veterans who have overpaid on GI policies because the experience tables used by the Government agency were based on material from the last century.

Socialized medicine is repugnant to American ideals in its very origin. Every student of philosophy knows that the theory is to be found in Karl Marx's treatise on communism, expounded in 1848. Bismarck, the Iron Chancellor, first put it into effect in Germany, whence it was later carried into Austria and France; but no honest way of financing the "free medical service" was ever hit upon, and history records the subsequent bankruptcy of these three countries.

The question is asked, naturally enough, that if socialized medicine isn't a good thing, why is it still practiced in other countries? The answer is simple—those countries are not free republics like our own. The Soviet constitution guarantees free medical care and security in sickness and old age to every ward of the U. S. S. R., but the cost to the individual is his personal liberty. England has socialized medicine today, and England's once-supreme medical rating has declined below that of its own dominions. Furthermore, the absolute monarchism of the past and the socialism of the present under which the subjects of the British Government have existed both represent a part of Europe that the citizens of the American Government willingly left to the Old World.

If we intend to remain free agents in a democratic government, we must rise above the level of confused thinking about such schemes as compulsory health insurance, which is but another subterfuge plan for directing America down the same weary road known to the countries of Europe. It is the road which leads away from the fertile fields of individual freedom, of States' rights, and of the democratic way of life toward the desolate wastes of federalized control in every private walk of life.

Hon. J. Harry McGregor, of Ohio, Calls for Better Roads in Rural Areas

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the road-builders' conference and forty-sixth annual meeting sponsored by the American Road Builders' Association, February 7, 1949, Washington, D. C.:

Mr. Chairman, members of the American Road Builders Association, and guests, I appreciate the privilege of being with you today and discussing briefly some of the issues confronting us relative to our road-building program. Really I think I should say—to discuss with you the economic and military issues which confront our Nation, as most certainly our road program is a major part of both of these subjects. I have been asked to speak on a subject very close to my heart, the Program of Secondary or Local Rural Roads—Farm-to-Market Roads.

We must not be interested in roads, or any other legislation for that matter, from a selfish viewpoint. We must consider what is best for all of us—not only from the viewpoint of highway contractors but from the viewpoint of citizens we should carefully analyze and agree on a policy that will benefit all, and formulate a program that will make ours a greater America.

Secondary roads—farm-to-market roads—how shall we define them? When we speak of them do we mean the feeder roads, the tributary roads, the farm-to-market roads, country and township roads, local roads, or do we mean all the roads below the level of the primary system? Certainly some of the terminology we use in classifying our highway systems is rather misleading. For instance, take the term "farm-to-market road." When most people use this term they certainly are not referring to our primary highway system, yet many of our main roads would warrant such a classification. Many of our farmers and industrial workers are located along this primary system and so to them the main highway becomes the farm-to-market road.

And even the farmer who resides on the tributary roads may use the main road in the last lap of his trip to the market. So as farmers travel to their markets they may travel over a route which includes sections of township, county and State roads. And they all can rightfully be called farm-to-market roads.

The crops, upon which depends the economic well-being and continued existence, not only for farmers, but for the American people, must be transported in a large part from the farm to the market and ultimate consumer on our roads, including farm-to-market roads. Both consumers and farmers, therefore, suffer from an inadequate road system.

Of the 3,300,000 miles of roads, alleys, and streets in our Nation, 3,000,000 miles are in rural districts, only 23 percent of which are graded and drained but not surfaced, and 31 percent are primitive, undrained and not surfaced. Thus more than half of the roads serving farmers are not all-weather roads. Over the secondary and feeder roads, 4,000,000 children ride to school daily; 33,000 rural letter carriers travel each day approximately 1,500,000 miles serving their mail routes. In doing that they directly serve 30,000,000 people of this country.

About 80 percent of our total road mileage is under local jurisdiction. Studies of our highway travel characteristics show that our paved roads aggregate about 10 percent of the total rural mileage. They carry more than 70 percent of our total vehicle miles. Yet this 10 percent of paved rural roads provides direct service to less than 25 percent of all our rural dwellings. This leaves 75 percent of our rural dwellings on the remaining gravel, earth or unimproved roads.

It is estimated that between 65 and 70 percent of our raw materials from the farms, the mines, and the forests are transported over the roads under local jurisdiction to the factory and to the city. While 70 percent of the total vehicle miles occur on 10 percent of the paved rural roads, much of this traffic is generated by rural activities, which are dependent upon the use of the gravel, earth, or unimproved road in travel to and from market.

From a defense standpoint, these farm-to-market roads are also important. During the war when gasoline was rationed, highway traffic was divided into essential and nonessential classifications. It was determined at that time that 67 percent of all farm-car travel was essential whereas only 53 percent of the automobile travel of other classes was considered essential. These farm-to-market roads are the supply lines of our Nation. They are also the roads which would enable traffic to disperse from the arterial system in case of atomic bombing of our cities. If our main roads should become blocked, they would serve as alternates or relief roads.

The 1948 highway act provides for a reduction of 10 percent in appropriations. If continued on the basis of present Federal-aid appropriations for a period of 15 years, this program will be barely sufficient to construct a mileage of principal secondary roads of over 15 percent of the total rural mileage. It can, however, act as a spark plug for the local highway program and can serve as an instrumentality to bring about improved local highway administrative practices. It can serve to stimulate cooperation between the Federal, State, county, and other local agencies.

It is interesting to note in the Annual Report of the Public Roads Administration that the cost per mile for Federal-aid secondary roads have averaged about one-third that of primary roads. The progress we have made to date on our highway system represents the united effort of the Federal, State and local governments. With a varying degree each has exercised responsibility and control of roads within its own jurisdiction. A sound, integrated highway program is an essential part of our economy. If we are to meet the transportation needs of all of our people, we must not only improve our primary system, but must extend adequate highway facilities to the people living on our farm-to-market (county and township) roads as well. In such a program it is necessary that we enlist the cooperation of the Federal, State, county and township units of government.

With automobile registration expected to reach 50,000,000 by 1960, and the entire highway system in need of overhauling, a greatly accelerated highway program is a vital need. Congress must recognize that need. State legislatures and local officials must aid in solving their highway problems. The road building profession and industry now face the biggest challenge in their history. With cooperation and teamwork we can meet that challenge.

A great many people, including me, wonder why our own farm-to-market roads (county and township) are not being improved more rapidly. Let us take Ohio for example.

Ohio's allotment of funds for secondary roads is $13,836,000. The November 30 report from the Public Roads Administration indicates that Ohio has now a program under way which adds up to $27,178,000. This will finance the construction of 568 miles of secondary roads. Two hundred and twenty-five miles have been completed involving an expenditure of $8,832,000, a little less than one-half of which is Federal funds. The balance of funds are in the various stages of programing, contract awarded and under construction. Thus it would seem Ohio has quite a sizeable program, yet it involves improvement of only 568 miles, as compared to the 28,747 miles under county control and 40,938 miles of township roads in Ohio.

What is wrong? And to be perfectly honest there is something wrong, and it is time to find out what and see that it is corrected. Is it red tape? Is it overlapping of power? Is it caused by unnecessary plans and specifications? Or is it just indifference on the part of someone in authority?

In my opinion, we need a complete reorganization of that branch of our various

highway departments, National and State, that has control of the road program dealing with farm-to-market roads—county and township. Why not establish, National and State, a division to handle farm-to-market roads, county and township? A division to cooperate with the county and township organizations and to delegate to the county and township officials as much responsibility for planning, engineering, and construction as they are organized and equipped to undertake. The creation of this division will give to the local people an opportunity to put practical knowledge into our road program. They will know local problems, needs, and conditions, and then we can truly design and build a road to fit the traffic which it bears.

Give to rural Americans, the farmer, the shop worker, the mail man, and the school bus driver, an opportunity to get to and from their work 12 months out of the year. We want and certainly are entitled to "an all-weather road."

Labor-Management Relations

EXTENSION OF REMARKS
OF
HON. LAURIE C. BATTLE
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. BATTLE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an editorial by Mr. C. G. Thomason, editor and publisher of the Industrial Press, of Ensley, Ala., concerning the proposed new labor-management law.

This editorial has gained much praise in the industrial Ninth District of Alabama, and especially from many union members. It calls for calm, sane, and unselfish thinking and pleads for a law that will not lose sight of that all-important factor—the public interest.

I feel that the country would greatly benefit if the Members of Congress will read this editorial and adopt the suggested policy of giving first consideration to the welfare and security of our Nation, then make all provisions just or fair as possible to labor and management.

The editorial follows:

PUBLIC SHOULD COME FIRST

The way things are shaping up all indications point to quite a battle in the Eighty-first Congress over passage of some kind of labor law. Leaders of the A. F. of L. and the CIO will bring all the pressure possible for the repeal of the Taft-Hartley law. Industry will fight to have it maintained. John L. Lewis, United Mine Workers' chief, is advocating repeal of the T-H law and is opposed to the enactment of any law to replace it. He says let labor and management settle their own differences without resort to Government interference.

Both the CIO and A. F. of L. will seek to have the Wagner Act reestablished.

In this fight both sides to the controversy will overlook the public interest. Chances are that Congress will also lose sight of this important factor.

Organized labor represents some 15,000,000 people and management only a very small percentage. On the public side there are 130,000,000. But they don't count. They are merely the bulk of the American people. They are unorganized and confused, have no spokesmen and are not represented in these selfish controversies. They are the ones that suffer every time labor and management get the upper hand.

Both labor and management yell that they want a law that is fair to both sides. That is not true. Management wanted the T-H law which union leaders believe is unfair to them. Labor wants the Wagner Act back on the books. No one, even labor, will admit that it is fair to management.

Consequently both sides are intensely selfish and greedy, constantly fighting for every possible advantage, and, in their zeal, completely unmindful of the public interest.

A national labor law in all probability is necessary to umpire labor-management disputes. But such a law should be entirely in the interest of the public as a whole. Here is what we believe the public wants:

A law that will give it complete protection against both strikes and lock-outs. Any strike or work stoppage of any duration affects the public. A railroad, bus, or any type of transportation stoppage not only inconveniences the public first but proves more costly to it than to either side in the controversy. Any work stoppage on a national scale affects the general public more than those involved in the dispute. Even the smallest local work stoppage has its inconveniences for the public.

Therefore, we believe that if a national labor law is passed the public would want it to provide for compulsory arbitration by a board composed entirely of unbiased, level-headed citizens representing the general public. A majority decision by such a board should be final.

Such a board would be fair to both sides. If a jury composed of plain American citizens can be trusted to settle legal controversies involving great sums and even deciding the question of life or death, such a group certainly could be depended upon to render a fair labor decision.

The process of determining the right or wrong under a labor law should not be any different from that of any other law.

All laws are supposed to be fair to every citizen and for the protection of all. Laws designed to benefit any selfish group, class, or clique are undemocratic and un-American.

Our Socialistic Trends

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech entitled "Creeping Paralysis," made by Dewitt Emery, president of the National Small Business Men's Association, before the small business day dinner at the Hotel Statler on Wednesday evening, February 16:

I'm very happy to be here this evening. I consider it a high honor and a great privilege to speak at this meeting. I say that particularly because the more than 350 members of our association who are here have almost 200 Members of Congress as their guests.

I've been in the House galleries many times when the Congressman who had the floor didn't have nearly that many Members listening to him, and on the Senate side the full complement is 96.

So, when a layman, and a small-business man at that, has an opportunity to talk to 200 Members of Congress at one time and also more than 200 beautiful and charming ladies and in addition has 350 businessmen from all over the country all in the same audience, he is indeed highly honored and has a unique opportunity which he should make the most of, and that's exactly what I propose to do.

What I have to say is not directed to either Democrats or Republicans. My primary interest, the primary interest of the National Small-Business Men's Association is in good government and no one knows any better than I that the friends of good government are found on both sides of the aisle in our National Legislature.

I'm speaking as an American to a group of Americans. I'm speaking as an American who knows beyond any shadow of doubt that his is the greatest country in the world and who is fully and firmly convinced that his country has the best form of government in the world. I'm speaking as an American who has enjoyed the blessings of liberty and freedom all his life and who proposes to enjoy these blessings for the balance of his life or die fighting for them.

Freedom—that's what makes America, and freedom is what makes it great to be an American.

But, ladies and gentlemen, I'm concerned, deeply concerned. This great Nation of ours got off the track some place along the line. Where, I don't know. John T. Flynn, in his book, Men of Wealth, says that John D. Rockefeller started us down the wrong road in 1872. E. S. Pillsbury, of St. Louis, says that we took the wrong turn in 1913 when the Federal Reserve Act was passed and we substituted debt-backed currency for gold-backed currency. Uncle Joe—Stalin, that is—says we never were on the right track and adds—I'm using a liberal interpretation of his remark—"There isn't any point in going to war with the United States. Capitalism will destroy itself from within much faster than Soviet arms could destroy it from without." The sad part of what Stalin says is that it's much too close to the truth. We actually are destroying ourselves from within.

What do I mean? How are we destroying ourselves? I ask you Members of Congress who have 15 years or more service to your credit to compare Congress today with what it was during your first term. Compare the prestige, power, and authority of Congress then and now. Then picture in your mind what Congress will be like after 10 or 15 years more of the same.

I ask you businessmen to compare the way business was done in this country 15 years ago with the way it is done today. Then if you will project that curve into the future, I believe even the doubting Thomases, if there be any among you, will be convinced that another few years of travel down the same road in the same direction at the same rate of speed will entirely eliminate freedom of enterprise from the American scene. And, ladies and gentlemen, if we ever lose freedom of enterprise, all of our other freedoms, freedom of speech, freedom of religion, freedom of assembly and so on, will go along with it. All of our freedoms are wrapped up in the same package.

Why is this country where it is on the road to the left, the road away from constitutional government and freedom of enterprise? The answer, in my judgment, can be given in one word: ignorance. Not nearly enough of the American people understand the facts of life concerning our capitalistic system.

Who's to blame for this?

I'd put some of the blame on our educational system. I'd put some more of it on the people themselves. I'd put more of the blame on our two major parties and I'd reserve the major share of the blame for this economic ignorance for businessmen. I say

that because in my book it's up to each businessman, small or large, to see to it that those on his pay roll understand what freedom of enterprise is, how it operates, who benefits and why. I know that's a large order but it's one which must be filled if we wish to avoid slipping into national socialism by way of the back door.

At the conclusion of the Constitutional Convention in Philadelphia in 1787, 162 years ago, as Benjamin Franklin was leaving Independence Hall following the end of the final session of the Convention, he was asked, "What kind of a government have you given us?" He replied, "A Republic if you can keep it."

Why did Franklin include "if you can keep it" as part of his answer? Was it because he foresaw that as the country grew and prospered under its Republican form of government that the people would become indifferent to public affairs; that as each generation got further and further away from the life and death struggle their forefathers had to make to win and hold freedom and to advance our frontiers, they would become less and less vigilant, most of them eventually forgetting entirely that "Eternal Vigilance is the Price of Liberty"?

I think this is what Franklin foresaw and is why "if you can keep it" was part of his answer.

We have kept our Republic for quite a few years and we can keep it for a far greater number of years provided we have the wisdom and the courage to do what needs to be done.

Now here is where I rush in where "angels fear to tread." Here's where I get my neck out about seventeen feet because I'm going to tell you what needs to be done.

First, foremost and above all else we must drastically reduce the spending of our Federal Government.

I'm thoroughly familiar with most, if not all, of the reasons why it is impossible to reduce Federal expenditures and I still say the budget must be cut, cut drastically.

I know the so-called sacred, untouchable items add up to such and such a sum and that if everything aside from these special items were eliminated entirely it would save less than five percent. At this point the proponents of big spending usually add, "So you see our actual cost of government is only five percent of the total. All of these other things are extras and it's impossible to do anything about them." That, my friends, in the vernacular of the day is eye-wash, ten cent store eye-wash.

There's only one untouchable item in the budget: that is the interest on the public debt. All of the others, each and every one of them, can, should and must be cut.

For one thing, every department of the Govenment is grossly overstaffed. You can walk into the Washington office of any of these departments any hour of any day of any week and find at least fifty percent of the employees sitting around doing nothing. One reason for this is our cockeyed civil service setup which bases a supervisor's rate of pay on the number of people he has under him. If he has six people in his section who don't have anything to do and he can, by some hocus pocus, get six more who also wouldn't have anything to do, he gets a raise.

In business, the increases in salary and other rewards go to the person who can do the most with the least. In Government service the rewards go to those who can do the least with the most.

For several years Senator BYRD has been telling Members of Congress, businessmen, and others how to reduce Federal spending. He has compiled a great mass of interesting data and has his recommendations well documented. Now the Hoover Commission, after an exhaustive study, is making its report, which is pretty much of a blueprint for reducing expenditures. So there isn't any doubt that Federal spending can be cut.

I've had some first-hand experience on both increasing and decreasing expenditures and while it's a far cry from my personal expenditures to the expenditures of our Federal Government, nevertheless the same principle applies and there is a considerable parallel.

On my first full-time job, which was in the trust department of a bank, my salary was $75 a month. After I'd been there about 4 months I told the trust officer that I'd have to have more money as I wasn't making enough to live on. He looked at me out of the corner of his eye and said, "You'll probably have the same complaint when you are making ten thousand a year." He was right; I did. Each year as my income increased my expenses kept pace. Exactly the same thing is true of our Federal Government. Each year as it found it could get its hands on more and more money, expenditures went up and up and up. Frill after frill was added and each frill within a year had twins or triplets, which increased expenditures more and more.

There are now more unnecessary bureaus, agencies, and projects in our Federal Government than there are fleas on a cur dog, and there's more water in the expenditures of each of the several departments than there is in the Pacific Ocean.

I was brought back to earth with a resounding crash in 1932 when my income was exactly one-third of what it had been the year before. If you want to find out for sure how many unnecessary expenditures you make, try living on one-third of what you are accustomed to spending.

We discovered right quick that belonging to a country club wasn't a necessity. We discovered much cheaper cuts of meat we'd never heard of before, but which when properly prepared—my wife is one of the best cooks in the country—really weren't bad.

We came through this period all right because we did what had to be done. I realize that the compulsion the Emerys were under is not yet apparent to most people so far as our Federal Government is concerned, but the handwriting is on the wall for anyone who will read.

Not long ago, after I had spoken at a businessmen's banquet and said some of the things I'm saying tonight, I was told by the president of a manufacturing company that I was all wet, that everyone had more money than he'd ever had before, that everyone who wanted to work had a job at high wages, that business was better than it had ever been and that he was in favor of more rather than less Federal spending.

My answer to him was, "You remind me of the chap who fell off the roof of a 20-story building and who called to some people in a window on the fourth floor as he fell past, 'I'm all right so far.' "

Maybe the spending of our Federal Government is all right so far. Maybe it is. Maybe it still has more than four floors to go before disaster strikes. But I don't think so. There are any number of reasons why I don't: The drop in commodity prices, the decrease in the price of clothing, the decline of retail sales, the increase in unemployment to mention a few. Those are important factors but here's my main reason for believing that disaster is not very far ahead unless we mend our ways.

In 1937 it took all of the income of all of the people in two States—Pennsylvania and Missouri—to pay the cost of our Federal Government—$7,910,000,000—for 1 year.

Ten years later in 1947, it took all of the income of all of the people in 25 States to pay the cost of our Federal Government—$42,505,000,000—for 1 year.

In 1947 it took all of the income of all of the people, that's right, all of the income of all of the people in Minnesota, Iowa, Indiana, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Montana, Wyoming, Colorado, New Mexico, Idaho, Utah, Arizona, Nevada, Washington, Oregon, New Hampshire, Connecticut, Alabama, Mississippi, and Maine to pay the cost of our Federal Government for 1 year.

I ask in all seriousness, how much further can this creeping paralysis go before the economy of our entire country is completely paralyzed, before the Federal Government takes over everything and everybody?

It can't happen here. I say it can happen here. We've been traveling toward it at an ever increasing rate of speed for many years and it's way past time to stop and reverse this headlong rush. The place to start is with the budget for fiscal 1950 which begins next July 1. Every item in that budget, including each and every one of the so-called untouchables, must be drastically reduced.

There are many other phases of this problem I would like to discuss but time will not permit, so I'll close by giving you my definition of our American way of life. Here it is.

Our American way of life is made up of many things, bathtubs and automobiles; big cities and small towns; farms and victory gardens; mammoth steel mills and village machine shops; colossal educational institutions and the little red school beside the road; churches and hospitals; railroads and air lines; chewing gum and ice cream; department stores and cross-road-general stores; specialty shops and beauty parlors; pool rooms and race tracks; Hollywood, Broadway, and the high-school play; laughter and sorrow; eagerness and despair and people—millions of all kinds of people—gathered together from all over the world, drawn by the magnet of freedom, opportunity, and justice.

Our American way of life provides each individual an opportunity to go as far and climb as high as his willingness to work, his skill, ingenuity, and integrity will carry him.

Our American way of life recognizes that the individual has the right to work when and where he wishes, the right to worship as he pleases, to speak his mind on any subject, to meet with his fellow men for any peaceful purpose, to be secure in his possessions and to have his day in a free court. It also recognizes that the individual is superior to the state, that our public officials are servants of the people and that they derive their just powers from the consent of the people.

These things taken together created an atmosphere of freedom and an economic climate which made possible in the United States the greatest production and diffusion of wealth in the history of the world, and the establishment, for even the lowest paid workers, of the highest standard of living the world has ever known.

Why? Because for more than 150 years, free men in a free country have been working together to provide this better way of life. Let us hold what they have given us and go forward in the sure faith that the American way of life is the greatest blessing known to mankind any place on the face of God's earth.

Religious Persecution

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper

article from the Washington Times-Herald:

FURTHER RELIGIOUS PERSECUTION BY REDS PREDICTED BY WALSH—TELLS GEORGETOWN UNIVERSITY ALUMNI MINDSZENTY CASE IS BUT NEW TACTIC IN OLD CAMPAIGN

PROVIDENCE, February 16.—Dr. Edmund A. Walsh, S. J., vice president of Georgetown University, tonight told a meeting of the Georgetown Alumni Association of Rhode Island to expect further religious persecution by Communists.

"Aware that the Marshall plan is succeeding, that western Europe is being stabilized and united, and fully conscious that the church is the last domestic obstacle to total domination in the satellite states, Moscow is reacting swiftly and ruthlessly within an organized pattern," he said.

PROTESTANT ALSO JAILED

"In addition to the Catholic primate of Hungary, a Protestant bishop has also been imprisoned there; Evangelical ministers have recently been rounded up in Bulgaria and similar persecution is in progress in Rumania.

"Indications point to the arrest in the near future of the leading Catholic ecclesiastic in Czechoslovakia, the archbishop of Prague. Then it could well be Archbishop Sapieha of Poland. China will come next.

"To maintain its present control of approximately 30 percent of the human race, world communism must consistently and progressively eliminate the leadership of Christianity in every area where the Soviets gain the upper hand. This necessity is perfectly clear to the high command in the Kremlin. It has likewise always been understood by the Catholic Church."

VARIED RED TORTURES

The prosecution of Cardinal Mindszenty was a "renewed attack in a very old campaign but with new tactics and smoother techniques," Walsh declared.

Reviewing the various forms of torture known to have been used by the Russian secret police, he said that two drugs, actedron and scopomorphine, fed the prisoner in liquids after a state of unbearable thirst had been developed, would produce both moral and mental collapse.

"The cardinal in his first public appearance (after Communist seizure) followed precisely the pattern which he had predicted when he warned his friends that he might be drugged and tricked into a compromising confession. This performance took place in a manner and in language wholly at variance with his known character and public history. He debased himself publicly, recanted neatly and with a childish enthusiasm confessed to all the things which his tormentors had dictated to him.

"From a human point of view, it would have been far better for Josef Mindszenty to have been hanged immediately or decapitated by the butcher's knife. But with a refinement of the diabolical sadism which characterizes their hatred, his enemies have consigned him to a living and lingering death of obscurity in the dungeons of their despotism, meanwhile attempting to blacken his name and ridicule his moral grandeur. However, the true Josef Mindszenty disappeared into darkness on the night of December 25, 1948, leaving behind him an unsullied reputation and that written testament in which his honor was committed to the civilized world."

ATTACKS ON CATHOLIC CHURCH

Walsh attacked the "gullibility of some pseudo-liberals in this country who commit intellectual suicide on the altar of expediency and solace their cowardice with a pitiful array of ifs and buts and countercharges."

"Saddest spectacle of all is the case of that well-known professional bigot who uttered a few weasel words of regret on the fate of Cardinal Mindszenty but then tendered solace and support to the common enemy of Christianity and democracy in the Kremlin by launching on a diatribe of recrimination in an unrelated field against the Catholic Church.

"Fortunately, such ungenerous spirits are rare in the American democracy and the practically universal indignation of responsible Protestant leaders over the Mindszenty case is a fine tribute to their sense of fair play and clearness of spiritual vision at this historic moment."

Address of Hon. Hugh D. Scott, Jr., of Pennsylvania

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1949

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from address of Hon. HUGH SCOTT, JR., chairman of the Republican National Committee, before the Cabell County Young Republican League, Huntington, W. Va., February 14, 1949:

It is indeed a pleasure to have this opportunity to speak in West Virginia under the auspices of a young Republican group. It is to the younger voters that the Republican Party must make its appeal for support during the next few years. No party can go on indefinitely without reinforcements. I am happy to be able to report that during the 1948 campaign we did receive substantial support from voters in the younger age group. It is true we did not receive quite enough. We must do better in 1950 when we have an opportunity to elect a Republican Congress.

The support which we received last year from the younger voters was demonstrated by the numerous straw votes taken in various colleges throughout the Nation. So far as I know, the Republican Party won in every one of those contests. And, what is even more important, since the election last November, I have had thousands of letters from young men and women all of whom express a desire to assist the Republican Party in staging a winning fight in 1950 and 1952. That is one of the most encouraging features in the situation which confronts our party today.

There is every reason why the younger generation of voters should turn to the Republican Party and give us their support in our fight to preserve the Republic and the institutions which have made this a powerful and prosperous Nation. The younger men and women have a far greater stake in the future of this country than do those of more advanced years. It is the younger generation which, of necessity, will have to pay most of the bills for our present reckless and extravagant expenditures in the field of government. And, furthermore, if a continuation of our stumble-bum administration of foreign policy should involve us in another war it will be the younger men and women who will be called upon to fight that war. Therefore, aside from all other considerations, it is to the advantage of the younger generation of voters to support a party which stands for sound and thrifty administration and under whose leadership we have never become involved in a major foreign war.

As Republicans, it is our duty and our job to carry this message to young men and women everywhere, and to welcome them into the organized ranks of our party.

During the past week I have had an opportunity to make speeches from California to New England. Everywhere I have found Republicans in a fighting mood. I believe that is a sign that the party is in a healthy condition. Sometimes I wish that attitude had been a little more prevalent a few months ago. But, anyway, we have it now and let's keep it.

We might as well face the fact that we are in a fight to the finish against powerful and unscrupulous opposition. The only way we can win that fight is to go in slugging and keep on slugging every day from now until November 1950. That is going to be my policy as chairman of the national committee and I shall do everything in my power to encourage other Republicans to do likewise.

But, of course, we have to know what we are slugging for as well as what we are slugging against. We must take to the American people a program of constructive action and sell it to the people as an alternative—an infinitely better alternative—to the program of junior grade socialism exemplified by the Truman administration. That Truman program, incidentally, is becoming considerably shopworn. It's the same old program, with only minor exceptions, which Mr. Truman first proposed to Congress back in September 1945. I might add that at that time many people were struck by the fact that the Truman program bore a startling resemblance to the Communist Party program. Anyway, Mr. Truman presented it to the Seventy-ninth Congress in 1945, and, although the Democrats had substantial majorities in both the Senate and the House at that time, the program was enthusiastically ignored. It was also ignored, for the most part, by the Republican Eightieth Congress because most of it simply didn't make sense—or worse.

After the Eightieth Congress, in its regular sessions, had refused to go along with Mr. Truman on the road to Moscow, Mr. Truman called a special session of the Eightieth Congress last August. He presented the same old program and told the country that the Congress could pass it in 15 days. Maybe he intended it as a compliment to suggest that a Republican Congress could do in 15 days something that the previous Democratic Congress had not done in two years. Now we have another Congress—the Eighty-first—in which the Democrats once more have a majority. At the beginning of that Congress Mr. Truman tossed out his perennial program. It struck his Democratic Congress with all of the terrific impact of a soft-boiled egg dropped on a featherbed from an altitude of 2 inches. His Democratic Congress met on January 3. It is now February 14, almost three times the 15-day period in which Mr. Truman said the Eightieth Congress could pass the same program. And what has happened since January 3? I would not want to have you think that the Eighty-first Congress has been doing nothing. No indeed. It has done nothing about Mr. Truman's program, but it has passed a bill to raise the President's salary to give him a $90,000 tax-exempt expense allowance for which he does not even have to present an accounting. Wouldn't most of you like to have just about one-tenth of that amount tax free?

Incidentally, this was one bill dealing with taxes which Mr. Truman signed. You will recall that three times during the Eightieth Congress he vetoed tax reduction bills designed to give the taxpayers relief to the extent of $4,000,000,000 per year, and to take 7,000,000 individual taxpayers off of the tax rolls entirely. The last time Mr. Truman vetoed such a bill he denounced it publicly as a rich man's bill, and the Congress, including the Democratic Members, were so dis-

gusted with his demagoguery that the bill was passed over his veto.

While we are on the subject of taxes, I suppose you have noticed that Mr. Truman is now asking Congress for new tax legislation which will raise about $4,000,000,000 in additional revenue? That is just about the amount by which taxes were cut under the Republican Eightieth Congress. And, remembering that Mr. Truman denounced the Republican tax reduction bill as a rich man's measure, wouldn't it seem to be logical for him to now ask his Democratic Congress to repeal that tax reduction bill? It certainly would, so far as I am concerned. But, does Mr. Truman do it? He does not. He knows very well that 7,000,000 taxpayers have 7,000,000 votes and, as has been suggested, maybe they have more than that if some of them live in the Pendergast wards in Kansas City.

So, we have the spectacle of the present Democratic Eighty-first Congress, after it has been in session more than 40 days, coming up with just one accomplishment—a $90,000 per year tax-exempt expense allowance for the plain son of the people who only a little more than a month ago was telling Congress that taxes must be increased for everybody else.

* * * * *

I said a few moments ago that the Republican Party must present to the people a constructive and affirmative program. I am sure you will be interested in knowing that at the recent meeting of the national committee in Omaha a definite and, in my opinion, an important step was taken, looking toward the formulation of such a program. The national committee voted to create a committee on party program and policy. It is to be composed of six representatives of the national committee—three men and three women, all of whom have been appointed—two representatives of Republican members of the Senate and two representatives of Republican Members of the House, two Republican State chairmen and two Republican State finance chairmen. The chairman of the national committee and the secretary of the national committee hold ex officio the same positions on this policy group. As soon as the full membership of this committee has been selected, it is my intention to call a meeting of the committee. It has been empowered to decide whether or not to convene a national conference on party program and policy, and if so to fix the time and place for the conference and to specify the qualifications for participation. As I have said previously, it is my hope that such a conference will be convened some time during the latter part of this year.

On this subject I would like to make two things clear. Generally speaking, of course, party policy is fixed by the platform adopted by each national convention. In my opinion, the 1948 platform was an able and admirable document. So far as I am concerned personally, we can start with that as a basis. But national conventions meet only once in 4 years. Changing conditions frequently require a reappraisal of the party's position and the formulation of new policies to meet new conditions.

In the second place, as a Member of Congress I realize as keenly as anyone else that party policy on the national level can be given effect only by the votes of Republican Members of the Senate and the House. But, again speaking as a Member of Congress, I am convinced that it would be most helpful to our Republican legislators to know that they have back of them an organized and articulate expression of the views of Republicans throughout the Nation.

* * * * *

During the recent campaign Mr. Truman barnstormed throughout the Nation scattering promises like a New Year's Eve reveler throwing confetti. Many of his promises have just about that consistency. There is one thing about the Truman administration which the American people will find out in the very near future if they have not done so already—it just can't be trusted.

Let me give you one definite illustration of what I mean when I make that serious charge. The Senate Labor Committee is now considering an administration bill which is represented as a proposal to repeal the Taft-Hartley Act. You will remember, of course, that Mr. Truman promised to repeal that act on many occasions last year. So did Senator McGRATH, the chairman of the Democrat National Committee, and other Democrat spokesmen. Actually, the bill which the administration has presented to the Senate committee is a proposal to amend or revise the Taft-Hartley Act and to retain many of its valuable guaranties of the rights of working men and women. However, one provision of the Taft-Hartley Act which the administration proposed to abolish is that which authorizes the President to obtain injunctions to prevent strikes which would imperil the national health or welfare. Mr. Truman has used that authorization half a dozen times since the Taft-Hartley Act was passed over his rather hysterical veto, with a majority of the Democrats in the House and Senate voting against him. Now, however, he comes up with the very startling assertion that he does not need any such authorization; that he has inherent powers to obtain such injunctions without any authorization by law. Let's look at the record on that point to illustrate what I mean when I say you can't trust the Truman administration. On May 25, 1946, Mr. Truman certainly had all of the inherent powers which he has today. As a matter of fact, he had more power then because some of the extraordinary wartime delegations of authority to the President were still in effect. But it was on that date that he, personally, went before a joint session of Congress and asked for emergency and temporary authority to draft railroad workers into the armed forces to head off a Nation-wide strike. Where were his inherent powers on that date, and if he had them why didn't he use them? Sometimes I wonder if we are supposed to believe the President in the even-numbered years like 1946 and not believe him in the odd-numbered years like 1949. What do you think?

* * * * *

It is a serious and depressing situation to have an administration in power which cannot be trusted. However, we may as well face the fact that that is what we have today. The only way that situation can be remedied is for the Republican Party to fight everlastingly to bring decency and honesty back into our Federal Government. It is going to be a hard fight, but it is not altogether a Republican fight. It is your fight as well as mine and the fight of every American who wants a trustworthy Government in Washington. Let's all get together, and let's all get to work. Let's do it right now.

REA Housing for Both Rural and Urban Housing, H. R. 2811

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1949

Mr. PATMAN. Mr. Speaker, I am inserting herewith a statement that was prepared when H. R. 2811 was introduced by me today. It is as follows:

Congressman WRIGHT PATMAN of Texas today introduced in the House what he described as an "REA" housing bill. The bill would have the Government dedicate itself to the promotion of home ownership through encouraging cooperative housing associations to be formed and through providing them with mortgage insurance such as has long been granted to speculatively built housing under the Federal Housing Administration. Veterans would be granted an increase of 10 percent in the mortgage insurance on their homes. The bill also provides for the development of housing for farm tenants and farm laborers and for temporary shelter in migratory farm-labor camps. PATMAN said his bill would encourage ownership of homes in cities and on farms and would help small business.

"This bill has been written to express a first interest in the men and women, or families who want houses to live in and then to own so they can make them into homes," said PATMAN. "Our housing legislation has been written heretofore to express a first interest in the mortgage money lenders and the builders and speculators in the housing field. We know now, from experience, that we failed to get housing and home ownership for the great mass of our American families. But now we are going to lay the sound foundation, to cut the cost of housing, to help the consumer of housing, and then let the question of profits take care of itself.

"Less than 15 years ago we talked about getting electric power to our farmers. Only about 18 percent of our farmers then had electric power. The power trust and all the big utility interests said we could not do it. They had every opportunity under the REA law to build electric lines into the farms but they refused to do it. The cooperatives entered that field and proved the job could be done. More than 80 percent of our farms are now electrified and in some States as many as 92 percent of the farms. Exactly the same principle can be used, under my bill, to break the monopoly bottlenecks in the housing field and we are going to see to it that the job is done."

PATMAN said that in working on his bill he had consulted with leaders in Congress and the administration, and in business, veterans' organizations, cooperative organizations, farm organizations, and labor organizations. He said there was general agreement on the basic principles of the bill, and on most of the details, and that he thought any differences of opinion that might develop could be ironed out in the hearings before the House Committee on Banking and Currency.

"I just came from a meeting of the Joint Committee on the Economic Report where Murray D. Lincoln, president of the Cooperative League, U. S. A., was talking about what he called a program of abundance to replace the policies of scarcity," Patman said. "It is interesting that Lincoln proposed that through an REA program the people could solve their problems and break the monopolies in housing and steel and farm machinery and fertilizer production. I have been working on this REA housing bill for several weeks and I think Lincoln is right. The people can do the job through cooperatives and other independent small business organizations. We can create abundance and that will provide an opportunity for every small business organization which monopoly has stifled and destroyed."

The Patman bill (H. R. 2811) would do the following:

1. Create a Cooperative Housing Administration and provide for the appointment of a Commissioner to administer the cooperative provisions.

2. Instruct the Commissioner to encourage the development of cooperative housing organizations and give to the Commissioner power to issue rules and regulations and to supervise their operations during the years the Government had financial investments in their projects.

3. Provide for direct loans from the Government, which would then be refinanced through the mortgage-insurance provisions of the Federal Housing Administration.

4. Provide that veterans would have a 10-percent increase in the mortgage insurance or direct grants from Government.

5. Provide for formation of cooperative housing associations to build houses for farm laborers and tenants and instruct the Secretary of Agriculture, who would administer this part of the law, to encourage the tenants to become owners of their housing.

6. Strike at the disgraceful labor camps for migratory farm labor through assisting in the development of sanitary and wholesome camp shelter.

PATMAN said he provided for the creation of a Cooperative Housing Administration to administer the law because it had been proved in REA that the law should be administered by someone who believed in it. He said that the Federal Housing Administration had been created to help the speculative building industry and the mortgage money lenders. He said to put cooperative housing under the Federal Housing Administration would be unfair to FHA and to cooperative housing as it would cause distrust and suspicion and conflict within FHA.

"Other housing bills, introduced in the House and Senate, have attempted to recognize our debt to veterans by providing that certain numbers of veterans should constitute a housing project," said PATMAN. "This bill recognizes our debt to the veterans in a much more democratic way. Under this bill, one veteran or a dozen or a hundred veterans could be granted preference. This bill is based on sound cooperative principles, and incidentally the basic democratic principle expressed by the phrase 'of the people and for the people and by the people'—that is for all people. It does not attempt to create classes of any kind of people and particularly of income classes. Moreover, this bill is economically sound and more in the interest of veterans and others, with small incomes, than is the other plan."

PATMAN said there had been some difference of opinion about the percentage of value of mortgage insurance and about the rate of interest but that he desired to put the program before the House Committee as soon as possible and for study by the committee experts. Then, he said, the proposals could be debated and any sound amendments could be offered.

"I am just as much interested in getting rid of the slums and subslums which farm tenants and farm laborers have to occupy sometime," said PATMAN. "I think this bill will give the Secretary of Agriculture the authority he needs to attack the housing problem on the farms and particularly in the migratory labor camps."

"It is interesting that practically every REA cooperative is retiring its debt to the Government ahead of the time when the debt is due," said PATMAN. "If we can develop a sound home-ownership housing plan through this bill, and I think we can, I am sure the cooperative housing associations which wil be formed will demonstrate that they can handle the financial problem so it will not be a burden to the Government.

"We are developing here something that has been tried and proved successful. We have proved it through the mutual home-ownership plan which was tried out under the Lanham war-housing acts. We have a number of big housing projects under that act, where through cooperative-mutual housing associations, the tenant occupants are acquiring ownership of their houses. They are doing that at far less cost than they would pay for housing otherwise. And more important than the money concerned, we are developing a high degree of citizenship through the ownership motive. There is no juvenile delinquency in several of these little towns which are owned by these cooperative-mutual organizations, and that is evidence of what we can do if we give the people a chance to own their homes."

The American Spirit

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. SANBORN. Mr. Speaker, at a time when the trend toward more Government aid and more so-called Government security is almost overpowering, I submit this letter from one of my constituents to give hope that we are not completely lost. In this letter the real spirit of progress is evidenced and the spirit that made America great is so abundant that it is refreshing to read. I commend Mrs. Sanders for her attitude and forthright expression and urge my colleagues to read her message with the hope that it will help point the way to a new turn in governmental practices.

The letter follows:

MARSING, IDAHO.

Hon. JOHN SANBORN,
Representative from Idaho,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: In view of the fact that more people voted for other candidates than did for Mr. Truman, as revealed by the recently released election returns, and that therefore any talk of a mandate from the people is very questionable, I think it should interest you to know the views of one of the majority who did not vote for him.

I have reached the point where Government schemes for the security of the common man make me utterly angry. It appears to me that in order to guarantee this so-called security in the rosy future we are being asked to sacrifice all hope of security in the present. Right now the Government takes so much of my husband's salary—he is a teacher—that we find it difficult to meet our obligations with what is left. If it isn't asking too much, we would much prefer living decently and buying the things we need now to piling up highly doubtful future Government benefits. I say "highly doubtful" with reason. While working my way through school I had to pay part of my small earnings for social security. I needed all the money desperately, but I had to send some of it to the Government. Will I ever see it again? Certainly not. I didn't contribute enough in the period of time I worked. It has happened and is happening to many others.

I consider myself competent to handle my own finances, much more competent than any dreamy-eyed theorist in Government circles. If our family want old-age insurance, we'll arrange for it ourselves; when we need a doctor we'll pay our own bills, without having also to pay the wages of the hundreds of Federal administrators and clerks to handle a national health set-up. Incidentally, this way we get the best of medical care, which is more than we could count on under a Government arrangement. If we run into emergencies, we'll handle them ourselves. At least we know where our money goes and can keep our books balanced. The Federal Government is the most inefficient, untrustworthy, and wasteful manager of money there is. I see no inducement to entrust my future security to it.

This social program of Mr. Truman's would impoverish the group to which we belong—the lower middle class. We don't want the Government to pay for anything for us; we just want to be allowed to earn and to receive our full salaries and to pay our own bills and to stand on our own feet. I am so sick of the Government's sticky fingers in my pocket that I am at a point of absolute rebellion. And if any darned fool in the White House or Congress thinks that I, as a housewife, will buy social-security stamps to pay anyone who works for me, he has another large think coming. I just won't do it, if I can never hire anyone.

I'm fed up with Federal aid for this, that, and the other. The Government pays farmers' price supports, and our food bill soars. The farmers around here drive 1949 cars and live in new houses; we drive a 1939 coupe and live in an old rented house. In my opinion the Government would do better to balance its own budget rather than playing Santa Claus by unbalancing ours and pushing us into poverty now so that we can live in security in a future we may not live to see.

Sincerely,

Mrs. W. H. SANDERS.

Charles Taft—Alger Hiss

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following testimony by Mr. Charles P. Taft before the Ways and Means Committee on Tuesday, January 25, 1949, because Mr. Taft has called to my attention the fact that in my speech on the floor of the House on the reciprocal trade agreement extension program as reported in the CONGRESSIONAL RECORD for February 8, 1949, I misquoted him regarding his testimony concerning Alger Hiss. I am accordingly inserting the complete printed testimony on this point in order to clarify any misunderstanding as to exactly what Mr. Taft did say on the question of the part played by Alger Hiss in the conduct of our trade agreements program.

Mr. EBERHARTER. Mr. Taft, something was said yesterday by one of the members of the committee with respect to Alger Hiss. Now, I have the impression that you worked in the State Department when he was employed there?

Mr. TAFT. Yes, sir.

Mr. EBERHARTER. Are you well acquainted with him?

Mr. TAFT. When I went into the State Department in the fall of 1943 I was on the economic side under Mr. Acheson, whose responsibility was entirely economic. At that time Mr. Alger Hiss was in the Office of Far Eastern Affairs, and he remained in that office until he became Deputy Director of it, if I am not mistaken, until about the summer of 1944, when he went over into what became the United Nations Office, and then was secretary of the Dumbarton Oaks Con-

ference and later of the San Francisco Conference.

During that entire time while I saw him and knew who he was he had no connection whatsoever with the economic operations or with Mr. Acheson.

Mr. Donald Hiss had been Mr. Acheson's executive assistant and later became an associate of mine as Deputy Director of the other parallel office. What has been said about the connection of Mr. Acheson and Mr. Hiss I happen to know about. It is not true. Mr. Berle's memory was mistaken in referring to Mr. Alger Hiss as having been Mr. Acheson's assistant, and if his character is of any importance, it is perfectly clear that he had nothing to do with the reciprocal trade agreements, I think, since the first time Mr. Sayre left the State Department in 1941 before the war. Mr. Donald Hiss was his assistant.

So far as Mr. Berle's argument is concerned, he is mistaken in his own position, because I was present on the Policy Committee of the Department when the argument came up, which I suppose he is talking about, and it was with Mr. Dunn and not with Mr. Acheson. It was on the subject of his position on Russia, which was not as he describes it, seeking a clear-cut show-down with Russia, but his judgment, which I think was very acute, was the place where war might develop, was in the Middle East.

Mr. EBERHARTER. That is, Mr. Berle?

Mr. TAFT. Yes, Mr. Berle; and that is very different from what he said to Mr. Acheson and Mr. Hiss that he thought it would develop between the British and Russia, that it might develop between them. He was just mistaken in what he said to Mr. Acheson and Mr. Hiss. We in the economic side of Mr. Acheson's office never had an opportunity to find out.

Mr. EBERHARTER. Then Mr. Alger Hiss never had any duties in connection with the reciprocal-trade-agreements program?

Mr. TAFT. I know he had them in 1937 and 1938, because then he was in Dr. Francis Sayre's office, who was in charge of the reciprocal-trade-agreements program. As I say, my impression is he left that operation before the war and had no further connection with it.

Mr. EBERHARTER. And you had a pretty good opportunity to observe Mr. Alger Hiss and to form an opinion as to his loyalty and capabilities?

Mr. TAFT. I am afraid not, because he was in a completely different operation in the Department. Of Mr. Donald Hiss, I did, and I would, certainly testify as to his loyalty.

The "Dead" Committee

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. POULSON. Mr. Speaker, I am inserting this editorial from the Chicago Daily News which I think hits the nail on the head—in other words, by subterfuge the administration has killed the Un-American Activities Committee:

THE "DEAD" COMMITTEE

The House of Representatives has appropriated $200,000 to carry on the work of the Un-American Activities Committee, which President Truman not so long ago characterized as "dead." It has yet to be shown that Mr. Truman was not correct.

For the committee clearly intends to work very closely with Attorney General Clark and the Department of Justice. Under Democratic management, the inquisitors promise to conduct themselves in a very shy and retiring manner, avoiding publicity, suspicious of anything sensational.

This will eliminate the circus flavor from the committee's procedure. It should end the abuses and injustices of which the former committee was frequently guilty. It should mean that suspected persons will no longer be pilloried by publicity without a chance to defend themselves.

But it may also mean that the committee will operate as a sort of apprentice Justice Department. The role could have very little value. The usefulness of the committee, irresponsible and flamboyant as it may have been at times, was to provide a check on the efficiency with which Mr. Clark's hunters were hunting.

Legislative inquiries exist because administrative branches cannot be expected to investigate themselves or to confess their own shortcomings. The Chambers-Hiss matter, for example, for whatever it may turn out to be, would never have had the airing it is getting except for the blatant persistence of the old committee.

Too close a rapport with the administrative agencies will detract from the effectiveness of the new committee as well as the confidence in which it is held.

Report of Col. Melvin J. Maas, National President, Marine Corps Reserve Officers Association

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. THOMPSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of Col. Melvin J. Maas, national president, Marine Corps Reserve Officers Association:

No group of men has met at a more serious time, nor with any more solemn purpose than this conference. On the face of it, as things look today, the balloon of communism is swelling so large that our hands cannot press to contain it. Another way to put it is that the dike against the menacing flood of communism is springing more leaks than we seem able to plug up.

When we put our finger into the hole in the dike at Greece, another hole appears in Palestine. When we shove our fist into the hole at Berlin, the dike breaks wide open in China. And all of the time we are hampered, harassed, and beset by insidious subversive activities at home.

Never in history was there a greater need for unity, loyalty, and selfless leadership, yet we meet today faced with dissension, backbiting and frequently a leadership of selfishness and greed even in our own military forces. Our enemies couldn't by design set the stage for their purposes better than we ourselves are doing.

A bewildered and confused world—yes, including the peoples of our own country—are crying out for a leadership that will point the way out of the seeming hopelessness that now faces us all. In an era that is still military and semimilitary, the peace-loving world is looking to the United States for wise, calm, and statesmanlike leadership from our military experts.

What do they see? Still all too much of a mad scramble to either hold blindly to outmoded traditions and weapons, or to greedily reach out and grab control of the weapons, personnel, and funds of sister military services, as if the battle were among themselves, instead of against a common enemy.

Bickering, backbiting, sly undercutting, exagerated claims, slurs, and ill-concealed hostility among too many professional military leaders of all ranks, is discouraging our allies, disgusting Americans, and causing gleeful jubilation among our enemies. All know that we are not to be the hope of a much divided and discouraged world, unless we ourselves can be united, confident, positive, and resolutely firm. How as a nation can we present that picture to the world—friend and foe—unless our right arm—our military and naval forces—are united in purpose, in spirit, and in a common plan for the defense of our security? How can we expect the liberty- and peace-loving peoples of the world to feel secure in our leadership if we can't even have the type of unity needed to assure our own safety?

The time has come when our military leaders must stop fighting each other and unite to present a common front, with closed ranks, and a single plan of action.

This applies also to the attitude of the professional military toward the Reserve components. There are still too many Regulars who seem to feel that Reserves are outsiders, that we are trying to "muscle in," that we are just "rank seekers" and parasites on their appropriations. Also, there are too many Reserves who always have chips on their shoulders and take the attitude that the Regulars are all brass hats, incompetents, and interested only in holding down Reserves.

This friction among the professionals, and between professionals and the Reserve, is a luxury that this Nation can just no longer afford.

This does not mean that there should be no honest differences of opinion between military men, nor healthy competition between Regulars and Reserves. From now on, however, they must be on the merits of issues, and after sincere debate and free expression of professional opinion, they must be resolved within the family and not in headline seeking, and public charges and countercharges.

Once such problems are resolved they must be gracefully accepted and there must be honest cooperation to make the decisions work in the interest of the United States, regardless of the personal interests of those involved in such disputes.

The present deplorable situation is partly the fault of the imperfections in the unification law itself, the rest is the unyielding attitude of individuals in the military service. Where the law is at fault, let us openly work for congressional action to improve the law. Where the fault is in the individual, vigorous steps must be taken to see to it that such individuals henceforth accept the official decisions that are made, or else get out of the service.

The military have a hard enough time holding public support, in peacetime anyway, and they must do nothing to create distrust in themselves by the public. The present interservice bickering is accelerating the disintegration of the public support for the armed forces.

Let all of us, professional and Reserves, so conduct ourselves and our military affairs as to regain and then hold the active interest and support of the Congress and the general public. To that end, let the membership of this association lead the way by setting an example. We have had and doubtless will continue to have professional differences with the Marine Corps, the Navy, and the defense establishment. We will however, present our views in the proper way, with dignity and on a high professional plane.

I call upon Marine Corps Reserve officers—the few hundred here and thousands all over

America—to take the lead in actively promoting interservice cooperation and understanding. Specifically, I ask this conference to consider the necessity of adopting as part of our chapter program for 1949 the following:

1. Each chapter to hold one all-service social function during 1949, possibly during February in which National Defense Week is observed.

2. A joint meeting of all local Reserve units in all MCROA towns once a year at which prominent speakers will highlight an interservice program.

3. Follow the lead taken by some MCROA chapters and invite Regular and Reserve officers of the Army, Navy and Air Force to address chapter meetings at suitable times and partake of interservice understanding and share their knowledge with us.

The opportunity is ours to perform as salutary a service in peacetime as we did during hostilities. We are all Americans first and we must never forget that the uniform we wear does not alter the flag we serve or the Commander in Chief we follow. With God's blessing MCROA will continue to serve our country unselfishly and in a spirit of understanding of and cooperation with all other Regular, Reserve, and National Guard units.

A civilian commission has recommended a sweeping change in the pay and retirement basis for the military services. Certainly an upward readjustment of service pay is long, long overdue. I urge MCROA to support the pay features of the Hook report, now before Congress.

On the other hand, there are features of their proposed disability retirement provisions that appear disastrous to lower ranking Regular officers and extremely discriminatory against all Reserve officers of every rank. I urge that we withhold support for those features of the Hook report.

While MCROA by direct poll, is supporting universal military training, we cannot remain blind to the increasing evidence that there is no immediate prospect of its enactment. The time has come when the Military Establishment must not only give thought to what shall be done if universal military training is not adopted, but it must now come forth with an alternate plan to provide the backlog security that UMT was intended to supply.

Oviously, the only logical alternative is an enlarged and intensified reserve program. From now on the emphasis must more and more be placed upon a live, vigorous, and expanding Reserve program, with practical and realistic training for both officers and men.

To assure the success of such a program, and to safeguard against any future tendency to militarism in our land which is the last hope against military dictatorships, new emphasis must be placed upon the civilian direction of our military establishments, including military policy-making matters.

The best way of providing this is the creation of the office of Under Secretary of Defense for Reserve Affairs, and assistant secretaries for Reserves in the Departments of the Army, Navy, and Air Force. In addition, there should be established a deputy chief of staff for reserves in the Army and Air Force, a vice chief of naval operations for Reserves in the Navy, and an assistant commandant for Reserves in the Marine Corps.

At the same time, some way must be found to bring representatives of the Reserve components into the active over-all policy-making of the Military Establishment and the basic military services.

Is that too much to ask on behalf of the 95 percent who will actually fight a war if it does come—the civilian in uniform?

The general public, in peace and war, will accept the professional much more readily if it knows that the semiprofessional civilian has a healthy part in the direction and formulation of military policies.

It's the best antidote for the unnamed fear by the public of a military domination in this country. In the past that fear has always expressed itself in the curtailment and reduction of the military forces to the point where they became almost impotent. True, the system has worked to prevent the military from domination of the Government. But, unfortunately, it also has made it impossible to have a vigorous foreign policy that might have prevented wars, since we seldom had a military large or effective enough to back up a vigorous foreign policy. Just remember the Manchurian incident. We warned Japan not to invade and take over Manchuria. Our words were bold and brave. They went unheeded, since the world knew we did not have the naval and military establishments capable of stopping Japan's conquests in China. Our opposition to Japan's aggression ended with our comic-opera protest.

Whether the Nation repeats these errors of the past largely depends upon how the military deports itself in the coming months and years.

The military always blames the situation upon the Congress, but the Congress only reflects public opinion back home—a public opinion largely created by the military itself. The public reacts favorably or unfavorably toward the armed forces, largely as a result of the kind of leadership displayed in peacetime by the military leaders.

Either the United States will give the world the leadership that will take the world along a path of peace and better standards of living and expanding liberties, or we will have to surrender our leadership to an opposing ideology, and we ourselves will become subjected to an intolerable foreign domination.

No longer can we sit back and trust our security and our future to the mere possession of the atomic bomb. Soon, two may play at that game. The atomic bomb is really not a suitable military weapon, unless we intend to make real all-out war in the manner of Genghis Khan. If we mean to completely destroy and totally wipe out the population of our enemies, the atomic bomb is the thing to use. If we mean only to knock out the Government of our enemy and to help the peoples of such countries to reestablish themselves, we had better never again use atomic bombs. Reconstruction of the bomb's destruction will bankrupt us, and we will never overcome the mass bitterness toward us, after a large scale use of atomic bombs, atomic dust clouds, radioactive rain, etc.

Anyway, there is no assurance that we will win such a war. The only way we can be certain of winning the next war is to prevent such a war. Only the wisest of leadership, with overwhelming public support, can do that, but it is our only real hope. Let us pledge our association to assist in developing and supporting in this country that kind of leadership.

The Alaska Highway

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1949

Mr. MANSFIELD. Mr. Speaker, I am inserting in the RECORD a very much worth-while and up-to-date story on the Alaska Highway carried in the St. Louis Post-Dispatch under date of December 9, 1948. The article in question has been written by the Honorable Richard L. Neuberger, a member of the Oregon State Senate and the outstanding authority on the Alaska Highway. Dick Neuberger played an active part in the building of the highway during the war, when he enlisted in the United States Army, and since has maintained his great interest in the northwestern part of the United States and Alaska. His writings are practically the only source available to the American people, and we are deeply indebted to him for keeping us informed of developments in these important areas of our Nation.

The article follows:

ALASKA HIGHWAY UNLOCKS DOOR TO FAR NORTH, CHANGES LIFE THERE—ROAD MEANS MANY NEW SETTLERS, BREAK IN SEATTLE MONOPOLY ON COMMERCE, AND HARD LIVING WITH UNEMPLOYMENT FOR SOME

(By Richard L. Neuberger)

WHITEHORSE, YUKON TERRITORY.—The Alaska Highway is the biggest single fact of life in Alaska today. This 26-foot gravel road, 1,519 miles in length, was opened last April to general traffic for the first time by its Canadian guardians. In the months which have passed since spring the influence of the wilderness road has been felt in every community on the Alaskan mainland.

In a sudden, swift burst Alaska has been subject to a wave of migration typical of the pilgrimages which built the American West.

Until the prodigious highway was opened Alaska claimed immunity to such migration. Alaska was, to all intent and purposes, an island. It was as cut off by the forest and mountain solitudes of British Columbia and the Yukon Territory as Hawaii is by the sea. No one could reach Alaska except through the steamship and air-line firms whose headquarters are in Seattle.

AIR, SHIP FARES HIGH

This often acted as a kind of protective tariff. Fares are high to Alaska. Comparatively few workingmen could pay them, and certainly not for their families. Pan American charges $103.50 for a 1,300-mile flight from Whitehorse to Seattle. This compares with a fare of $143.50 for the 2,900-mile passage by Northwest Airlines from Seattle to New York City.

The expensive tickets necessary to reach Alaska kept out people without considerable means. It limited northward migration by laborers to those who already had signed up with canneries, contractors, and mining companies, and thus had their passage paid for them. In addition, every community had a shipping manifest by airmail and thus knew in advance who would step off the next steamer or airplane. It was easy to get rid of undesirables. They just had to be prodded up the gangplank when the boat called.

ROAD REASONABLY GOOD

Today anyone may migrate to Alaska. Old jalopies bounce over the highway's 1,519 rugged miles. The road is in reasonably good condition, its curves banked, its grades gentle. Yet it still is a gravel road, and rocks and pebbles for a distance exceeding half that across America can do considerable damage to tires. Few wayfarers reach Fairbanks without acquiring proficiency in the use of lug wrench and air pump.

The Royal Canadian Mounted Police at Whitehorse report that 2,200 automobiles headed for Fairbanks on the highway in July. This figure becomes all the more amazing when compared with the total number of cars licensed in all of Alaska last year, 9,876.

Largely because of the influence of the highway, the Territorial Tax Commission will issue license plates in five figures this year for the first time in Alaskan history. To date in 1948 more than 14,000 vehicles

have been licensed. This is particularly high in view of the fact that some Alaskan communities—notably Skagway and Ketchikan—have no roads which extend more than a few miles beyond the edge of town.

In some Alaskan cities there is an unemployment problem. Men are on the streets of Anchorage looking for work. Fairbanks is afraid the jobs on the new Army airfields cannot absorb all its newcomers. The housing shortage in Anchorage, now Alaska's biggest city, is so acute that many families face the sub-Arctic winter in tents, tar-paper shacks, and old railroad boxcars taken off their trucks.

Ben D. Stewart, Territorial Commissioner of Mines, who has lived in Alaska for 30 years, said that in Anchorage he saw a scavenger grubbing through garbage cans in back of the Westward Hotel. "It was a sight I never expected to see in the North," observed Stewart. "It was then that I realized the highway has exposed Alaska to all the good and all the bad in the civilization we always thought was so far away."

To some degree, the opening of the highway to unlimited traffic has jarred Seattle's traditional monopoly over Alaskan commerce. In the past neither a pound of freight nor the most casual traveler got to Alaska without first clearing through Seattle. The Alaskan highway, however, takes off not from the vicinity of Seattle, but from the Middle West. It approaches through St. Paul or Great Falls, Mont., and then via the Canadian city of Edmonton.

This fact lies behind Seattle protests over this choice of a route by the American Army, when the highway was surveyed in 1942. The Army claimed the road would be principally useful as a guide for military aircraft, winging over the trackless Yukon wilderness. Gen. H. H. Arnold, then commanding the Air Corps, claimed that flying weather was generally better east of the Rockies than along the coastal slot extending northward from Seattle.

Within Alaska itself, the highway has upset even more the usual balance of trade deals and relationships.

Since 1901 the narrow-gage White Pass & Yukon Railway, owned primarily by British capital, has controlled all commerce into the upper Yukon Basin. Only over this spectacular 111-mile line could supplies be transferred from tidewater to the head of navigation on the Yukon. Now, an offshoot of the Alaska Highway is a 250-mile cutoff called the Haines Road. It twists through the foothills of the St. Elias Range to Port Chilkoot at the head of the Inside Passage.

TRUCKERS CUT RATES

A group of American ex-GI's are trucking on the Haines Road, aided by the Alaska Yukon Trucking Co., of Whitehorse. Their activities have brought down the White Pass through rate from Vancouver nearly 30 percent—from $90 a ton to $62. Great jockeying is taking place over whether the Haines Road will be kept open this winter. Gov. Ernest Gruening has announced that Alaska will clear away the snow on its side of the international boundary, but Canadian Army headquarters at Whitehorse favors letting the road be plugged.

Carl W. Heinmiller, one-eyed spokesman for the American veterans at Chilkoot, has claimed that the White Pass & Yukon is influencing the decisions of the Canadian Army. However, C. J. Rogers, president of the White Pass & Yukon, counters with the answer that "we can't haul only the Yukon's winter freight and then lose the lucrative summer business to the highway."

SNOW 14 FEET DEEP

Rogers says that his line spends $12.50 in maintenance for every winter ton hauled across White Pass. Snows are often 14 feet deep on the level. A gap of as much as 2 minutes between train and rotary plow may mean that the train will be choked off by drifts for the next month.

The Alaska Railroad, owned and operated by the United States Department of the Interior, also is alarmed over the competition afforded by the Haines Road. A Fairbanks trucker named Al Ghezzi is highballing cargo from Haines to Fairbanks in faster time than the same freight can reach the Alaskan interior via Seward and the railroad. Heinmiller charges that the Interior Department assessed the Chilkoot veterans $200-a-month rental for old, abandoned Army living quarters when they first moved in.

Fares on the White Pass & Yukon and the Alaska Railroad have been the highest on the continent. It costs $12.70 for a one-way ticket from Skagway to Whitehorse in day coaches nearly half a century old. The distance is 111 miles. Rates between Fairbanks and the seacoast are comparable over the line operated by the United States Government.

RISE IN POPULATION

It is as a disturber of old, long-established customs and relationships in the North that the Alaska Highway is having its greatest influence. George Sundborg, manager of the Alaska Development Board, estimates that the population of the Territory is now 95,000. Small as this is, it represents a terrific gain over 1940 when Alaska had 39,000 white and 33,000 Indians, Eskimos, and Aleuts. Today the native population is practically the same, but the number of whites has increased to 62,000. This is a gain since 1940 of 62 percent in white population, far more even than that of California.

"The Alaskan Highway," adds Sundborg, "has meant that any American with an old car and a few hundred dolars for gasoline and tires can drive to Alaska. What is more, he can bring his family. We do not welcome unplanned and helter-skelter migration, yet we realize that this is exactly the sort of migration which transformed the American West from a wilderness into a prosperous civilization."

Trial of Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. MADDEN. Mr. Speaker, the world has been shocked by the unfair kangaroo-court tactics which the Communist government of Hungary used to convict Cardinal Mindszenty.

All religious organizations in America have taken the stand against the campaign emanating from Moscow to stamp out religious liberty and freedom not only in Europe but throughout the world.

The following editorial by H. B. Snyder, editor of the Gary (Ind.) Post-Tribune, further illustrates this fact:

MINDSZENTY TRIAL FOLLOWS USUAL TOTALITARIAN PATTERN

We now know a little more about the trial of Cardinal Mindszenty. It followed the customary Hungarian court procedure of questioning the defendant in jail, although this fact was not brought out in the news dispatches. Indeed, there appears to have been some kind of censorship connected with the news dispatches, probably a result of the totalitarian atmosphere rather than actual editing of copy.

The Cardinal and the other prisoners apparently were subjected to the usual totalitarian questioning in jail by teams of interrogators. These teams work in relays and subject the prisoner to hour after hour of what must be mental torture. The teams wear out and are replaced with new ones, but the poor prisoner, even though he falls into a stupor, is reawakened so that the torture can continue until he is ready to confess anything.

It is not known positively that this method was followed, but enough has been said to provide a very large suspicion that some kind of third degree was used. However, one English newspaper reporter telephoned to London that the prisoners seemed to be in a normal state of mind during their appearance in court. He said that if the Cardinal did not look like one who had been subjected to torture he did look like a man defeated.

From what we know of the Communist totalitarian procedure, however, it seems most unlikely that a public trial would be scheduled without full assurance of the outcome. The European method of taking evidence in jail fits in with the working of the Communist apparatus. Unless the defendants give the testimony the state wants they stay in jail or go to one of the labor camps where they are worked to death.

But, on the other hand, if they admit guilt they are hauled before the judges whose business is to condemn and are then sent to a labor camp where they are worked to death. So it doesn't make much difference in the final outcome what the defendants do. But of one thing we can be quite positive—if a trial is held the defendants will admit enough to cause their conviction.

Therefore, the actual facts have little to do with the outcome. The Cardinal was arrested and tried because he would not go along with the Communist state. He took that stand because he knew the Communists are intent on destroying the Catholic Church in Hungary, just as they are trying to destroy all other churches where they come into power.

Communism, which is the basest materialism, cannot exist for long if religion exists in the hearts of the people. Communist ideology reduces man to the status of the animal and permits him to exist for the one purpose of serving the state. Yet the state is a mere collection of individuals, who, whatever they profess, are chiefly interested in remaining in power.

In every totalitarian state the individual has been crushed to a pulp so that out of this base material might be created a new race of robots. This is the process now being carried out in eastern Europe and we see one part of the procedure in this trial in Hungary. The process will continue as long as the omnipotent state continues to advance.

Is Foolocracy the Answer?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. REED of New York. Mr. Speaker, the State of Virginia, "The Old Dominion," has produced many outstanding statesmen. One of these was Hon. Henry St. George Tucker, a constitutional lawyer of great fame, whose opinion on the fundamentals of free government was sound, respected, and followed by those who firmly believed in liberty under law. I may be guilty of lese majesty in these days of New Deals, Square Deals, and

Raw Deals to mention the philosophy of those who laid the foundation and charted the true course of our Republic. The rocks and reefs to avoid were well known and distinctly marked by men like Hon. Henry St. George Tucker. The thoughts and warnings of the sages of old are the subject of ridicule by the planners, the spenders, the wastrels who make up the foolocracy of the present administration, but "truth crushed to earth will rise again."

Be this as it may, let Hon. Henry St. George Tucker, of the Old Dominion, be heard:

If B takes A's property by force for his own use, it is equivalent to a claim of mastery by B and a condition of servitude to A. And when Government, by form of law, takes the property of A and gives it to B, whether by direct confiscation or by indirect means, it is a violation of duty and a usurpation of power. It is none the less robbery, because it is done under the form of law and is called taxation.

When government advertises itself as the munificent almoner of indefinite charities, as the machine through whose grind benefits may be conferred on some at the expense of all, and enterprises be fostered or destroyed at will, contestants for the prize of its power will spread their nets to catch the most powerful and combine the most influential, until extravagance, plunder, and corruption will fill the land. Elections, being the game for great stakes, will be controlled by political gamblers; money, not morality, will rule its results; and the democratic patriarch will become the paternal plutocrat of the country.

But this is not all. As soon as paternalism holds itself ready to help its children out of the common fund, furnished by the taxation of all, everyone will demand what another receives. They will argue, if one enterprise is aided by gift or loan, why not all? Equality is equity. If the Government may lend to C without security, why not to others on mortgage? If one producer receives bounty to raise a crop, why not all? If one is relieved of loss by fire or flood, why not all? Is not the Government the impartial father of all its children? If it directly or indirectly helps one to make a billion out of the many, why not in turn, help the many to distribute their excess? If it can give plethora of wealth to monopoly, why not help commune by healthful depletion in order to return ill-gotten gains to the victim of privilege? These questions confront us with the truth: Privilege and communism are twin monsters from the womb of the patriarcha of Filmer, the paternalism of today. Privilege sows the wind; the commune will bring the harvest of the whirlwind.

A Plea for Tenants—Concerning Rent Controls

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1949

Mr. GWINN. Mr. Speaker, why does this ever-expanding, all-powerful central Government propose to extend rent control for 27 months? We are in the fifth year of peace, yet it is proposed to continue wartime rent control for a longer period than we did during the war.

Why? What is causing a worse shortage of rental housing in peacetime than in war? Why not find out the cause of this shortage. If we can abolish the cause, the shortage will end.

In 1947 the Census Bureau made a survey of housing. The results are almost unbelievable. The number of dwelling units in the United States in 1940 was 34,854,000. By April 1947 they had increased to 39,016,000. In spite of this increase of housing units by more than four million, the number offered for rental dropped by two million. There were less rental units in 1947 than there were 7 years before, the first drop in our history.

Here are the actual figures for two major metropolitan areas. Rental units in Chicago dropped from 863,000 homes in 1940 to 819,000 in 1948. In Philadelphia, the drop was from 432,000 to 381,000. Figures for most American cities tell the same tale.

Perhaps the most thought-provoking picture is that presented by the Scranton-Wilkes-Barre area in Pennsylvania. There was no housing shortage there in 1940. In the next 7 years its population declined 15 percent. In spite of ample housing and the population decline, there was the same old complaint, "A severe shortage of rental housing." Overcrowding of veterans was one of the worst in the country. Two or more families were found in 19 percent of the units occupied by veterans.

What happened? Under rent control owners of about 11,000 dwelling units quit renting and threw them on the market for sale. Owners of non-income producing investments take their losses and get out as quickly as possible. The horrible crowding of veterans and others who must rent was caused by the Government's destruction of rental values. There was actually more living space per person than ever before. Fifteen percent of the people moved away, but the houses with more than enough space remained. There were only 3.7 persons in the average home in 1947 compared with 4.3 persons in 1940. But the rental shortage has become so terrifying that Government propagandists propose that Government build more houses to cure the shortage it created.

Actually there is no housing shortage. The only shortage is one of dwellings for rent. The proof of this is most dramatically illustrated by comparing the real-estate advertistments found in our newspapers. In 1940 there was a surplus of housing. Vacancies ran about 7 percent. In 1948 there was an alleged housing shortage. Thus, one would expect to find many for-sale advertisements in 1940, and practically none in 1948. Here are the facts: In August 1940 the New York Times carried 6,322 classified advertisements of houses, apartments, and apartment houses for sale; in August 1948 it carried 23,036. The Chicago Tribune went up from 11,303 to 32,045 in the same period. The Los Angeles Times showed an increase from 18,930 to 78,925. This same fantastic increase in houses, apartments, and apartment buildings for sale was found in the Pittsburgh Press, the Atlanta Journal, the Cleveland Press, the San Francisco Examiner, the Baltimore Sun, and almost any other newspaper that you may wish to consult.

Now how can there be a housing shortage when hundreds of thousands of desirable dwellings are literally being thrown on the market at prices below present building costs. Can it truthfully be claimed that there is a housing shortage when there are more houses than ever before; when the newspapers are doing a land-office business in selling houses but not in renting them?

The only shortage is one of dwellings for rent. The dwelling units that were formerly for rent are now offered for sale. This is not because owners want to sell but because they are forced to sell. When Government destroys 40 percent of rental income from property, it destroys 40 percent of the investment value of that property. This moral break-down of Government causes owners to dump their buildings and retire from that investment field. In other words, they are being liquidated—American style—and those who want to rent must buy or double up.

The Census Bureau furnishes still more evidence that rent control is the cause of our shortage of rental housing. In April 1940, it found that 7 percent of all urban housing units were vacant. In 1942 rent control began. In its 1945 study the Census Bureau found few vacancies in rental property. However, it did find a 30 percent increase in the number of dwelling units occupied by only one person. It also found a 22 percent increase in the number of units occupied by only two persons. During the same period the dwelling units occupied by five, six, and seven or more persons decreased rapidly.

In other words, tenants in all categories were spreading out and using more space than ever before. One person occupied space that was formerly occupied by two or three and so on throughout the frozen housing situation. Under rent control, if the husband or wife dies, the survivor stays on. If children marry or leave home, parents stay in possession of the unneeded and unused space. For them space is cheap, but newcomers, newlyweds, and returned veterans find no vacancies. Those vacancies which would normally appear in a free economy are no longer released. Thost who could get along with smaller space do not move because they cannot find it. The October first moving date for all manner of adjustments to needs and pocketbook is prohibited by law.

Why is this? Why are people forced to buy houses when they prefer to rent them?

Here's why. The purchasing power of the 1949 dollar has dropped to about one-half that of the 1940 dollar. This has resulted in higher prices for all goods and services except one—rent-controlled housing. Since most people know a bargain when they see it, the demand for rental space at about one-half its real value has increased enormously. It is still increasing.

That is why tenants are spreading out and demanding more space per person than ever before. That is why the number of apartments occupied by one or

two persons has increased so rapidly. That is why the number of rental houses occupied by five or six persons has decreased. That is why home owners would rather sell their homes than rent them. That is why there is a shortage of units for rent. That is why people must purchase houses they would rather rent. Thus it can be accurately stated that rent control is the sole reason why prospective tenants cannot find apartments and houses for rent. And the longer this restriction on freedom—rent control—is continued, the worse this shortage will become.

Now it is claimed that most tenants would not be able to pay the increased rents that would result if we returned to freedom. It is charged that there would be mass evictions and millions of homeless people. These are utterly false and irresponsible statements for this reason: Home owners cannot charge more than tenants can afford to pay. More than they might wish to pay—yes—but not more than they can pay. If the home owners tried it, their rental units would be vacant. Does anyone claim that home owners would deliberately keep rental property vacant in a free market? Did they do it before rent controls? The price for free-market rent will automatically be within the means of the tenants.

It is admitted that the abolition of special privileges in housing would inconvenience many persons who now occupy apartments that are underpriced by Government decree. Many of these tenants might find it necessary to seek smaller and lower-priced quarters. Many of the persons who now live alone might find it necessary to share their apartments—or give up apartments for rooms—in order to pay the increased rents. The trend under controlled rents toward single-person occupancy would stop. As a result, persons who could afford only $50 quarters would move there instead of staying in their present $75 quarters that they are appropriating for $50. The persons who could afford the more desirable—and higher-priced—locations would then move into them.

What would happen if we abolished the special political privileges granted to one group at the expense of another group by rent control? Let me cite a concrete example—a certain Chicago apartment hotel. When rent control came 11 of its 50 apartments were occupied by 1 person, and the balance by 2, 3, or 4 persons. The building housed 96 persons.

As time passed, changed circumstances caused tenants to move. Whenever a vacancy occurred, those who had been sharing apartments requested separate apartments. With higher income and frozen rents, they wanted more living space. This was O. K. with the manager. From his viewpoint, fewer tenants meant less wear and service. After 5 years of rent control, 35 of the 50 apartments were occupied by single persons. The other 15 were occupied by married couples. Not one apartment was occupied by two girls, two men, or even a mother and daughter. The building housed 65 persons on July 1, 1947.

Rent controls on apartment hotels were removed July 1, 1947. The manager raised rentals $12.50 a month for 2 months in a row—$25.00 in all. Within 3 months 14 tenants moved. Four moved back to their parents; four doubled up; and six moved into rooms in private homes. All are adequately housed with perhaps a little less luxury. New tenants moved in. Within 3 months the building housed 93 persons—43 percent more than under rent control. Can this result accurately be called bad for tenants as a whole?

So we see that rent control, like price control, which it is, produces scarcity. Remove rent control and the scarcity is cured almost immediately. This is how the free economy works.

Conversely, if Government control of housing continues, the present demand for rental units at a price below their true value will multiply. The shortage will increase because tenants can afford to buy more space at this bargain rate. In fact, many present homeowners will sell their homes and try to become tenants at the bargain prices arbitrarily set by Government. Building for rent will stop. Tenants in free-market-rental properties will soon insist that in all fairness Government should reduce their comparatively high rents. If it is fair for one group of tenants, why is it not fair for the other?

Rent control stops tenants from advancing to new jobs in other cities. If you doubt this, read the apartment-for-exchange columns in any metropolitan newspaper. Thousands of tenants wish to move to new locations. The reason is often a new and better job. It may also be a desire for larger quarters, a change in scenery, new neighbors, or any other good and valid reason. But unfortunately for the tenants, they are caught in the trap of rent controls. They cannot hope to duplicate their Government-set rents in a free market. So they advertise in a pitiful—and usually unsuccessful—effort to find someone else under Government control who also wishes to move. Then the Government-controlled tenants usually forget the new job, the larger quarters, and the better opportunities. They remain rooted in their Government-controlled dwelling to continue their bitter arguments with the home owners about needed painting, repairs, and services. Does anyone honestly believe that a continuation of this situation is in the best interests of the tenants? Does any Congressman dare use the word "American" to describe this degrading favoritism?

Probably the most unfortunate result of rent control is the discrimination against prospective tenants with children. Now there have always been apartments reserved for persons without children. This is because tenants themselves demand it. But before rent controls were imposed upon home owners and tenants, there were always plenty of desirable rentals available for families with children, any number of children. The home owners provided facilities for children and made them welcome. Under freedom, home owners with dwellings for rent had to do this in order to keep their building occupied. But all this changed under Government-imposed rents. Single persons and childless couples have an advantage in bargaining for the space usually reserved for families. Home owners feel that they can make up a part of their lost rent by reducing the number of occupants per unit. They feel obliged to try to balance their increased fuel, service, and repair bills by avoiding the increased fuel, service, depreciation, and repair bills that come with children. And as the Government tightens its control over the price of rent, this discrimination against children increases. Thus persons who own rental property—and 80 percent of all rents go to persons with incomes of less than $5,000 a year—use one of the few legal methods left to them whereby they can attempt to balance their depressed rental income against their inflated costs.

Now, Congress can condemn the home owners and the tenants by passing another law against them. This law could follow the recent French decree that forbids each person from occuping more than a Government-decreed amount of rental space. Or Congress might decree that hereafter no person may sell a dwelling unit above 60 percent of value. That might bring about more rental units by making the loss on sales about the same as the loss on rentals. Does any sane American advocate that kind of robbery; the moral collapse of government? The only permanent solution to this desperate situation is for Congress to reject these rent-control laws which utterly fail in their purpose because they are morally and legally wrong. Economically they are crazy. A return to freedom would mean that rental space, prices, number of occupants, location, and services would, in a matter of weeks, adjust themselves to the relative needs, desires, and abilities of all concerned. That is the American way.

This proposed rent-control measure has a time limit of 27 months. As was to be expected by any student of history, this time limit is longer than the limits set in the previous extensions. And it can be safely predicted that the next extension will have a still longer time limit, if any. The same thing happened in France, Austria, Germany, and all other countries that tried rent control. They kept temporary rent controls after World War I for exactly the same reasons that we have kept rent controls after World War II. They, too, extended those measures temporarily from time to time. They, too, once removed rent controls from new construction in order to induce persons to build new dwellings for rent. Finally the clamor of the tenants in those newer and higher-priced units caused the Governments to bring them also under Government control—temporarily, of course. Next the word "temporary" was dropped forever from the rent-control laws. Now those tenants are forced to remain permanently in their rapidly deteriorating government-controlled dwelling units. Those are the lucky tenants who have apartments. Their rent is only 2 percent of

their income. A month's rent will not buy the landlord a pair of shoes. He is frankly conceded to be among the underprivileged classes. The Government promises to do something about it, but nothing is done. Who will buy property that offers nothing but losses? It is a liability in France today where there is no equity or justice governing property ownership. Nobody benefits. The poor, as usual, suffer most of all. Would-be tenants cannot find a vacant house for rent at a legal price. There just are not any. In spite of the destruction that rent control has brought to housing in these European countries, the tenants and the Government officials still seem to believe in the myth that Government rent controls were and are in the best interest of the tenants.

We Americans are following this same path. So far, we have not deviated in any respect from the European pattern of Government-controlled housing after World War I. It is as though we had taken their blueprint for the destruction of housing and decided to follow it line by line. This present proposed extension of rent controls in America is in exact agreement with the European timetable. The proposal to bring certain uncontrolled housing back under rent control fits the pattern perfectly. The reasons are the same. The time and extent are identical. And the inevitable results cannot vary in any respect.

Who benefits from rent control? A few tenants continue to enjoy an unjust enrichment they have had for years. A few landlords of new uncontrolled housing enjoy abnormally high rentals. A few bureaucrats enjoy Government checks. In the end owners are robbed and liquidated. Many tenants are shut out of needed space. The public pays more taxes to build public housing to cure a Government-created shortage of rental housing.

Government control of housing is contrary to freedom, justice, morals, reason, progress, and the best interests of the American people including tenants. We must summarily reject this monstrous evil of rent control while it is still possible; before it grows into a vested interest that will forever defeat a return to freedom.

The British Medical Program

EXTENSION OF REMARKS
OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1949

Mr. MITCHELL. Mr. Speaker, frequently we are told in an irresponsible and biased way that the British medical program is a disastrous failure and an example of what would happen here if we adopted a national health program.

There are, of course, many fundamental differences between the program the British have adopted and the plan proposed for this country. But quite aside from that, the best evidence available here indicates the British plan is far from the failure that certain spokesmen for the American Medical Association represent it to be. Officers of the British Medical Association, which speaks for British doctors, have repeatedly protested the distorted stories which have been spread in this country about their experience.

Recently the New York Times printed a well-rounded report on the British medical program by the chief of its London bureau, Herbert L. Matthews. While he made no attempt to gloss over the troubles the British have encountered, Matthews reported that some of the difficulties arise because it—the British plan—is almost too successful. In order that my colleagues may have a chance to read this important and impartial report, under unanimous consent, I am having it reprinted in the CONGRESSIONAL RECORD:

REPORT ON BRITAIN'S CRADLE-TO-GRAVE PLAN—ITS FIRST SIX MONTHS FINDS FREE MEDICINE FOR ALL POPULAR, DESPITE CONTROVERSIES AND HIGH COSTS

(By Herbert L. Matthews)

The greatest experiment in social service ever attempted by a democratic government—Britain's cradle-to-grave National Health Service—has been in operation for 6 months. That is too short a time to pronounce it a success or a failure, but not too short to describe and assess its early life.

It is yowling with aches and pains, but all things considered, one must account it a lusty infant.

American critics or champions who look across the Atlantic for arguments to oppose or support President Truman's plan to introduce compulsory health insurance will find whatever they are seeking. The American Medical Association will be able to produce a mass of testimony from British doctors on how badly the scheme is working. Conversely, the Federal Security Administration should be able to compile a still more formidable body of testimony from patients, druggists, dentists, and many doctors to prove that a Nation of nearly 50,000,000 can take care of the health of every man, woman, and child from teething to senility.

This old country has frequently shown a genius for new ideas, and it was natural that a Socialist government should decide that a scheme which was designed to benefit 95 percent of the people ought to be good. However, no one expected a colossal and revolutionary plan of this sort to function smoothly and efficiently in only 6 months. Even a generation is a brief period in the life of a nation. At this early date, one merely has the right to report the way the scheme is working now, to list the opposing arguments, and to analyze the effects of the service to date on doctors, patients, and the general health of the country.

But, first, one must know what it is all about.

The actually ill could always be taken care of free in Britain, and there has been compulsory national health insurance for virtually all workers since 1911. However, wives and children had to pay doctors' bills, and only half of the insured workers used to qualify for dental services.

Now everybody gets everything, so to speak. Doctors and dentists, specialists and hospitals, maternity and child welfare, home nursing, spectacles, dentures, wigs, deaf aids, artificial legs and other necessary appliances as well as all drugs and medicines are yours for the asking. You can have a baby, break a leg, get a toothache and go insane, and it won't cost you a penny of direct outlay.

Yet despite the scope of this program medical treatment here remains outwardly unchanged. Doctors keep their same offices. Patients come in as before and wait their turn, or the doctor goes to their homes as he did when they were private patients. Hospitals and clinics are carrying on without the slightest difference so far as anyone can see. For his medicines, the patient still takes his prescription to the druggist of his choice.

Everyone under the health scheme is entitled to choose his doctor and change him at will. Doctors can accept or reject anybody. The scheme is completely voluntary, and the public and practitioners alike can stay out of it if they wish.

It is what might be called the mechanism of administration that has changed. Most Britons today belong to the national insurance plan and every such insured person pays 4 shillings 11 pence (slightly under $1) per week by buying proper stamps at any postoffice. Of that amount 8½ pence (less than 15 cents) goes to the National Health Service; the rest is for old-age and widows' pensions, and unemployment, sickness, and disablement benefits.

You can join the health scheme whether you are insured or not. If insured, you continue paying your "4 and 11" and nothing more. If you elect to register for the health service and are uninsured, you pay nothing. In either case, you have no other financial medical worries unless you want some extra fancy eyeglass frames or an expensive hearing aid. Employers make a small contribution to the health scheme, but five-sixths of the total cost comes from the national budget. Higher income taxes take up part of the slack.

It is, therefore, the Government that settles all bills on behalf of the patient. Doctors, dentists, druggists, and the like get quarterly checks from the Government, instead of being paid as they go along by their clients.

Such is the scheme that Britain's dynamic and sharp-tongued Minister of Health, Aneurin Bevan, pushed through Parliament and got working last July 5. He fought it out with doctors and dentists, meeting just such opposition as the AMA is now mustering in America, and, while it was universally agreed that he was high-handed, tactless, and ruthless, it was an unequal struggle, since the Government has a safe majority in Parliament and could push the health bill through.

Now "Nye" Bevan is feeling moderately well pleased with himself and his National Health Service. It is creaking and groaning, but it is under way and gathering steam. In fact, some of the difficulties arise because it is almost too successful.

Out of an estimated total of 21,000 general practitioners in England and Wales, more than 18,000 agreed voluntarily to join the scheme. There are about 10,000 dentists here, and 8,700 of them have joined up. Of the 14,000 chemists, as druggists are called here, virtually all are in the health service.

Most impressive of all are the figures for patients. The population of England and Wales is about 43,000,000. Well over 40,000,000 have registered with doctors, the remainder being mainly well-to-do and elderly who carry on with their old family physicians on a paying basis.

(These figures are limited to England and Wales because the original bill covered only those two political divisions. Similar bills have been passed separately for Scotland and Northern Ireland, and the situation is virtually the same there.)

As the figures suggest, the British public in general likes the new scheme. Demands of all kinds have been so great that Mr. Bevan had to make a public plea recently for everybody to go easy. The luxury, so to speak, of enjoying bad health without paying for it has been irresistible.

Some abuses have been reported. Patients are suspicious that they aren't getting the same treatment now, although they really are, and ask more of doctors than they did before. A Scottish ear doctor recently told of a man who, having already got two pairs of spectacles and a denture from the state, asked him for a hearing aid to complete his outfit, although he wasn't deaf. An optician wrote to a British medical journal that "I have discovered that in a southwest town a considerable number of brand-new spectacles have been located in pawnshops."

Dishonesty, however, is rare. What has happened in the case of spectacles, for instance, is that many thousands who would have gone without them or bought them—as Britons did to an amazing extent—in 5-and-10-cent stores, now get proper glasses after examination by an oculist.

Typical of the general reaction to the scheme is the attitude of young Mistress Doris Collier, whose husband, a clerk, pays his "4 and 11" weekly. She says she likes it much better now.

Not being insured, Mistress Collier used to have to go to a district nurse and to pay for prenatal care. Now she is getting better care for her coming child and getting it free along with a weekly grant for 13 weeks and a lump sum of £4 when the baby is born.

Evelyn, who will be 2 "next Sunday week," is Mistress Collier's other chief reason for rejoicing. When Evelyn had enteritis a year ago she nearly died before they took her to the clinic. Last week Evelyn was taken to the family doctor—at no cost to the family—because she had a cold and was sniveling.

The medical effectiveness of the National Health Service is more difficult to assay than its popularity. There have been no epidemics this winter, and except for one fog that lasted 5 days, no weather calamities to put undue strain on the profession. Everyone connected with the service itself insists that it is too soon to pass judgment on the country's health after only 6 months.

Nevertheless, certain specifics cannot help but be noticed. There can be no question that medical attention, medical appliances, and medicines are more widely distributed than ever before. Spectacles, already mentioned, are a case in point. Before the new act took effect Britons used four to five million pairs of spectacles annually. The present demand is estimated by representatives of the ophthalmic industry at a little under 8,000,000 pairs.

There is a similar story for medicines. Britain's chemists' shops are now dispensing nearly 100 percent more prescriptions than a year ago. In the old days doctors hesitated to prescribe expensive medicines like penicillin and sulfa drugs, knowing that the patients couldn't afford them, but now they not only can do so but are tempted to prescribe large doses in order to postpone the next visit from the patient. Because the doctor's pay is based on the number of patients rather than the number of calls, it is to his advantage to do preventive work, a practice which also benefits the patient.

Finally, since records must be kept of every visit and every patient, Britain in the next generation is going to have a national medical record unequaled in the history of the science.

From the doctor's viewpoint, the plan has both advantages and disadvantages. Doctors are given the choice of being paid entirely by so-called capitation fees amounting to about 17 shillings 6 pence (about $3.46) annually for each patient on their panels or they can accept a fixed annual payment of £300 (about $1,210) plus a capitation fee of 15 shillings 2 pence (about $3) for each patient. No doctor may handle more than 4,000 panel patients.

There are many possibilities for adding to basic earnings. Doctors can continue to take private patients and charge their usual fees. They get extras for maternity cases and for special work on medical boards and in clinics.

On the average, it is conceded that remuneration is fair, and it was, indeed, fixed by a committee composed half of doctors and half of laymen. However, it is natural that distinguished physicians and specialists and those with especially lucrative practices are losing out, and in general the scheme favors the younger doctors against the older ones with established practices.

Typical of these young doctors whose careers as medical men will be pursued under the National Health Service is J. Leslie MacCallum. Dr. MacCallum's office, or surgery, as the Britons call it, is in the Bloomsbury district of London. He has 2,100 patients and doesn't see how any doctor can give proper service to many more than that.

Dr. MacCallum's panel runs from the very poor to the professional middle classes, who live by the thousands in Bloomsbury. He feels he must treat them all as if they were private patients, and he encourages them to join the health scheme. They can telephone and make appointments to go to his surgery, or, if they are confined to bed, he visits them just as he did before July 5.

For anyone in his early thirties like MacCallum, who was just starting to build up a practice, there was really no choice but to join the health scheme. Anyway MacCallum, while critical, believes that it is a democratic scheme with possibilities of preventive health services on a vast scale for the nation.

"It is surprising how much illness that used to remain undisclosed and unchecked, particularly among women, has come to light in the last 6 months," he says. On the other hand, he worries because he can't give as much attention and service to each patient as he would like.

Like all doctors, MacCallum was dismayed at the smallness of the first quarterly installments from the Government last September which, because the quarter was a short one and because some items were temporarily withheld, turned out to be less than everyone expected. Most doctors are living on loans from their banks, but the kinks in the payment plan are being smoothed out.

If doctors have been busy since July, dentists are frantic with work. Unlike the doctors, there aren't enough dentists to go around and nobody can register with the dentists. There is a priority for children, maternity cases, and emergencies; otherwise you wait your turn.

It is a well-known fact that when a Briton has a toothache, he waits until he can stand it no longer and then goes to a dentist and has the tooth yanked out. When a number of teeth have been pulled he is in the satisfactory state—to him—of being able to get the rest extracted so that he can have a denture made.

The result, now that dentures are free, is to give the impression of an impatient population queuing up to get their teeth pulled and dentures made. The Socialist government seems to be realizing the prophecy of the Scottish divine who was asked how there could be gnashing of teeth for toothless sinners. "Teeth will be provided," he replied.

Because of the shortage of dentists and the demand for their services, dentists' earnings have rocketed into the big money. The ministry of health had it figured out that the average dentist working some 1,500 hours a year would earn £1,600. Instead, dentists are working on the whole about 3,000 hours and, with extra remuneration for special services, are making from £4,000 to £10,000 annually in many cases.

Mr. Bevan's ministry announced new regulations limiting those earnings only a week ago, a move which annoys the dentists who point out that the income tax extracts from 40 to 65 percent of their earnings. The danger, of course, is that they will simply take less patients and leave more toothaches. Another danger is that the public dental services for school children may be wrecked if dentists quit for private practice.

The strongest opposition to the National Health Service exists, as might be expected, among the doctors. The British Medical Association debated the issue heatedly for a few years. At first it advised doctors to stay out, but when Mr. Bevan, who had antagonized the doctors by his high-handedness, made some concessions, there was a close vote in favor of advising doctors to join. However, a die-hard group has set up a dissident wing to fight on.

Doctors and dentists who stay out of the health service simply carry on as before. Specialists and those with well-to-do clients and long-established practices can manage, although they earn less. They were surprised and disconcerted when more people joined the health scheme than they had expected, leaving fewer private patients. However, the doctors who stayed out were obviously those who could afford to do so.

One of the most repeated arguments of the opposition group concerns the high cost of the plan. It is a fact that the cost of the scheme far exceeds the official estimates, and is proving a great worry.

The original estimate in the Parliament bill for the first year was £152,000,000 (about $612,000,000). When the time came to make up the civil estimates for the 1948–49 figure, it was raised to £218,000,000. The actual cost will be fully £240,000,000, which is getting close to a billion dolars—a tidy budgetary sum for Sir Stafford Cripps to find.

A more fundamental controversy is being fought out on the quality of the service that can be rendered. Lord Horder, who was physician to the royal family and is one of Britain's most distinguished doctors, has been leading this battle.

"A variation on a current gibe," he recently wrote, "might be to say that we seem likely to get not only the best Government, but also the worst medicine that money can buy."

No medical man or woman, Lord Horder holds, should be responsible for the health of 4,000 patients. "That may be making medicine available for every citizen but is it medicine?" he asks.

One well-known surgeon, Scott Edward, bases his opposition on a different argument. "As a surgeon visiting a hospital today," he wrote recently, "I take responsibilities for human life and happiness, for hope or for despair, success or failure, life or death for 15 shillings (about 60 cents) each."

This sort of injustice, however, is being recognized, and payment for specialists is going to be reconsidered. It is one of the quirks that were inevitable in starting anything so colossally new as the National Health Service. Lots of doctors are grumbling, but in the nature of things it is the grumblers whom one hears and not those who are quietly and determinedly trying to make the scheme work.

It will be years before there are enough dentists, enough nurses and health visitors, enough hospitals and beds, and, above all, before the "health centers" that will form the real basis for service in the future are built. Success of the whole health act really depends on these centers, where doctors, specialists, nurses, and clerical staffs will all work together, sharing expensive equipment and laboratories, and handling their patients with maximum speed and efficiency.

Meanwhile, if the National Health Service is working smoothly in 10 years it will have been a great accomplishment. And there will be no turning back even if the conservatives win the next general election, partly because eggs that are scrambled can't be unscrambled and partly because everyone applauds the ideal behind the new service. Critics have no valid alternative to offer, which was why

the British Medical Association finally agreed to cooperate with the scheme.

If the Tories come back to power they will make changes in the Health Service, but they won't try to abolish it. A great social experiment is under way, and a nation is committed to make it work.

Keep Santa Solvent

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend, I am inserting an article by Frank Tripp, which appeared in the Olean (N. Y.) Times-Herald under date of January 25, 1949:

A young fellow said to me: "Yes, but you got started back when you could save something out of what you earned and get somewhere."

His remark embodies the essence of what most bothers youth, why many a thrifty lad is discouraged, why he spends what he gets like a drunken sailor, and seems to have no thought of the future.

He does think much of the future, but it looks so futile. The security he earnestly craves looks so impossible of attainment that he shoots the works, lives just today, and gets a reputation for being a spendthrift—which he doesn't want to be at all.

Then older people condemn him and cry, "What is youth coming to?" Youth didn't get that way of its own volition. We oldsters sat back complacently and let things drift to where they are.

What has happened has put youth in the dog house. The kid was right when he said: "Sure, I get what you call big pay, four times what you got when you started; but by the time I've paid off the Government, the butcher, baker, and candlestick-maker, I do well to break even. So what's the use?"

The butcher, baker, et al., some day will take less toll from the young fellow's earnings. The inescapable law of supply and demand will see to that. No manhandling by politicians, economists, and price controllers can prevent it. Prices will come down—and wages with them.

But what about his taxes? They must come down, too, for they now take 31 cents of his dollar. It is to Government retrenchment that youth should give attention; vigorous, tough attention. Government, National, State, and even local went the way of the abundant life, but painted no picture of the pit into which they have led the next generation.

We see it even in the struggle for our communities to collect enough taxes to operate under the extravagance forced upon cities and villages, a pace which they cannot afford.

The common man is learning that he emerges a commoner man than ever and is stuck for the cost of it all.

It has always got to be that way. No security program, unemployment insurance, or dole by any other name can defeat the certainty that everything the people enjoy they must pay for themselves.

It is only the product of the people's labor that can make the wheels go 'round. All who do not labor, or who shirk, only move the burden to their fellows' shoulders. The public till is filled by the people. When one of them takes more out, another must put more in.

The era of the common man, through shots in the arm, subsidies, and creation of destructive things for war, turns out to be, when thus bolstered, one of the highest employment and highest wages ever known. Yet, right in the midst of it, one common man pays to another more in public relief and unearned benefits than at any time in world history. The abundant life notwithstanding, the common man is getting nowhere fast.

What will it be when times are worse? It can be so staggering that even this richest country on earth cannot stay solvent under it. At our present gait, we can become a country of dependents upon a government which cannot tax a people who are broke.

By this route came the end of great empires. We are not smart enough to forever defy the laws of nature, of economics, and of God—as we now are doing—and remain a free and independent people.

So, young man, if you would regain for your children the opportunities which you say were mine, a place to start reform is with a government of Roman extravagance.

One can be so liberal that he goes broke. So can government. He who would perpetuate liberalism must keep Santa Claus solvent.

The Moral Core of Military Strength

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "The Moral Core of Military Strength," by Brig. Gen. C. T. Lanham, Director of the Staff, Personnel Policy Board, Office of the Secretary of Defense, at the small-business day banquet of the National Small Business Men's Association, in Washington, D. C., February 16, 1949:

The evils that attend us today are abundantly evident wherever we look. In this, the fourth year since the destruction of the Axis Powers, we have found neither peace nor tranquillity. On the rubble of broken cities and in the desolation of ravaged countrysides, weary and bewildered men scrabble for food and for hope, while the first fruits of their labor are still claimed by the mechanisms of death that dominate our shrunken planet. This is the true face of the obscene imposter that for four long years has worn the bright name of peace.

Here in our own broad land the picture is different, but the difference is only one of degree. For even here 1,600,000 men are diverted from the fruitful tasks of America and apprenticed to the barren profession of arms. Nor does the bitter paradox that we maintain this military might in the name of peace lessen our yearning for a sane and stable world free from the tramp of marching men, free from the shadow of the bomber's wing, free from the unseen death that moves beneath the oceans.

Nonetheless, we are confronted with this fact, and therefore we must learn to live with it. As a free people, our most compelling concern is to cauterize the vast potential for evil that is inherent in this as in any other great concentration of power. We have learned that lesson thoroughly, and there is little likelihood that we will forget it now. At the same time we must avoid the equally grave danger of building a barrier of distrust and suspicion between the civil community and the amazingly young men who now make up our armed forces. To allow such a situation to develop will more than counterbalance all the billions we are currently devoting to the dreadful paraphernalia of war, for an army derives its moral strength from the people it defends—from their confidence, their affection, their institutions, their beliefs.

There is no substitute for this. The Nation's will is our will; the Nation's faith is our faith; the Nation's virtues are our virtues. Even those countries that are the most barren politically and the most retarded morally recognize that fact and strive endlessly to create the illusion of civic virtue and moral rectitude. For they understand that neither a nation nor its army is any stronger than its beliefs. The centuries have underscored this truth with blood and ruin for those leaders, both civilian and military, who have ignored it. Over and over again, gigantic concentrations of physical power have gone down in defeat before a lesser strength propelled by conviction; over and over again the Goliaths have perished at the hands of the Davids.

Therefore, without deprecating our armed might and the evil circumstances that make it necessary, I contend that we must be increasingly vigilant lest we come to evaluate our strength and our security exclusively in terms of material power. Our true strength resides in the philosophy upon which our country stands and the degree of understanding and acceptance of that philosophy by our people. Here lies our fundamental security whether the threat be external or internal, by ideology or by force. And about this hard and enduring moral core must we build our military strength. To do otherwise is to build a colossus of straw.

Until the eve of World War II this basic consideration played no significant part in our military thinking. Until that time we had taken for granted the ancient virtues of our people—a deep knowledge of our freedoms, an almost instinctive awareness of dangers that threatened those freedoms, a broad fund of factual information from our amazing press and radio, and a public-school system that had always been the source of our civic strength and unity. In mid-1941, these complacent assumptions came down like a house of cards. For in that year we found that the young men in our expanding Army were divided and confused. We found that great numbers of them were literally ignorant of the catastrophic events in Europe and the dark portents in Asia. And since they saw no danger, they saw no compelling reason why the Congress had decided to retain them in the service. In common with many of their fellow citizens, they appeared to be unaware of the human values at stake in a collapsing civilization—values which they would soon be called upon to preserve at the ultimate price of their lives.

Somewhere, somehow, a perverted philosophy had found its way into our national blood stream; a philosophy that placed peace before freedom, comfort before sacrifice, self before the common good, and rights without obligations. It is not likely that any nation which embraces such principles will long endure; and it is certain that any military force so motivated will collapse at the first shock of battle, no matter how magnificently it may be equipped.

Pearl Harbor automatically restored all of us to our good senses and united us as we have never been united before. Nevertheless, the great gaps in the moral armor of our young fighting men had been made clear. Anger and indignation at Japanese treachery had served to unite us, but anger and indignation were not substitutes for an understanding of the freedoms we were committed

to preserve or the moral issues involved or the nature of the dark forces that were loose in the world. Therefore, the Army undertook to remedy these grave defects as best it could.

This was a strange and unfamiliar mission; and since it was strange and unfamiliar, mistakes were made and acceptance was slow and difficult. But the important thing lies in the fact that the Army had at long last come to recognize that its fighting strength depended completely and utterly upon the understanding and acceptance of an idea. That idea was the preservation of freedom and the fearful consequences of failure. We recalled belatedly that even in our own war for independence General Washington had engaged Tom Paine to do an identical job—to keep the idea of freedom burning like a beacon before his little Army. We recalled that the philosopher Spinoza had observed that "men fight better with ideas on the ends of their bayonets." We remembered that nearly every great captain in history had testified that the decisive factor in war lies in the moral field, in the will to win. Not all our billions can arm one man with this determination; nor can all our fabulous machines of war make good its absence. That ineluctable power is derived from the spiritual and moral roots of our country. It carries no price tag.

Thus were our traditional military patterns shaken. Today our concepts are beginning to crystallize. We realize now that we can no longer live in our former military isolation, walled up in forgotten garrisons and divided spiritually and intellectually from the civil community. We realize, too, that we are citizens first and soldiers second; that we cannot exist as a separate organism divorced from the context of citizenship and the social fabric of our country.

Similarly we have taken a long, hard look at our human relations within the Military Establishment. Here, too, a new philosophy is beginning to take on form and substance. At the moment we see it shaping up toward four broad objectives. These I should like to discuss briefly.

At the head of the list we set as our No. 1 goal the preservation of the dignity and the identity of the individual soldier. This is the very foundation of our system of government; it must also become the solid foundation upon which our military structure rests. For man can suffer no greater indignity than the loss of his identity. He can sustain no heavier spiritual blow than the thought that his life or death is of no consequence. Too often has the conviction that the individual is of no importance led the soldier to the collateral belief that his individual effort is of no importance either. If this thought be generated in enough men in an army, the end result in battle is obvious. Therefore, we are striving to build an officer corps that will recognize, honor, and preserve the dignity and the identity of the humblest soldier. At the same time we use every device available to us to convince the soldier himself that his well being, his aspirations, his service are all matters of prime importance to his country and to his Army. Thus do we seek to fulfill the desire in every human heart to count for something, to be needed.

Our second aim is to provide an answer to the soldier's inevitable and eternal question "Why?" We base this on the fact that the American soldier can be led but not driven; and to lead him he must have an adequate and an intelligent explanation of the things he is called upon to do. You will recognize, of course, that this does considerable damage to that ancient school of thought which contended "Theirs not to question why; theirs but to do or die." Enlightened leaders have always done their best to answer this ever-present question whether it was spoken or unspoken. Now, as it should be in the army of any free people, it is a fundamental requirement of command.

Strangely enough, this policy has been questioned not only by some of our military men but by some of our civilian critics, too. This, in common with the rest of the philosophy I have been describing to you, has been indicted as mollycoddling. It has been categorically charged by some that such procedures will destroy discipline without which an army cannot exist. It appears to us that the critics of those policies are mistaking the shadow for the substance. Quite apparently, they are advocates of that brittle counterfeit of discipline which is based upon fear. We seek as a matter of fundamental policy the tougher, more enduring discipline that is rooted in understanding. This, the true discipline, by its very definition renders an Army propaganda-proof and subversion-proof. As a matter of cold fact, nothing short of this has ever produced a first-class American fighting unit and nothing ever will.

Our third goal is to bring to our young men an understanding and an appreciation of the American ideal; to nourish that ideal; and to build an abiding belief in the future of our country and the democratic process. Here lies the very bed-rock of motivation; here lies the hard, enduring core of our military strength. Occasionally it is contended that this is not our business, that our business is to develop a body of trained fighting men for the Republic and nothing else. For our part, we contend that love of country must live in the heart of every fighting man and that anything we can do to strengthen it we should do. No group should have a monopoly on civic education; it is a job for all of the people all of the time.

Our fourth objective is to keep the men of our Army aware of the great national and international issues that confront us from day to day in order that each man may understand the vital interest those matters hold for him as a soldier and as a citizen. The military man, as well as the civilian, is entitled to a free flow of information. But for reasons I have cited earlier, we believe that these matters are of such vital import to the soldier that we cannot leave the question of his current knowledge entirely to chance or inclination. Therefore, in addition to providing him with broad access to the American press and radio, we make positive provision to bring him objective presentations of the more important matters transpiring in his country and in his world and, then, encourage organized discussion of those matters on duty time. There is no attempt to influence his thinking. On the contrary, every effort is made to encourage him to think for himself and to discuss his views with his fellow soldiers. The virtues of this process both from the military and from the civic points of view are too obvious to this distinguished audience to warrant elaboration.

These four goals I have listed are among the more important on the human side of the new Army we are trying to develop. There are many derivative objectives, but I believe these four are sufficient to make the point that the philosophy of the Army of 1949 is far removed from that of the Army of, say, 1939.

There are many activities and many programs that bear directly on the attainment of these good ends. I will make no effort to describe these, but I would like to list a few of the more important ones. We are particularly proud of our fledgling career-guidance program that picks up the young soldier at the beginning of his service, channels him into a service career compatible with his inclinations and aptitudes, and thereafter purposefully helps him climb as far and as fast as his ability and his ambition will carry him. This is one of the major devices for attacking the savage anonymity that has been the traditional curse of every military establishment.

We are equally proud of our character-guidance program and the philosophy that underlies it. No longer are we content to regard the religious and moral welfare of our men with indifference. Our efforts in this field are being richly rewarded. Our chapels are crowded. Post activities and post interests grow. The venereal rate steadily declines. The civil communities near our garrisons are helping us enormously in this work, and they, too, are profiting by it.

Our great educational program is almost too well known to comment on. More than 200,000 men of our Armed Forces are actively participating in some phase of it. More than 70,000 are attending organized classes on off-duty time. Incredible though it sounds, approximately 5,000 servicemen are winning their high-school diplomas or certificates of equivalency each month. This program is one of our most profitable enterprises: It provides us with an alert soldiery; it pays rich dividends in terms of prestige for the man in uniform; it is one of the primary inducements in attracting high-quality volunteers; and, finally, it represents a permanent social gain to the Republic.

Other constructive personnel activities are grouped in our troop information program whose major effort is devoted to civic education. By means of weekly discussion groups, Army radio stations, soldier papers, motion pictures, posters, and other graphic and printed materials, we bring our men the story of our country and of the world. We may truly boast that our Army is the best informed and the most objectively informed in the world.

In summary, then, these are some of the innovations you will find in your Army of today. You will not find perfection. You will not find that every officer is an Eisenhower or a Bradley or even a competent practitioner in the difficult art of leading his fellow soldiers. But you will find that the doors and windows of the Army are open and that a clean, invigorating wind is blowing away the cobwebs of a narrow and fruitless traditionalism. A good start has been made. It cannot continue without the interest, the understanding, and the help of our fellow citizens. It cannot succeed if young America comes to us imbued with a hatred for the Army and a contempt for the corps of officers. Nor can it succeed without first-class leaders who enjoy the confidence of their country and of their men.

It might be well to pursue this thought a bit further. It seems significant to me, for example, that three key groups in our country are under ceaseless attack—our representatives in Congress, our businessmen, our military leaders. These three groups are made the butt of endless ridicule; vicious stereotypes unendingly depict them as fools or scoundrels or advocates of the blackest reaction. The fact that completely honest and worthy citizens are occasionally involved in this practice does not disguise the treacherous inspiration nor hide the treacherous intent to undermine confidence in our political, industrial, and military leadership.

We of the Military Establishment are particularly handicapped by this attack, since we cannot strike back. Our defense, therefore, must be left in the hands of others. For our part we have nothing to apologize for. The professional officers of our Army are justly proud of their service to the American people. Our senior officers find it difficult to believe that their fellow citizens regard them as incompetents, as unscrupulous seekers of tarnished glory, or as heartless and inhuman martinets. We are unwilling to believe that after a hundred and seventy years the American people have suddenly come to regard success as shameful and mediocrity as an ideal. For 4 years the attempt has been made to drive these vicious wedges between

the corps of officers and their fellow soldiers and between the corps of officers and the civil community. That way lies disaster for any army any time, anywhere.

It would also be well to remember that a man of ability in a free society will not elect a profession that promises no reward for achievement. Our whole society is based on incentives. Competition and personal initiative have carried us to the pinnacle of the world. Dare we set these aside for the military profession and still expect to attract men of ability or hold those we have? I submit that this is a matter of profound concern now and in the future.

For a considerable period of time we have concentrated almost exclusively on the soldier. Perhaps it is time we gave a little sober thought to the men who may some day have to lead him in battle and upon whose ability and wisdom and judgment his life will depend. Therefore, while we strive to build a more perfect Army about the central core of our way of life, let us remember that such armies are not built by second-rate leaders with second-rate minds. Nor have our wars been won by such men. It is the devout hope of all of us that we may never again be engulfed in war, but if we should be, let us hope that the policies we adopt today will attract to our ranks the Eisenhowers and Bradleys of tomorrow.

Address of Gen. Omar N. Bradley

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. POTTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address by Gen. Omar N. Bradley, Chief of Staff, United States Army, at the Third National Industry Army Day conference, held in Boston, Mass., and which address was given at 8 p. m., Friday, February 4, 1949:

In the creation of a sound military force for the armed defense of the Nation there is no place for free competitive enterprise among the separate services in the business of fighting a war.

Security is a cooperative venture; it is not a competitive race. To forewarn aggressors and to construct effective military might, we are in need of partnership, not partisanship; concern for the safety of this Nation, not the survival of our arms.

Because we insist that every American armchair has a right to its own home grown general, the agreement of our armed forces on a strategic plan for defense is on trial today before a bar of public debate.

I certainly do not question the right of any American to speak his honest opinion on the fitnesss of our plans. His is the Nation to be defended and his are the taxes that pay the bills.

And I respect the constitutional right of Congress to make such provision as it may judge essential to the Nation's safety.

But as a soldier, entrusted by you with a share of responsibility for the Nation's defense, I feel it my duty to speak the truth as I see it, to state my convictions as plainly as I can that you may know my position and that of the Army today.

Let me make it clear at the outset, that what I have to say this evening is not in criticism of the Air Force. I work in daily close association with General Vandenberg, of the Air Force, and Admiral Denfeld, of the Navy. And I know they both believe as strongly as I do that the security of the Nation depends upon the teamwork of the services. It was General Vandenberg himself who said only 2 months ago: "The three services are in complete agreement that no one service can do the job alone."

Because too many Americans are searching for an easy and popular way to armed security through top-heavy trust in air power at the sacrifice of our remaining arms, we are in danger of reckoning our safety on fantasy rather than fact.

I do not deprecate the vast capabilities of air power as a priority weapon for attack against any aggressor state. Nor do I deny that the threat of instant retaliation through an air offensive is our greatest deterrent to war today.

But I must part company with those enthusiasts who ascribe to air power limitless capabilities in winning an instant decision. Air power, like every other weapon, has gaping limitations for war as we shall know it for many years to come.

However crippling air attack can be, I am convinced beyond any reasonable doubt that should this Nation be forced into still another conflict, we shall once more be forced to gain the inevitable victory over our dead bodies—those of our soldiers on the ground.

If I did not believe that war in the future will still thrust its eventual burden on the soldier who fights on ground, then I would readily recommend abolition of the Army and happily bequeath our missions to anyone who would have them.

To provide long-term security for the Nation, our military requirements must be related both to American foreign policy and to the known offensive capabilities of likely enemy states. They must be predicated upon preparedness for a plan of war—a strategy that can defend our shores, aid our allies, and preserve a foothold from which to strike the aggressor in his homeland.

Even in the combined employment of air, naval, and ground arms—war presents a problem of priority and sequence in mounting an offensive against the aggressor's forces and the sources of his strength. To survive, the United States must be prepared instantly to gear its counterattack to a war of increasing violence, a war of growing intensity, and a war of widening global dimensions.

At the instant of aggression, the United States must fling the full force of its strategic air offensive against the enemy's heartland. But however savage this attack might be, it is dangerous for us to count on a decisive knock-out in the first round. For the concentration of this initial air offensive must diminish as we dip deeper into the stock pile of our atomic bombs.

In the second stage of war, we must rapidly seize, hold, and push nearer the target those strategic bases from which we might bomb the enemy and from which he might bomb our cities. At the same time, while the enemy is flooding his neighboring states with troops and thundering against ground defenses, we must commit ourselves unreservedly to the preservation of a springboard for an eventual climactic ground attack.

If we were to accept the inevitability of enemy superiority on the ground, we should not only be forced to abandon our allies with frail hope of liberation, but we might also find ourselves trapped in a long and punishing war of attrition through air bombardment. While the odds in such a conflict would presumably lie with us, an air war of attrition could readily lead to disaster—to a duel, a duel in the best fabled tradition of the gingham dog and calico cat who ate each other up.

Unless the enemy suddenly were to collapse from the wounds of those first two blows, the United States must then be prepared in the third round of a war to strike at the enemy's forces, wrest from him his bases, and destroy the enemy's armies in large-scale ground assaults. Whether they be airborne or seaborne, these piercing attacks of mobile mechanized troops provide the only weapon that can find its way to the roots of enemy resistance and there crush it or subdue it.

Because the Army cannot subscribe to the thesis that air power is a self-sufficient power capable of single-handed victory in a global war, I am dismayed that those who dare question it should be tagged as oxcart soldiers in an atomic age.

And I am alarmed that the Army's insistence on a combined defensive force should be distorted in the minds of some Americans as stubborn opposition to the strengthening of air power.

The United States Army does not question the need for placing first emphasis on strategic air as the most formidable weapon of attack. We confirm the premise of most airmen that the fear of instant retaliation at the hands of our strategic air offensive is the most substantial deterrent to war today.

We freely affirm—in concert with the Joint Chiefs of Staff—our critical need for creating an instant war readiness in American air power.

And we readily agree that while the Nation in times of peace must curb exorbitant spending for defense, first things must come first—and the first is readiness in air strength.

But this does not mean we can abandon the others of our armed resources. For if we are to construct air power at the fatal expense of ground and naval arms, then we may foolishly be forced to desert our allies and forsake our capacity to wage a sustained war.

By reckless reliance upon a knockout blow in the opening months of a conflict, we might unwittingly risk defeat in war and the possible loss of our lives. Even a champion does not enter the ring until he has trained for the full bout.

If the Army and Navy were to be denied relative readiness in their striking forces to hold and seize advanced bases, we might easily waste our air strength in an overextended and therefore far less effective preliminary air war. This could do nothing but lengthen the conflict and multiply its eventual cost.

By our failure to preserve a foothold for subsequent ground assault, we might have to abandon the promise of help for our allies and discard our hopes for decisive invasion against the enemies' armies.

For no alliance can be effective anywhere in the world until the United States is ready to deploy its strength immediately in the critical theater of war. And no massive invasion can succeed without a near and friendly base from which we might launch it.

Unless the Army can maintain a minimum mobile striking force as well as an effective base for mobilization of its civilian soldiers, the Army cannot be readied in time to accomplish its mission in war.

In our mounting sequence of attack against an enemy aggressor, we cannot ring a bell for the third round and have the Army answer: "Wait a couple of years and then we'll come out swinging!"

"Then" will be too late because of too little now.

The roles of defense forces are publicly defined during Congressional hearings on their budgets. But because limited peacetime budgets cannot—and will not provide—for the wartime mission of the Army, that mission is too often forgotten and frequently ignored.

Because air power is essentially a first priority weapon, its first priority needs are provided in peacetime readiness budgets.

And because the Army is a lesser priority weapon in the sequence of attack, many of its peacetime needs are preparedness needs for wartime mobilization.

If we starve the Army in an effort to feed those first priority forces, then we shall have to anticipate that ground support will be perilously thin in the initial stages of war and the large-scale ground offensive will, of necessity, be long delayed.

Ultimately a war between nations is reduced to one man defending his land while another tries to invade it. Whatever the devastation in his cities and the disorder in his existence, man will not be conquered until you fight him for his life.

I repeat to you this evening what I said last week before a committee of Congress: The Army will live scrupulously within the means of a budget recommended to the Congress by its Commander in Chief.

It is clearly apparent that in the absence of any precipitant danger, the Nation must curb within reason that share of the national income it would devote to its common defenses. A nation cannot hope to purchase within the limits of its purse an assurance of guaranteed security against aggression. But it can spread the risk among its several services so that with reasonable safety we may forewarn aggressors and intelligently provide for an effective force in the event of war.

This I believe we have done—critically, soundly, and with the general approval of the services themselves.

The Department of National Defense is not irrevocably split—as critics would have you condemn it—among partisans of the several arms. We have made a start in compromising our individual requirements to construct—one with another—a security force that can best fulfill both our instant and eventual needs in the event of war. And we have learned that just as important as step-by-step sequence of fighting in modern war is the fundamental demand for complete unity in word and heart among the armed forces.

I pledge to you the willingness of the United States Army constantly to review its requirements that you need not be taxed for the maintenance of nonessentials. We do not exist to defend stubborn traditions, obsolete concepts, or yesterday's tactics. We exist to defend the Nation, tomorrow as well as today.

And in subscribing to the need for prudence in military spending, I say to you that I would much prefer to take some military risk rather than have to weather the dangers of an economic bust.

For only so long as we encourage the investment of our earnings in more production and better living for those who labor at our machines can we be assured that our massive industrial plant and the health of our people are equal to the challenge they face. And only so long can we sustain the faith of our allies, aid them in the task of defending their reconstructed cities with some resources of their own.

The danger of conflict today appears to have slackened, partly because we are chewing sedatives in this constant war of nerves. What the coming years may bring will certainly be shadowed in the strength, resolution, and common sense of the United States.

Michael Straus and Richard L. Boke

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. WELCH of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial published in the San Francisco News, a Scripps-Howard newspaper, under date of February 9, 1949:

WILL EIGHTY-FIRST CONGRESS RIGHT THIS WRONG?

United States Reclamation Commissioner Michael Straus and California Regional Director Richard L. Boke are still on their jobs despite the action of the Eightieth Congress in cutting them off the Interior Department pay roll. It looks as if the Eighty-first Congress will undo the wrong its predecessor committed and put these two public servants back on pay.

Cutting them off was a cowardly act for a body like the United States Congress to commit. It was in the form of a rider to the appropriation bill providing that no man could hold either of these positions who had not had five years of engineering experience. Neither Straus nor Boke was named in the rider. But, inasmuch as neither was an engineer, the intent was plain.

Like this newspaper, the Washington Post denounced the action at the time. In an editorial recently the Post commended President Truman's special message urging repeal of the rider and added the following pertinent comment:

"The proviso was carefully drawn to get around the constitutional prohibition on bills of attainder while accomplishing the same end. Since the jobs of Straus and Boke are primarily administrative, engineering training and experience are totally beside the point. In fact, one of Mr. Straus' predecessors, John Powell Davis, was fired back in 1923 on the precise ground that he was an engineer rather than an administrator. The President's request has been referred to the House committee on appropriations. We hope that it will move toward rectifying the last session's egregious misdemeanor with the speed that other committees are attaining in handling emergency legislation."

We join the Post in that hope.

Fairness to Veterans Improperly Removed From Government Service

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. KEATING. Mr. Speaker, under a bill passed last year, it is provided that a veteran in Federal service who is removed from his position but later reinstated to duty on the ground that the removal was unjustified, shall be entitled to be compensated for the period he was out of work. Certainly this is only simple justice.

The purposes of the Veterans' Preference Act of 1944, however, are not served unless this measure is made retroactive to the date that Act was passed, June 27, 1944. The reason is that any veteran who has received such treatment between this date and the date of passage of this law last year is not entitled to take advantage of its provisions.

For that reason, I am today introducing a bill to provide for this retroactive feature. It seems only just that one who has served his country in wartime in the armed services and who, while later employed in a civilian capacity, loses his job through the unjust or illegal action of a superior, should be entitled to pay for the time he has lost.

Veterans' Hospitals in Alabama

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. ELLIOTT. Mr. Speaker, the Honorable James E. Folsom, Governor of Alabama, and the Honorable C. C. Horton, director of the department of veterans' affairs of the State of Alabama, have called to my attention the reports of the most recent inspection of the Veterans' Administration hospitals in Alabama. These inspections were made by the Department of Veterans' Affairs of the State of Alabama, and the reports are objective and factual. As a citizen and as a member of the Veterans' Affairs Committee of this House, I am intensely interested in an adequate hospital program for the veterans of all our wars. Believing that these reports might, by way of comparison with similar reports from other States, be of interest to the Members of the House, I am including as a part of my remarks the letters of Governor Folsom, Director Horton, and the Veterans' Administration hospital inspection reports referred to:

STATE OF ALABAMA,
EXECUTIVE OFFICE,
Montgomery, February 10, 1949.

HON. CARL ELLIOTT,
House Office Building,
Washington, D. C.

DEAR CARL: Alabama's State department of veterans' affairs advises me that they have mailed you a copy of a recent inspection that they have made in this State covering Veterans' Administration Hospital, Tuscaloosa, Ala., Veterans' Administration Hospital, Tuskegee, Ala., and Veterans' Administration Hospital, Montgomery, Ala.

I believe that these reports will prove beneficial to you and your staff, in view of the fact that it gives a very good picture of the veterans hospitals in this State. It is pleasing to me to know that these facilities apparently seem to be in good condition and are rendering our veterans a good service. I would particularly like to call your attention to the report concerning the Veterans' Administration hospital in Tuskegee, Ala., page 3, in which it is recommended that a lighter variety of dishes be secured in order to keep the patients from injuring each other and the attendants. I believe that if this was called to the attention of the proper authorities, something could possibly be done about the matter.

With kindest personal regards and best wishes, I am

Sincerely yours,

JAMES E. FOLSOM.

STATE OF ALABAMA,
DEPARTMENT OF VETERANS' AFFAIRS,
Montgomery, Ala., February 10, 1949.

To the Members of the Alabama Congressional Delegation:

GENTLEMEN: This department makes a semiannual inspection of the veterans' hospitals in Alabama, and in the belief that the

most recent reports might be of interest to you, we are taking the liberty of forwarding them herewith.

We are grateful for your consistent support of veterans' welfare, and should an occasion arise where we can serve you, please give us that opportunity.

Yours very truly,

C. C. HORTON, *Director.*

STATE OF ALABAMA,
DEPARTMENT OF VETERANS' AFFAIRS,
Montgomery, Ala., January 26, 1949.

REPORT OF OFFICIAL HOSPITAL VISIT, VETERANS' ADMINISTRATION HOSPITAL, MONTGOMERY, ALA.

An official visit was made to the Veterans' Hospital, Montgomery, Ala., December 15, 1948. I was accompanied on this visit by Dr. H. D. Shapiro, senior medical consultant, the American Legion, Washington, D. C. I felt that every effort should be made to utilize the services of Dr. Shapiro, and for that reason our entire visit was devoted to looking into the medical side of the hospital.

Clinical records were inspected on the various wards to determine what effort was being made to properly diagnose a case and how quickly proper treatment could be instituted. Owing to the fact that there is a tremendous shortage of beds in this area, there is a rapid turn-over of patients at this hospital. We find that once a patient is admitted to the hospital, no time is lost in seeing that he receives the necessary physical examination with the necessary laboratory tests. This hospital also has an excellent staff of consultants in the various phases of medicine, and at least one of these consultants is in attendance at the hospital every day in the week. Any unusual case or any case in which there is any question as to proper diagnosis, and as to the proper method of treatment, is immediately called to the attention of these consultants when they visit the hospital.

It was found that accurate clinical records are kept on each patient. In most instances, diagnosis is quickly and accurately made and proper treatment instituted as early as possible with a view to getting the veteran on his feet and out of the hospital in order that room may be made for other patients.

The veterans' hospital, Montgomery, Ala., is now fairly well staffed with doctors, and in addition to the number of doctors, they seem to be outstanding in their profession. Dr. Shapiro was pleasantly surprised to find that we had here in Montgomery, a veterans' hospital which would measure up with any other similar veterans' hospital in the country.

Another amazing thing about this hospital is that somehow, they have been able to take care of the emergency cases and the service-connected cases in fairly good order. There have been times when there was not a vacant bed in the hospital, but in some way the hospital could manage to discharge some patient who had reached maximum hospital benefit in order to receive the next emergency case.

I feel that the hospital at Montgomery is doing a good job. The manager, the chief of professional service, and the entire staff are vitally interested in their work and in the welfare of the veterans entrusted to their care. I feel that every effort is being made to constantly and continuously improve the hospital and make a better hospital out of it. So long as this situation exists, it is felt that this hospital should receive the support of every veteran and veterans' organization within the State, and that every effort should be made to cooperate with them in order that we may eventually boast of the fact that we have here in Montgomery, the finest veterans' hospital in the United States.

Respectfully submitted.

GEORGE W. CAMERON,
Chief, Claims Service.

STATE OF ALABAMA,
DEPARTMENT OF VETERANS' AFFAIRS,
Montgomery, Ala., February 3, 1949.

REPORT OF OFFICIAL HOSPITAL VISIT, VETERANS' ADMINISTRATION HOSPITAL, TUSKEGEE, ALA.

On January 24, 1949, an official visit was made to the Veterans' Administration hospital, Tuskegee, Ala. I was received by Dr. T. T. Tildon, manager, who assigned the assistant executive officer as a guide for me, and gave instructions that I was to be taken any place which I thought necessary to accomplish the aims of my visit.

Dr. Tildon stated that the 100-bed addition which had been in the blueprint stage had been delayed and that he was afraid the whole addition was going to be dropped at this time. He stated that he was not giving up hope, however, because it seemed to be the present plan to scrap some of the new hospitals now in the blueprint stage because of various shortages and building costs, and he hoped the Veterans' Administration would make an effort to enlarge and improve the existing facilities.

In a conversation with Dr. G. C. Branche, chief of professional services, it was learned that a great deal of success is being obtained from the whole physical medicine rehabilitation program. Almost every patient was receiving therapy treatment of various degrees, the exception being those who could not participate because they were too ill. The hospital is even working in close cooperation with Tuskegee Institute on their educational therapy courses, and in some cases the veterans continue to receive training after their discharge from the hospital (Public Laws 16 and 346).

Upon visiting the manual arts therapy shop, I discovered an apparently well equipped division with facilities for teaching woodwork, auto mechanics, radio repair, photographic work, watch and jewelry repair, and academic subjects. There was, however, a surprising lack of patients present to take advantage of the training offered. Of course, this could have been due to the fact that they were held on their wards pending daily doctors' examinations. In that event it seems that some more desirable scheduling system could be instigated. The personnel in this division are most enthusiastic; they are all very proud of the work they are doing, and show their enthusiasm by constantly trying to improve on the existing facilities by improvising tools and other items needed in the teaching in their classes.

Upon visiting the physical therapy section, it was found that everything seemed to be well kept and clean. The portable whirlpool tanks and the Hubbard tanks were in the best condition. Here again it was found that there was a high degree of enthusiasm on the part of the employees. One device had been improvised so that by using pulleys, a patient was exercising a paralyzed arm by pulling a rope with his useful arm.

The wards appeared to be neat, although there was a natural amount of litter which had accumulated since they had been cleaned that morning. The nurses were cordial and there seemed to be no shortage of nurses. One was constantly reminded, however, that there was an acute shortage of attendants everywhere. The day rooms were clean and well aired with cross ventilation. It was learned that when USO shows come to the hospital, they are taken to the various wards where the patients are not able to go to the recreational building. It was also learned that there is no shortage of organizations interested in the welfare of the patients. The wives of the doctors and other employees are constantly about on the capacity of "Gray Ladies." Groups from the campus of the institute frequently come over to entertain the patients, and the citizens of nearby Tuskegee are also very cooperative in contributing to the entertainment.

I was informed that plans were under way to build an outdoor basketball court for some of the NP patients. The staff had been hoping that there might be a chance to get authorization for a gymnasium. They felt, however, that it was very unlikely that such an undertaking could be possible. There are golf classes for some of the patients, and it was felt that by the time the golf season arrived, there would be several patients who would be skillful enough for competition.

The patients seemed to be well satisfied with the food, and it appeared to be well prepared and balanced. There was, however, one point of the feeding of patients which struck this writer as being not only impractical, but dangerous. The china from which the patients are fed is a very heavy, course type which affords a disturbed patient a very lethal type of weapon. This was especially true of the cups from which they were served coffee. These cups stand about 6 inches in height and weigh in the neighborhood of 12 ounces. It was learned that on several occasions a disturbed patient had hurled one of these cups at a member of the personnel. One case was related to me where a nurse was struck on the breast with a cup, and another of an attendant being injured by a flying cup hitting him on the back of the head. It was stated that at irregular intervals, patients had injured each other by throwing these heavy cups. The substitution of these cups should be accomplished at as early a date as possible for a lighter variety.

Upon visiting the registrar's office, it was learned that the registrar was at a meeting. However, the assistant registrar informed me that there were 1,732 NP patients and 431 general medical patients now in the hospital, or a total of 2,163 patients. I was informed that there were no service-connected cases on the waiting list, and the non-service-connected cases had been reduced to about 89. When I remarked about the amazing reduction of patients on the waiting list from 800 in the early part of 1948 to the above numbers, it was stated that this number had been reduced by placing patients in other hospitals; also by letters written to the veterans requesting information as to whether or not they still desired hospitalization. By this method, it was stated, they were able to eliminate patients who were able to receive treatment elsewhere, or who no longer required hospitalization, and transfer the more acutely ill patients.

The canteen was in a large, clean looking quonset hut, one of a group of three. It appeared to be well stocked, and I was advised that plans were under way to have a beauty shop installed when that group of buildings had been completely furnished, also a cafeteria and cleaning establishment.

In conclusion, I feel that the hospital at Tuskegee is doing a fine job. The entire staff, from the manager and chief of professional services down, seem eager to perform their jobs at a high degree of efficiency and show their eagerness to be of service to the veterans by their interest in every patient. One can see that every effort is being made to constantly improve the hospital and treatment in all departments. I feel that so long as this situation exists, they should have the support of all veterans in the State.

Respectfully submitted.

PAUL B. EASTMAN,
Claims Reviewer.

STATE OF ALABAMA,
DEPARTMENT OF VETERANS' AFFAIRS,
Montgomery, Ala., January 26, 1949.

REPORT OF OFFICIAL HOSPITAL VISIT, VETERANS' ADMINISTRATION HOSPITAL, TUSCALOOSA, ALA.

On December 13, 1948, an official visit was made to the veterans' hospital, Tuscaloosa, Ala. I was fortunate in having with me, Dr. H. D. Shapiro, senior medical consultant, the American Legion, Washington, D. C. In order that I might fully utilize the services of Dr. Shapiro during our visit, it was felt that statistical information and an inspection of the physical features of the hospital should be dispersed with and that an intensive study should be made as to the kind of medicine being practiced in the hospital. Dr. Shapiro is a certified neurologist and psychiatrist and is a professor in neurology at George Washington University Washington, D. C.

Much of our time was spent in discussing treatment of neuropsychiatric patients with the staff of the hospital. We had an opportunity to talk to the entire staff, and it was interesting to note that the doctors at the hospital asked Dr. Shapiro numerous questions concerning medical treatment and procedure which would be helpful to them in treating patients. Many clinical records covering treatment of patients at the hospital were scrutinized by Dr. Shapiro and me, and a thorough study was made of the medical side of the hospital.

I am glad to report that Dr. Shapiro stated that the doctors assigned to the veterans' hospital at Tuscaloosa were above the average; that the treatment being carried on at that hospital was in keeping with modern medical science. It was found that the records were somewhat slovenly kept and that hospital summaries submitted to the regional office for rating purposes were not all that was to be desired, but in discussing this situation with the staff, it was found that the poor hospital summaries which were sent to the regional office resulted from the fact that no one had ever taken the time to properly instruct them as to the type of reports necessary in determining degree of disability in rating a case.

For a period of about 3 months, additional doctors were borrowed from other veterans' hospitals, and during this period it was easier to get a patient into the hospital. These doctors, however, were only sent to Tuscaloosa on a temporary tour of duty. Their temporary tour of duty has now been finished and it is again exceedingly difficult to get a patient admitted to the hospital. Only service-connected cases and emergency cases may expect admittance.

During our discussion of the situation with the officials at Tuscaloosa, the manager of the hospital made the statement that more than 50 percent of the admissions to the hospital were psychoneurotics; that is, patients who were not insane and had nothing mentally wrong with them except perhaps an anxiety neurosis. When questioned as to why this situation existed, it was stated that it had been represented to the hospital that these patients were frankly psychotic, but upon arrival at the hospital, it was found that this was used as a subterfuge to get them into the hospital, and in most cases, the only thing wrong with them was psychoneurosis with chronic alcoholism.

We asked the manager for a report, giving us a summary of the source of admissions to the hospital, or that is, who initiated the action which resulted in the veteran being hospitalized. This summary showed that the largest percentage of patients were admitted by friends or members of the family calling direct to the hospital. The next highest number on a percentage basis were those cases where the family physician called in seeking hospitalization for the patient. I am glad to report that the records showed that our veterans' service officers were guilty of this in only a few cases.

It is felt that a splendid service could be rendered to the hospital at Tuscaloosa, Ala., and to the veterans in the State of Alabama, if an educational campaign could be conducted as to the type of hospital at Tuscaloosa and the further fact that in most cases, hospitalization of psychoneurotics does no good whatsoever.

We found the manager and the entire staff at the hospital alert and sympathetic toward the patients. At intervals during the period being reported on, world-famous neurologists and psychiatrists have come to Tuscaloosa and lectured to the staff for as much as a week at a time, teaching them the new trends in treatment of psychiatric patients. In addition to this, the staff is lectured to twice each week by instructors of the medical center of the University of Alabama.

It is believed that conditions at the veterans' hospital, Tuscaloosa, Ala., have materially improved in the past 6 months, and with the present program being carried out, further improvement may be expected.

Respectfully submitted.

GEORGE W. CAMERON,
Chief, Claims Service.

Labor Legislation

EXTENSION OF REMARKS
OF

HON. ANDREW JACOBS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1949

Mr. JACOBS. Mr. Speaker, for the purpose of stimulating discussion in Congress, under unanimous consent, I extend in the RECORD the 18 questions on the Taft-Hartley law that the General Electric Co. is disseminating all over the United States; together with my answers thereto and my questions to Mr. Charles E. Wilson, as president of General Electric.

This material, not as mine, but as the other side of Taft-Hartley, is also entitled to public consideration. General Electric has the wealth to, and has covered the Nation with these rather ornate poll sheets. The public press has a duty to report to the public suggestions and arguments in this Congress. The press is, of course, and of necessity must be, its own taskmaster. But should it not devote, say, 1 percent of the space to these opposing views that is currently consumed in upholding Taft-Hartley proponents?

If it would do so, it would go far toward earning its claim to selfless public service.

There is no more important domestic issue before this Congress and the country we represent. There is no more confused subject than this complicated law. The press has a singular opportunity to help clarify this issue in the public mind. I hope it will seize the opportunity and respond accordingly.

FEBRUARY 9, 1949.

Mr. CHARLES E. WILSON,
President, General Electric Co.,
New York, N. Y.

Subject: Labor legislation.

DEAR MR. WILSON: I received your questionnaire entitled "How Would You Revise Our Labor Laws?" containing 18 questions, in ballot form, requesting a straight "yes" or "no" answer.

My response must be by more extended statements than categorical "yes" or "no" answers. The questions will be repeated verbatim and marked with the answer obviously expected. They disclose the inadequacy of a "yes" or "no" answer.

Interrelated questions will be grouped. I shall ask you to comment upon my views. I trust you will respond, and I assure you respectful consideration of your opinions. We can use all the help and wisdom available to enact a fair labor law.

I. THE EMERGENCY STRIKE

(Your questions Nos. 1 and 2)

"1. Do you believe that labor laws should, in general, preserve the employee's right to strike?

"Yes_____ ☒ No_____ ☐

"2. Do you believe labor laws should give the President of the United States the right to seek, through courts of law, to delay a strike that would cause a national emergency endangering the health and safety of the entire country?

"Yes_____ ☒ No_____ ☐"

A labor questionnaire put question No. 1 to me as a candidate, but not No. 2. My response was as follows:

"The right to strike is necessary in a free economy, which I would defend for reasons presently stated herein. However, one limitation is necessary to avoid destruction of free economy and that is the closing down of an entire vital industry, whether by strike or lock-out.

"Industry-wide strikes will bring irresistible public demand for Government control over such industry, which in turn results in wage and, ultimately, price fixing; hence, a controlled economy.

"A controlled economy inevitably results in socialism, communism, fascism, or some form of state monopoly, under which the Government exercises all the power inherent in mass wealth. Again the inevitable final result of such concentrated power would be forfeiture of personal liberty to entrenched officials.

"Curtailment of labor's right to strike is proper only to the extent of preventing industry-wide cessation of production which would create the pressure indicated above, and curtailment of any combination of industry, or any governmental action having like effect, should be likewise treated."

This response illustrates how a categorical answer would not clearly disclose one's honest opinion to the single question. And I believe, Mr. Wilson, that your position in industry, and mine in Government, demands our being rather specific upon this dangerous problem.

In order to help me, would you please give me the benefit of your views upon the following questions:

1. An emergency strike (or lock-out) is unsettled after the period of legal delay expires. How would you deal with the problem then?

2. Specifically, would you favor compulsory settlement?

3. If wages were fixed, would not prices also be ultimately fixed?

4. What, if any, other approach is there to this problem?

5. The Taft-Hartley law provided a union membership vote on the employers', but not a stockholders' vote, on the union's last offer. Do you think this omission discloses any basic lack of objective and unbiased thinking in the construction of the law?

II. TWO EXAMPLES OF BIAS IN LEGISLATION ON LABOR DISPUTES

(Your questions No. 18 and 12)

"18. Should labor laws provide that a striker who has been replaced in the course

of an economic strike—not involving any unfair labor practice—be permitted to vote in an election to choose a bargaining agent at the conclusion of the strike?

"Yes_____ ☐ No_____ ☒"

While this is your last question, it goes to the heart of the Taft-Hartley law. Therefore, I discuss it early in this letter.

You refer to section 9 (c) (1) (A), and 9 (c) (3), permitting an election for decertification of a union during, not merely "at the conclusion of the strike," as your question implies. The Taft-Hartley law provides:

"Employees on strike who are not entitled to reinstatement shall not be eligible to vote" (sec. 9 (c) (3)).

This makes quite a difference. This is but the first step in requiring the Government to use its full power as a strike-breaking force without regard to the merits of the dispute. Here is how it works:

1. Union A strikes for higher wages.

2. Company A employs replacements, or strike-breakers; term depending upon one's bias.

On this subject Business Week, December 18, 1948, had this to say:

"Given a few million unemployed in America, given an Administration in Washington which was not pro-union—and the Taft-Hartley Act conceivably could wreck the labor movement.

"These are the provisions that could do it: (1) Picketing can be restrained by injunction; (2) employers can petition for a collective bargaining election; (3) strikers can be held ineligible to vote—while the strike replacements cast the only ballot; and (4) if the outcome of this is a 'no union' vote, the Government must certify and enforce it. (And this is the point where the mandatory injunction against all union efforts is prescribed.)

"Any time there is a surplus labor pool from which an employer can hire at least token strike replacements, these four provisions, linked together, presumably can destroy a union."

(Parenthetical comment added)

(Passing strange indeed that Business Week and others, Fortune and Life included, should, after the election, tell the people what I had claimed throughout the campaign.)

3. Replacements can petition for election to obtain decertification of union A and probably succeed, since they by working are already in disagreement with union A.

4. Strike by union A becomes an unfair labor practice by virtue of Taft-Hartley law, section 8 (b) (4) (B) and (C), which provides:

"(b) It shall be an unfair labor practice for a labor organization or its agents * * *

"(4) to engage in, or to induce or encourage the employees of any employer (including their own erstwhile employer) to engage in, a strike or a concerted refusal in the course of their employment to use, manufacture, process, transport, or otherwise handle or work on any goods, articles, material, or commodities or to perform any services, where an object thereof is * * *

"(B) forcing or requiring any other employer to recognize or bargain with a labor organization (the decertified union) as the representative of his employees unless such labor organization has been certified as the representative of such employees under the provisions of section 9;

"(C) forcing or requiring any employer to recognize or bargain with a particular labor organization as the representative of his employees if another labor organization has been certified (by decertification election, at the petition of a new union formed by strike-breakers, or replacements, during a strike) as the representative of such employees under the provisions of section 9."

(Parenthetical comment added)

The precise effect of the Taft-Hartley law up to this point is to permit the struck employer (company A) to manipulate the decertification of the union of his old employees (union A). Thus a condition is created whereby the old union and its members commit an unfair labor practice if they even try peaceably to induce the strikebreakers to join them to hold up the wage scale.

The right to picket, take note of nonunion workers in order "to seek their acquaintance * * * visit them at their homes * * * and at all other suitable places, discuss with them the mutual benefits of the union and the importance of their quitting work" was a nonenjoinable right recognized by the courts 44 years ago. (*Karges Furniture Co.* v. *Amalgamated Wood Workers, Local 131* ((1905) 165 Ind. 421).)

Thus the old employees are forbidden to exercise this early right, now outlawed by Taft-Hartley, but which was recognized even in the days when the yellow-dog contract was upheld as sacred.

But this is only a relatively minor and preliminary application of the Taft-Hartley law. It provides that (1) the exercise of this early right is an unfair labor practice after such decertification; and (2) that a complaint on such case "shall be made forthwith and given priority over all other cases" and "the regional attorney * * * shall, on behalf of the Board, petition * * * for appropriate injunctive relief," immediately. Thus, without regard to merit, if the employer can procure pliant replacements, he can force the Government to enjoin even peaceful persuasion, picketing, boycotting, etc.

Now, there is the whole story involved in the subject posed by your question No. 18. In short, by simply employing unemployed people the employer can enlist the whole power of the Federal Government as a strike-breaking force. Perhaps, Mr. Wilson, you would never consent to do such a thing. But could you meet the competition of a concern who did employ this "gimmick" on a trend of rising unemployment? With the national debt we have today we must expand, not palsy our economy. You, as an enlightened businessman, know that purchasing power for your product comes from the earnings of the people at large, and the lack of that purchasing power will stagnate business. I fear now the effect on purchasing power the unreasonably high prices of the last 3 years may have.

I have three questions to ask you regarding this point:

1. Do you agree with my analysis?

2. If you do not, give me your analysis of all the provisions discussed.

3. Do you think the Taft-Hartley law is fair in this regard?

(Your question No. 12)

"12. Do you believe labor laws should make it unlawful for a union to compel an employer to engage in featherbedding; that is, to pay money for work which hasn't been done or won't be done?

"Yes_____ ☒ No_____ ☐"

Had you asked if I opposed featherbedding I would say "Yes." But I oppose a law forbidding such.

I oppose whisky, but I don't favor prohibition. We tried it.

But if I did favor outlawing featherbedding by labor, I'd have to favor similar restrictions on business.

Featherbedding means, as you indicate, the acquisition of pay for doing nothing. The laborer asks extra help or stand-by men, usually to spread the work and hence the pay.

Let me give you an example of featherbedding in industry and business: I am a stockholder (somewhat substantial for me, although really a comparatively small one) in one of your competitor corporations. It has never paid a dividend. I wrote, as a stockholder (without disclosing my office) and asked to purchase a television set at factory price. I was advised that the retailer was entitled to his profit, hence, I must pay the full retail price. There is quite a difference, too.

I use considerable dictating equipment, purchased from the manufacturer, a representative of which admitted a mark-up of at least 600 percent. There must be some featherbedding in this over and above a fair profit, especially in such a well-established business.

Last year I bought a radio-phonograph. This year, with labor costs no less, I saw it advertised for less than 50 percent of what I paid.

1. Are these things not in the nature of getting pay for nothing?

2. What is your opinion as to whether or not, if featherbedding is to be outlawed, you would favor price fixing, at least, in cases of unconscionable profits by a well-established business?

3. Do you believe the problem is simple enough to regulate fairly in a free economy?

III. Secondary Boycotts and Jurisdictional Strikes

(Your questions No. 3 and 4)

"3. When two or more unions are fighting each other over who shall do a job or who shall represent the employees, and a strike is called to compel an employer to give to the members of one union the work or recognition being given to the other union—that is a jurisdictional strike. Should labor laws prohibit such strikes?

"Yes_____ ☒ No_____ ☐"

"4. Should labor laws prohibit secondary boycotts—that is, prevent an employer and his employees, where there is no labor dispute, from being damaged by a union seeking to coerce another employer having a labor dispute?

"Yes_____ ☒ No_____ ☐"

Jurisdictional strikes, where the employer is taking no sides in the primary dispute, should be prohibited. Jurisdictional disputes should be made subject to an appropriate election (in cases of plant or department representation; that is, where permanent employees are selecting a union to represent them).

In case of different work of an intermittent nature for the same employer, as in craft trades, and particularly in construction, a far more serious and complicated question is presented.

Here, decisions, to be effective, must be reached with dispatch; else the question becomes moot, the work having been stopped or finished.

Nor does this type of dispute lend itself to a fair settlement by election among interested workers. Usually the employer is dealing with several crafts who belong to unions laying general claims to the disputed work. If craft A outnumbers craft B the election results would be a foregone conclusion and without much regard to the competence or skill of the parties in dispute.

The problem of skill might, standing alone, warrant the conclusion that the employer be the sole arbiter, but the opportunity to use this power to favor or destroy one union is a factor we cannot disregard if you ask us to legislate upon the subject. Stated otherwise, can you honestly ask us to say to the carpenters and the machinists, "Your historical jurisdictional dispute is handed to the employers for their decision."

Do you not see the tremendous bargaining power the employer would be thus handed

by the law? Each group would be tempted to underbid the other in its bid for the employer's decision.

Nor does this mean that I do not appreciate the plight of the employer who desires to complete his work without being caught in the cross-fire between two competing unions.

But over-all, this points up the pressure of conflicting interests in any legislation. Every man who comes before our labor subcommittee proclaims his undying faith in "free enterprise." I, for one, believe they all mean it, but most of them have blind spots when they view the prospects of free enterprise for the other fellow.

For example, let us take two measures—first, the Fair Labor Standards Act on which we are now holding hearings. Almost every witness agrees that a minimum wage is desirable in our economy. But it should not apply to the special circumstances of his own case. When we are impressed with those special circumstances (as we often are) and try to phrase the act to avoid his special case, we complicate the law almost beyond understanding. The employer complains that the regulations go too far. They protest in the name of the eighteenth century interpretation of the commerce clause. They say regulation is bad for the country. But the workers think these regulations are necessary.

Now, let's see the reaction of the parties to Taft-Hartley regulations. The positions change. Business has forgotten all about the commerce clause. Labor thinks the Government is going too far with regulations.

Naturally; but perhaps both are partly right and both partly wrong. We in Congress are supposed to be right.

I read this essential difference between the Taft-Hartley provisions and the administration proposals.

Under Taft-Hartley Act, the jurisdictional disputants were forbidden to strike, regardless of whether or not the Board had, or even could possibly, hear and make a decision in time to be applicable to the job in question.

Under the administration proposal, the jurisdictional strike is forbidden if the Board (or legal arbitrators) have decided the jurisdictional dispute. Until there has been a decision or award, the parties are not restrained by legal inhibition. This is not a complete remedy. However, some situations defy remedy. Is this such a situation? Let's test it by an example.

Take the case where crafts A and B contend for assignment of 10 days' work on building construction. Neither A nor B will yield. A hearing and determination within 10 (perhaps 30 or 60) days is impossible. Employer C awards the work to B. A either acquiesces or strikes, if the law permits. He has his day in court; true, a rugged court—the court of economic endurance.

But suppose the law forbids. A awaits the decision. Suppose A wins. Who should pay? Suppose further, both B and C were in good faith. Would they stand to be penalized? Or would it be fair to penalize either of them?

Remembering that the very purpose of the remedy is to avoid work stoppage, will you tell me how to fairly meet this problem?

True, we could avoid the entire stoppage, and the dispute, too, by simply making the employer the sole judge. In fact, all labor disputes could be thus stopped. But I don't believe either you or I want that sort of settlement. At least, it indicates the question is not as easy as the question itself suggests.

Do you agree?

A secondary boycott, where the second employer is not participating in the primary dispute, should be prohibited as an unfair labor practice.

1. What do you think should be the case where the employer is participating in the dispute?

As an example to illustrate: Employer A is struck. Employer B manufactures the same goods or furnishes the same service. Employer B takes over A's struck work. Taft-Hartley forbids B's employees from refusing to perform the struck work. But no law forbids B and A from agreeing that B undertake to do the struck work and thus starve out A's employees. The law permits this combination of the two employers, but forbids a counter combination of the two groups of employees.

1. Do you deem this fair?

IV. Free Speech

(Your question No. 7)

"7. Should labor laws give to both employees and employers the freedom to express their own points of view on employee relations problems—provided such views, or arguments, or opinions do not promise bribes or threaten reprisals?

"Yes_____ ☒ No_____ ☐"

No law, including the Wagner Act, ever denied the employer free speech.

What the employer, the press, and many misinformed people have called denial of free speech was simply the application of the law of evidence. Example: The employer expressed his utter dislike for unions. Then he fired the union leaders. If for union activities, it was and is an unfair labor practice. At a hearing on this question; i. e., "Was the discharge because of union activity?" the employer used to hear his own words given in evidence as tending to prove his motive. The same rule of evidence applies in every field of jurisprudence, and did in the labor law until the Taft-Hartley Act provided (sec. 8 (c)) that, unless the statement contained a "threat of reprisal or force or promise of benefit," it should "not be evidence of" an unfair labor practice.

A man's expressed dislike of another has always been deemed competent and probative evidence of his motive when his conduct or treatment of the other person becomes the subject of judicial inquiry.

An excellent example of the application of this section is disclosed by the following quotation from the case of intermediate report in the matter of Greensboro Coca-Cola Bottling Co. and International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America, A. F. of L., Local 391, Case No. 34-CA-25:

"CONCLUSIONS AS TO THE DISCHARGE OF HODGE

"Inasmuch as Hodge was discharged by Parker after obtaining approval from Carter, and immediately upon the conclusion of Carter's talk to the employees, it would normally be presumed that Carter's speech might throw some light on Hodge's discharge and help to clarify Parker's charge that Hodge was 'dissatisfied,' a term which, without clarification, is vague and ambiguous. If, for example, and as the general counsel contends, this 'dissatisfaction' amounted to nothing more nor less than his activity in organizing the employees, it should be helpful in determining the respondent's motivation—the thing at issue—to know whether Carter expressed a dislike of unions or of union activity.

"Reasonable as this course might seem, and firmly rooted in legal precedent as it is, the undersigned is prohibited from following it by the language of section 8 (c) of the act. Not that he may not examine the speech and construe it. In fact, he has done so. He has been impelled to do so because if it had appeared that its declarations were favorable to union organization, that the respondent, for example, preferred to deal with a collective-bargaining agent rather than with all its employees individually, that would be persuasive evidence that Hodge's discharge was not connected with his union activity and that the term 'dissatisfied' had reference to something else. And there would be no difficulty in using the evidence for such a finding. For section 8 (c) forbids only the use of views, arguments, or opinions, not associated with threats of reprisal, or force, or promise, or benefit, as evidence of an unfair labor practice. In other words, the undersigned may use Carter's words for the respondent but not against the respondent, odd as such a result may appear to the lay mind.

"Actually, Carter's speech strongly opposed unions and the undersigned may not, therefore, use it in making a finding that Hodge was discharged immediately afterward, and without perceptible change of pace, in violation of the act. The finding hereinafter made, that Hodge was discharged because of his union activity, is based on other evidence entirely."

Do you believe a different rule should apply in labor relations?

V. Closed Shop and Union Conduct Toward Employer

(Your questions Nos. 13, 16, 15, 5, 9, 10, 11, 14)

These questions are all related to the problem of the closed shop and the union's conduct toward the employer. Hence, they are all treated under this heading, and in the order set forth above, because they seem to me better related in that order.

(Your question No. 13)

"13. Should labor laws permit the forcing of an employer to hire only workers who belong to a given union?

"Yes_____ ☐ No_____ ☒"

Of course, you know the law never required the employer to grant a closed shop. The question of the closed shop was a matter of bargaining. Taft-Hartley forbid the bargaining, or the bargain, either. The question of the closed shop has been obscured in platitudes and epitaphs. The closed shop simply provides that the employer employ union men. You apparently oppose this. O. K.; but you want the Government to join you in opposition.

But let's examine the real issue. Is it not something of a question of free enterprise? Are you asking the Government to write for you the favorable provisions of your labor contracts?

Are not the employers, like they accuse the unions, trying to enlist governmental aid in winning at the bargaining table?

I cannot extend this letter to examine all the phases of the closed-shop question, but I think it only proper to point out a few of the obvious facts of industrial life.

Closed shops are not peculiar to labor. Recall I couldn't buy a television set from a company in which I have money invested. That company and the retailer have a closed shop. Do you have a similar closed shop?

Now let's take a very practical aspect of the question: When your company bargains with your employees it is not weakened by any fractional stockholders' groups at the bargaining table. You, the management, present a solid front. It is natural that the union should seek like unity. It is to management's advantage that the employees be divided.

This is best illustrated by three quotations:

A UNION SPEAKS

"The theory of the open shop as a permanent arrangement presupposes a stable balance of power as between the employer and the workers, if not a safe preponderance of power on the side of the former. It breaks down in practice as soon as one or the other

party attempts to alter the balance. It breaks down when the employer feels himself sufficiently powerful to endeavor to rid himself of whatever restraints the activity of the mere presence of the organization imposes on his freedom. It breaks down, likewise, when the organization gains in power relative to the employer and uses this ascendancy to secure from him recognition for itself and concessions for its members that he would not voluntarily grant. In practice, therefore, the tendency of an open shop is either to degenerate into a nonunion shop or to develop into some form of union shop with union recognition or participation." (Amalgamated Clothing Workers of America, the Clothing Workers of Chicago, 1910–1922, p. 330 (1922).)

AN EMPLOYER SPEAKS

A rather frank employer speaking on a resolution before the New Idea Convention in 1921: "It is unpopular to say you don't believe in the open shop, but I confess I do not quite know what the open shop means. To my mind it is a good deal of a question of a nonunion shop or unionized shop, and I hate to be a hypocrite under a resolution or anything else, or to vote or declare in favor of open shop when my own policy is not to carry that out, but to hit the head of the radical in my shop whenever he puts it up." (Nation, 112: 529 (April 13, 1921).)

AN EMPLOYERS' ASSOCIATION SPEAKS

That this thinking is not dead is illustrated by this very enlightening (though not enlightened) quotation from a 1948 employers' association bulletin, "Antiunion Campaigns":

"How far management can go in its efforts to keep a union out of its plant is something most employers would like to know a great deal more about."

Then this bulletin, sent to all employers in a great industrial State, proceeded to inform upon the subject. The executive secretary of this employers' association informed me that he favored unions. I had the bulletin in my pocket at the time. No; I didn't flash it on him.

But it is living proof to me that some men haven't yet changed too much. This is a factor which Congress must keep in mind if the laws it enacts are to be fair and effective.

In my opinion, the evils of the closed shop have been used as a pretext to create a divided front for labor at the bargaining table.

The closed shop has been abolished before. The Landis Commission once awarded an open shop in building construction at Chicago. The employers disdained the award within a few months.

Were I wont to do so I could name employers who have entered into closed-shop contracts since Taft-Hartley, not from force, but because they prefer such. The watchdog committee complained of such contracts, calling them bootleg contracts.

But you will never stop labor's efforts to create for itself a single front to match the strength the employer finds in unity. In practice there is both justification and often abuses; abuses I will discuss under the last heading.

(Your question No. 16)

"16. Do you believe labor laws should protect individual workers in the right to join or not to join a union—to remain or not to remain members—just as they individually wish?

"Yes---------- ☒ No---------- ☐"

The workers should have the right to contract with the employer that only those who bear their share of the expense of collective bargaining, and help sustain the employees' side be employed. This means union membership. I would not favor a law providing you had to agree to the closed shop nor that you couldn't.

However, I have been asked by a large union to support legislation retaining the Taft-Hartley union-security election with the proviso that when the union won, union security would become a part of the contract by operation of law. I rejected the idea. It didn't fit my philosophy. But if you say the workers must twice win their right to bargain for union-security shop, perhaps it is logical that, having won twice, the employer should not have a veto. I think the workers should "have a say" but when they select the bargaining agent, it should mean "the" not "one of many" bargaining agents. Again, remember the employer presents a unified front at the bargaining table. Here he asks the Government to forbid the union to bargain for a vital right; one sometimes important to its existence.

(Your question No. 15)

"15. Do you believe foremen and other supervisors could properly perform their management duties of serving the balanced best interests of employees, customers, and owners alike, if the bargaining for supervisors by unions should be included in the labor laws?

"Yes---------- ☒ No---------- ☐"

I agree the foremen should not be permitted to belong to the production workers' union. But beyond that let's examine the point.

You speak of the foreman's obligation and loyalty to management. In that you are right. But is the foreman's contract of employment dictated by his and the company's loyalty to each other? Or is it a case of getting down to "the captain and the cook" where arms-length bargaining takes place? Remember there is just one company.

1. In your plant, how many foremen are there?

2. Doesn't one foreman loom pretty small across the bargaining table from General Electric?

(Your question No. 5)

"5. Should labor laws provide that an employer cannot deduct union dues or assessments from wages unless the employee gives his personal O. K.?

"Yes---------- ☒ No---------- ☐"

Now we find the employer again advocating something he says will protect the worker, his employee. But coincidentally that proffered protection, if accepted, will also weaken the union. If the union has been selected as the bargaining agent, the workers should support it. Even Senator TAFT agreed to this. But all sorts of devices are invented to discourage membership. Iowa required the wife's written consent. A double shot at an antiunion veto. I am sure many men are honest in advocating such measures. But are they practical?

I am reminded of Justice Brown's comment in 1898 in the case of *Holden* v. *Hardy* (169 U. S. 366). Here the employer contended a Utah law providing an 8-hour day in mines was unconstitutional. The opinion remarked rather dryly:

"It may not be improper to suggest in this connection that although the prosecution in this case was against the employer of labor, who apparently under the statute is the only one liable, his defense is not so much that his right to contract has been infringed upon, but that the act works a peculiar hardship to his employees, whose right to labor as long as they please is alleged to be thereby violated. The argument would certainly come with better grace and greater cogency from the latter class."

I recognize abuses in the use of union funds. They are discussed under the last heading.

(Your question No. 9)

"9. Do you believe that labor laws should require both union officials and company officials to swear they are not Communists or Fascists or members of any party or organization which plans to overthrow the Government of the United States by force and violence?

"Yes---------- ☒ No---------- ☐"

Again, your question is misleading if it is meant to sustain the Taft-Hartley law, inadvertently so, I am sure. The Taft-Hartley law does not require officials (union or corporate) to swear they are not anything. It denies legal remedies to the union if its officers do not swear they are not Communists or subversive.

Of course, one is expected, from a political viewpoint, to support that section. It bears the label anti-Communist. But I'll risk castigation to examine the provision and its effect.

What is the result of a union officer's failure to so swear. The employer can engage in unfair-labor practice with impunity. The union can't get its case of unfair-labor practices or question of representation before the National Labor Relations Board.

Strange, is it not, that in every provision, said to be designed to protect the worker and to prescribe patriotism and honesty, somehow, by practical application, the employer stands to benefit. As in the case of the financial report, not one provision of the Taft-Hartley Act affords any remedy to the union member who demands an explanation of the prescribed financial report, to protect his rights against a dictatorial labor official except to forsake his union. No provision for democratic government (by which to oust Communists and dictators in the American way) or a look at the books (without fear of capricious expulsion) if the union official is dishonest and all powerful in the union.

Recently, J. Mack Swigert (author of Saturday Evening Post articles, October 25, 1947, The Taft-Hartley law: Does it really hurt labor? and October 30, 1948, Should we repeal the Taft-Hartley law?) and I debated the Taft-Hartley law before the Indiana State Bar Association. He said (and wrote) that if international union officials didn't swear to anti-Communist affidavits, or thus qualify, the locals could secede. Brilliant idea, but wrong on two counts: First, legally a local cannot secede if the union constitution prohibits such, as they all do. (*Martin* v. *Smith* ((1934) 286 Mass. 227); *Harris ex rel. Carpenters' Union No. 2573 of Marshfield, Oreg., Lumber and Sawmill Workers* v. *Beckman* ((1939) 160 Oreg. 520, 36 P. (2d) 456); *M and M Wood Working Co. (and Plywood & Veneer Workers' Union)* v. *N. L. R. B.* ((*C. C. A. 9th, 1939*) 101 F. (2d) 938); *Winnetka Trust & Savings Bank* v. *Practical Refrigerating Engineers' Ass'n.* ((1944) 322 Ill. App. 154, 54 N. E. (2d) 253); *Local No. 2618 of the Plywood and Veneer Workers of the United Brotherhood of Carpenters and Joiners of America* v. *Taylor* ((1938) 197 Wash. 515, 85 P. (2d) 1116); *Local No. 2508, Lumber and Sawmill Workers* v. *Cairns* ((1938) 197 Wash. 478, 85 P. (2d) 1109); Dangell and Shriber, the Law of Labor Unions (1941) 257; *Brotherhood of Railroad Trainmen* v. *Williams* ((1925) 211 Ky. 638, 277 S. W. 500).) And I think this is sound law. I prefer to cleanse and preserve, not destroy unions.

Secondly, the thought of secession illustrates the philosophy of the Taft-Hartley law. Every child that has read American history knows secession means destruction of the union.

(Your question No. 10)

"10. Do you believe labor laws should require unions to make appropriate reports to members and Government as to handling of funds—just as companies are required to

make appropriate reports to owners and Government?

"Yes---------- ☒ No---------- ☐"

Here is a question very dear to my heart. I tried to get Members of the Seventy-ninth Congress to sponsor such legislation. I tried again in the Eightieth and with failure.

The Taft-Hartley law only adds the financial report as an added impediment to the union in presenting its bargaining claims to the employer and in prosecuting unfair labor practices.

Furnishing a financial report means nothing unless the examiner can also look at the books. Taft-Hartley does not provide the right to look at the books. Of course, we know this is inherent. But in practice how does it work?

Taft-Hartley does not provide a remedy if the worker is expelled for demanding a look at the books, or for any other reason, for that matter. I can cite you a local union president who announced he would demand, as a delegate to the international convention, an explanation of the following item in an international treasury report:

"Special organizing, $1,101,025.03." That's all!

He said he would ask who got the money and what the union got in return for it. A fair question, I would think. Wouldn't you? He was expelled before he ever reached the convention floor. I successfully prosecuted his case for reinstatement to judgment in the civil courts.

I had also called this case to the attention of Congressman Hartley (March 12, 1947). Mr. Hartley answered me 7 months later, October 7, 1947. He wrote that the Taft-Hartley bill was now law and the man should file a complaint with the "Labor Board." I immediately wrote back and asked Mr. Hartley to inform me what section or provision of the Taft-Hartley law afforded this man any remedy. Mr. Hartley never answered that question, dated 16 months ago. Can you give me the information? I have been unable to find where the law provided a remedy. It only immunizes the employer, in case of the failure to furnish a formal report. The union I am talking about always furnished reports which balanced, but there was a large embezzlement, which we proved when we went behind another report. But it took an expensive common law remedy to procure a judgment reinstating the man who had the courage to raise the question. And that judgment is yet ineffective because it is on appeal, almost 3 years after expulsion. This man is entitled to a more efficient and seasonable remedy.

I have seen about all the evils in unions there are to see and I favor remedying them by wholesome legislation, not by destroying the union and immunizing the employer that engages in unfair labor practices.

I would appreciate your comment upon these problems.

(Your question No. 11)

"11. Should labor laws make it clear that a collective-bargaining contract must be honored by both parties? And that each has an equal right to sue the other for breaking the contract?

"Yes---------- ☒ No---------- ☐"

J. Mack Swigert, a law partner of Senator TAFT, wrote in the Saturday Evening Post that there had been more nonsense written about this point than any other. Though he was my worthy adversary in a recent debate, I am forced to agree with him. Why? Because a union has always been suable. (See *Duplex Printing Press Co.* v. *Deering Press* ((1921), 254 U. S. 443); *Laylor* v. *Loewe* ((1915), 235 U. S. 522).)

The truth is the Taft-Hartley law favored the union member in this regard at least. It limited liability to the union treasury, where-as previously the members' own funds or property was subject to levy. Mr. Swigert also pointed this out, and I agree with his conclusion.

I sicken at the utter misunderstanding the public gets from such propaganda that only under Taft-Hartley was the union suable. The facts are many suits are and were generally filed in connection with labor disputes. Few judgments are rendered because when the dispute is settled both sides quit "lawing each other" and go back to work. Not a bad idea.

(Your question No. 14)

"14. Do you believe it should be unlawful for an employee to be prevented from working by the use of violence, force, or intimidation?

"Yes---------- ☒ No---------- ☐"

Certainly, I agree; and it is unlawful and always has been. I am also against sin. Of course, the same should apply to the employer, who in recent years has been less prone to violence than in the past, and always less prone than the employee. But the employee has never had a complete monopoly on violence, though the employer usually acts by proxy.

The employee, however, lacking economic strength to match the employer, is naturally more prone to use violence as a substitute for economic power. Violence is foolish, ineffective, and wrong; it always has been and should be forbidden to all men.

VI. UNION RESPONSIBILITY TO PUBLIC AND MEMBERS

(Your questions Nos. 6, 17, and 8)

(Your question No. 6)

"6. Do you believe labor laws should see to it that both employers and unions be required to bargain in good faith?

"Yes---------- ☒ No---------- ☐"

To this question I can say "Yes" without further comment.

(Your question No. 17)

"17. Should labor laws make clear that both unions and employers can now so affect the public for good or ill that the labor-management relations of both should be regulated equally by law?

"Yes---------- ☒ No---------- ☐"

Now we are getting to the meat of the question. In my experience with men no difference in basic characteristics has appeared, whether the man was trying to plow a straight furrow in a stumpy field with a balky mule, working at a factory bench, or at the director's table, or perhaps even legislating in Congress; though my experience here is very limited.

In each case the man is trying to better himself, his place in society, perhaps financially; maybe socially, or in political preferment or in the esteem of his fellow creatures, or in all those respects.

But none is divinely anointed by virtue and few are utterly depraved.

Another thing pretty clear is that combinations of men, whether corporate or union, spell power.

Furthermore, Government has but one rightful claim to exist; i. e., to protect its citizens from the unwarranted exercise of power from within or without its borders.

With those indisputable facts understood, how could any man deny that unions as well as corporations should be fairly regulated. The question is the fairness of the legal regulation, and that we in Congress refuse to "rook" one or the other. To avoid doing so we must be on our guard against propaganda emanating from those of greater experience than ours.

Such regulations should be as simple as clarity permits. They should leave as much to individual decency as experience warrants. But a government that fails to recognize the necessity when it exists and cries out for remedy is a static government and has lost all claim to the respect, or if it becomes too lax, to the support of its owners, the citizens.

With that in mind I shall answer your only remaining question.

(Your question No. 8)

"8. Should labor laws protect the employee against unfair practices by unions and management?

"Yes---------- ☒ No---------- ☐"

Of course. No combination should be permitted to crush the individual. But we must, as reasonable men, agree upon what should be unfair labor practices, and be fair in that determination.

Until the Railway Labor Act, I believe legal unfair labor practices were nonexistent. The employee was a pawn, almost an expendable material in the employers' hand. His only defense was unionization. He fought an uphill fight against the "yellow dog contract." Only the Wagner Act fully outlawed the "yellow dog contract." It prohibited the employer from wringing a promise from the employee not to organize. The law finally recognized that the employer's power was so great the worker was forced to sign by duress. Thus, the ancient common law principle of duress was for the first time made applicable to the labor contract. Like the lender who was restrained by usury laws in dealing with the borrower, the employer was restrained in his absolute power by the Wagner Act. For a half century Congress and state legislatures struggled to enact such protective legislation. But the lawmakers were always thwarted by the courts.

Finally the courts recognized the evils.

In the meantime, unions had struggled to some positions of power in some crafts. Then their power increased. Their power was not, and never has been (generally speaking), equal to the power of the employer. Wealth is power. No one knows that better than you. When people speak and write of the amassed wealth of unions, they think in terms of their own personal holdings, not in the terms of corporations having more assets and employees than there are wealth and population in many States. Statistics disclose that the combined treasuries of all international unions is about a quarter of a billion dollars. This is but a minor fraction of the wealth of any one of several corporations—one thirty-second the value of American Telephone & Telegraph Co. and the Metropolitan Life Insurance Co., and but one-fourth of your own company, General Electric.

However, the union's wealth and prestige are tremendous when applied to the individual, or individuals, in one local. Some union officials have wantonly abused this power of wealth and position, and such abuses affect the working terms and conditions of their members and their fellow men of the same trade.

The Taft-Hartley law regulated, not the use, misuse, or abuse of this power, as directed against these individuals, but curbed that power as it was pitted against the greater power of the employer for the benefit of the individual member.

Taft-Hartley proponents have inveighed against the closed shop. But I challenge the closed union, from which stems much of the abuse. California has, by common law, decided that it is tortious to deny membership in a union which controls work in a craft or area. Thus the single front in collective bargaining is preserved; but the worker is not denied membership necessary to a job and protection on the job.

I have heretofore, and will again in the Labor Committee, advocate legislation to prescribe that union officers be elected in fair elections; to prohibit an international

officer from making a local captive and handling all its funds and negotiations, and concluding its contracts without submission of terms to a vote.

I suspect, Mr. Wilson, that you have not had experience with this particular type of abuse. But I have seen men in a captive local union working alongside men in a free local for 25 percent less wages. I won't say why it occurred that way. The fact that it occurred is enough. And when democracy was reestablished, the inequities ceased.

I have seen men expelled because they demanded decency in the union they needed and supported, and without effective remedy, Taft-Hartley claims notwithstanding; and Taft-Hartley remedies all the while nonexistent. Yet it was held up as a bill of rights for labor.

I have talked to union men, leaders, if you please, in as high a rank as president of internationals, all agreeing that remedies in these matters are long overdue. But they mortally fear any legislative move in this direction because they are upon them would help us more than a million questions that the architects of the Taft-Hartley gimmicks seized to justify their provisions; provisions which do not strengthen nor sustain decency, democracy, or justice in the unions; but which add further burdens to break them down. The workers in those few unions that abuse democratic processes would welcome legislation affording remedies. But they don't want their union destroyed.

I know that many honest and sincere union leaders would welcome legislation, fairly designed, to provide:

1. Secret elections in local unions; including delegates to national or international conventions.

2. A remedy for fraud or duress in such elections.

3. A right for any member or body to look at or audit any of the union books.

4. Provisions regulating seizure and holding of captive locals; allowing only reasonable discipline of locals and members.

5. Remedies for capricious and fraudulent imposition of heavy penalties and prohibition against violation of the principles of due process of law generally.

Incidentally, all these rules are now the law of the land by common law. But the remedy is expensive, slow, and generally ineffective. A worker hasn't the means to pursue these remedies, nor to sustain himself while he waits for them. They should be codified and the remedy made more accessible to a man of moderate means.

For emphasis, let me repeat, Taft-Hartley set its provisions against the union leaders who stood stanchly for their members' rights in bargaining with a usually stronger entity, the employer. It ignored, in all practical respects, the abuses of the union leader who oppressed his own members.

I sincerely hope both these errors will be corrected.

In closing, I wish to say to you, Mr. Wilson, that the problems upon which your questions are predicated are not as clear as those questions are transparent to one with a mite of experience. I doubt if you prepared them, or possibly comprehended their import and the mischief their leading effect might have. That they might mislead the people (since they were printed in daily newspapers) is obvious. And that they might affect Congress is possible. Hence, your responsibility in this regard is tremendous. It has been said that to whom much is given, of him much is expected. Therefore, I invite you to give us in Congress some broader and well-reasoned comment upon the subjects concerning which I have inquired.

None of us can know too much, even in that area of the broad field of legislation assigned to our committee, and even in that area we "fear a doubt as wrong."

For my part, I feel I know a little (yet far too little) about the subject of this letter. But (and you may find it difficult to believe this), I had no burning ambition to be a Congressman. And I believe I would not have sought the office had it not been for my interest in this subject, and a desire to help construct some fair legislation in the place of what I knew was unfair. That I am going to try. In so doing, I will probably incur enmity of some folks on both sides. Perhaps that will be the best proof that I am doing the right thing.

But in trying, I and my associates would be heartened by a more objective approach by men of your position and standing than by broadsiding us with a meaningless, or at least confusing, questionnaire ballot barrage. They are balanced by mail from the other side. You can't estimate logic by weighing your mail, or counting induced pros and cons.

One good logical letter, outlining facts, and pointing to specific and fair remedies, marked by persons obviously confused by leading questions of great cleverness.

I trust you will accept this letter in the spirit intended and give me the benefit of your considered judgment upon these several matters.

Most sincerely yours,

ANDREW JACOBS.

Two More States

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of February 19, 1949:

TWO MORE STATES

In a few more weeks Congress again will take up the question of granting statehood to Hawaii and Alaska. Hearings on the proposals will probably be held before the Senate Interior and Insular Affairs Committee, headed by Senator O'MAHONEY, Democrat, of Wyoming.

We believe the Senator should give a sympathetic ear to requests from the people in our two Territories so they may take their place shoulder to shoulder with the residents of our 48 States.

At this time in our history, when national life is threatened by communism, the most terrible foe it has ever faced, we need to bind our outposts as closely to the Union as possible.

The mere fact that the two Territories are not a part of the continental land mass of this country is not a valid argument against counting them in. We have to protect them anyway, whether they are a State or Territory.

Remember, Hawaii was the starting point of the last war and Alaska looks like the place the next war is going to start, if it does.

NOT FAR AWAY

And neither of the places is so far away now that we are in the air age. Just a couple of weeks ago the Air Force flew from Fort Worth, Tex., to Hawaii in a few hours and the trip to Fairbanks from our northern cities is just as short.

In the past, when statehood proposals for Hawaii and Alaska were brought up in Congress, there was some hollering that we shouldn't increase the number of the States. There's no magic in 48.

The country began with 13 colonies and advanced up to the 48 States as the people living on the land asked for a chance to live under our constitutional government. We've only been 48 States for 37 years.

Oklahoma entered the Union February 16, 1907. New Mexico joined January 16, 1912, and Arizona, the last one to come in, became a part of the Union February 14, 1912.

ALASKA WAS PURCHASED

Alaska was purchased from Russia in 1867 but little was done to develop it until gold was discovered 30 years later. The boundary dispute with Canada was settled in 1909 and, strangely enough, Alaska was given territorial status in 1912, the same year that New Mexico and Arizona became States.

Hawaii became a Territory of the United States in 1900 and time after time since then attempts have been made to turn it into a State. Alaska is the outpost in our defense against attacks from the north. Hawaii is our outpost against attacks in the Pacific.

Each of the Territories is rich in natural resources. The sugarcane crop on the Hawaiian Islands amounts to approximately $65,000,000 a year. The pineapple crop amounts to about $60,000,000 annually.

Besides gold, Alaska is rich in other minerals, in oil, in lumber, in fish and furs. Its swift rivers make available vast water power for industrial expansion. It is a land much more valuable than the people in this country thought when the purchase was made. And now the Russians would like to have it back and are making all kinds of passes at it.

This country has prospered and become stronger as it grew to the 48 States that now make up the Union. It would be stronger and more prosperous with 50, or 60.

OTHERS WOULD LIKE TO JOIN

To look ahead a little further, it is not at all improbable that we will soon be receiving requests from peoples in all parts of the world to be allowed to join our Government. For ours is the oldest constitutional government on this globe. It has survived and grown because it teaches its citizens to balance liberty and responsibility.

This Government is now the only hope of many of the smaller nations whose feeble governments are facing complete obliteration at the hands of the Russians.

So, you might as well get used to the idea of expansion over and above our continental limits. We ought to start right now taking in the two Territories.

And, while Congress is busy at this problem, might we also suggest it ought to do something about giving the people in the District of Columbia a voice in the National Government. The District is in the heart of the Nation. It is the heart of the Nation. Why not give us representation in Congress and a right to vote for President?

The High Cost of Winning

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1949

Mr. HÉBERT. Mr. Speaker, the New Orleans Item has hit the nail on the

head in the editorial which it entitles "The High Cost of Winning."

It is a timely editorial.

It is an editorial which should be read before and not after campaigns.

Too often some political candidates seem to stand on Olympus and the voters, who will not take the trouble to look, fail to notice that despite their apparent lofty position, their feet are in the clay below.

I know it might be asking too much for the American people to evaluate the difference between promise and performance and it perhaps would be asking just that much more for them to pause and look at the record before making a decision on candidates, but at least we can hope.

Anybody can criticize, but few can accomplish.

As a member of the Eightieth Congress I refuse to believe that the Eightieth Congress was as black as it has been painted by some individuals merely for the sake of getting votes. I remember that the Seventy-seventh and Seventy-eighth Congresses, of which I was also a Member were likewise lambasted as rubber-stamp Congresses by a minority party which, too, was also interested in getting votes and not in the facts.

It seems to be that more action and less talking would be in order.

My very good friend and a most able newspaperman, Herman B. Deutsch, of the New Orleans Item, is the author of this editorial which merits your attention:

THE HIGH COST OF WINNING

President Truman is now learning something that, soon or late, is brought home to every winner: The cost of victory is nearly as great as that of defeat. It was one thing to say, in the thrilling days of campaign oratory, that the Republicans who opposed him were promising to do next year what "the Republican Congress could accomplish in 15 days right now, if it wanted to." As titular head of a minority party, though still in office, it was wonderful to charge the Republican majority in Congress with responsibility for all the things Candidate Truman was assailing in order to win votes.

"They could do it in 15 days"—if they wanted to, if they weren't "the worst Congress in the country's history," if they weren't simply trying at all costs to discredit the Truman candidacy, if they weren't so intent on baying the red-herring trail, if they weren't determined to keep the Taft-Hartley law on the books, etc., etc., etc. Repetition made it a familiar refrain—all the things a Republican Congress could do in 15 days according to the Harry Truman who was running for the Presidency last September and October.

The new Congress has been in office not 15 days, but 45. It has been in session since January 3. Its Democratic majority is far heavier than was that held by the Republicans during the past 2 years. And where is the legislative program Candidate Truman insisted the Congress could enact within 15 days—if it wanted to?

The tax legislation he demanded is not yet written. Taft-Hartley repeal is not even well on the way out of committee. The longer it stays there the more it becomes obvious that, like the wedding in an old-fashioned melodrama, it will be a repeal in name only; that its major features are likely to be maintained in full force and effect. The President's call for price-control legislation is puffing and panting and straining to catch up to the price drop which Messrs. Truman and Brannan still insist can only be brought about by Government controls.

We have no quarrel with the delay. On the contrary, we think those Members of Congress, in either House, who insist on thoughtful evaluation of the President's proposals instead of the push-button procedure inherent in the precipitate action he advocated last fall are entitled to a hearty vote of commendation.

This applies especially to any reckless hiking in taxes, and Government spending in general. It also applies to broad-scale tinkering with the Taft-Hartley Act, under the delusive and often disproved notion that the President is fully capable of handling any situation that might arise in industries affecting public health, safety, and general welfare.

In calling attention to the difference between a candidate's stump speeches and an officeholder's performance we merely seek to underline this interesting conjunction of facts: In 45 days President Truman's administration has not even made a good start on what Candidate Truman insisted the Republicans could finish in 15. Mr. Truman, in short, is learning—the hard way—about the cost of victory.

Surgeon General Praises State's Health Services

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

SURGEON GENERAL PRAISES STATE'S HEALTH SERVICES—SCHEELE SPEAKS AT DINNER MEETING OF SECOND DISTRICT MEDICAL SOCIETY

KINSTON, February 1[illegible].—Dr. Leonard A. Scheele, United States Surgeon General, in an address before the second district of the North Carolina Medical Society, Wednesday, pointed to North Carolina as the foremost State in the Union in the establishment of public-health service.

He stated that Edgecombe County was the first to offer the cooperative Federal-State and local service in America. Dr. J. W. Norton, State health officer, presented the speaker.

Guests included Dr. J. F. Robertson, of Wilmington, State society president, who spoke briefly; Dr. John A. Ferrell, of Raleigh, executive secretary of the State Medical Care Commission; and others. Dr. Floyd Woodten, of Kinston, retiring district president, recognized guests. Dr. Rachel Davis, of Kinston, is retiring district secretary and she arranged the program. Dr. H. Fleming Fuller, president of the Lenoir County Medical Society, was toastmaster. New district officers are Dr. Sam Thompson, of Morehead City, president, and Dr. L. W. Moore, of Beaufort, secretary. The 1950 session will be at Morehead City.

LAUDS LEADERS

In his prepared address, Dr. Scheele paid tribute to North Carolina's health leaders, past and present, and cited statistics showing the present ratio of medical and hospital facilities to the needs of the people over the Nation. He said there are about 880,000 acceptable hospital beds in the country and a recent survey shows 897,527 more beds are needed. In North Carolina the ratio, even with current expansions in progess, is somewhat worse. There are approximately 20,000 beds now available to 3,500,000 people while 26,550 more are needed and the 21 hospital projects that have been approved will provide only 1,300 of that number, Dr. Scheele observed. He stated that North Carolina is one of 8 States furnishing State aid in hospital expansion under the Hill-Burton Federal aid program while only 11 States have applied for aid.

Dr. Scheele stated that in 1948 this State received $148,526 in 18 Federal aid grants which went for medical research. There were 14 to Duke University, 1 to University of North Carolina, 1 to Wake Forest, and 2 to the State tuberculosis sanatorium. He commended the plan to set up a 4-year medical college at Carolina stating it would make possible the provision of adequate doctors and nurses for the State's far-reaching medical care program.

Dr. Scheele did not commit himself on the controversial Ewing bill for Federal health insurance but stated in response to a question that the State medical care program, with some exceptions, dovetails with the Federal program. Dr. Robertson gave an interesting review of the North Carolina program in his remarks. About 100 doctors over the second district attended the supper program and a number participated in the question and answer forum which followed Dr. Scheele's address.

Address by Hon. Irving M. Ives, of New York, Before Michigan Republican State Convention

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1949

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Republican Opposition," delivered by the distinguished Senator from New York [Mr. IVES] before the Michigan Republican State Convention at Grand Rapids, Mich., on February 19, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The honor and privilege accorded me by your invitation to participate on this significant occasion are greatly appreciated. I term this occasion significant advisedly.

It marks the first important official Republican gathering since the fateful Republican reversal of last November 2. It takes place in one of the great States of the Union, where dynamic Republicanism is still alive and on the march. It takes place in a State which is represented in the United States Senate by two outstanding leaders in Republican thought and action, my two distinguished friends and colleagues, ARTHUR H. VANDENBERG and HOMER FERGUSON. It takes place in the native State of him who is the great governor of my own State of New York, my very good friend and your former neighbor, Thomas E. Dewey. It takes place at a time when the fate of the Republican Party literally is hanging in the balance.

This is no time for recrimination and backbiting—let those things end with Omaha.

This is no time for post mortems and inquests—we have had enough of them since the last election. This is no time for discussing any possible need for new major parties or new party alinements—such discussion can only waste precious opportunity and prove barren of results. This is no time for retreat or surrender by the Republican Party—that way leads to disaster for the country and the snuffing out of freedom everywhere.

It may have its faults; it may be divided; but however great its faults or serious its divisions, the Republican Party must be preserved. Only by its preservation can our two-party system be saved and only in this way can the American people be protected from the evil consequence of one-party government, which has overtaken other free peoples of the world.

And I say to you today, my fellow Republicans, our party can and will be preserved because you and I and millions of other Republicans in America are determined that it shall be preserved. We are determined that it shall play the great role in the future of our country which the course of events has demanded and will demand that it play. We are determined that in the exigency of the moment it shall provide an opposition at once creative and constructive, an opposition not solely to oppose, but mainly to propose, an opposition which by promise and performance will deserve and receive the overwhelming confidence of the American people.

Now, all this can and will be achieved if the Republican Party will recognize conditions as they are and will pursue a course in line with realities. It seems to me that we, as Republicans, need reorientation; we need to place first things first; we need, at the outset, to revive our party's basic principles; then we need to apply these principles to the society in which we live.

Ours is a party of great tradition. It came into being at the time of our gravest national crisis. It met that crisis victoriously and opened the way for the greatest advancement and achievement in our Nation's history. A large share of our national progress has been the result of Republican policy and Republican success. Much of the enlightened legislation which has been enacted in the last 90 years has been of Republican origin.

And ours has been the party which has cherished and defended the Constitution. Believing in the Constitution as the final protector of liberty, we have sought to defend it against the apostles of usurpation and other evangelists of a new order, who have held it in contempt. We have insisted that ours is a government of law and not of men, recognizing that a government of men brings despotism. We have sought to achieve and have achieved progress within the framework of the Constitution. We have known that, without the Constitution or with the Constitution ignored, no progress is possible and liberty is dead.

And yet, in spite of worthy heritage and splendid earlier record, our party now finds itself sorely pressed, with Republicans divided among themselves. This present low Republican estate is something for which Republicans have not been primarily responsible, although for its persistent continuation Republicans have been largely to blame. World conditions, over which none of us could have had control, caught our party off balance and unsuspecting—and pitched us headlong into our present plight. We are still in the political doghouse because too many of our number do not appreciate the problem before us or, appreciating it, are unwilling to take steps which are necessary for its solution.

So it is we are having conflicts within our ranks over the course we should follow. So it is we are told the issue for us is the choice between conservatism and liberalism. So it is that many among us are bewildered about their status for nearly every so-called conservative protests that at heart he is a "liberal" and nearly every so-called liberal asserts that fundamentally he is conservative.

In this connection I urge that we forget the terms "conservative" and "liberal" and try to be realistic in our appraisal of the situation in which we find ourselves. Let us remember our party's great tradition and be ever mindful of its historic devotion to the Constitution. Let us discover where this tradition and this devotion can be made to apply in meeting present-day needs and in solving present-day problems. Let us make of our party the flexible instrument for promoting the general welfare which it must be if it is to endure. Without sacrificing principle, let us again champion the cause of the ordinary man because only by strict adherence to principle can the ordinary man in America be saved from a doom with which he is menaced by the uncontrolled force of the social and economic revolution that is now gripping the world.

When this revolution began is unimportant. There is evidence that it was under way before the close of the last century. Some say it is a continuation of the industrial revolution. Some call it an aftermath of or sequel to the industrial revolution. Whatever its origin, its form is unmistakable.

It is the upsurge of the ordinary man to seize his place in the sun. It has been a part of or has followed his struggle to be free.

Now, this ordinary man is generally a mighty fine fellow. He is any one of us. Among his number are included the common man of Henry Wallace—and the economic royalist of early New Deal days—and even the "uncommon man" to whom reference was recently made by that great American and our beloved former President, Herbert Hoover.

For the most part, the ordinary man demands personal freedom, equality of opportunity, a decent standard of living for himself and his family, an adequate education for his children, and protection against economic insecurity because of unemployment and sickness and disability and old age.

In his upsurge the ordinary man has pressed along different paths in different countries and in different parts of the world. He hasn't always been prudent in his decisions; sometimes he has followed false gods and sold his birthright of freedom for a mess of pottage; too often until too late, he has traded his freedom for security, failing to realize that security without freedom is worse than insecurity.

Evidences of the present revolution are everywhere. In fact, all human life today is affected directly or indirectly by it.

Communism in Russia, nazism in Germany, fascism in Italy—these phenomena have been a part of the revolution. World Wars I and II were violent explosions which it produced. It has assumed a more recent form in the Socialist Government of Great Britain. Analysis will show it is basic in today's crisis in China. Ominous rumblings are already heard in India. Even in South America there appears to be a seething undercurrent which threatens the peace and stability of all Latin America.

Here in the United States we are experiencing the same revolution. When it began with us is uncertain, but our economic collapse at the end of the 1920's and the resultant depression in the 1930's quickened its pace. More than anything else, it is responsible for five successive New Deal administrations in Washington, from which we Republicans have been the chief sufferers. As a result of prolonged and continuous one-party control in this country, all opposition is now threatened with extinction, and the American people are threatened with the unhappy fate which has overtaken other free peoples of the world.

I do not make this statement as a Republican who is unmindful of Republican shortcomings. Neither do I make it in criticism of the ordinary man. I am in full sympathy with the ordinary man in his hopes and desires and demands. Rather do I seek to emphasize our party's responsibility for his welfare.

If the present revolution has shown one thing above all else, it has revealed that the ordinary man has not yet demonstrated an ability so to govern himself that he can obtain security and freedom at the same time. Not comprehending that collectively, while free, he is the government, he has saddled upon it burdens which have been more than he or it could bear. The consequence has been collapse, disaster, and slavery for himself when, in desperation, he has succumbed finally to the wiles of some demagogue and tyrant.

So today in the United States this same kind of danger confronts us. Here, too, there has been and is a tendency to place an ever greater burden on government and an ever greater responsibility in government. Here, also, in seeking objectives which separately and individually are wholly legitimate, the ordinary man may overload his government through thoughtlessness and selfishness to the point of catastrophe. And it is right here that I most severely condemn the New Deal through all its administrations since 1932.

Instead of warning the ordinary man of his grave danger in asking too much of government, the New Deal has encouraged him to demand more and more of government. It has promised everything to everybody everywhere. In effect, it has treated the ordinary man as a commodity to be bought and sold on a political auction block. It has failed to meet a basic obligation of a major political party in the great American tradition.

"Oh," someone will say, "what difference does it make? The New Deal will not deliver on its promises because it can't deliver on them, and everybody knows it can't." Well, if such is the case, the New Deal is all the more culpable, for it has added trickery and deceit to an already impressive list of derelictions.

And right here is where we Republicans must meet our test. With us it cannot be a question of "outdealing the New Deal" or of "Me, too; only I can do it better." This course leads to the Nation's destruction just as surely as that on which the New Deal is now embarked.

Neither with us is it a matter of denying to the ordinary man his right to achieve the objectives he is seeking. Assuming he cherishes his freedom and wants to preserve it—and I am sure this is still a fundamental desire among most Americans—our problem is how to help him obtain the things he demands, including the greatest possible economic security, without further jeopardizing his freedom.

How great a load can a free government carry without breaking down? Where is the point in Government control beyond which our free economy will cease to be free? At what point in his demand on Government will the ordinary man lose his personal freedom? And with respect to any of these questions, have we yet reached or passed the danger point?

The situation is made far more difficult because of Soviet Russia's evident intent to conquer the world and to destroy all religion. Capitalizing on the revolution of the ordinary man, the Communist leaders of Russia, wherever possible, have tricked and bludgeoned him into slavery to serve their own diabolical ends. Taking advantage of the inexcusable opportunity afforded them by the betrayal of the ordinary man at Tehran and Yalta and Potsdam, these leaders have engaged our Nation in the "cold war," upon the outcome of which may rest our survival.

To meet the Communist menace, to find the answers to the questions I have posed—these are primary obligations of both major political parties, and they are of particular concern to the Republican Party. Only by recognizing and accepting the preponderant mandate of the people themselves can we Republicans provide the creative approach to the solution to these grave problems which is essential to achievement. Moreover, only by showing that our chief interest is in the welfare of the ordinary man can we win the support of the ordinary man.

Somehow, over the years, we Republicans have acquired the reputation of being champions of big business and of the vested and special interests. This has come about, at least in part, because we are champions of the free competitve-enterprise system, by which our country has largely attained its greatness. We do believe in property rights as well as in human rights, because, without property rights, human rights are illusory and nonexistent. Too often we have neglected to point out that only through our free competitive-enterprise system can we safeguard our other basic freedoms, including the freedom and right of labor to organize and to bargain collectively. We have been so occupied in striving to help preserve these freedoms that we have failed to give proper heed to the misrepresentations and distortions which have been aimed at our activities by our political opponents. Unfortunately, it is true, we have been sometimes negligent in fulfilling platform promises.

So today I urge, most of all, that we stand solidly by our party platform adopted last June in Philadelphia. I urge that we strive to keep the pledges in that platform. I urge that we honor our given word as formally expressed in convention assembled.

This is neither the time nor the place for a review of that platform. Suffice it to state that in it all the important questions and issues and problems now facing our country and the world are comprehended and covered. It provides a guide and chart for the Republican Party by which to revive and carry on our great tradition in meeting adequately, and within the limitations of free government, the needs and demands of the ordinary man. It offers a plan and program for our party's revitalization.

Thus we Republicans in the Congress can provide the answers to the challenge which circumstance has forced upon us and we can parry the New Deal threat to our free society. Thus we can resolve our differences and reach agreement by way of the lowest common denominator in every controversial issue before us.

In this way we can favor a social-security system in our country which is comprehensive, adequate, and sound—without socializing American industry; we can favor a uniformly high quality and standard of education throughout America—without Federal interference or control; we can favor slum clearance and public housing—without a Government program which would drive private industry from the housing field; we can favor an effective over-all public health program—without socialized medicine; we can favor price supports for farm commodities, which will insure our agriculture against depression and will help to stabilize our economy—without throwing our economy out of balance through inequitable and excessive subsidization; we can favor new undertakings and projects in reclamation, conservation, flood control, water power development, and rural electrification—without destroying private initiative and incentive, but rather with the assurance of increased opportunity for private initiative and incentive. All these things, and more, we can support through so moderate an approach that our national solvency will be protected and our free economy will be benefited.

In the broad area of human relations, however, let us refrain from partisanship just as far as the New Deal will permit us to do so. This is one area where partisan politics can cause only trouble for our country.

It seems to me, for instance, most unfortunate that in our foreign relations the administration appears now to insist on going it alone, although our party's obligation to cooperate beyond the water's edge must nevertheless continue in the face of grave emergency. It becomes no less our duty, therefore, to hold the administration to strict accountability in its conduct of international relations.

Again, in the field of labor relations, let us strive for objective consideration of legislation—in spite of the fact that the President and his New Deal colleagues would use labor relations as a political football. No good can come to an individual or party that seeks to take partisan advantage of the relationship between workers, employers, and the public. By this callous attitude toward so delicate and technical and vital a subject, the country can only suffer injury.

Furthermore, let there be no partisan controversy over civil rights. Happily the platforms of the two major parties are largely in agreement at least on this part of the area of human relations.

Discrimination in employment, for example, denies the principle of equality of opportunity and makes a mockery of our pious boasting about our American way of life. There is no room in America for second-class citizenship; either we are united in ideals and purpose and example, or ours is a Union in name only, torn by resentment and dissension among heterogeneous minorities in conflict with whatever majority may be in the ascendancy at the moment. To those of us—Republicans and New Dealers alike—who constitute the immediate over-all majority is given the task of translating our lofty ideals and principles into a living reality.

By and large, however, we Republicans do, and must inevitably, differ with the New Deal on either principle or method. Where these differences are over method, we must offer sound alternatives as I have indicated, and we must be so right in our proposals that we shall be supported by strong public opinion. Where we may disagree on principle, as evidenced by our opposition to the proposed socialization of the steel industry, we must fight the New Deal to the limit, leaving no stone unturned in an all-out effort to obtain overwhelming public support and to convince the ordinary man that our battle is his battle.

Most of all, we must have cohesion and unity in our own ranks. United in determination and effort, scorning personal advantage, obsessed with a common desire to help make the Republican Party the kind of powerful, creative opposition it must be for its own sake and for the sake of the Nation, we can recapture for our party the confidence of the American people. We can assure for the Republican Party victory this year and in 1950 and 1952.

The Right to Work

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. HÉBERT. Mr. Speaker, this House will soon have to make a decision in connection with revision or amendment of the so-called Taft-Hartley Labor Relations Act.

One of the most controversial problems is the so-called closed shop.

My attention has been called in this connection to an article written by Mr. George Rose in the American Bar Association Journal, which seems to me to be most persuasive.

Mr. Rose speaks and writes with authority. He is a graduate of the University of Pennsylvania and practiced law in the District of Columbia. At one time he was a trial attorney for the National Labor Relations Board and since 1939 has been in private practice in Indianapolis, specializing in labor law.

He is so right in entitling the article: "The Right to Work—It Must Be Supreme Over Union Security."

In these times when so many of us prate about liberty and freedom and bellow forth with the full power of our lungs about the civil rights of the individual but who advocate legislation which would curb that very liberty and freedom through many devious legislative protections, we could gain much by reading this article.

It is of more than passing interest and cognizance that those individuals and organizations loudest in their cries for "equal rights" and denouncements of discrimination "because of race, color or creed" are making even more noise for the kind of legislation which will deprive an individual of the right which is akin to life itself, the right to work. In their book it would seem that it is all wrong to discriminate against an individual because of "race, color or creed," but it is not wrong to discriminate because of labor union affiliation. It does not make sense to me.

It seems to me, Mr. Speaker, that when such individuals and organizations shed crocodile tears and bleed so profusely from hearts supposedly overburdened with the welfare of their fellowmen, that we should scrutinize them closely and minutely and evaluate them for their real and true sincerity—or lack of it.

I believe, Mr. Speaker, that any man has the right not to work if he doesn't care to work. By the same token I believe that no man has the right to prevent any other man from working who desires to work. That is fundamental under a Constitution which guarantees to each and every individual the right to "life, liberty and the pursuit of happiness."

I believe in labor unions. I don't believe the laboring man has a chance of effective bargaining except through organization. My belief and advocacy of labor unions, however, does not transcend the right of the individual to his freedom of speech, his freedom of movement and his freedom to work whenever and wherever he can get a job.

I cannot reconcile the attitude of the so-called "liberals" who, out of one side of their mouths scream in anguish for so-called civil-rights legislation to guarantee full protection to individuals regardless of "race, color and creed" and who, out of the other corner of their big mouths, plead for a law which would deprive an individual of the right to work in order to provide the necessities of life for himself and his family.

Mr. Rose, however, says all this far better than I can.

Here is Mr. Rose's article:

THE RIGHT TO WORK

In all cases of conflicting rights we must determine by a delicate balancing which right must prevail. At one time it may be the right of the individual that will be paramount, while at another, it is the right of the group or the community. It must be this way, lest the individual become submerged in the mass, or we lose the group in an anarchy of individual claims. Neither extreme represents the democracy which we have known.

Before us we have a very vital question: the controversy relative to the individual's right to work, regardless of membership in the majority union, and the right of the union to force the employee to join the union, if he wishes to work. It is especially timely to consider this, in view of the cases decided January 3 by the United States Supreme Court, arising under State laws banning union security. Which right is more important in this extremely elemental situation, and which is entitled to the precedence?

Let us look at it from different angles. Is the individual merely being stubborn and anti-group-minded in not joining the union, and in failing to unite with his fellows for the betterment of all, if there is no principle at stake? Or is he actuated by principle? Is the group seeking a justifiable control over all the employees, in order to secure better performance of their agreements, or is it striving for a domination over all the employees, which is unnecessary for the protection of the rights of the group, and is an unwarranted interference in the rights of the individual?

When the community considers it essential to have all persons attending school vaccinated, the opinions of a contrary minority must yield to the considered determination of the majority that vaccination is necessary to the protection of the health of the whole community. The Supreme Court pointed out that "real liberty for all could not exist under the operation of a principle which recognizes the right of each individual person to use his own, regardless of the injury which may be done to others."

Under this principle the union claims that the individual must not use his right to the detriment of what it calls the economic health and solidarity of all the employees. However, we must examine what the union is trying to do. It would deprive a man of his essential right to work, without establishing that this solidarity and discipline are a sine qua non of union existence, for the protection of joint rights and the requirements of economic health.

Congress passed the National Labor Relations Act, recognizing and enforcing the right of self-determination, which, under this Act, is the right of individuals to form labor organizations for the purpose of collective bargaining because of the individual's inability to bargain with a corporate employer with any degree of equality.

The right of self-determination would therefore seem to be, not a mere supplanting of the individual right to bargain, but a requirement that individuals unite to bargain, if a majority desire it. In other words, it is a reinforcing by merger of the individual rights of the members of the group, because of their separate ineffectiveness, and giving this group action paramountcy.

The union contends that without union security self-organization is similarly ineffective. This argument appears erroneous from the experience of unions. Without union security, the union is denied great power, which has at times meant arbitrary power, but it is neither requisite to the purpose of the union and its agency, nor is it a privilege to which the union is entitled on its merits.

The right to self-organization is founded upon the right of a man to work and pursue a calling, for it is the uniting of fellow workers for their economic betterment. In upholding the constitutionality of the act, the Supreme Court described it as a "fundamental right," giving "employees * * * as clear a right to organize and select their representatives for lawful purposes as" a corporation has. In providing for collective bargaining the act assumes the existence of the right to work, since the representatives are to bargain as to "rates of pay, wages, hours of employment or other conditions of employment." To reason otherwise would be to argue that the right to work arises from the right of self-organization, which is contrary to fact, as the right to work exists regardless of self-organization.

The Supreme Court links this right of self-organization with the right of people peaceably to assemble and petition the Government for the redress of grievances. In a democracy all persons must be permitted peaceably to assemble for a lawful purpose either in the advancement of their private interest or of the general interest. The union would identify this right of assembly with the right to union security, as being inseparable, yet unions have notoriously denied their own members the right of assembly with regard to their own union governance, calling it dual unionism. Union security therefore appears suppressive of the right peaceably to assemble, upon which the right of self-organization is based, and consequently it interferes with the right of self-organization, as a continuing right.

While the union emphasizes the right of self-organization, with all its pendant privileges and claims accruing to the union, including union security, it rejects the individual's right to work, which is even more basic, proceeding from the United States Constitution itself. This is a primary right, more essential than any other except the right to life, which are both part and parcel with the right to liberty. If a man cannot choose his calling, business, or trade "as may be best adapted to his faculties," he is being deprived of his liberty. A man must work if he is to live and reap the full advantages of democracy. To be denied the right to work, must condemn him to being a state dependent.

The right to self-organization, as we have pointed out, is a merger of individual rights to bargain, and is correlative with the right to form, join, or assist labor organizations, serving the advantage of the group. If this right of self-organization interferes with or deprives others of the right to work, as the union would have it, then it must yield, because the right to work is primary, while self-organization is secondary.

A superficial consideration of this matter might lead one to conclude that under the National Labor Relations Act, the domain of self-organization includes the right to work, which is the right to be employed. This is rebutted by the Supreme Court which, in discussing the effect of the collective agreement with regard to individual contracts, said: "There is little left to individual agreement except the act of hiring. * * * In the sense of contracts of hiring, individual contracts between the employer and employee are not forbidden, but indeed are necessitated by the collective-bargaining procedure." Therefore the right to work, to obtain employment, has not under the act been amalgamated with the collective agreement, although its terms may regulate employment. Consequently, a group of employees, even though they are a majority of the employees of an employer and desire to make membership in the union an essential requirement of the right to work for that employer, do not have the right and should not have the right to deprive an employee of the primary right to work. This would be repugnant to our ideas of democracy, for as the Supreme Court has said, "the very idea that one man may be compelled to hold his life, or the means of living, or any material right essential to the enjoyment of life, at the mere will of another, seems to be intolerable in any country where freedom prevails, as being the essence of slavery itself."

An attempt is made by the union, in its attack upon this right to work, which it describes as an alleged right to work, to draw an entirely unjustified analogy between the union and the state to support the right of union security. Our national state was established by the people to provide a government of democratic principles, and to give protection to the basic and fundamental rights of persons. The union was not formed to give economic government to its members, but to enable them to bargain more effectively with the employer as to certain economic matters. The idea of economic government came later, when union leaders saw in union security the means of more aggressive control over the members, and better discipline, more comparable to an army than to a government.

The union is the representative and agent of its members, and under the National Labor Relations Act, of all the employees of the employer in the appropriate unit, but it has no right to assume or claim a political authority under the guise of economic rights, which would have the result of barring primary rights to other persons. Such authority would be unconstitutional and presumptuous. To have any validity at all, it must come from the body politic, and not from a small segment, which desires to increase its own power.

It is one thing for the union to represent the employees in a plant and bargain with the employers for the purposes of concluding the conditions of employment; such proper agency cannot be said to exist where the union is no longer acting in such capacity, but seeks to establish an extra-constitutional, a pseudo-political status. In any case, the union is not entitled to oust all employees who will not join the union and keep them from working for that employer or at a trade. But over and beyond this, the employees themselves, whatever form or capacity they assume, do not have the right to do this, as it deprives others of more basic rights than the secondary right of self-organization which they allegedly strive to realize. This is not the case where one individual is trying to use his own liberty regardless of the injury or consequences to others, referred to above, but on the contrary it is an effort by the group to prevent a person from exercising a superior right, the right to gain employment, regardless of union membership.

The claim that this right or liberty, as they would call it, has become an institution seeks to give it an authenticity and authority which is lacking. The fact that the union-security forms have been acquiesced in cannot give them any legal sanction, for no statute of limitations could run against such basic rights of the people. The claim that this right is necessary to give strength and stability to the union is merely to plead expediency and to confess the failure of the union to win democratic support.

Its true analogy is to the totalitarian state. The unions quite naturally have recognized the advantage of universal membership and have resented the rivalry of other organizations, even that of sister unions. However, if such supremacy cannot be attained by democratic methods, with the maintaining of democratic standards, it cannot be recognized. Under the yellow-dog contract the employer has sought by force of the employees' economic necessity to obtain his agreement not to join a union. Likewise,

through the union or closed-shop contract, the union has sought by the same undemocratic methods to compel him to join the union. Both the employer and the union are to be condemned for resorting to such undemocratic practices.

The limitation upon the individual's right to work where he can find a job must lead to the undermining of our democracy. This is only the first step, but the second step, which follows close behind, is the right of the Government to determine where the individual should work, and to shift the employee from job to job. We cannot welcome this possibility, because such regimentation, domination, and interference with the individual's activities must shatter and destroy our highly prized freedom. Consequently, the right to work and to do such acts as the individual may judge best for his interest, consistent with the equal rights of others, must be upheld as being an essential element of that liberty that we claim as our birthright.

Lincoln Day Address at Colorado Springs by Hon. Edward Martin, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, February 21, 1949

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Lincoln Day address delivered by the Senator from Pennsylvania [Mr. MARTIN] at a Lincoln's Birthday celebration held under the auspices of the Colorado Republican State Central Committee at Colorado Springs, Colo., on February 10, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I appreciate more than I can tell you the great honor of being invited here tonight.

I am sincerely grateful for this opportunity to pay another visit to the great and beautiful State of Colorado.

Colorado represents in full measure the courageous spirit of America. You are rightfully proud of the romantic history of the Old West. You have inherited the pioneer traditions of self-reliance, hard work and thrift.

By your own courage, energy and industry you have built a grand State that looks forward with full confidence to greater progress and increasing prosperity in the years ahead.

It has been my happy privilege to serve as a Member of the Senate Finance Committee under the chairmanship of your able and distinguished United States Senator EUGENE MILLIKIN. He is not only a great Senator but a great American patriot who has given many years of magnificent service to our country as a soldier and as a statesman. His sound judgment and his high sense of public duty are needed in Washington to continue to advance the welfare of our Nation. Colorado is indeed fortunate to be represented in the Senate of the United States by a man of such outstanding ability.

Although we are not of the same political party, I am glad to express my admiration and regard for ED JOHNSON as a public servant of unquestioned integrity and high character. It will be a real pleasure to continue in the Eighty-first Congress the pleasant association which I enjoyed in the last session with GENE MILLIKIN and ED JOHNSON.

We meet tonight to commemorate the greatness of Abraham Lincoln, first Republican President of the United States and one of the outstanding figures of world history.

We honor his memory in praise and gratitude and in reverent recognition of his service to America and mankind.

The glorious story of his life and his steadfast devotion to the Union will everlastingly inspire Americans to greater love of country and more intense allegiance to the principles for which he lived.

More than any other man in American history, Abraham Lincoln knew the real meaning of Americanism. The story of his humble birth and early struggles are known to all. He knew the hardships and suffering of pioneer life on the rough frontier. He experienced defeat, disappointment, and discouragement.

But he never lost faith. He held firmly to faith in himself, faith in the people and faith in God.

Perhaps the outstanding characteristic in Lincoln's makeup was his undeviating faith in the capacity of a free people to govern themselves.

He realized that the people might be led astray for a time by false hopes and false promises. But he was firm in his belief that the good judgment of the American people and their love of freedom would lead them, in the end, to the right decisions.

Lincoln did not promise an easy way of life. He did not offer security from the cradle to the grave. He had the courage to stand by what he believed to be right—even though it did not attract votes or popular acclaim. He did not compromise principle for expediency.

Today, as in Lincoln's time, America's greatest need is faith in the fundamental truths that have given our people a greater measure of individual freedom than has been enjoyed by any people since the world began.

As we consider the problems confronting America and the world today, we cannot escape the conclusion that we need a rededication to the principles of Lincoln. We must face the dangers to which we are exposed with the same courage and the same determination to follow the right that brought undying fame to the memory of the Great Emancipator.

Lincoln knew the vital importance of national strength—military strength, material strength, and spiritual strength. He knew that the greatest danger of American freedom was not from outside our borders but lurked within our midst.

He sounded a warning in his famous Cooper Union speech of February 27, 1860, when he said:

"At what point then is the danger to be expected? I answer, if it ever reaches us it must spring up among us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a Nation of free men we must live through all time or die by suicide."

My fellow Americans, if we remember and heed the warning of Abraham Lincoln, America will not die by suicide but will live through all time—a strong, free Nation of free men.

Let me repeat Lincoln's question:

"At what point, then, is the danger to be expected?"

The answer is given in the tragic fate of great nations that have gone down to destruction because they prized so-called security more highly than freedom.

In all history every nation where the people were deceived by promises that the government would supply more and more of their needs, freedom has been swept away by dictatorship, tyranny and misrule.

The history of advancing civilization from ancient times is a record of the struggle of mankind for freedom. Submission to the dictatorship of an all-powerful government in the false hope of security has always resulted in disaster.

Every forward step in human enlightenment, in higher standards of living, and in cultural development, has been achieved when men were spurred on by incentives that brought them a greater share of individual freedom.

The great victories of civilization were not won by men who placed personal safety and security first.

Let us review briefly the record of history.

In its days of glory, Rome enjoyed the highest standard of living then known to mankind. Rome was the center of freedom. As her victorious legions brought western Europe and northern Africa under the rule of the Roman Republic, freedom was extended to her colonies.

Then the leaders of Rome reached out for more power. The Republic became an empire. The people were placed under regimentation and control. At the same time they were assured that they would retain their ancient freedoms. The people were told they needed protection. A planned economy was instituted with absolute control over food, clothing, wages, and many activities of their daily lives.

The people were given the illusion that the paternalistic government, always concerned with their welfare, would confer blessings upon them that they could not achieve for themselves.

A huge bureaucracy was established to carry out the edicts of the central authority. The people gladly accepted the bread and circuses provided by the government. The more the people received the more they expected.

What was the outcome? Taxation rose to unprecedented heights. Initiative was destroyed. Production was crippled in industry and on the farms. Scarcity of food and goods brought on inflation. Poverty was created where once there was plenty.

The national treasury was empty despite the imposition of more exorbitant taxes.

Corruption in the servants of the government added to the general demoralization. Honor and justice became forgotten virtues.

Thus were brought into play the forces of evil which weakened the moral fiber of the Roman people beyond hope of recovery. History records that Rome, robbed of freedom and dignity, impoverished by economic collapse, was no longer able to defend itself against invaders who wrought its destruction.

Does not this recital bring to mind a pattern of government that is being presented today under the guise of liberalism?

Will future historians write a similar story about the decline and fall of our Republic?

The same pattern of concentration of power brought the downfall of the French empire of Napoleon III. It brought death, hunger, and despair to Germany under Hitler and to Italy under Mussolini.

Great Britain was once looked upon as the world's great stronghold of human rights and property rights. Now it is struggling in the grip of a socialistic government which is day by day increasing its power over the affairs of individuals.

Strengthened by American dollars taken from the earnings of the American worker and American industry, England has nationalized its coal, power and transportation industries, and is about to place iron and steel under government ownership and operation.

Once Great Britain proudly boasted that the sun never set upon its flag. Today many of its people are cold because the output of

its coal mines has been greatly reduced under nationalization.

Today many of the British people do not have sufficient food, even though all supplies have been placed under rigid governmental rationing.

Is England's socialistic course leading that once great nation along the road to demoralization and eventual destruction?

The heroes and patriots of the American revolution fought not for independence alone. They defied the mighty power and force of England because oppression by British rules threatened the liberty and personal freedom which was their most precious possession.

In erecting the structure of American freedom the founding fathers exerted every effort to protect the individual from oppressive control by government. The primary object of the Constitution they framed was to limit the power of the central government over the lives of freemen. The Bill of Rights was added in order to state explicitly the rights guaranteed by the Constitution.

Today we are confronted with proposals which, if adopted in their entirety, would defeat the principles of individual liberty to which the founders of our Nation were passionately devoted.

Many of these proposals and recommendations are based upon socialistic theories which have failed in every part of the world where they have been attempted.

In many instances the doctrine of control by the Federal Government is made palatable to the people by sugar-coating it as social legislation.

The promise of an easy way of life is held out to divert attention from the costs involved and the increased burden of taxation which must be imposed upon the people.

The hope of security is advanced to overshadow the greater boon of liberty and individual freedom under which all American progress has been achieved.

As I study the recent proposals of the President of the United States, I cannot escape recalling the stern warnings that have come down to us through the ages. The lessons of history and what we have seen of dictator governments in recent years should make us resist with all our strength every move in that direction.

As Americans and as Republicans we must impress upon all of our people the fact that when government increases its power to do things for people it also increases its power to do things to people.

Too much government, too much dependence on government, and government that gives no heed to the cost are the milestones along the road to a socialistic pattern of government. The end result is always the same. The government becomes supreme. Individual initiative, thrift, opportunity, industry, savings, and freedom are wiped out.

Lincoln's great task was the preservation of the Union. The great duty before us is to preserve individual freedom by safeguarding the right of every American to live his own life free from strangling control and regulation by government.

Only by maintaining America's strength can those objectives be achieved.

We are now gravely concerned with national defense and the threat to peace in the world. We have embarked on the expenditure of vast sums of money to assure adequate protection of our homes and our independence.

We are determined that America shall be so strong that no aggressor nation will dare threaten our safety or our national security.

We are committed to a tremendous outpouring of our wealth and resources to bring peace and freedom to people in many lands who live under the threat of disaster and enslavement.

Can we at the same time fail to realize that our treasure chest is not inexhaustible? Can we continue to consume our substance in excessive taxation and Government spending that gives no thought to the inevitable day of reckoning?

Recent campaign promises and President Truman's state of the Union speech give emphasis to the statement made by John Stuart Mill many years ago. That great economist said:

"It is the art of the demagog to tempt people into idleness by promising them a share in a fictitious hoard lying in an imaginary government strong box supposed to contain all national wealth."

The President has proposed a budget of $42,000,000,000, the biggest peacetime budget in all history. But that figure alone does not give the American people a true picture of the magnitude of the proposed public spending which must steadily increase in each succeeding year.

The President has asked Congress to approve 15 new domestic programs to be financed out of general tax funds. In addition he has asked for three new or expanded so-called social-welfare programs to be financed by pay-roll deductions.

Experts have estimated that when these programs are in full bloom, they will add to the Nation's permanent tax burden a minimum of $14,800,000,000 and will require an annual budget in excess of $56,000,000,000.

The same experts say that these programs could reach a maximum cost of $42,700,000,000 a year, if all the objectives of those promoting the programs are realized.

If we add that staggering sum to the present already swollen budget we would have an annual tax burden of $84,000,000,000.

These are shocking figures. They cannot fail to alarm every American who is concerned with the future of our country and the welfare of his family.

We cannot undertake all of these constantly increasing expenditures without rushing headlong into state socialism and national bankruptcy. That would mean the loss of all freedom and the destruction of our Republic. It would be disastrous to us and to the free world that is now depending upon our leadership for guidance and assistance.

It would expose the United States and all we hold sacred to the same cancerous condition that resulted in the death of Roman civilization and in the downfall of every other nation that adopted the Socialistic system.

I do not mean to imply that sound progress should be checked. But I do say that we must search our souls and give honest, conscientious answers to these four questions when considering every piece of proposed legislation:

1. Is it right?
2. Will it work?
3. Is it for the benefit of all the people?
4. Can we afford it?

I am sure the wisdom of Abraham Lincoln would have rejected every proposal upon which he could not answer these questions in the affirmative.

There is wise counsel in the statement Lincoln made in 1863, in which he said:

"I hope to stand firm enough not to go backward and yet not go forward fast enough to wreck the country's cause."

In conclusion I would like to read another quotation from Abraham Lincoln which is appropriate to the problems of the present day. Lincoln said:

"If we do not make common cause to save the good old ship of the Union on this voyage, nobody will have a chance to pilot her on another voyage."

I need not point out to this audience that the ship of state is now embarked on a voyage fraught with peril. Its precious cargo is the freedom of the individual. The survival of the American Republic and the future of the world depends upon its safe deliverance.

Let us, in the words of Lincoln, "here highly resolve" that our ship of state shall be guided, now as in the past, by our sacred charter of freedom, the Constitution of the United States.

Let us make common cause in renewed allegiance to the principles which made us a great nation. In no other way can we make sure that our ship of state will not be wrecked on the rocks of socialism, fascism, communism, or any other philosophy that corrupts and destroys the God given rights of freemen.

Lincoln Day Address at Oklahoma City by Hon. Edward Martin, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, February 21, 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Lincoln Day address delivered by the distinguished Senator from Pennsylvania [Mr. MARTIN] at a Lincoln Day dinner held under the auspices of the Oklahoma Republican State central committee at Oklahoma City, Okla., on February 11, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You have conferred a great honor upon me by your invitation to address this Lincoln Day celebration.

It is a real pleasure to return for another visit to Oklahoma. I recall with deep gratitude the splendid hospitality extended by your former Governor, now Senator BOB KERR, and the State of Oklahoma to the governors' conference which I attended as Governor of Pennsylvania in 1946.

The romantic story of Oklahoma and its progress to greatness is a thrilling record of real Americanism.

The men who made frontier history in your early days were men of courage, vigor, and determination.

Pioneer life was hard but the difficulties faced by the early settlers did not discourage their faith in the future.

America is proud that Oklahoma has made greater material and cultural advance in a shorter time than any other comparable area in the world.

The marvelous development of oil in your State links Oklahoma with my own State of Pennsylvania where the first oil well was drilled in 1859.

From those Pennsylvania fields, which are still producing the world famous Pennsylvania grade crude, came the men with the know-how who helped Oklahoma in the beginnings of its rich oil industry.

Oklahoma has produced many great Americans.

I want to pause for a moment to pay my respects to my former colleague, a distinguished Oklahoma statesman, whose sturdy independence and stalwart Americanism has been an inspiration to all who benefited from his wise counsel and patriotic guidance. I refer to my good friend, your former United States Senator, Ed Moore.

It is an honor and a privilege to have been associated with him in the Senate.

In reviewing the greatness of Abraham Lincoln we are reminded that his life was one of toil and struggle, self-reliance, humility, and faith in God.

Those qualities, combined with his tolerance, his sound common sense and his loyalty to American ideals exemplify the spirit and courage of the American way of life.

He truly believed in freedom—in the right of every American to work and prosper—to establish his own security by industry and thrift—to make a better life for himself and his children through his own initiative and energy.

One hundred years ago he expounded a principal of government to which the Republican Party has adhered ever since.

In a speech of July 1, 1854, he said:

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves in their separate and individual capacities. In all that the people can do as well for themselves, government ought not to interfere."

Lincoln recognized that interference by government in the lives of its citizens was an encroachment upon individual liberty and a barrier to opportunity.

In recent years we have seen the extent to which government has interfered and the evils that have resulted. We have been led into a time of grave danger by oppressive taxation, extravagant and wasteful spending by government, deficit financing and a staggering national debt.

We have allowed the cost of government to grow and grow, year by year, until we are consuming nearly one-third of our national income just to govern ourselves.

What is the reason for this? Have the American people lost their capacity for self-government? Must cost of government be so great as to endanger our national existence?

Must peacetime taxation placed upon our people be so burdensome as to destroy all incentive for industrial growth and economic progress?

Must the people give up to government such a large share of their earnings that they are deprived of all opportunity to get ahead?

The greatness of America was not built by Government spending. It was not created in legislative halls. It was not produced by the enactment of laws which led people to believe they were getting something for nothing.

The greatness of America is ours to enjoy because of the toil and sweat, and the inventive genius of generations of courageous, industrious, self-reliant Americans. They were willing to work and sacrifice and save to build economic security for themselves, for their families, for their communities and their country.

They knew the value of thrift. They did not look to government for aid when the going was rough. They worked harder. And they saved a portion of their earnings to risk in productive enterprise. They cleared our forests. They developed our natural resources. They invested in business, in factories, in farms. They provided employment for others.

From the earliest days of our Republic, these men, with the extra dollar they put aside from their earnings, built our great cities, our great industries, our railroads.

With that extra dollar, they built our churches, our schools and colleges, our temples of art and music.

That extra dollar supported our charitable institutions and maintained our medical and scientific foundations.

And that extra dollar has given America the highest standard of living in all the world.

What was there peculiar to America that enabled this young Republic in 170 years to reach a place of greatness unparalleled in the history of the world.

What unique quality did Americans possess that gave them advantages over older and more advanced nations when we won our independence?

That quality was freedom of the individual—freedom of opportunity—freedom to strive, safeguarded in the sacred rights of life, liberty and the pursuit of happiness.

Individual freedom is the keystone in the structure of the American way of life.

Just as Lincoln preserved the Union so must we dedicate ourselves to the preservation of individual freedom without which private enterprise cannot flourish but must wither and die.

Taxation which dries up the sources of venture capital destroys individual freedom which is the birthright of every generation. It robs our young people of the boundless opportunities which the American system offered to generations of the past.

If, through indifference or recklessness, we fail to keep open the avenues of opportunity for every boy and girl we will betray our sacred trust. America will no longer be the stronghold of freedom. Individual liberty will be lost.

The time has come when we must abandon the easy going attitude toward needless and wasteful government spending.

Of course, the essential programs of national defense must be strengthened. Our commitments to restore economic stability to lands threatened with disaster and enslavement must be met. Essential domestic services must be maintained.

But no matter how attractive or how desirable spending proposals are made to appear we must first decide whether we can afford them.

The budget offered by President Truman calls for the expenditure of nearly $42,000,000,000 during the next fiscal year.

He has asked Congress to approve and to provide the funds for 15 new domestic programs to be financed out of general tax funds. In addition he has asked for three new or expanded so-called social-welfare programs to be financed by pay-roll deductions.

He has proposed that an additional load of $4,000,000,000 be added to the tax burden of the people.

It must be remembered, however, that many of these new spending proposals are of the foot-in-the-door variety, opening the way to vastly increased expenditures when they are in full swing.

It has been estimated by experts that the minimum cost of these new projects, when they are in full operation, will shoot the Federal tax bill above $56,000,000,000. It has been estimated also that if all the objectives of those promoting the new programs are realized the added cost could reach the staggering figure of $42,700,000,000 a year, or an annual tax burden of $84,000,000,000. That would be double the tax bill we are paying today.

Those figures should make every American shudder. They are frightening. If we fail to check the trend toward unlimited spending now, we may never have another chance.

The present national income of $210,000,000,000 a year, great as it is, cannot sustain a spending program of such vast proportions.

Furthermore, no one, whether an average citizen or an expert economist, expects that we will go on year after year with a national income as large as at present.

When the inevitable drop comes disaster will loom over us.

Even if the national income should drop, let us say, to $175,000,000,000, the loss of Federal revenue would throw the present budget out of balance by at least ten to twelve billion dollars. We would be forced into deficit financing and instead of reducing the present national debt of $252,000,000,000 we would go deeper and deeper into debt.

All experience has shown that once a new governmental function is undertaken it is impossible to stop it or even restrict its expansion into wider fields and higher cost.

I regret that it has become necessary to paint such a gloomy picture. But, ladies and gentlemen, I am gravely concerned, just as you are, with the future of our children and our grandchildren and the perpetuation of America as a land of freedom and opportunity.

The writings and utterances of Abraham Lincoln have a significant bearing on the problems of today.

The background of his humble birth and his early struggles gave him a clear insight into the vital importance of maintaining the freedom which gives equal opportunity to all. Let me quote from his remarks made to a regiment of soldiers after he had reviewed them in Washington. Lincoln said:

"I happen temporarily to occupy this big White House. I am a living witness that anyone of your children may look to come here, as my father's child has. It is in order that each one of you may have, through this free government which we have enjoyed, an open field and a fair chance * * * that the struggle should be maintained, that we may not lose our birthright."

Turning once more to the wisdom of Lincoln, I would like to quote from a speech he made in March 1864, when he said:

"That some should be rich shows that others may become rich, and hence is just encouragement to industry and enterprise. Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example, assuring that his own shall be safe from violence when built."

Discussing the dangers of excessive national debt in a paper addressed to the people of Illinois he wrote:

"Coming expenditures must be met, and the present debt must be paid; and money cannot always be borrowed for these objects. The system of loans is but temporary in its nature, and must soon explode. It is a system not only ruinous while it lasts but one that must soon fail and leave us destitute. As an individual who lives by borrowing soon finds his original means devoured by interest, and next, no one left to borrow from, so must it be with government."

We honor Lincoln tonight as a leader in world progress and as a benefactor of mankind. We honor him as a great statesman of clear vision and deep understanding of real Americanism, whose great achievement was the preservation of the Union.

We honor him as one of the founders of the Republican Party and the first Republican President of the United States.

Principle was paramount in his political activity. In his famous Cooper Union speech in New York he said:

"Let us have faith that right makes might; and in that faith let us to the end dare to do our duty as we understand it."

Our duty as Americans and as Republicans is clearly defined. It is to save our Nation from the course which must inevitably lead to bankruptcy and disaster.

The Republican Party must be a fighting party. We must have the courage to battle for the fundamental principles enunciated by the founding fathers in the Declaration of Independence, the Constitution, and the Bill of Rights.

We must talk fearlessly about the folly of a domestic program that teaches people to depend upon government for all the good things of life.

We must constantly warn against the dangers of a fiscal policy that deceives people into thinking that what they receive from the Government costs them nothing.

We must call forcefully to the attention of the people the shameful outcome of a foreign policy which has placed millions of people in Europe and Asia under the tyranny of Soviet Russia.

We must place where it properly belongs full responsibility for the secret agreements which betrayed free nations into communistic enslavement.

We must point out, so all may understand, the fallacy of spending billions of dollars to prop up western Europe while we leave the back door wide open for Communist domination over 450,000,000 helpless people in China.

We must fight here at home against the drift into a socialistic pattern of government because that system has brought death and destruction to every country where it has been attempted.

We must enlist all who love our country, regardless of political affiliation, in a great crusade to save America.

We need Americans who will place themselves, like Lincoln, above sectionalism, class, creed, and personal advantage and will be for those things which make America a stronger and greater country based upon justice and right.

We need Americans who will not be bribed by the promise of selfish advantage or special privilege.

If America is to continue to be the country planned by the founding fathers, every action must be based upon justice and right.

That was Lincoln's way. Let us, in the words of Lincoln, "here highly resolve" to make it our way.

Good Highways Promoters of Good Will

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1949

Mr. ANDERSON. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Good Highways Promoters of Good Will," delivered by my distinguished colleague [Mr. CHAVEZ] before the American Road Builders Association Conference and Forty-sixth annual meeting in Washington, D. C., on February 9, 1949.

There being no objection, the address was ordered to be printed in the RECORD as follows:

It is always a real pleasure to address an American Road Builders meeting or convention and it is especially an honor for me to address the Pan American delegation to the conference.

The fine work that the Pan American Division is doing has never been given sufficient attention. What the division is doing in fostering friendly inter-American relations deserves more credit and praise. The program outlined by your president, Ing. Rene Pulido y Morales, of the Public Works Ministry of Cuba, cannot be overexaggerated. When men can get together on a subject of common interest, friendly relations are established. Road builders are ambassadors of good will.

I take special interest in Latin-American affairs, perhaps because I am of Spanish ancestry, but principally because I believe that a strong union of western hemisphere nations is the surest means of promoting international peace today. If our countries are strong industrially, economically, and politically, we can assure peace for the world because none will dare attack us.

When I first came to Congress in 1931, there was no such thing as a good-neighbor policy. I was convinced that the big-stick policy and dollar diplomacy was outmoded and above all a menace to Inter-American understanding and amity. So when President Roosevelt and his great Secretary of State, Cordell Hull, initiated the good-neighbor policy I welcomed and encouraged it in every way I could; and then even as now, I felt that highway construction was one of the surest means of creating international understanding and good will. A network of roads, radio, telegraph, and telephone, if developed throughout the hemisphere on a scale comparable to that attained in the United States would constitute sinews of steel linking our countries in indissoluble union.

We applaud the daring and statesmanship exhibited by our President in his inauguration address. Last week I talked with the President on the general subject of highways, public works and flood control. I found him vitally concerned not only with the highway construction program of our country, but most deeply interested in the development of avenues of communication throughout the world. He has a high regard for your organization and he told me that he has often attended your conventions.

Last July in Chicago I had the honor and privilege of addressing the representatives of your international division. I believe some 1500 enthusiastic representatives of foreign countries attended that convention. My address outlined relation of Congress to the general highway construction program. I attempted at that time to praise your association for the work it is accomplishing in the international field. I can assure you that your executive secretary, Charlie Upham, is known and respected in engineering circles throughout the world. Through his sponsorship and that of the President and Secretary of the Pan American Division, American road building techniques are being made familiar to the world.

Last December I visited Brazil, Argentina, Chile, and Uruguay. Your association is recognized and respected in every country. The engineers and technicians with whom I have come in contact are vitally interested in our new engineering techniques. They are anxious to obtain for their countries the latest machinery developed during the recent years. For example, I was truly surprised in Brazil when a local engineer told me about the miracle highway constructed on Guam in 60 days during the war by the Sea-bees. South American engineers whom I met on my recent visit want to learn the know-how that made that highway possible.

Road builders appreciate more than most people what good highways really mean. The greatness of the Roman Empire can be attributed in no small measure to a highly organized and efficient highway system which they developed. The Phoenician Empire was based on avenues of communication established by well charted sea lanes. A study of all of the great civilizations of the past will convince one that if the civilization was advanced there were always highly organized systems of communication. The Inca culture was based on a highway system which had no equal in the entire world. It extended for thousands of miles in South America. When Cortes landed at Vera Cruz the news of his arrival was conveyed to Montezuma in 2 days. The Aztec runners used a highway which, from an engineering standpoint, was comparable to the best highways built today. In contrast, when highways were absent, the cultural level of the civilization has always been low.

In Chicago last year at your convention I described the sad plight of the Navajo Indians in New Mexico and Arizona and the situation is so much in point that I am repeating the story today. Dr. George Sanchez, of the University of Texas, and one of the leading educational authorities in our country, made a special study of the Navajo Indians. One would expect that an educator would recommend the construction of schools and the employment of teachers, but Dr. Sanchez said the way to solve the problem was first to build roads. Culture, industry, and prosperity would follow if the Navajo only had modern avenues of communication.

We in the United States take highways and roads too much for granted. For example, I live in Albuquerque, N. Mex., a distance of some 2,000 miles. I can drive there without pushing in 4 days. Twenty years ago that trip would have taken a week. Last week the son of a former Senator from Tennessee, Luke Lea, Jr., told me that in 1920 he and his father took a trip from Nashville to Asheville by motor car. It took them 4 days. Today the same trip can be made in 4 hours.

The social and economic advances that this country has attained are attributable principally to our modern system of communication. Some analysts insist that the remarkable growth of New York City is due to its geographical position. However, authorities on transportation inform me that the growth of New York is the result of its cheap and efficient subway and surface transportation systems.

Telling road builders that highway construction is important is like trying to convince the directors of a bank that their mission in life is to make money. Your Pan American division, however, is more aware of the need of highways than even the parent organization. We know that highways bring prosperity, encourage industrialization, and bring about elevated standards of living and assure political and economic security. In our hemisphere a casual study of the highway systems should be sufficient to convince us that much remains to be done if we are to launch a really effective highway construction program. The American Road Builders Association and your division should take the lead in developing such a program. International good feeling and the promotion of peace are objectives worthy of our greatest efforts. I am convinced that highways bring good feelings because I saw what happened when the Laredo, Tex.-Mexico City portion of the Inter-American Highway was constructed. Years ago the average Texan was suspicious and prejudiced of things Mexican. Today, when a trip to Mexico City and Monterrey can be undertaken over a week end, prejudices are fast disappearing.

President Truman's inaugural address is one of the most significant public statements pronounced in years. His global plans for assisting backward areas have commanded the attention and endorsement of the world. Americans unanimously praised and approved it, but I cannot help but feel that for once we might be a little selfish and perhaps confine some of that help to develop the highway systems of our own hemisphere first.

I recall so well during the war the reluctance of the War Department to undertake the completion of the Inter-American Highway to Panama. The military could not see the advisability of diverting machinery and equipment to that task, but when the submarine menace grew intense the Department finally undertook the completion of the highway. Since the war's end construction has lagged, but the necessity of an all-weather highway to the Panama Canal should be apparent to everyone. I am not an alarmist and, frankly, I don't feel that at this time the Soviet Union menaces our national security. However, I cannot close my eyes to the possibility of our relations growing worse and in the event of war we will surely have to contend with her

undersea fleet which she is building with the assistance of German technicians.

The average layman looks at highways and roads from a tourist point of view; but from a security standpoint, and without being military experts, would we all not feel more secure if, in addition to the sea lanes which we control, we had an all-weather highway to the Panama Canal and to Alaska?

The thought struck me, when I heard President Truman outline his fourth point, of how much good has resulted from the construction of the portions of the Inter-American Highway built during the war. Vital goods and raw materials which were absolutely essential for the continuance of the war effort would not have been utilized had these highways not been constructed.

I am enthusiastic about highways because I am convinced that if we had a highway system through the hemisphere like that which we possess in the United States, Latin-American living standards would be equally as advanced. I heartily recommend that you do everything on your part in developing this program.

Great progress has been made. The educational program initiated in 1946 by your association, the United States Department of State, and the Public Roads Administration had truly remarkable results. Of the twenty-two engineers brought to this country from Latin America to be trained by the State highway departments, by the Public Roads Administration, and by the machinery manufacturers, three have become ministers of public works in their countries; seven have become directors of highways; and three have become directors in engineering and highway construction organizations. That was the good-neighbor policy in high gear. We need more of the same medicine.

Our hemisphere is rich in raw materials and manpower. Our security would be more secure if a highway system as extensive and as efficient as that which we have in the United States today existed in both North and South America. We would be eminently more powerful today if we had better highways. This is a matter of policy. Public policy is not administered by road builders, but road builders can take the lead in influencing the fashioners of policy.

One of the principal points of contention affecting our relations with our Latin American neighbors is the failure of our country to furnish machinery and building supplies with which to build highways. Quotas established by manufacturers and Government Departments are based on 1938 requirements, and not on 1949 demands. The highway now being constructed by Mexico from Juarez to Mexico City has been delayed 50 percent by the failure of the United States to furnish Mexico with essential materials and machinery.

Your association can contribute vital impetus to the good-neighbor policy by urging Congress, the administration, and American manufacturers to increase quotas of machinery and construction supplies. The education program, which I mentioned a few moments ago, must be revived. I am sure that you will find the American Congress receptive to the initiation of such a program. Cooperation of your associations, the Public Roads Administration, and Congress is needed to launch the program.

In closing I would like to call attention to the really novel program conceived by a good friend of Latin America. My good friend Dr. Axel Wenner-Gren is an international figure of much repute. I have followed his career with interest. I knew him to be a close friend of the former President of Mexico, Manuel Avila Camacho, and his brother, Maximino. Dr. Wenner-Gren has invested vast sums in Latin America and he feels, as we all do, that the defense of Christian ideals and western European principles will ultimately depend on the power of the civilization which we are developing in the Western Hemisphere. He sees South, Central, and North America as the last bastion of democracy, and he feels that the development of a highly efficient highway system is our most pressing problem. It is his thought that private capital associated with international banking institutions should finance and promote the organization of regional corporations for the construction of international highways and other communication mediums. He envisions a corporate structure like the Tri-Borough Bridge Authority. In other words, just as neighboring States can get together and organize semigovernmental institutions for the construction of bridges and highways, nations in the Western Hemisphere can do likewise. Neighboring countries can organize authorities on a strictly sound banking basis and build highways which we so badly need. I have informed Dr. Wenner-Gren that the Public Works Committee of the Senate would be delighted to have his views on such a project.

In closing I offer you my sincerest congratulations for your splendid efforts in the international field. The friends you are making are insurance for the future. Keep up the good work. I thank Mr. Upham, Mr. Keefe, and Ingeniero Pulido for the opportunity of addressing you.

The Struggle for Hebrew Liberation

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1949

Mr. MAGNUSON. Mr. President, on February 13, I had the pleasure of participating in the ceremonies of the American League for a Free Palestine in New York City, where a farewell send-off was staged at the Waldorf-Astoria for two valiant Hebrew patriots, Mr. Peter Bergson and Mr. Samuel Merlin. Both of these men, who, during several long years of exile from Palestine, worked to arouse American public opinion, were elected to the Constituent Assembly of Israel.

On this occasion some of America's most notable champions of freedom were gathered. Among those present were the distinguished Under Secretary of the Interior, the Honorable Oscar L. Chapman; Judge William S. Bennet, head of the Sons of the American Revolution; the great playwright, Ben Hecht; and the eminent short-story writer, Konrad Bercovici; the great artist, Arthur Szyk; Mr. Will Rogers, Jr.; Elliott Roosevelt; Paul O'Dwyer; and many other figures from public life and from the world of arts and letters.

The spirit of the occasion was most eloquently voiced by a man who, as president of the American League for a Free Palestine, dedicated several years of his time and wisdom to awaken America to the just cause of Hebrew liberation.

I ask unanimous consent to have printed in the RECORD the address delivered by this outstanding leader in the cause of freedom, our eminent colleague the Senator from Iowa [Mr. GILLETTE], whose words expressed the full meaning of this memorable occasion.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are here today to bid farewell to two friends about to take their seats as elected representatives of the Hebrew people in the Constituent Assembly of Israel. I think this is a fitting occasion to review one phase of the struggle for Hebrew liberation in which some of us here in America were privileged to be associated with that group of Hebrew patriots whom Mr. Bergson and Mr. Merlin so well personify.

In 1940, a small group of Palestinians who went into voluntary exile because they considered their country, Palestine, as an oppressed nation under foreign occupation, came to the United States in order to present to America the case for the Hebrew people and to enlist support among Americans for the Hebrew liberation struggle. It was not an easy task. And today even, it is difficult to realize how great the obstacles were. Today when Israel is a topic for daily reports and articles in the American press, when almost every American newspaper and press agency has special correspondents in Tel Aviv, it sounds almost incredible that in 1940 one could scan any American daily from cover to cover without finding a single line referring to Palestine and to the national aspirations of the Hebrew people. It is one of the great historical achievements of our honored guests who have put Palestine on the map both here in the United States and in the world at large and thus made an immense contribution toward the advancement of the cause of the restoration of Hebrew freedom and independence.

But it was not only a conspiracy of silence that these pioneers of Hebrew freedom had to overcome. No sooner had they made their plans known than active opposition appeared from numerous quarters, opposition which sprang from the fountainhead of British propaganda in this country and which, I am sorry to say, was not always characterized by strict adherence to the rules of fair play. If only an infinitesimal part of all the malicious and libelous statements about the Hebrew Committee on National Liberation and the American League for a Free Palestine that were published in this country were true, Bergson and Merlin instead of taking up their seats in the Constituent Assembly should have landed in the dock of a criminal court and indeed all of us who gave them some measure of support and encouragement should have been there with them. But history fortunately is not made by sensational headlines and misleading or misled propaganda. The very fact of the existence of Israel and the role which Bergson and Merlin, together with other members of the Hebrew Committee for National Liberation and of the Irgun Zvai Leumi with whom they were intimately connected, are being called to play in the shaping of its future is sufficient vindication of the nobility of their purpose and the greatness of their achievement. I know that many among those who took it upon themselves in the critical days of the Hebrew fight for survival and liberation to label noble patriots as terrorists and gangsters and hoodlums are now ashamed of their reckless action and would like very much to bury the past. I will not dwell any longer on this painful aspect of the fight that was so brilliantly won by the great courage and devotion and the combined efforts of the patriots in Palestine and their friends in the United States, and the international political arena.

How well the task of the American League has been accomplished may now be estimated. Today, with half a million members, the league can look back on its basic program. We called for the three R's of the Hebrew revolution—resistance, repatriation, and recognition. The resistance won, driving out

the British and creating the groundwork for the victorious army of Israel; the repatriation—not illegal immigration—of the Hebrew people to their homeland is now proceeding, perhaps not at the pace some of us would like, but we all can continue to help in this so that the Hebrew DP problem may be truly solved by Israel this year. And recognition—the cornerstone of the Hebrew Committee of National Liberation's program has been won. What has been achieved has been a beginning—not a final victory, but a glorious beginning.

Those of us in the United States who backed the Hebrew liberation fight, and I am glad to say that they were counted in the hundreds of thousands in all walks of life, of all creeds and persuasions, were motivated first and foremost by a sincere and deep conviction that this was a fight for a righteous cause, a fight of a people which for nearly 2,000 years suffered martyrdom and persecution and yet refused to acknowledge defeat or to give up the hope for a rebirth of freedom and independence. They were inspired by that fundamental American love of liberty and abhorrence of tyranny in any form and in any place on God's earth. They were inspired by that great American tradition which was handed down to us by the founding fathers and the great heroes of the American Revolution. They joined the Hebrew liberation struggle because deep in their hearts they felt that this was a historical repetition of the great revolutionary struggle which was fought by our own Washington, Jefferson, and Hamilton. But there was more to it.

We backed the Hebrew liberation fight because we were resolved to solve a complex age-old problem which had become a sore on the body politic of the entire world and which was a serious stumbling stone on the path toward a peaceful world for which, in the past generation, we have fought two great wars. A free independent Palestine and a free Hebrew nation were to be the ultimate solution of that vexing Jewish problem. Not a symbolic or token solution, but a practical solution that would give normalcy and security to the Hebrew people and thereby contribute toward the establishment of world peace. This task i still far from achieved, for we must remember that it was not our intention to collect the individual components of the problem and to concentrate them in one place so that we might change the problem from one of individuals to one of a misfit state. As Israel's boundaries, its economic possibilities, and its relative position among the nations of the Middle East exist today, we have not a complete solution but, in many ways, a continuing problem. As matters stand in the Middle East today, Israel could be, in many ways, an irritant rather than a contributing factor toward stabilization.

Perhaps the most fitting formulation of this as yet unachieved goal was given by President Truman in his statement of October 29, 1948, when he said that "it is my desire to help build in Palestine a strong, prosperous, free, and independent democratic state. It must be large enough, free enough, and strong enough to make its people self-supporting and secure."

This means that what has been accomplished in Palestine today must be treated only as a first phase in the establishment of a normal republic with adequate boundaries and with an economy which can validly serve the needs of its population without the outpourings of charity or subsidies. This means that there is still a considerable discrepancy between the goal set by the President of the United States and what some people and some governments would have us believe to be the ultimate and maximum that could be achieved. This discrepancy is not accidental. It is an outgrowth of the development of the role which American policy has played in the drama of Hebrew liberation. Regarding America's policy, I should like to present this simple history.

Our foreign policy in the Middle East can be divided into three phases, which can be characterized as, first, the phase where America subordinated our own to the British policy; second, the phase where we disassociate ourselves from the British and let them go their own way without United States backing; and the third, future phase, wherein we must take the lead and formulate a positive American foreign policy for the Middle East.

During the years of Mr. Bevin's tenure, which was characterized by an unprecedented, stubborn, and unjustifiable hostility toward the legitimate and internationally recognized national aspirations of the Hebrew people, the United States functioned for all intents and purposes as a tail for the British kite. In crass contradiction to numerous pious utterances in behalf of the Hebrew people, we as a government, too often condoned and even supported the actions of Mr. Bevin and his colleagues in the British Government which aimed at suppressing Hebrew freedom and at thwarting the efforts of the Hebrew people to achieve real independence. While the overwhelming majority of the American people and American public opinion gave generous support and encouragement to the Hebrew revolutionary war for independence, our official expression often seemed to back the British oppressor.

It was only recently that a more happy policy, a policy which promises to reflect the true sentiments of the American people has been initiated. The first step in this direction was made when we felt compelled to disassociate ourselves from the British. Indeed, the Anglo-Arab aggression in Israel had reached such a frenzy that we had to indicate clearly our serious disapproval and to leave what Mr. Churchill so aptly calls Bevin's "sulky war" against Israel, to be an exclusively British proposition. This shift in American policy at once showed gratifying results. Mr. Bevin, minus American support, no longer was able to persist in his vicious aggressiveness against Israel or to continue a policy which was not too popular even within his own labor party. The simple fact that we withdrew our blessing compelled Britain to recognize the Republic of Israel and to refrain from creating any further incidents that would endanger the present truce.

I must, however, warn here and now against undue optimism. Mr. Bevin, with whom I conferred in London in 1940 as head of a special mission of the American League for a free Palestine, is not a man to change overnight a policy of many years' standing. We must be realistic. What Mr. Bevin did should not be overestimated, he just recognized a hard fact that stared him in the face—that Israel was now a fact and not a hope only. There is no indication whatsoever that he gave up his attitude toward the Hebrew people or that he is reconciled to the necessity of giving the Hebrew people a chance and an opportunity to become what President Truman wants it to become—large enough, free enough, and strong enough to make its people self-supporting and secure.

In order to achieve this, American policy with regard to the Middle East must now enter a third phase. A positive constructive American policy for the Middle East must be formulated and implemented. Only such a policy will guarantee peace, justice, and progress in that vitally important region. Only such a policy, based on America's own interests, will bring to the fore these forces in the Middle East which favor democracy, human rights, and social and economic progress. Such a policy is needed at once.

Imperial colonialism which flourished on the fertile soil of medieval feudalism has been mortally wounded in the Middle East. A political vacuum now exists there. Politics abhors vacuum, and communism conceivably could move in, if we don't act swiftly and decisively. With the emergence of a free democratic republic in the present state of Israel, I feel confident that democracy has the advantage and that backed by a positive American program this new state will become the beachhead of progress and freedom in that entire area. I am confident that all those who so substantially helped the Hebrew people to victory in the first phase of its fight for freedom shall from now on devote themselves to the great task of furthering an American policy which will make that victory final and ultimate both in the interests of America and world democracy.

Address by Hon. Harold E. Stassen Before Pennsylvania Society

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Harold E. Stassen at the fiftieth anniversary dinner of the Pennsylvania Society, at New York City on December 11, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, president of a railroad named after one of the two greatest States in the Union, Your Excellency, Governor Duff; Mr. Chief Justice; Senator Pepper; Senator Martin; Senator Myers; distinguished guests, members of this remarkable Pennsylvania Society gathered on this golden anniversary: Speaking to you tonight I would like to tell you first of all of a vivid scene at the end of the war which I shall never forget.

It was in Japan. When the order to "Stop shooting" was received by Admiral Halsey off Tokyo, immediate action was taken to locate, assist, and liberate the prisoners of war held by Japan. The Japanese command was immediately directed to permit the prisoners of war to paint the letters "P. W." on the roofs of their camp buildings. The carrier planes were sent in to find the camps and radio back their location.

This information was relayed to the B–29's which then flew up with food, medical supplies, and clothing for the thousands of men who had been held under desperate conditions of imprisonment. Under Admiral Halsey's famous command, "Those are our boys—go and get them," the landing craft and hospital ships went on in advance of the surrender. The evacuation proceeded with speed. Then came word, relayed through the prison camps, that a large camp in the western part of Japan had not been located. It was cloud covered in the mountains and the pilots had been unable to see it. No mercy drops had been made. Conditions were desperate. The tension and suffering were extreme. But the message also said that the senior prisoner-of-war officer, a young American captain, had taken command with unbelievable courage and determination, had maintained discipline in the camp, had organized the systematic foraging of the countryside, had given orders to the Japanese, and had prevented disaster.

Of course, rescue was dispatched at once and soon American planes were landing on

the airfield near this camp in the mountains. The young American officer in command came out to meet us, lean and gaunt, but erect. I told him that I trusted he had heard that the ships were in Tokyo Bay, that emergency supplies were at hand, and that evacuation would proceed promptly. He looked straight at us, his lips quivered, tears streamed down his cheeks, but not a word came. Moments seemed like ages. Finally he said, "I'm sorry, Commander; you see, you are the first free man I've seen for 2 years. Freedom is so precious."

I will never forget that scene. I will never forget those words.

"Freedom is so precious." These simple words spoken in that dramatic scene have a tremendous meaning far beyond prisoner-of-war camps or time of war. They are the subject of my address to this distinguished audience of the Pennsylvania Society tonight.

And I am doubly pleased and proud that it is the occasion on which one of the truly great Americans, a truly distinguished Pennsylvanian, the Honorable Owen Roberts, is receiving your medal.

Freedom is so precious.

The underlying question which cuts across all of the international and domestic, social, economic, and political problems today, is whether or not man shall be free in the years ahead. As I see it, there are four principal dangers to the future freedom of men.

The first danger arises from those who sincerely love freedom, but believe that the way to preserve it is to give more and more and more power to do good to centralized government.

The second comes from those who sincerely love freedom, but believe that the way to preserve it is to stand still, to maintain the status quo, and to look backward.

The third originates with those who seek to destroy freedom by using freedom's openness as the avenue for subversion and sabotage.

The final threat is found in those who would destroy freedom by the use of aggressive military force.

The fourth of these dangers is the one most generally recognized. It clearly demands today that our country be strong and alert in its armed forces. It requires that our research be continuous, that our strategic thinking be modern. It demands that minimums of trained manpower be maintained. But it is of grave importance that the free men of the world recognize that freedom can be lost without a shot being fired. And also that strength for defense can be undermined through actions entirely nonmilitary in nature.

Is it not clear from the facts disclosed in Czechoslovakia, in France, in Canada, in Burma, that there is a world-wide network of agents of a foreign power, under direct orders to destroy the freedom of men? Does not this modern technique of assault require a modern defense. We should never abridge freedom of thought, or of speech, or of press. But this does not mean that we should permit organized, direct agents of a foreign power to operate legally as they endeavor to destroy those very freedoms that we hold so very precious.

I believe our thinking might be clearer if we analyze the question entirely apart from the fact that they bear the label of Communists and consider it solely on the basis that it is an organized set of agents of a foreign power whose objective is to destroy freedom. Viewed in that light, it seems to me it becomes mandatory that our laws should be modernized to protect our freedoms from those under direction of a foreign power who would sabotage and destroy our liberties, the liberty of free nations, including our own, from within.

I have also referred to the danger of the loss of freedom as the result of the decisions of those who sincerely love freedom, but who believe that the way to preserve it is to delegate great powers to centralized government. These are predominantly the Fabian Socialists. This is the course now being followed by England. The government has taken over the coal mines, the transportation systems, and is now proposing to take over the steel industry. I do not doubt 1 minute the sincerity of those who move upon this program. I am certain that they love freedom. We should continue to have a sympathetic interest. We should extend a helping hand to the people of this great country. But I do believe they are making a sad mistake by placing in government the extreme powers that go with the nationalization and control of basic industry. We who believe in freedom should speak out upon these basic subjects in the world.

Ladies and gentlemen, all of history shows that for every one time that great concentrations of power have been used wisely there have been a hundred times in which it has been abused. All of history shows that the greatest production and the highest standards of living have come under decentralized and private ownership and management.

Even this year, nationalized British coal mines, with the whole weight of British Government seeking to bring up production, are mining only 200,000,000 tons, compared to a 10-year average before the war of 220,000,000 tons. On the other hand, British steel under private ownership produced 15,000,000 tons in 1948, compared to a 10-year average before the war of 12,000,000 tons, or an increase of over 20 percent.

It is my further view that the lack of decentralized management and initiative becomes progressively more severe as the cumulative effects of governmental supervision are felt. Granted the parallels are not complete, I do report to you that the lack of management attitude and ability and the contrary routine, stagnant following of a 5-year plan imposed from above, is the most striking observation in the low production in the industries of Russia.

I earnestly hope that the recognition will soon come that economic freedoms are inseparable from social and political freedoms and the trend toward centralized government-operated economics will be stopped. Is it not clear that if men are not free to buy and to sell, to work and to produce, to fabricate and to mine, to trade and to profit on their own decisions, then the other liberties are in danger and are soon lost? It is the story from ancient Rome down to Europe in the wake of World War II. It is particularly evident in the Balkans and in Russia.

But, ladies and gentlemen, the point upon which I would give the greatest emphasis tonight is this: If we would preserve and expand the precious freedom of men, it is not enough that we be armed and alert, that we modernize our defense against sabotage, and that we oppose centralized-controlled economics. It is of even greater importance that within the framework of our Government and within the outlines of our free social and economic system we move and act and progress in the well-being of our people, in the humanitarian returns to all from our system, in the correction of shortcomings, and in the education of the youth of our land. In other words, the maintenance of freedom is not a static process. It must be a dynamic program of action.

Science moves with amazing speed in pushing back frontiers. We can split atoms and do strange things with neutrons and electrons directly related to that awesome force that was demonstrated in Nagasaki and Hiroshima. The world is constantly changing, and we must ever find the new answers to meet the new conditions. But we must do so in keeping with the fundamental concept of the nature of man, that he was meant to be free.

It is so obvious that if the founding fathers of America had been content to win freedom and then to stand still, freedom would have long since been lost. Instead at Philadelphia in 1787 they entered into a bold experiment of a new form of government. They developed new rules for the conduct of business and of labor and of the rights of citizens. They established new institutions of higher learning. The action of Benjamin Franklin and his associates in founding our University of Pennsylvania is a significant instance of this early purposeful pioneering. In later years the corporate device played a key role in the development of huge production and of vast trade, and all secured advantages from it. As the corporate power grew it was in turn wisely curbed through laws against monopoly and restraint of trade and by the development of minority rights.

The founding fathers did not refuse to give powers to government. But they did insist that those powers be specifically defined, that checks and balances be placed upon them, that the basic concept of the nature of man be maintained. Care was ever exercised that officials of government should not be given the authority to exercise whim and caprice over the individual citizen.

The same fundamental approach, it seems to me, is so important today. We should not block and obstruct all action by government upon the obvious problems of health and of education and of housing. Rather should we seek to have that action taken in accordance with the superb fundamental American traditions. The authority and action by government should be clearly defined. Blanket powers which could be used at the whim of administrators should be refused. Standards definite and clear should be set by the Congress.

If we demonstrate the alert, dynamic, and ingenious approach to the new problems that the early leadership of our country displayed, holding fast to the fundamental concepts which come from our religious basis, as to the nature of man, and as to the moral principles under which he should live, then I am confident that we will win the economic struggle against those who would destroy the freedom of men. We will also win the ideological struggle against those who would destroy the freedom of men. The prospects will then be bright that we will never need to win a grim struggle by military force. And, finally, by that course, we would insure that if a tragic military struggle ever came, we would win—we would win for that freedom—which is so precious.

Missouri Basin Power Program

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Missouri Basin Power Program," delivered by Assistant Secretary of the Interior William P. Warne before the Nebraska Reclamation Association annual meeting at Lincoln, Nebr., on February 10, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is indeed a pleasure to speak before this annual meeting of the Nebraska Reclamation

Association on the subject of the power development under the comprehensive Missouri Basin program.

The State and the Nebraska Reclamation Association have always been in the forefront of the fight for a comprehensive power, irrigation, and flood-control development for the waters of the Missouri River Basin. Since the early part of the century, Nebraskans have advocated reclamation developments. Your North Platte project was a pioneer private project that mothered the more extensive development that was made in the North Platte Valley under the Federal reclamation laws. Enders, one of the first of the great Missouri Basin project dams, was started on the Republican River in Nebraska, and there also was executed the first of the Missouri Basin repayment contracts, one between the Secretary of the Interior and the Frenchman-Cambridge irrigation district. Your State has been in the forefront of public power, and your public power agencies are now working out with Interior Department representatives the policies and program that will bring Missouri Basin power to Nebraska consumers.

Last year your State reclamation association adopted resolutions that were widely noted by all who were interested in water and power problems. Resolution No. 1 of your association last year expressed concern with the infiltration into local and national reclamation association of certain groups with special objectives not compatible with the best interests of reclamation water and power users. In response to that resolution and to similar expressions from other groups interested in reclamation, a rededication to the fundamentals of the reclamation movement has now been set in motion. These fundamentals are to secure for the enjoyment of the people the widespread distribution of the benefits of irrigation and power developments in order to prevent monopolization of the public's resources.

The second resolution of your 1948 meeting recognized the critical shortage of electrical energy. It reaffirmed your faith in power development as the partner of irrigation, and it pledged your support in cooperation between the public bodies of your State and the agencies of the Department of the Interior that handle Federal power projects. That resolution is indeed gratifying to all of us who, in the Government agencies, deal with the valuable and coveted electric power output from federally constructed dams. There has been progress in the cooperative work of the Nebraska public power agencies and the Bureau of Reclamation. I regret that since your 1948 meeting the power-supply situation has not improved, but, rather, that present and impending shortages of energy are intensified. The plants simply cannot be built fast enough to meet rising demand.

The Missouri Basin program of the Department of the Interior, coordinated with that of the Corps of Engineers, Department of the Army, was formulated with a view to generating as much electrical energy as possible to meet the requirements of Nebraska and other States of the basin. We need to remember the great scope of the integrated system that has been undertaken. Under the program that was adopted by the Congress in the Flood Control Act of 1944 all of the waters of the Missouri River and its tributaries, from the farthest reaches in northwestern Montana down to the juncture with the Mississippi, will be conserved and put to beneficial use through a series of reservoirs, power plants, transmission lines, irrigation facilities, canals, and navigable channels.

In order to assure those multiple purposes, and also to provide as needed flood control, silt retention, pollution abatement, municipal water supplies, recreation, and favorable habitat for fish and wildlife, the Federal, State, and local agencies that are concerned operate in a carefully coordinated system. In accordance with the basic statutory provision provided by the 1944 act, the Corps of Engineers is building the mainstem and certain tributary dams below Fort Peck in Montana, and will operate them for flood control and navigation. The Bureau of Reclamation is building the reservoirs on the upper reaches of the river and most of those on tributary streams, as well as the irrigation projects, and the electric power transmission lines. The Bureau of Reclamation through a single transmission backbone system will transmit and sell, with preference to cooperatives and public agencies and on a uniform rate schedule, all of the power generated in the entire project, including energy generated at Army dams as well as those constructed by the Bureau of Reclamation.

The comprehensive plan for the Missouri River Basin was adopted by the Congress, and it sets forth the objectives of the program, the works to be constructed, and the manner of financing and accounting for the expenditures and repayment. The program is formulated with a view to construction by the Bureau of Reclamation and the Corps of Engineers of all of the units described in Senate Document No. 191, as supplemented by the further engineering findings in Senate Document No. 247. Necessarily, the program contemplates that where appropriate, alternative reservoirs and other facilities may be substituted for units described in the plan, and additional features and developments may also be undertaken in furtherance of the objectives as set forth in Senate Document No. 191. Those physical aspects, although to a large extent accurately forecast in 1944, were subject, of course, to improvement by development of additional engineering and other physical data.

The principles of the Missouri Basin program as set forth in the basic documents do not change with the accumulation of additional engineering information. The works are constructed to bring about the full productive use of all of the natural resources in a manner that will best meet the needs of the region and that will make the maximum contribution to the people living there, as well as to improve navigation and provide flood protection. Among the brightest promises of the project are that it will minimize the impact of drought disasters in the livestock and dry-farming economy of the Great Plains and will promote sound urban and industrial development, as well as light the farm houses of States where rural electrification had lagged furthest behind.

The Bureau of Reclamation plans to build as rapidly as is feasible and as rapidly as funds are made available the major facilities under its jurisdiction for control and conservation of the waters of the Missouri Basin and its tributaries. Irrigation works and generating and transmission facilities are to be geared to the construction of the control and conservation works on which they are dependent. In establishing the priority for the construction of the irrigation and power facilities, a prime factor is the extent and manner in which such facilities will contribute to the over-all land use and economy of the northern Great Plains. Other factors include securing suitable geographical distribution, the desire of local people for construction, and, in the case of irrigation works, readiness to assume an appropriate share of the reimbursable construction costs. And, of course, consideration must be given year by year to national conditions that affect Federal budgetary policy, for in the Missouri Basin project we have undertaken a job so vast that it will be constantly a factor in national financial management.

The Congress approved the comprehensive Missouri Basin plan in 1944 on the basis of the showing then made of the national and local benefits. The cost of construction to fulfill the primary control and conservation functions of the program—that is, of the main regulatory reservoirs and associated facilities of the Missouri River and its tributaries—is not a burden on the water and power users. The Congress has, however, required of the Secretary of the Interior that, in connection with the construction of irrigation, municipal water and power facilities he provide for a return to the Treasury of an appropriate share of their construction costs. That fair share of the costs of construction, which does not include the portions properly assignable to nonreimbursable functions such as flood control and navigation, is determined on a basin-wide basis which seeks to equalize the payments throughout the basin, taking into consideration the benefits received. With respect to any given unit, the amount to be returned to the Treasury by irrigation and power is determined in relation to the direct benefits that are to be obtained from all units theretofore or thereafter constructed. Revenue from and returns for power produced at Missouri River dams constructed by the Corps of Engineers are included in these basin-wide determinations. In other words, the plan is one that is integrated in every respect.

Without the pooling of the cost of individual dams, power plants, and canals, and for divisions on a basin-wide basis among the benefits—flood control, navigation, irrigation, power, municipal water supply, etc.—for accounting and repayment purposes where the law requires repayment, only a part of the Missouri Basin program could have been undertaken. No adequate program for irrigation in the high-plains States that are so frequently drought stricken could have been devised with piecemeal plans and programs. Inaction and no progress in 50 years proved that. In contrast more than 120 dams and associated works are projected for construction under the adopted plan and more than 25 units are already under way. Almost 5,000,000 acres will receive irrigation water. A backbone transmission grid will reach from western Montana, where it will interconnect with the lines from power plants in the Columbia River Basin, through the Dakotas to southern terminals in Colorado, Nebraska, Kansas, and Iowa. That backbone grid will integrate the output of the mainstem dams at Garrison, Gavins Point, Fort Randall, with the generators at Canyon Ferry, Boysen, Kortes, and elsewhere throughout the basin, and it will interconnect with the Colorado-Big Thompson, Kendrick, and Fort Peck systems. The power generation capacity that thus will be linked into a single grid will ultimately be in excess of 2,500,000 kilowatts. This will become a mighty factor in the strengthening of the economy of the basin States. Computation cannot be completed until final costs are known, but Missouri Basin power prices are expected to put this energy in a relatively low-cost bracket.

In Nebraska high voltage transmission lines will initially be constructed to Ogallala, Columbus, and O'Neill. Other reclamation lines will bring power soon to the Omaha area and will extend into western Iowa. In order to meet the urgent power requirements of the southern portion of the Missouri Basin, the Bureau of Reclamation is investigating the possibilities of installing additional generating facilities on the Platte and other Nebraska rivers. We are also planning high voltage transmission lines that will bring Colorado-Big Thompson power into the western part of the State, thereby permitting substitution and transfer elsewhere of the power now moving westward.

Right here in the State of Nebraska you have a continuing problem of meeting power loads. Recently in my office representatives of one of your State power agencies reviewed with me that situation. Conservative estimate of power requirements revealed that future power demands will exceed the available supply, and even with the great power

plants of the Missouri River Basin we still will be scratching about for more kilowatts in the States along the Big Muddy. Through the years I have had so many times to answer assertions that some one of our great projects would find nothing but jack rabbits to use its power that I make a particular point here of the fact that we already foresee in the Missouri Basin the time when all of the power from this great project will be committed and more will be needed.

I am pleased to remind you that a good start has been made for distributing Missouri Basin power in Nebraska. Last September the Secretary of the Interior, after a series of conferences with representatives of all of the Nebraska State power agencies, issued a statement of policy regarding the purchase and distribution of federally generated power in Nebraska. That initial basic policy contemplates that the large State public power-distribution agencies will purchase power from the Government and they will distribute it to wholesale agencies, which in turn will sell the power to the ultimate consumer. It is our belief that such a system will result in a most efficient use of existing State-wide transmission and distribution facilities. It is now up to your public power organizations, the public power districts, and he REA's to work out arrangements among themselves so as to be able to inform the Secretary of the Interior how the policy that was formulated in the preliminary conferences can best be adapted to your local requirements.

I have sketched for you a broad outline of the structure of the Missouri Basin program. You will want to know also the progress to date in accomplishing our purposes. One hundred million dollars have already been appropriated to the Department of the Interior for the Missouri River development program. With these funds construction now is going forward on 20 Missouri Basin units. The appropriations requested by the President for the next fiscal year amount to an additional $87,000,000 for the Missouri River Basin. Of that about $13,000,000 is for projects, including transmission lines, in the State of Nebraska. The network of reservoirs along the Republican River is well advanced, with five major dams under constructions—Enders, Culbertson, Medicine Creek, and Bonny, as well as the Army's Harlan County dam. Irrigation facilities on the Republic River are also well under way, including about 50,000 acres in the Frenchman-Cambridge area, which will receive water within a year, and a comparable development under the Bostwick unit, which is served by the Harlan County dam. Preconstruction plans are being pushed in the central Nebraska area, including work at Columbus, Grand Island, and at Middle Loup. Phase C, general planning, to develop the basic engineering and economic material, is proceeding in the basins of the Niobrara, North Platte, and the South Platte Rivers.

In summary fashion I have done but scant justice to the magnificence of the conception, to the boldness of the engineering works, and to the urgency of the need. I have sketched for you the current status of the Missouri River Basin program. Ultimately, more than 1,600,000 acres of irrigated land may be added to Nebraska's resources. Electric power will come to you over a backbone transmission grid that will place a far-flung system of generating plants at the service of urban, industrial, and rural power consumers. I have reminded you that $100,000,000 has already been appropriated to the Department of the Interior and that this year an additional $87,000,000 is requested to carry forward Interior's work program. The overall cost for the Department of the Interior's share of the job may reach $3,000,000,000, exclusive of the costs of the Corps of Engineers' works. Similarly, the Army has proceeded with its segment of the coordinated program. In addition to Interior's expenditures, the Corps of Engineers has had $133,500,000 appropriated for use in starting 6 dams.

I mention these figures not to dazzle you with hundreds of millions and billions of dollars but for the opposite purpose. Soberly each of us must constantly be aware that the great work program in which we are engaged requires for its fulfillment a tremendous investment by the Federal Government of public funds. Nor can we afford to plan in terms more cautious than annual appropriations of the $100,000,000 order. You here in Nebraska know the urgency of your power and water needs. The same urgencies are equally pressing elsewhere in the basin. To meet them requires a construction schedule that will soon be expending annually more than double that amount of money.

The investment by the United States in the Missouri Basin will be forthcoming in annual appropriations only to the extent and only so long as all of the people of the country have confidence that the investment is for truly public purposes and that it is not being made for the enrichment of a limited and entrenched group of vested interests. So here again I revert to two of the resolutions which your Nebraska State Reclamation Association adopted at your 1948 convention. One of these resolutions I have already mentioned. It is your resolution No. 2 that reaffirms your faith in public power development as a corollary of irrigation and as a means of securing maximum public benefit from the generation of power at the reservoirs in the Missouri River system.

Another resolution adopted by your association last year that provides reassurance as to the public purposes of the Federal investment in the Missouri Basin is resolution No. 5. In it you reaffirmed your support for acreage-limitation provisions of the Federal reclamations laws, which are as old as the reclamation program itself. In your resolution No. 5 you endorsed the policy of limiting the benefits of Federal reclamation projects to individual farmers on family-size farms. Ever since white men settled in this country, ever since the Thirteen Colonies banded together to form these United States, right down through the western reclamation program, the principle of individual owner-operated farms has had the determined policy of the Nation as a whole. Throughout many portions of this country where irrigation is an unfamiliar word describing some unknown (to people there) kind of farming, the 160-acre provision and the family-size farming concept command support for the reclamation program.

I am confident that continuation of our work here depends for its financial support on the preservation and effective application of the principles of public power and acreage limitation. President Truman repeatedly has affirmed his commitment to these principles. As recently as 1 week ago I attended a conference in the President's office, during which he emphatically instructed us of the Interior Department to maintain without relaxation these existing policies so as to assure that public confidence in the reclamation program is well founded and that the investment of public funds remains truly for public benefit. It is with deep appreciation that I find in the Nebraska State Reclamation Association consistent response and repeated reassurance that you, too, are working for a reclamation program with the widest possible spread of the benefits.

Among the many significant precedents that have been established in connection with the Missouri Basin development, one more is of great interest and importance. The Federal agencies of interest and the States of the basin have worked conscientiously together in the Missouri Basin Inter-Agency Committee to eliminate the friction and conflicts that attend uncoordinated programs. In this way the physical plan has been completely coordinated, the construction programs are being kept in harmony, and work is progressing on plans for integrated operation of the river control works. Like democracy itself, this device for basin administration has at times appeared unresponsive in emergencies and cumbersome, but, again as in the case of democracy, it has risen to its occasion and acquitted itself well. There has been much clamor surrounding this experiment in resource administration. The verdict on it will be rendered in the future on the basis of the effectiveness of the flood control, the number of successful farmers on the newly irrigated land, the extent to which the project works provide against disaster when drought again stalks the plains, the number of farms electrified, factories built, and mines opened with the project power.

You may have heard or read scare stories arising from the attention being given by the Hoover Commission on Reorganization of the Executive Branch to reorganization of the administration of the natural resource programs of the Federal Government. Some of these imply that the Interior Department may be abolished. Such stories bore me. One thing should be kept in mind. The advance of a dynamic people toward a sound, secure future, rooted in development and use of their resources, is a resistless force. Whatever program of reorganization may be evolved, I know that basin resource development will continue to be pushed forward vigorously. A soundly conceived, logical regrouping of the functions of Federal agencies dealing with resource development could accelerate the construction of the Missouri River Basin project. Though the name of the Department of the Interior might conceivably be changed, the functions of the Department are indispensable and will continue to go forward with a force impelled by the requirements of a growing nation. Next March 3, Interior will celebrate the end of its first 100 years of service to the Nation. It is now ready and able to start a second and greater century.

For 5 years now, from the time we began drafting the final reclamation report on the Missouri River, I have been working intimately with this program for the development of this basin. On the foundation laid by the Army's General Pick and Interior's W. G. Sloan, we have begun the erection of the structure. Pain and some strife have attended the birth of the project, but it nevertheless is a healthy and promising infant today. So far, I say, so good. I know not what influences may mold its character as it grows toward maturity, but a good start on a project, as in the life of a man, is largely determinative. There is every reason, therefore, to believe that the Missouri River Basin development will bring to all of the people of this great area the manifold blessings that are anticipated. Time, labor, and the faithful pursuit of our objectives are all that are needed now.

Support Price for Milk

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by me before the Committee

on Agriculture in the House of Representatives on February 10, 1949.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Senator HUMPHREY. Mr. Chairman, I don't come before this very distinguished committee of the House as an expert. I am one of the freshmen on the other side of Capitol Hill and I am over here because of the tremendous demand on the part of our people that something be done in this rather serious situation that confronts the dairy industry in the State of Minnesota.

I have some prepared testimony I would like to read.

I was very interested in what I heard Congressman MURRAY, of Wisconsin, say to the committee, and in the main I concur with his remarks.

I would also like to say that we feel our representation from Minnesota has presented bills to the committee and the House as a representation that clearly understands the agricultural problems that face our people, and I am in support of the legislation which has been presented by Mr. ANDRESEN. I have not seen the bills from Mr. ANDERSON, Mr. HAGEN, or Mr. O'HARA, but I imagine they are right along the same line as that which Congressman ANDRESEN introduced.

Mr. HOEVEN. Mr. Chairman, may I interpose a comment? I understand that all of the bills listed by the chairman are identical to the bill entered by Mr. MURRAY.

Senator HUMPHREY. Fine. I, of course, took notes on the bills presented by the Congressmen from our own State.

I have here a folder packed full of telegrams and letters from people in the dairy industry of the State of Minnesota. I have one here from the Twin Cities Milk Producers Associations from which I would like to read a paragraph. This letter is signed by Mr. Harry Leonard, general manager of the Twin Cities Milk Producers Association, and is dated February 8, 1949:

"Help has been so long delayed that a large part of its value has been lost. Butter has dropped from a high of 92 cents to the present 60-cent level; cheese, from 47 cents to 30 cents; dry milk dropped during the past week 1½ cents per pound to a level which returns the farmers not over 25 cents per hundred for skim milk. We got this much in the depression period of 1933."

That is the statement from Mr. Leonard.

A telegram arrived just before I came here today, from the Tri-County Dairy Association over a whole list of signers. I would like to read that telegram.

"We, the undersigned, do hereby urge your representation at a hearing which will be held by the House Committee on Agriculture Thursday, February 10. The manufactured milk market is in a precarious position. The price has dropped to the point where the dairy industry will suffer enormous damage. We think the price for butter and milk solids should be supported at a level whereby the farmer will be in a position to realize enough for his products to help sustain the national economy. Your cooperation will be greatly appreciated."

My background in government was as mayor of a large city, the City of Minneapolis, Minnesota. I have always believed that the stability of our economy is basically predicated on the stability of our agriculture. Possibly that is because of the intimate relationship I have had with agricultural economy in South Dakota and Minnesota.

As a mayor, I tried to get that message across to our own people. Sometimes there is a difference of opinion between persons in an industrial area and persons in rural areas. To me their economies are inseparable. All too often we have watched our farm economy become depressed. I think the economic history of this country clearly reveals that every major recession or depression has been born in the agricultural community where there was a sudden price break, a decline in prices and values which in turn reflected itself in a break-down in inventory prices, unemployment, and ultimately in a depression.

I know of no committee that has more responsibility for the future well-being of American economy than the House Committee on Agriculture, and the similar committee in the United States Senate. I realize the great burden that is yours. I have the greatest respect for this committee, its distinguished chairman, and his colleagues, who have given many years of study to agricultural legislation. I come here to give you my point of view as to what I think ought to be done on an emergency situation, and on a long-range basis.

I have a statement here that I hastily prepared—and, believe me, it had to be hasty, because as you know we have been having a little trouble on the other side with hearings that have taken from 9:30 in the morning until 10 o'clock at night. With the few minutes I had before those meetings, and the late evenings, I put down the following remarks which I would like to have the privilege of reading. At any time, of course, I will stand open for questions.

Markets for factory milk in the United States are demoralized. Prices for manufactured milk have taken a terrific drop since last August. They have fallen from above four dollars per hundred pounds to less than three dollars a hundred pounds.

Without question, they have fallen below the Government guaranty of 90 percent of parity—if we could get the Department of Agriculture to establish a parity price for manufactured milk.

Our dairy farmers and processors are in distress. I am receiving hundreds of telegrams and letters asking that the Government make good on its pledge to support the prices of milk and milk products. Butter is in trouble, cheese is in trouble, and perhaps in the worst trouble in Minnesota now is dry skim milk.

One of my constituents sets forth the situation quite clearly. He points out that production of dry-milk solids in the United States last year was about 650,000,000 pounds. Of this, 479,000,000 pounds were sold in commercial channels; 100,000,000 pounds to the Children's Relief Fund of the United Nations; and 25,000,000 pounds to the Army. The balance, 46,000,000 pounds, has no market outlet now. It is dragging down the price of current production. Prices dropped by one-third in January. Some producers in my State say they are receiving only $2.50 a hundred for their milk. Yet parity for all milk is about $4 a hundred.

This man believes the Department of Agriculture should buy this surplus dry skim milk at once for 15 cents a pound—what it paid last year when the commercial price was 18 cents a pound. I agree. This one move right now would help restore confidence in an industry so discouraged that one plant in Minnesota is actually considering paying farmers for their milk in dry skim milk instead of in dollars.

This man also asks that the Secretary of Agriculture establish parity prices for manufactured milk—just as Congressman MURRAY's bill outlines. I agree, but I would go much further, as I shall show later.

I am told that the Department of Agriculture is giving notice today that it will buy dry skim milk starting February 21, on an offer-and-acceptance basis. That means bids. A distressed industry is bound to bid low to get rid of its surplus. The great Department of Agriculture, which must buy large quantities of this product this year anyway, for foreign relief and for the Army and school-lunch program, is likely to buy now at bargain rates.

If such is the case, I have little respect for the officials who would thus drive a hard bargain at the expense of farmers and processors who are already hard pressed. At this time, when we are all concerned about the spreading market declines and mounting unemployment, we ought to be doing all possible to bolster depressed markets. It seems to me this is no time for the Government to drive hard bargains. Strong, fast, price-supporting moves in farm markets right now will do much to halt the price panic that is gripping so many people in a deadly fear of depression which should never be permitted to arrive.

In regard to this business of setting parity prices for manufactured milk, I have been told that the Department of Agriculture does not now do this because its lawyers do not think the law requires it.

You have had some questions about that from Congressman MURRAY and your colleagues.

The Agriculture Department's interpretation is that the law only requires prices of butterfat and milk be supported. And milk is milk to them, whether it is high-priced fluid milk, or low-priced manufactured milk. So the prices of all kinds are averaged together to get the price of milk received by farmers each month.

Naturally, this blended, average price is much above what farmers get for milk sold to factories. And manufactured milk accounts for about 55 percent of all the milk sold in America.

By this legal interpretation, the Department feels that it never has to support the price of the milk that farmers sell to powder plants, condensaries, evaporators, and cheese factories. It may do it once in a while, but it does not think it is required by law to do so, even though prices as now are without doubt well below 90 percent of a realistic milk parity.

I think this policy should be ended. If the Department of Agriculture is too timid or conscientious to interpret the law as I feel sure its makers intended, then let us clear the matter up by a Congressional directive. Such as the bill and companion bills that have been presented here.

Now, permit me to quote from an article that appeared in the St. Paul Pioneer Press, St. Paul, Minn., under the date line of Friday of last week—February 4, 1949. This article is by Alfred D. Stedman. He is the farm writer for the St. Paul Pioneer Press and Dispatch, St. Paul, Minn.

"Four hundred harassed dairy men were joined by Minnesota legislators here Thursday in demanding that the Truman Administration make good its pledge that the farmers will not again be the first victims of a postwar depression.

"Mincing no words, they called on two top dairy officials of the United States Department of Agriculture, to insure immediate, emergency Government action to stop the present slump in milk prices and save cooperative and other dairy plants having backs to the wall.

"The two administration spokesmen, Mr. Philip Nelson and Don S. Anderson, were told bluntly by dairymen and legislators assembled in the Capitol Office Building Auditorium that the farm vote in the dairy States swung the recent presidential election against Dewey and to Truman."

I don't want to inject politics in here. I did not even know that was there. But I guess that is a matter of record these days anyway.

"The farmers voted in expectation that the Truman Administration pledges of price protection would be fulfilled."

By the way, this is coming from a Democrat, too, and I expect the Democratic Party

to fulfill its pledges to our farmers or they do not deserve that farm vote.

"Now, when the dairymen are being forced up against it, is the time to make those pledges good, the Federal officials were told.

"Responding to those demands the two officials who are Director, respectively, of the Production and Marketing Administration's Dairy Branch and Chief of its Manufactured Dairy Products Section, told the mass meeting these three things.

"First. They believe the Secretary of Agriculture has discretionary power to establish a separate parity for manufactured milk as distinct from bottled milk, as the dairymen demanded.

"Second. That an official search now is on in Washington for funds to finance Government buying to support country milk prices up to 90 percent of that new parity.

"Third. That the way for dairymen to have permanent price supports is to get together on a long-time program which provides funds and disposal outlets through school lunches, stamp plan, or otherwise, for Government-purchased products."

I bring this news report to your attention because here are two officials who say that they believe that the Secretary of Agriculture has discretionary power to establish separate parity for manufactured milk as distinguished from bottled milk. I believe that the Government has that power, too, and they ought to act. If the Department does not act I think the Senate of the United States, and the House of Representatives, ought to help it act by a directive from the Congress.

Just a few more words and then I shall conclude my testimony.

This present system, blended milk parity, is now about $4 a hundred. I suspect that if two true parities for milk were worked out fairly that parity for fluid milk would be $4.50 a hundred, or more, and parity for manufactured milk would be at least $3.50 a hundred. That would make a 90 percent of parity support price for manufactured milk about $3.15 a hundred. Do not misunderstand me; I do not think that is enough. But if the Secretary of Agriculture is instructed to announce this "manufactured milk" support price regularly, and instructed to see that every farmer gets it, it would be a big help in the market.

The fact is that 90 percent of parity for dairy farmers is almost a depression level in these days of high, inflexible costs. If parity is right, then dairy farmers ought to get 100 percent and not some fraction of it. If the formula is not right then let us remake the formula. I am sure that this committee has given a good deal of study and time to the parity formula.

Farmers sell in a highly competitive, free market. Their prices are flexible, without any help from the Aiken Act. Farmers buy industrial products the prices of which are quite inflexible. For industrial prices are administered prices—managed by monopolies in their own interests. They can do this because of Government privilege in the form of tariffs, franchises, concessions, subsidies, etc.

Our economic system cannot stand two kinds of prices that work so differently. That is why we were finally driven to establish farm price supports.

If we are going to do the farm price support job which the national economy demands in order to keep functioning without a crack-up, we must have a minimum of 90 percent of parity price supports for every product for which we can work out a practicable plan. Let us not try to fool ourselves and the farmers into thinking some such formula as 60 or 70 or 80 percent of parity will do.

Maybe that is beyond the question here, and I will come back at a later time in regard to that, but I just wanted to give you my convictions on it.

There are two things I think ought to be done right away, and I would like to bring them to your attention. The immediate thing for the Department of Agriculture to do is to come back into the market and purchase dairy products at a price that will afford support to manufactured milk. That should be done immediately. They already have a plan by which they can support butter. Dry, nonfat milk solids should be purchased at about 15 cents per pound, and cheese, dry whole milk, and evaporated milk should be purchased at prices which will allow these producers to live also. This will have the effect of assuring the commercial buyer as to what the floor in the market will be and bring him back into the market now—and now means today, not next week when it may be too late for many of the plants.

I want to emphasize that. Many of our dry milk plants are literally with their backs to the wall. I have letters and telegrams showing that they are actually having to close their doors. They are up against it. To me that is a tragic situation. There are a number of people who have entered this business, young men who have come back from the war who have put their time, effort, and savings into this business, and they are just being rubbed out. Where on the one level their tractor prices are still up, their fertilizer prices are still up, and their feed bills are still up, whereas on the other level their processed milk prices are falling out from underneath them. That is what happened in the late twenties and early thirties.

The second step is to establish a separate parity price for manufactured milk. I admit this will take a little time.

I want to emphasize that the House bills would do just that—establish a parity price for the milk that goes into manufactured milk products.

I do not need to say more. You know how much the price of manufactured milk products has gone down, as much as 33 percent. I have learned a good deal about this in the last few weeks. I can say to my colleagues from Minnesota that the dairy business is an intricate and complex business, and I have great concern for it. I would be remiss in my responsibilities as a representative of the people of my State if I did not appear before your committee and urge upon you the most expeditious action and at the same time a long-range program on a sound and constructive basis.

I emphasize the two things which ought to be done: The urgency to act now. I think the Department of Agriculture should act now, and Congress should instruct the Department of Agriculture to act. Secondly, a long-range formula should be worked out. I agree that there may be need for two formulas, one for the dry-milk products, and one for the fluid milk. That is something that will take time to formulate. In the meantime, give us the emergency action so we can hold together and not permit financial ruin to come to a great section of the American farmer.

Thank you.

Mr. MURRAY. I don't think you intend to infer that Mr. Anderson or Mr. Nelson are opposed to anything we are trying to do.

Senator HUMPHREY. No; not at all. I can appreciate the circumstances under which Mr. Anderson and Mr. Nelson are working when we have three or four hundred good Minnesota farmers who want some action.

Mr. MURRAY. They have several hundred lawyers down there, too.

Senator HUMPHREY. Over in the Senate I said something about lawyers, and I had some lawyers get after me, so I am here again to voice my respect for the legal profession.

However, I say again that the lawyers are best in the legal field, but the farmers are best in the field of husbandry and agricultural economics.

The CHAIRMAN. Mr. PACE.

Mr. PACE. It is recognized that it takes some time to work out these parity figures, but it is also true that the law requiring 90 percent of parity for milk and its products for the year 1949 went into effect on July 3, 1948, over 7 months ago. I think one of the principal complaints is that notwithstanding the expiration in excess of 7 months the figures are not yet available. I presume, Senator, that the dairymen in your State have encountered the enormous increase in the cost of producing milk just as all other producers of agricultural commodities.

Senator HUMPHREY. That is surely true.

Mr. PACE. The fact is that you are now paying two, three, or four times as much as you were a few years ago for the labor.

Senator HUMPHREY. That is right.

Mr. PACE. Assuming that the Department works out a parity as now provided by law, do you not think it most unfair that even when they get that figure it does not in any respect reflect this enormous increase that your dairymen are having to pay to their workers?

Senator HUMPHREY. I surely do. I believe that a parity formula should take into consideration the labor costs. After all, the farmer has to hire labor just the same as any industrial producer, particularly if he has a large dairy farm.

Mr. PACE. Whatever parity they work out, with or without this bill, it takes into account the wages they were paying back in 1909 to 1914, 30 years ago. When they work this out, it is not going to be a fair parity then.

Senator HUMPHREY. That is my point of view. Just as sort of a layman's opinion on this, without, as I say, appearing to be an expert at all, but just one vitally interested in agriculture because it is a great part of our life, it seems to me the parity formula which is based on the 1909–14 structure is a bit outdated, and we ought to find a better period, a more modern period, on which to base it. We ought to take into consideration what you have just suggested here, labor costs as well as other costs that go into the production of the product.

Mr. PACE. As you say, the dairymen and other milk producers must get a fair price in order to maintain the economy of this Nation.

Senator HUMPHREY. When I read the papers, which we all have a chance to do—and I imagine very sparingly in these days—what do we see in the headlines? We see what has happened to our South St. Paul cattle market; what has happened to corn prices; what has happened to wheat prices; what has happened to dairy products prices. The first people who are taking the rap again in this year 1949 are the farmers.

I have not lived too long, but I have lived through one depression, and I know that the very first person who got it in the neck in my native State, which was South Dakota, was the farmer. When he caught it, my dad caught it, who was a businessman, and then the wholesaler, because we could not pay our bills, and then later the industrialists caught it. Then we had unemployed people on the streets of New York, Detroit, Chicago, St. Paul, Minneapolis, St. Louis, Boston.

I think that ought to be adequate warning to a Government that has long viewed the people's problems in this country.

I speak for a political party that has many responsibilities. We made many pledges, and I hope that we will be wise enough to understand what can happen if a depression hits us. I do not think it is going to happen, and I pray God that it does not. But, believe me, we had better see to it that American agriculture is not shoved around and left in some dark corner by itself. If that happens, we will have labor unions and businessmen before your committee, and everyone else, begging that some great project and

formula be created that will get us out of the depression.

I do not want to be a pessimist. I am really quite an optimist. But I believe I am beginning to see some signs which are distressing and disturbing.

Mr. PACE. Do you not think it is a warning that the Congress had better not let the Aiken bill go into effect which would knock support prices down to as low as 60 percent of parity?

Senator HUMPHREY. Congressman PACE, to me, no truer words have ever been spoken in any congressional meeting than the words which you have just spoken.

The CHAIRMAN. Thank you very much, Senator HUMPHREY.

Senator HUMPHREY. I certainly want to thank you for the indulgence of the committee. You have been very gracious to me and I hope that we can reciprocate at some time on the other side.

The CHAIRMAN. We have been very glad to have you with us. You have made a fine statement.

Senator HUMPHREY. Thank you, Mr. Chairman.

The CHAIRMAN. We will now hear from Mr. HULL.

(Senate bill 881: On February 10, 1949, Senator HUMPHREY introduced in the Senate a bill to direct the Secretary of Agriculture to announce the parity price of milk and to direct the Secretary of Agriculture to immediately announce the support price of milk. This bill is now in the Committee of Agriculture and Forestry.)

Historic Sites and Buildings

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, February 21, 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. David E. Finley, Director of the National Gallery of Art, before the National Council for Historic Sites and Buildings, at its annual meeting in Washington, D. C., on November 4, 1948.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The executive board of this organization held a meeting about 2 weeks ago at which we had a short but profitable discussion of the subject I have been asked to talk about today, namely, the present and future role of the National Council for Historic Sites and Buildings.

At the board meeting the discussion arose in connection with consideration of plans for seeking from Congress a charter for the proposed national trust for historic preservation, about which you will hear shortly from Mr. Alexander Smith, Jr., and his committee. The members of the board felt that we should all give serious consideration to the role which the trust can play in carrying out the purposes of its parent organization—the National Council for Historic Sites and Buildings. They also felt that, in order to justify our own existence and certainly to justify to Congress the creation of a new, subsidiary organization, we must be quite clear in our own minds as to just what our opportunities for usefulness will be and how we propose to meet those opportunities.

In the back of all our minds probably is the thought of the British National Trust and the long list of achievements that stands to its credit in the field of historic preservation. In connection with that trust, we should also remember the splendid achievements of its American godparent, a more ancient organization known as the Trustees of Public Reservations of the State of Massachusetts. The bylaws of the Massachusetts association were substantially adopted by the British trust when the latter was organized in 1895, and I understand the Massachusetts body has the right to nominate a member of the council of the British trust.

Both of these organizations were early pioneers in the field and to them we are all indebted for what they have been able to accomplish in preserving historic monuments and scenic areas. We would do well to model ourselves on them in some respects but not entirely, for the situation that confronts us today is very different from that existing in 1895.

Since that time, thanks to the vigorous championship of Theodore Roosevelt, Stephen Mather, Gifford Pinchot, and others, there has been a great awakening in this country to the necessity of safeguarding our natural resources and especially our outstanding scenic areas.

Dr. Mather's great contribution was the organization of our national park system, which is so ably directed by Dr. Drury. What the National Park Service has already accomplished and what it is doing now and is equipped to do in the future fills us all with justifiable pride in our native American genius for organizing and operating an undertaking so filled with possibilities for the happiness of the American people. It was said of Dr. Mather after his death: There will never come an end to the good that he has done. I will add that the same can also be said of the Park Service which he founded.

In view, therefore, of what is being done to safeguard scenic areas, both by the Federal Government and also, to some extent, at least, by some of the States, we do not need to shoulder so much responsibility for the preservation of these areas as is true in the case of England with their national trust. In England, after all, the national trust has the responsibility both for safeguarding their historic and architectural treasures and also for saving England's green and pleasant land from the encroachments of those dark satanic mills against which Blake inveighed so long ago.

Here in this country our National Park Service is doing splendid work not only in scenic preservation but also in acquiring and opening to the public a few of our outstanding houses of architectural or historical importance. It makes us very happy to think of what the Federal Government, through its Park Service, is doing in the preservation and operation of such houses as Arlington, Hampton, and others in the short but distinguished list of national monuments which are now in the capable hands of the Park Service.

But the role of the Park Service is, after all, limited in this field and circumscribed, as in the case of all Government agencies, and properly so, by limitations imposed by Congress and by the Bureau of the Budget. We must not expect the Federal Government to organize all the rescue parties and do all the work of historic preservation for us. Much of it is our own responsibility in this fortunate country of ours where individual initiative still persists and where everyone does not expect the Government to do everything for everybody, as is the case in many countries across the sea. We must, in short, not lean too heavily on the Park Service. We should, on the contrary, invite the Park Service to lean on us, though I hasten to add, we hope they will not lean too heavily at first.

We, in turn, should not be content to fill merely the role of clearing-house for those older societies, such as the American Scenic and Historic Preservation Society, the Society for the Preservation of New England Antiquities, and other organizations which have such long and distinguished records and so many achievements to their credit in the field of historic preservation. These and other organizations, which came together in the spring of 1947 to form the National Council for Historic Sites and Buildings, did so because they realized that there was, at that time, a no-man's land in the field of historic preservation which was not filled by any organization, governmental, regional, or private, and would seem to be indicated as the field in which the National Council and its proposed subsidiary, the National Trust, could do useful and important work.

First of all, the National Trust, when organized, will provide a legal entity which can assume title to such properties as may be donated to it and can be operated either by the trust itself, or by some qualified organization to which this responsibility can be delegated. The National Council has now the authority to accept legal title to property, if anyone will be kind enough to make us a gift. But the Council is too large and unwieldy a body to operate such properties as efficiently as would a smaller and more compact agency, such as we hope the National Trust will be.

We should recognize, however, that neither the National Council nor the National Trust is likely to be given important properties very often on a silver platter, so to speak. "The Lord helps those who help themselves," as most of us have found to be only too true in our own experience. Sometimes something you want drops into your lap, but mostly one is obliged to go out and get it the best way one can.

A case in point is Woodlawn. Last summer, in August, when most of those interested in historic preservation appeared to be happily engaged by the sea or in the mountains in conserving their own natural resources, Woodlawn came on the market. It was bought for what seems quite a reasonable sum by a Mission Society whose plans for its use did not contemplate that it would be opened to the public. A 3 months' stay of the sale was secured, with the kind cooperation of the Mission Society, and through the untiring efforts of a few individuals, headed by Mr. George Morris and Mr. Armistead Rood. This group has formed the Woodlawn Memorial Public Foundation, which is now endeavoring to raise more than $175,000 before the end of the year, so that Woodlawn can be opened to the public as a national monument and operated in the same manner as its neighboring property of Mount Vernon. The National Council has given such help as it could, including the use of its headquarters as offices, but the real burden of saving Woodlawn rests, and I fear may continue to rest, on the broad shoulders of Mr. Morris and Mr. Rood.

This is merely one example of the difficulties that will confront us in taking quick and effective action to preserve important properties for the public. What can we do in such situations? Certainly we cannot expect to provide the trust with funds sufficient to buy and operate all the desirable properties that may be offered to us. Nor do I think that we can expect, as in England, that the owners will often be in a position to give us title to the property free of encumbrance. There are, however, certain things we can do.

First of all, we must set up criteria as to what properties should be classified as historic or architectural monuments; second,

we should list the properties that conform to these requirements; and third, we should try to induce Congress and the various states to pass legislation that will minimize the hardships of owners in continuing to live in such properties and passing them on to the next generation, provided these properties are opened at stated times to the public, as is done in England.

There is a limited number of houses and other buildings of architectural or historic importance in this country that will meet the criteria we shall set up. Among them, there will be only a few of really primary importance. Today the public has access to such shrines as Independence Hall, Mount Vernon, Monticello, Arlington, Kenmore, Stratford, the Adams Mansion at Quincy, and others which are operated as historic house museums. From them the public carries away a renewed feeling of patriotism and a stronger belief in our own American way of life. They understand George Washington, Thomas Jefferson, Robert E. Lee, and the Adamses better because they have some knowledge of the surroundings in which these great men lived and some appreciation of the tangible objects that filled their homes and were part of their lives.

These great historic houses and others which will be opened to the public in the future correspond to our art and science museums and like them, they preserve, under glass as it were, the finest specimens of a civilization that is not passing but merely changing and on which we are trying to graft new ways of living that, in some respects at least, will be not inferior to the old.

Few of us can live in large and beautiful houses, any more than we can own Rembrandts and Cezannes. But there is no reason why our smaller houses, or even our one or two room flats, should not be beautiful and in good taste, provided we have some knowledge of the best that is available and suitable under the circumstances.

But how, may I ask, are future generations to educate themselves and acquire a taste for what is best, not only in architecture and gardens, in pictures and prints, in furniture and textiles, in porcelain and crystal, but also in the amenities that were part of a civilized existence in the past and should be carried into the life we are building for future generations in this country?

In the art museums our people are brought into direct contact with the greatest works of art. In the historical field, however, much still remains to be done. Mr. Rockefeller has provided at Williamsburg an object lesson for all of us as to how it should be done; and this is true also in the case of many other architectural and historical monuments that have been preserved and opened to the public throughout this country. But these monuments are few and far apart, while Americans in fast-moving motorcars, with time on their hands and nowhere to go, crowd the roads and look eagerly for instruction as well as entertainment.

It is not only our business, it is also their business, to provide objectives which they can visit and enjoy and from which they can take home new ideas for the decoration of their houses and, more important still, a better undertanding of history. Somehow, we must induce the average man, woman and child to become interested in these things and conscious of their value. We must make them aware that the National Council for Historic Sites and Buildings and the National Trust for Historic Preservation are their agencies and their clubs to which all can belong and to which all can contribute in saving the important monuments of our American civilization.

We must also enlist the interest and cooperation of powerful and public-spirited bodies throughout the country, such as the chambers of commerce, the Rotary Clubs, and others. We should leave nothing undone to bring about a realization of the fact that an important historical or architectural monument, well-preserved and properly shown, can be a source of revenue to a city, as witness Washington, Boston, New York, Philadelphia, and Charleston, not to speak of London, Paris, Rome, and Florence. Mexico has learned this lesson, as all of you know who have visited that interesting country, so filled with famous and well-cared for monuments of its recent and more remote past. In Mexico City they have followed the example of Paris in preserving intact a beautiful facade, while allowing the interior to be put to some modern and profitable use, as in the case of the Iturbide Palace, which is situated on one of the most crowded business streets in the city. Part of our battle will have been won if we can convince the chambers of commerce and other local organizations that their city can acquire greater fame and perhaps more lasting prosperity by maintaining intact a famous and important building rather than by replacing it with a new skyscraper, such as one may see in any American city.

All this is a long-range program and requires intelligent planning and constant activity by an adequate staff at the headquarters of the national council and the national trust. Even a small staff, such as we now have, requires a steady revenue for their salaries and to carry out the work assigned to them. A steady revenue cannot be based on a few sporadic gifts, but must be derived from many modest dues, such as would appeal to the average man and woman, provided they are given a quid pro quo that they deem adequate—and by that I mean such privileges as free access to historic monuments, frequent reports of current and contemplated activities, and lectures with slides and movies in schools and clubs throughout the country.

We cannot expect at first to have large capital funds with which to finance emergency rescue parties. But certainly we should start to build up a revolving fund by means of gifts and bequests, so that the National Trust will some day have the means to help in cases where quick action is necessary.

Perhaps our most important role will be that of educating people to value and enjoy our own American heritage. It is a positive, active role and one, it seems to me, which we are peculiarly fitted to carry on. We have come into existence at a time when the country has need of us. And certainly we could ask for no more important task than that of helping to preserve intact our own heritage of freedom and cuture. This is especially true at this time when America and everything she stands for is under attack by ruthless, militant nations that do not believe in our American way of life or the institutions that produced the fabric we are trying to preserve.

Here in America, since the earliest days, a man has had freedom to choose what is most worth while in the cultural life of his time. But freedom to choose, unfortunately, is not a universal privilege in this strange and uncomfortable world in which we live, divided as it is into two parts; one based on democracy and freedom and the dignity of the individual; the other based on the harsh realities of the police state, the concentration camp, and the forced submission to uniformity in order that all men shall think and see and act alike. Such submission is the absolute negation of human liberty and will eventually warp, if it does not destroy, whatever is left of individual initiative in the totalitarian countries in things that have to do with the mind where spiritual and artistic impulses find their outlet.

In many parts of the world where totalitarian rule extends and the police state lays its heavy hand, the artist, the musician, the architect, is told what to do. His work is judged not by its excellence according to world standards but by its value in building up a consuming nationalism that admits of no equality elsewhere.

Certainly we want no such nationalistic point of view here in our arts or in our architecture. In this happier and more tolerant country a man may choose a design for his house derived from Palladio or Thomas Jefferson, or Eliel Saarinen, or from Spain or England or France or Pennsylvania or Cape Cod or the Pueblo Indians. He may be as derivative or as original or as modern as he pleases; and while the result may be a fairly inharmonious landscape, in any event, a man may choose what he wants; and that is very important and in line with American tradition, as taught not only in our histories but in our architecture. We see, as a result, a distinctive American pattern which has made its own original contribution to the world's architecture and, at the same time, has excluded nothing of value from whatever source it may have been derived.

We shall defend a man's right to choose, even to choose badly. But we also owe it to him and to all Americans to give them criteria on which, in time, they can base an informed judgment. To do this, we must preserve not only our great monuments of the past, but also those built in our own time and that will be built tomorrow and the day after.

Historic preservation is no cloistered, unimportant activity. It is part of the battle we are fighting in America today for the only kind of world that is fit to live in—the kind that generations of Americans have paid with their lives to preserve for us and for those who will come after us.

The Civil Rights Program

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated February 15, 1949, which was sent by me to the editor of the New York Times.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEBRUARY 15, 1949.

The EDITOR, THE NEW YORK TIMES,
New York, N. Y.

DEAR MR. EDITOR: I have read with considerable interest Mr. Arthur Krock's column of February 11, 1949. Appreciative as I am as a freshman Senator for Mr. Krock's political analysis of the Democratic caucus of February 5 and the developments which have taken place on the floor of the Senate pertaining to Senator KNOWLAND's resolution to discharge the Rules Committee, I humbly observe that the analysis is incomplete.

Senator KNOWLAND, of California, presented a resolution on the floor of the Senate to discharge the Rules Committee because of what he termed its failure to expedite action on a change in the Senate rules so as to curb the filibuster. This action on the part of Senator KNOWLAND was subsequently discussed by the Democratic caucus held on Saturday, February 5. It was patently clear that Mr. KNOWLAND's resolution was an attempt on the part of the Republican minority to challenge the majority leadership on a

very crucial question. This matter was thoroughly discussed and those of us who are strong supporters of civil rights legislation and supporters of Senator MEYERS' resolution proposing a majority vote for the application of cloture, were strong and firm in our conviction that we were not going to permit a political trick on the part of the Republican opposition to upset the Senate organizational structure of the Democratic party. However, I personally made it crystal clear by my remarks in the caucus that while I would support the Democratic leadership in voting down Senator KNOWLAND's resolution, I would expect the Rules Committee to expedite its report to the Senate and there I would reserve my right to vote my convictions.

Mr. Krock has quoted me as saying that the Knowland resolution "was obviously a political attempt to embarrass the Democrats and start taking control. If the Republicans who voted for the motion will support the program, civil rights, then we shall deliver every single pledge made by both national conventions." Mr. Krock makes a point of the fact, however, that I did not take note that the administration's refusal to face the civil rights and cloture issues was also for obvious political reasons. It is only fair to state that your reporter did not question me as to the administration's tactics. I was questioned only as to how I viewed the Republican or Senator KNOWLAND's strategy.

My position, however, is clear. The administration must quickly come to the decision that it cannot refuse to face the inevitable split over civil rights that exists within the Democratic Party. The administration leadership must clearly recognize that if we are to pass civil-rights legislation the rules of the Senate must be amended to permit a majority vote to apply cloture. I repeat, that is my position. It has always been, and I will fight for it.

The tragic mistake of the Seventy-ninth Congress, which mistake produced the Republican Eightieth Congress, was the unholy alliance of the Republican Party with the conservative wing of the Democratic Party. Specifically, I mean the Taft Republicans and the soon-to-be Dixiecrats. No greater political blunder could be made by the Democratic leadership in the Eighty-first Congress than to permit the direction and strategy of Democratic leadership to be guided and watered down by the willful purpose of a few Senators who are unwilling to subscribe to the clear-cut provisions of the Democratic platform. I should add that this willful group is not only demanding that the civil-rights issue be pushed aside, but it is equally adamant in its attitude toward fulfilling our pledges on such matters as the repeal of the Taft-Hartley Act, the increase of the minimum wage, the health program, and other issues.

The time has arrived, in my judgment, for positive and bold action on the part of the President and the administration leadership. It is only through presenting the specific items of the Democratic platform in terms of legislative proposals that the country will be able to find out just how liberal some of the liberal Republicans really are. It will also provide a good political blood test for the revived Democratic Party. I am one of those who likes to have people stand up and be counted.

Those of us who have made clear our position on the civil-rights legislation will make equally clear our position on the application of majority rule for cloture. An amendment to the Rules Committee proposal will be presented on the floor of the Senate. At that time we will find out where Senator KNOWLAND and his Republican colleagues stand.

A political problem in the Senate regarding civil rights, if I may differ with Arthur Krock and Senator KNOWLAND, is not that of the Dixiecrats. We cannot blame the Southern Democrats for the dilemma we face. There are not enough of them to block legislation. The political problem we face is whether or not the Republicans and the Democrats who say they are for civil rights and who say they are for curbing the filibuster will really stand up and be counted when a roll call is made. The responsibility for this legislation is on both parties and I am eager to see what the roll call yields.

I am convinced that I have the full support of the President in my expression of these opinions. No President in the history of this country has been more courageous in his support of civil-rights legislation than President Harry S. Truman. I am convinced that the Democratic platform helped make the victory possible on November 2. I am equally convinced that the failure of the Democratic Party to enact that platform will make possible a victory of Republican reaction in November 1950. I complete the trinity by saying that I am wholeheartedly convinced that our success in the passage of civil-rights legislation and the other important aspects of the platform will make the Eighty-first Congress go down in history as one of the greatest of all time.

Sincerely yours,

HUBERT H. HUMPHREY.

Consolidation of State Agencies To Save Federal Funds

EXTENSION OF REMARKS

OF

HON. GARRETT L. WITHERS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1949

Mr. WITHERS. Mr. President, I ask unanmious consent to have printed in the appendix of the RECORD a most interesting letter from Hon. Earle C. Clements, the governor of my State. Governor Clements, by consolidation and efficient administration, has been enabled to operate several of our State agencies without seeking additional Federal moneys.

There being no objection, the letter and telegram were ordered to be printed in the RECORD, as follows:

COMMONWEALTH OF KENTUCKY,
EXECUTIVE CHAMBER,
Frankfort, February 11, 1949.

Hon. GARRETT L. WITHERS,
Senate Office Building, Washington, D. C.

DEAR SENATOR: I am attaching a copy of a telegram received from Frank Bane, executive director of the Council of State Governments.

The message, you will note, is self-explanatory. However, upon its receipt the matter was taken up with Mr. Vego Barnes, commissioner of the department of economic security, with reference to the needs for additional funds to cover administrative costs of the unemployment compensation commission and the employment service.

As you may know, at the last session of the legislature the above-mentioned agencies together with the division of public assistance and child welfare were combined, and the outcome was the creation of a new department of economic security, headed by Commissioner Barnes, which embraced all of the State agencies spending both State and Federal funds in the over-all social-security program.

Since this consolidation was effected, and as a result of prudent and efficient administration, the commissioner reports that his department will be able to live within its budget and will not need additional allocations. It is his opinion that the support which the deficiency bill has is being generated by those States refusing to consolidate their various social-security programs—thereby failing to realize the economies which Kentucky has demonstrated to be possible through such a move.

Sincerely yours,

EARLE C. CLEMENTS,
Governor.

(Following is the telegram referred to by Governor Clements:)

FEBRUARY 8, 1949.

In the great majority of States the appropriation and allocation for administration of unemployment compensation and employment service for fiscal year ending June 30, 1949, were inadequate when made. Since then increasing loads and lack of administrative funds have combined to create situation that not only causes great waste public funds but serves to undermine system of employment security.

The problem is immediate and urgent. Congress now considering deficiency bill and States must have approximately $20,000,000 additional for this fiscal year to insure effective and economical administration.

If this situation exists in your State, and if you think wise, suggest you wire your congressional delegation.

FRANK BANE,
Executive Director, Council of State Governments.

Relations With Spain

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1949

Mr. MURRAY. Mr. President, I ask permission to have printed in the Appendix of the RECORD a speech delivered by my good friend, Dr. Joseph F. Thorning, the only United States honorary fellow of the Historical and Geographic Institute of Brazil, and an honorary professor of the Catholic University of Chile, a pontifical institution.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Honor and gratitude alike suggest that we remember the solemn pledge given by our late President, the Honorable Franklin Delano Roosevelt, to the people and to the Government of Spain. At the time of the fateful landings in North Africa, when loyal friendship in the Iberian Peninsula was vital, President Roosevelt, addressing himself to the head of the Spanish state, declared that "Spain has nothing to fear from the United Nations."

In the light of this assurance, Spain, her Government and her people, furnished solid protection to our flank when our brave soldiers, sailors, and marines made their initial onslaught on the enemy. That was an hour in United States history, when a friend in need was a friend indeed. Spain, acting in her own true interests, defied the Axis more than once. In every such instance, the security of Spain coincided with the best interests of the United States.

During the past few months, I have had several personal conferences with wartime Ambassador Carlton J. H. Hayes. This scholar,

although restored to his post as Seth Low professor of history in Columbia University, retains all his interest in, and love for, Iberian culture. Best of all, he is in intimate touch with contemporaneous Spanish history as well as with the most recent developments in Hispanic-American affairs. It is the conviction of Professor Hayes, author of the famous best seller, Wartime Mission in Spain, that we should grant the 28,000,000 people of Spain generous economic collaboration. His reasons for such a policy of friendship and cooperation may be summarized as follows:

1. Spain and Portugal are essential to the success of the good-neighbor policy. This feature of Hispanic-American relations was admirably outlined in a statement by Senator MILLARD E. TYDINGS on February 3, 1949. It is available in the Appendix of the CONGRESSIONAL RECORD, page 509.

2. Under Spain's Foreign Minister (now Ambassador at Large Don José Felix de Lequerica in the United States), as well as under his predecessor, Count Francisco Jordana, the Spanish Foreign Office, with the obvious approval of the head of the Spanish state, granted us more favor than did any other neutral government, whether Sweden, Turkey, Switzerland, or Portugal. Not only did the Spanish Government pledge itself not to interfere in any way with our fateful landings and campaign in north Africa. Not only did it assure us as early as February 1943, that it would join us in war if the Axis should attempt an invasion of Spain. Not only did it permit us to use Spain as the base for invaluable espionage of Axis activities in France and the Mediterranean, it also accorded us important positive favors. It allowed us to get over 1,200 American airmen safely across the peninsula, without any internment. It permitted the transit and exit of over 25,000 members of the French resistance movement as reinforcements for the Allied Armies in north Africa. It choked off export of strategic war materials to Germany before any other neutral had done so. Spain, too, was the first country to conclude a permanent air agreement with us, and one whereby we were enabled to obtain landing rights for military as well as civilian planes.

In the light of all such facts, it is simply hypocritical to countenance the notion that Spain has been hostile to us and should therefore be treated as a pariah among the nations. It certainly belies the solemn assurances which President Roosevelt gave to the head of the Spanish state in November 1942.

There is in Spain a natural and almost inevitable evolution of the domestic administration toward greater liberty and democracy. The municipal elections in last November and December are evidence of this healthy trend. Freedom's progress can best be served by understanding, good will, and friendship. That is the United States role in the development of democracy in the Iberian Peninsula.

On the other hand, no nation likes to be dictated to by foreigners, least of all the Spaniards, and when our Government joins Generalissimo Josef Stalin in trying to tell the Spanish people that they must get rid of the present head of the Spanish state, the natural response is popular feeling in support of the existing administration. And how silly it is to allege that Spain—or the head of the Spanish state—is a threat to world peace. The real threat to world peace is in Moscow, not in Madrid.

Not only should we in the United States resume full and friendly diplomatic relations with Spain, and counsel our other friends in western union to do likewise. We should seek to cooperate with Spain commercially, economically, and culturally, and forswear any interference in its internal affairs. We should eventually help to secure Spain's admission to the United Nations or to any other world or regional organization which may supplant or supplement it.

Fortunately, the United Kingdom now favors an exchange of ambassadors between London and Madrid. For some time, our own State Department has recognized the folly of the now obsolete and invalid 1946 UN resolution, which was canceled out by the failure of the identical resolution in the General Assembly in 1947. Appeasement of the Soviet Union has failed. Consequently, political blunders that were perpetuated in the name of Soviet appeasement must be obliterated, if not atoned for. Truth and fairness toward Spain are better than any amount of political appeasement of the unappeasable Soviet Union.

For Spain is vital, as we see it, to American interests. The late war has abundantly demonstrated the enormous strategic importance of the Iberian Peninsula for any war in which the United States, unhappily, may henceforth be involved. Nor can the United States have enduring proper understanding with Hispanic America without proper understanding with Spain. As House Majority Leader JOHN W. MCCORMACK puts the case for friendship between the United States and Spain, the "goal is inescapable." Once more, the brave, liberal, noble-hearted leader of Democracy was right. He was the first statesman of Capitol Hill to call for the recognition of the present administration in Madrid as the de facto and de jure Government of Spain early in 1939. Now, early in 1949, he points the way again for those who love liberty.

Communism

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, February 21, 1949

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Advice for Americans," from the New York Enquirer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ADVICE FOR AMERICANS

In these days when too many are being misled by the false doctrine of communism it would be well to recall the words a great American—Charles H. Silver—uttered in warning against this false philosophy.

Mr. Silver, who was toastmaster, spoke at the recent dinner held in honor of former Gov. Alfred E. Smith, his warm, personal friend for many years. He paid tribute to the late governor as "a product of the American way of life," and asked if the liberty of belief and expression enjoyed by Smith and by all Americans would be possible under communism. Then he said:

"Communism is the enemy of human liberty. It is an ugly challenge to our freedom. It seems to strangle liberty.

"It is the Communist thesis that the state is god and master; that the rights of the individual belong to the state; that the common man must be kept common.

"It seeks to disrupt and destroy our American way of life. It seeks to weaken and destroy our American democracy."

Warning that we must always be on guard against communism, Mr. Silver said:

"You and I want to see our children happy and free * * * with love in their hearts and a true understanding of what the American way of life means to them; * * * we want to encourage industry and commerce to function without orders from ruthless dictators; we want to keep our houses of worship open so that Catholic, Jew, and Protestant may enter without fear of attack from those who destroy all religions."

Mr. Silver stressed that the strongest weapon against communism "is the philosophy of democracy itself." He said we need have no fear of the destruction of democracy if "we cling to its teachings, and that the only danger lies in our departure from a form of society which has made this country the most powerful Nation on earth."

Our Spanish Policy

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, February 21, 1949

Mr. O'CONOR. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a very scholarly discussion of our Spanish policy which appeared in the letter column of the Washington Evening Star, October 30, 1948, from the pen of Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SISTER REPUBLICS AND SPAIN

To the EDITOR OF THE STAR:

It was as refreshing as it was gratifying to read the factual and well-reasoned editorial on our Spanish policy in a recent issue of the Star.

The message which the Star formulated in patriotic terms may be read with profit, not only by the residents of the District of Columbia, but also by all the citizens of the United States. It is correct to urge that in the current crisis we have an obligation to base our foreign policy upon enlightened self-interest. Those who are charged with the Nation's security have recognized the strategic importance of the Iberian Peninsula. Last spring the House of Representatives, reflecting a good deal of public sentiment, voted overwhelmingly to include Spain in the European recovery program. The Members of Congress realized that it was criminal folly to invite Soviet-dominated countries like Rumania, Bulgaria, and Yugoslavia to accept American help and at the same time to exclude from the benefits of this program the Spanish people and the Spanish Government which accorded us valuable assistance in World War II.

It is interesting to observe that the foremost witness to the help we received from both Spain and Portugal was and still is wartime Ambassador Carlton J. H. Hayes. Although Professor Hayes has returned to his post, as Seth Low professor of history at Columbia University, he continues to point out that it is a matter of American honor to be grateful to the present Spanish Government.

The Star's editorial raises an interesting point with respect to the United Nations resolution of 1946 which recommended the withdrawal of chiefs of diplomatic missions from Madrid. Whenever this 1946 resolution is mentioned, it is imperative to add that when the same resolution was reintroduced in 1947 it failed to secure the two-thirds vote necessary for adoption.

PRACTICAL VIEW EMPHASIZED

Technically, to be sure, some State Department experts seem to make out a good case for their view that since the 1946 resolution never was formally repudiated it continues to remain in effect. From a practical point of view, however (and this is what should interest us in our duel with the Soviet Union), it is fair to raise the following questions: Why was it judged necessary to reopen the whole question in the 1947 General Assembly of the United Nations? Why was a new vote taken on the identical proposition that, under Soviet pressure, had been acceptable in 1946? Why continue to follow an admittedly bankrupt policy face to face with the monstrous realities of 1948? The best evidence as to the practical nature of these questions may be obtained by studying the record of diplomatic activity displayed by the other American republics in 1947 and 1948. Since the failure of the United Nations' resolution against Spain in 1947, many South American countries, including Peru, Bolivia, Paraguay, and Argentina, have accredited ambassadors and ministers as chiefs of their diplomatic missions in Madrid. The same movement is noticeable in Central America. The Acting Foreign Minister of the Republic of Costa Rica has announced that that republic is sending a chief of diplomatic mission to Spain. Previously, the republics of El Salvador and Nicaragua had taken the same step precisely in the light of the reasons admirably set forth in the Star's editorial. This is a trend which the citizens of the United States, who cherish the good-neighbor policy, should study with profound attention.

Much more is at stake than the security of Europe against further Soviet aggression; the high principles and ideals of inter-American friendship are involved in this struggle between the Soviet regime of slavery and the non-Soviet world whose aims must be liberty and progress. It is time entirely to disregard subtleties and technicalities in order to protect human rights in the Western Hemisphere. Our sister republics have shown the way. It is our duty to think in practical terms of our own national welfare.

Dr. JOSEPH F. THORNING,
Associate Editor of the Americas and World Affairs.

Religious Pressure on Trial of Josef Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, February 21, 1949

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from O. K. Webb, pastor of the Rutledge Avenue Baptist Church, of Charleston, S. C., together with an article entitled "Baptist Ministers Here Attack 'Religious Pressure' on Trial," published in the Charleston (S. C.) News and Courier of February 15, 1949.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

RUTLEDGE AVENUE BAPTIST CHURCH,
Charleston, S. C., February 16, 1949.

Hon. BURNET R. MAYBANK,
The Senate, Washington, D. C.

DEAR SENATOR MAYBANK: In our Baptist pastors conference today they voted to ask me to send the enclosed article to you that you might see how the Baptist ministers of this section feel about world life and the issue confronting us. If it's of any value to you, you may feel free to use it or any part of it in any sort of way.

Yours sincerely,

O. K. WEBB,
For Secretary,
Charleston Baptist Pastors Conference.

BAPTIST MINISTERS HERE ATTACK "RELIGIOUS PRESSURE" ON TRIAL

The trial of Josef Cardinal Mindszenty, Roman Catholic primate of Hungary, was a civil trial and to inject religious pressure into it is un-American and dangerous beyond estimation, the Charleston Baptist ministers conference declared in a statement issued after a meeting in Citadel Square Baptist Church yesterday.

"The sentiments developed from this trial are extremely dangerous," the statement read. "Agitation by radio and press has been of such nature as to actually tend toward a state of war between this country and communistic Hungary. We would urge therefore that the American people think carefully and prayerfully before reaching conclusions which would lead to such a disaster.

"Numerous occasions have arisen in recent times where individuals of different faiths have undergone such trials, but their cases have not been used for pressure purposes by the religious bodies of which they are a part."

The statement follows in full:

"Baptists have traditionally stood for liberty of conscience and the other liberty necessary for maintaining liberty of conscience, liberty of speech. Baptists introduced the idea of democracy into this land of ours and we stand ever jealous of any infringement upon the doctrine of the individual. Necessary to the doctrine of the dignity of the individual is that of the separation of church and state. Where the state has supremacy over religion or a religious sect has authority over the state, individuals always become subservient to the authority in power. History is monotonous in its proof of that fact.

"As Baptists we see a grave danger in the sentiment arising from the case of Josef Cardinal Mindszenty. The trial of Mindszenty was behind the iron curtain and doubtless held rigidly to communistic philosophy, which must be condemned by any freedom-loving individual.

"Because the trial was behind the iron curtain, all the facts in the case cannot be known. The conviction of Mindszenty was a matter for the civil courts of Hungary. Mindszenty was a citizen of that country and under the jurisdiction of the laws of that country as much as is every other Hungarian. The fact that he was a cardinal in the Roman system should have had no connection with the fact that he was convicted.

"He was convicted according to the communistic type of justice. Whether he was guilty or not is a matter which ought to concern every person in the world who regards his freedom as of any value; for an infringement of his freedom is essentially a challenge to all freedom. However, protecting him from the courts of the land behind the cloak of Romanism, is equally a threat to the liberty of every man who regards freedom a dear possession.

"We deplore the effort of Cardinal Spellman, President Truman, or anyone else who tries to inject into a civil trial immunity from justice because of the religious position of the one being tried. We consider this a serious threat to the freedom of mankind.

"The trial of Mindszenty may be an attempt on the part of the Government to control religion but no more so than was the trial of the humblest Christian in any other communistic country.

"It is certainly no more of an attempt to control religion than the Roman Catholic Church is doing in Spain, where none but Catholics are allowed to hold public services and private services are ever threatened with violence. Section 6 of the Spanish Constitution of June 17, 1945, reads as follows: 'The profession and practice of the Catholic religion, which is the religion of the Spanish state, will enjoy official protection. * * * No public ceremonies or manifestations will be permitted in any religion other than the Catholic religion.' Nor is it any more of an effort to control religion than the Roman Catholic Church is doing in sections of South and Central America. This is a civil trial, and to inject religious pressure into it is un-American and dangerous beyond estimation.

"The sentiments developed from this trial are extremely dangerous. Agitation by radio and press has been of such nature as to actually tend toward a state of war between this country and communistic Hungary. We would urge therefore that the American people think carefully and prayerfully before reaching conclusions which would lead to such a disaster.

"Numerous occasions have arisen in recent times where individuals of different faiths have undergone such trials but their cases have not been used for pressure purposes by the religious bodies of which they are a part."

Foreign Policy

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 21, 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Must Still Guess on Foreign Policy," published in the Grand Forks (N. Dak.) Herald of February 15, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MUST STILL GUESS ON FOREIGN POLICY

If there ever was a time when the people of the United States and those of the world should have certain knowledge of our foreign policy, that time is now. They at least should know, without having to guess, which direction the State Department is going on developments which are either democratic or opposed to democracy.

Our Government has had ample time to build the ground work of a policy which could be accepted with confidence everywhere, but such is not the case. It cannot be accepted with confidence even on the North American Continent. Yet the United States is expected to be and is attempting to fill the role of world leader.

That our foreign policy cannot inspire confidence on this continent was demonstrated when our State Department recognized totalitarian governments in Venezuela and El Salvador. Naturally, there was sharp criticism in Washington of the course taken, particularly as it had to do with the casual attitude toward the situation in Venezuela. Administration officials offered weak defense in a statement which generally deplored plots to overthrow governments in Latin America.

Last November a military clique staged a coup d'état in Caracas. At that time our State Department announced it was too early to discuss formal recognition of the new regime. The Gallegos government, which was

overthrown, had polled 70 percent of the Venezuelan vote in a free election last spring.

Despite the fact that the regularly elected administration had come into office by democratic process, some two months later President Truman's State officials placed their stamp of approval on a group of plotters who overturned the legal government of that country.

A State Department spokesman has gone at length to make it abundantly clear the United States still regards such overt acts as not only deplorable but unusually inconsistent with the acknowledged ideals of American republics."

We need no State Department official to tell us such acts are inconsistent with the ideals of democracy. We need not be told, either, that the decision of the Washington administration in condoning such an act is inconsistent with our own ideals and position. What we would like to know is when we are going to have a foreign policy that is consistent—one that follows a logical line of reasoning and in which we and the rest of the world can place some confidence.

Migratory Bird and Game Treaty With Mexico

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, February 21, 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Kem Resolution on Ducks," published in the Columbia (Mo.) Daily Tribune of February 7, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE KEM RESOLUTION ON DUCKS

Director Albert Day, of the Interior Department Fish and Wildlife Service, told reporters the other day that the resolution which has been introduced by Senator JAMES KEM, of Missouri, for an investigation of Mexico's observance—or lack of observance—of the migratory bird and game treaty with the United States would not help negotiations between the countries on this subject.

Director Day discounts numerous and widespread reports of how wild ducks are being slaughtered in Mexico for commercial purposes and of other destructive practices that disregard all principles of modern wildlife conservation. Day bases his opinion on information gathered on a recent visit to Mexico.

Other opinion disagrees with this.

The Missouri Duck Hunters' Association has conducted a vigorous campaign to get something done about what it describes as the slaughter of ducks in Mexico, and Matt Morse, a member of the Missouri group, paints a sordid picture of the Mexico situation in a recent article in Field and Stream magazine. In fact, Senator KEM introduced his resolution largely at the behest of the Missouri duck hunters.

It may be, as Director Day says, that Mexican officials resent the American attitude that we own all the ducks on the continent. The Director of the Fish and Wildlife Service might have politely replied to these Mexicans that American sportsmen also resent being held to a measly bag limit of 4 ducks per day and a meager season of only 30 days, while Mexican laws permit a daily bag of 25 ducks and a 4 months' open season.

Furthermore, Americans have spent millions of dollars and unlimited time and energy to improve breeding grounds throughout the plains and marshes of Canada. These efforts have produced a definite and gratifying increase in the duck population. It doesn't make American sportsmen feel very happy to hear reports of how the ducks they have helped raise in Canada and helped protect during their flight through the United States are being slaughtered for fun and profit after they cross the border into Mexico.

If these reports are untrue or exaggerated, as Director Day contends, then a public investigation of the facts as called for under the Kem resolution would reveal information most gratifying to all concerned and not in any way embarrassing to Mexican officials whose feelings Director Day is fearful of hurting. If the reports are true, then a public investigation would help pave the way for speedier action toward a remedy.

Either way, the Kem resolution would seem to be in order.

Federal Government Structure in Relation to State and Local Governments

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, February 21, 1949

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Time for Good, Hard Look," published in the Cleveland Plain Dealer of February 15, 1949, dealing with the resolution proposing a study of the structure of the Federal Government in relation to State and local governments.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME FOR GOOD, HARD LOOK

A bill of laudable purposes—the purposes of examining the results of the steady centralization of power in the Federal Government, of ascertaining how much of this centralization has resulted from necessity and how much from political design—has been introduced in the United States Senate by Senator JOHN W. BRICKER, Republican, of Ohio.

The bill by the former governor and the present junior Senator calls for the creation of a national commission on intergovernmental relations. The commission, which would be somewhat comparable in scope of authority to the Hoover commission on the reorganization of the Executive branch of the Federal Government, would be composed of representatives of the national administration, Congress, State government, municipal government and the taxpaying public that foots the bill for the oppressive snarl of Federal-State-local taxation and the wasteful, confusing jumble of jurisdictions of the three levels of government.

As Senator BRICKER accurately points out, not since the adoption of the Constitution, the framers of which believed they had stipulated a "proper division of powers and functions between the Federal and State governments," has a thoroughgoing inquiry into intergovernmental relationships been conducted. Senator BRICKER is deeply concerned, and rightly so, with the way in which the three levels of government, Federal, State, and local, have crisscrossed the jurisdictional lines—and with the enormous concentration of governmental power in Washington.

In presenting his bill to set up a commission to determine the best allocation of functions between the Federal and State governments, and mark out appropriate fields of taxation in harmony with its proposed allocation, Senator BRICKER made some remarks that should be soberly pondered by the American people generally, and by the Republican Party leadership particularly, if that party is to be the party which the senior Senator from Ohio, ROBERT A. TAFT, believes it should become: the party militantly protecting human liberty against the steady encroachment of government.

"I believe the Congress should find out, if it can," said Senator BRICKER, "what factors have contributed to the centralization of government in Washington, and the degree of contribution of each."

"I believe the Congress must carefully examine the ultimate result of the trend toward centralization. Are we faced with an irresistible rush toward centralization—then state socialism—then dictatorship? I do not believe we are. I do not believe that this trend, which to my mind will certainly lead to the eventual destruction of the Federal form of government, is irreversible. Again it is high time the Congress stop and take stock—high time to find out where we are going.

"It may be," Senator BRICKER said later in explanation of his bill, "that State and local governments are expensive, archaic manifestations of a bygone day and should be dissolved. Heaven forbid such a finding—but if they are, let's find it out and stop paying lip service to the Federal system."

Senator BRICKER is quite right; it is time to take a good, hard look and see what time, a vastly changed economy, and the dreamers of a welfare state have done to the handiwork of the creators of the Federal government who delegated what they thought were carefully enumerated powers to that government.

The Atom Bomb

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, February 21, 1949

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Momentous Decision," from the Bridgeport Telegram of February 7, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MOMENTOUS DECISION

Chairman BRIEN MCMAHON, of the Joint Congressional Committee on Atomic Energy, made a very daring address in Detroit last week when he pointed out that there lurks in so much secrecy over our atom bomb, a possible threat of war.

The barrier to truth set up by the iron curtain, the Senator said, has brought about the current armament race, and history is replete with proof that every unrestricted armament race can have but one result—war.

No wonder the correspondents say he has thrown a bombshell into Washington, a miniature atom bomb, and a pretty row has been stirred. Mr. MCMAHON doesn't say we should reveal the strength of our atomic energy development, but in the interests of peace, he

asks, "How can we expect mankind to believe us unless all the world knows that atomic weapons are capable of being produced in quantity? Are we not obligated to tell mankind what this elemental force means—in terms of production facts and figures?"

Immediate objection came from other Senators, yet Chairman McMAHON has directed David E. Lilienthal, chairman of the Commission, to study the question of secrecy. "My request refers solely to the size of the stock pile," the Connecticut Senator emphasized. "This is a highly guarded secret. In my opinion, the time has come to reconsider that question."

It is clear that Mr. McMAHON is not trying to bring into public knowledge any of the secret processes involved in the development of atomic bombs or any of the data on military strength. What he would like to know is where we actually stand today. It is likely that we have the only bombs in the world, and certainly, according to Mr. Lilienthal's current report, we have the most powerful ones and are producing bigger ones all the time.

But the Senator, who is chairman of Congress' joint committee on the subject, doesn't know how many we have, or how rapidly we are making them. This lack of information, he complains, makes the United States like a general who must train his troops without knowing how many rounds of ammunition they will be issued.

It may well be that the information will never come out, but Senator McMAHON is perfectly justified in demanding to know where the country actually stands, in light of the Lilienthal report. After all, what is the chairman supposed to be, and the Senate, figureheads? At least now the matter will be studied and debated by those who, like Senator McMAHON, have our country's interests at heart always.

The Economic Situation

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1949

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Time To Stop, Look, Listen," published in the Kansas City Star of February 6, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME TO STOP, LOOK, LISTEN

Sometimes, when we read all the clamor from Washington for more taxes, more spending, more Government functions, we wonder if they really know what is going on out over the country. Eventually, Washington and its myriads of experts will find out. Facts have a habit of catching up with theory. But often it is too late and genuine needless damage has been done.

If there ever was a time to look and think realistically, when sober judgment is needed, not just pious good intentions, that time is now. The country didn't begrudge President Truman his joyous, happy inaugural. He had it coming for his surprise victory and the almost single-handed battle he waged for reelection. But the tumult and shouting is over now and the painful "morning after" is at hand, much sooner than anyone anticipated.

Almost unnoticed, except by the people immediately hurt, there has been an acceleration in the drop of commodity prices that justifies genuine concern over the future months to come. The cost of living is coming down, for which housewives the country over probably will sing hosannas. Everyone, including the farmers themselves, recognized that food prices had got out of hand and were entirely too high the last 18 months. It was generally recognized a readjustment was coming and that it was a healthy, not a dangerous, omen. But most economists, and certainly Government leaders, hoped for an orderly adjustment, not a slide such as brought on the depression of the early twenties. What has happened in recent weeks has been a blizzard on farm commodity prices, almost comparable to the blizzard that has locked the great West in ice and snow.

From the high spots of 1948, more than $10,000,000,000 has been taken off the value of livestock generally. More than half of this has come since the fateful November 2 election, when many farmers thought they were voting for sustained high prices. To be fair about it, this drop probably would have happened just the same whether Dewey or Truman had been elected. But it has stunned cattle and hog raisers out West. The farmers aren't broke, but feeders have been badly hurt, and there is growing uneasiness and concern over the future, which is not healthy.

The Associated Press reported this week that its wholesale commodity index had dropped to the lowest point since February 11, 1947, with a decline of more than 3 percent in the last week and over 7 percent in the month of January. From the all-time high point, the index has dropped from 208 to approximately 170. All this has not been reflected yet to the consumer's table, but it is on the way. Specifically, on the Kansas City market, hogs reached a record high in August 1948, of $31.75. On election day, November 2, they were $25.50 a hundred—one of the reasons many farmers didn't vote or were afraid of Dewey. They felt there was a better chance of getting help from Truman than Dewey. The top price at the end of last week was around $20.50 a hundred, even below the OPA price.

Or take cattle. The record high was in July 1948, at $40.50 a hundred. On election day, the top for steers was $33.50. The very top this last week was $25, and there were days when good fed cattle brought only $22. When it is recalled that feeders often paid above $30 for their steers, the licking they have taken is apparent.

Lard has slipped worse than anything, although the Government is endeavoring to bolster the market by increased shipments abroad. From a record high in March 1947, of $32.75 a hundredweight, lard sold at $19 on election day, bobbed back up on the hope that the Democratic administration was going to do something, and then dropped back down to as low as $13.60 last week. Lambs haven't shown such a wide fluctuation. From a record high in July of last year of $33 and a price of $25.50 on election day, they are off only about $1 now from the election-day figure.

The story on grains is a bit different because of Government supports. Wheat, which stood at $2.24 a bushel on election day, held pretty well until the last week, when it tumbled at least 10 cents a bushel. Corn took its big drop last year because of the huge crop. It was selling for $2.27 last July. By election day, it was down to $1.35, one reason Dewey lost the big corn States. It went up a bit after election, but this week broke below election-day figures. The story is about the same on other commodities. Butter in Kansas City dropped from 92 to 67 cents. Eggs have dropped from a high of 51 to 39 cents. Butterfat has dropped from last year's high of 85 to 55 cents, but is up slightly from election-day figures.

All this is the story, not of what is going to happen, but of what has happened in the Kansas City territory. The farmer is not broke, but the readjustment has been more violent than expected. Buying power, necessarily, will be affected. The tremendous Government expenditure for shipments abroad and rearmament should tend to put a floor under the decline. If it does, farm sections can weather it. If it doesn't, and the decline continues, it could vitally affect future national economic prospects. Much is heard of keeping the buying power of labor up to keep prosperity, but the buying power of the farmer is just as important in the economic picture.

With such a picture already at hand, it would seem obvious it is time for Washington to show caution, at least, in its thinking and acting. They still talk of inflation controls when, except possibly on rents and a few other spots, inflation is as dead as $3 corn or the dodo bird. Everyone, seeking more spending for this or that purpose and more taxes, is claiming a mandate from the people for his particular pet project. The facts are, if there was any mandate in the close election, it was that a majority of those casting votes trusted Truman for the future more than they did Dewey.

Both parties promised prosperity. No one wants a debacle. Much of the program being pressed upon Congress might be all right in a period of a rising, expanding economy. But the sharp readjustment, to put it mildly, that has already come in farm commodities should be signal enough, both to the administration and to Congress, to slow up a bit in their thinking, and more important, in their spending on new programs that will increase the governmental load year by year for all time.

If the picture of the country as a whole is looked at realistically, it is a time for tax cutting, not tax increases. It is a time when wage raise sprees can't be justified, desirable as they might be. All the billions we are spending for defense and building up our armament will be wasted if the Nation's economy is not kept sound. That is the foundation on which the future has to be built.

One Hundredth Anniversary of the English-Jewish Press in America

REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. SABATH. Mr. Speaker, it was my honor and pleasure to be present at a conference of the American-Jewish press representatives, representing nearly every large city and nearly 52 of the really American patriotic and loyal independent Jewish newspapers. In that connection, the President of the United States sent a letter congratulating them on the one hundredth anniversary of the publication of the first newspaper in English in this country.

I ask unanimous consent that I may insert in my remarks the letter of the President and also a review of the first publication 100 years ago of the Jewish-American-English newspaper, which has always remained loyal and extremely patriotic.

The SPEAKER. Is there objection to the request of the gentleman from Illinois [Mr. SABATH]?

There was no objection.

(The matters referred to are as follows:)

THE WHITE HOUSE,
Washington, February 2, 1949.

Mr. PHILIP SLOMOVITZ,
President, American Association of English-Jewish Newspapers, Detroit, Mich.

MY DEAR MR. SLOMOVITZ: Please give my warm greetings to all those who are attending the convention of the American Association of English-Jewish Newspapers February 18 to 21. The one hundredth anniversary of the publication of The Asmonean is a significant occasion, and I am delighted to have a part in it.

The century that has passed since that date has witnessed our country's rise to a commanding world position. This has been possible because we were richly endowed by nature, but even more because we have drawn to ourselves from all the nations of the earth those who loved freedom best.

It is our people who have made America great, and I am proud of the fact that there have always been many of Jewish origin among us. In the development of our country, in its defense, and in upholding its high ideals, American Jewry has played a distinguished role.

For 100 years the Jewish press has been a potent force in building the America we love. May it long continue to uphold the highest ideals of human dignity and social justice.

Very sincerely yours,

HARRY S. TRUMAN.

THE ONE HUNDREDTH ANNIVERSARY OF THE ENGLISH-JEWISH WEEKLY PRESS IN AMERICA

(By Philip Slomovitz, president, American Association of English-Jewish Newspapers; editor, the Detroit Jewish News)

There are several stages in Jewish journalism in which Ladino (Judeo-Spanish), German, Hebrew, Yiddish, and English were the language media.

The first Jewish periodical in the world, which made its appearance at about the same time that the general European press was born, was published in the Ladino language, in Amsterdam, in 1678, under the name Gazeta de Amsterdam. It is interesting to note that the second Jewish publication in the world on record was published in 1687, also in Amsterdam, in Yiddish, and was known as the Tuesday and Friday Courant. It was short-lived—it survived only 16 months—and its text was in the Judeo-German known as Ivre Taitsch, its actual name having been Dinstagishi und Freitagishi Courantin.

In the following century, Hebrew publications began to make their appearance. Moses Mendelssohn published a Hebrew weekly, Kohelet Musar, in 1750. During the Haskalah period, Hebrew dailies were published and were the media for spreading modern ideas among Jewish communities, meanwhile setting into motion the movement for the revival of the language of the Bible.

Toward the end of the last century, Yiddish dailies assumed the leadership and became the dominant factors in guiding the thinking of the Jewish masses throughout the world. This was as true of the United States as it was of European countries. In this country and in Poland the Yiddish dailies predominated, although newspapers and periodicals also appeared in other languages in the Jewish communities of both countries. There were Polish and Hebrew journals in Poland. In the United States, Jewish periodicals appeared in German, Hebrew, and Ladino. La Vara, a Ladino periodical, edited by Albert S. Torres, was published in New York from 1922 to 1948, and it was only about a year ago that this Judeo-Spanish weekly finally ended an interesting existence in the declining community of Spanish Jews.

Prior to the era of Yiddish journalism in America, there were a number of German-Jewish periodicals and attempts also were made to foster a Hebrew press. At present, there is one Hebrew weekly, Hadoar, now prospering, in its twenty-sixth year, under the editorship of Menaham Ribalow. There are four Yiddish dailies, the Forward, Der Tag, Yiddish Morgen Journal, and Freiheit, Daily Yiddish newspapers at one time appeared in Philadelphia, Chicago, Cleveland, and for a very short period in Detroit. All of them disappeared. In Chicago and Cleveland Yiddish weeklies, offshoots of the earlier daily newspapers, still are circulated. But in the main the Yiddish press began to decline with the cessation of immigration to this country. A new era, although slow-moving, therefore began for the Jewish newspaper published in English.

The first English-Jewish periodical published in English in this country was the Occident and American Jewish Advocate, which made its appearance in Philadelphia in April of 1843 under the editorship of the able Rabbi Isaac Leeser, of Congregation Mikveh Israel. The Occident, about which Rabbi Leeser reported that "we circulate scarcely above 510," for 26 years struggled to advance cultural Jewish ideals and to clarify religious issues. But the Occident, like earlier periodicals which appeared both in English and in German, was a monthly publication.

The first English-Jewish weekly newspaper to make its appearance in this country was the Asmonean, which was published in New York by Robert Lyon in 1849. From that year, therefore, begins the history of the Jewish-weekly press in America, published in the English language.

The Asmonean, a "family journal of commerce, politics, religion, and literature," lasted only 9 years. Before it suspended publication it added occasional German supplements. These were indications of the prevalence of German as the language used by the Jews in the United States at that time. But its beginning marked the introduction of an important factor in American journalism—the English-Jewish press—which today is acknowledged as one of the most powerful factors for good in American and Jewish life in this country.

There were approximately 50,000 Jews in the United States in the year of the birth of the English-Jewish press. New York and Philadelphia were the largest Jewish centers of population. The first English-Jewish monthly magazine was issued in Philadelphia, while New York saw the birth of the first English-Jewish weekly—Robert Lyon's the Asmonean. A new cultural center was rising, however, in Cincinnati, where Rabbi Isaac Mayer Wise was laying the foundation for the Reform Synagogues and for Hebrew Union College. In 1854 Rabbi Wise founded the oldest surviving Jewish weekly. He then called it the Israelite, which in 1874 assumed the present name of the American Israelite.

Early beginnings in Jewish population expansion in this country are evidenced by the fact that an English-Jewish weekly, Jewish Times and Observer, edited by M. S. Levy and William Saalburg, was published in San Francisco from 1855 to 1905. Another early English-Jewish weekly, the Jewish Messenger, established in New York in 1857, was absorbed by the American Hebrew in 1903. The latter, for many years among the more popular weeklies, has changed publishers and editors many times in the past 20 years. The American Hebrew first made its appearance under its own name in 1879. Among the other more popular weeklies in the English-Jewish periodical field, all of whom, like the American Hebrew, had declined from their earlier standings, were the Reform Advocate which was edited by Dr. Emil Hirsch, in Chicago, and the Hebrew Standard, later merged with the Jewish Tribune, which also was absorbed by the American Hebrew.

The Jewish Exponent, of Philadelphia; the Jewish Criterion, of Pittsburgh; the B'nai B'rith Messenger, of Los Angeles; the Jewish Community Bulletin, of San Francisco; the Jewish Review and Observer, of Cleveland; the Jewish Advocate, of Boston, are among the oldest English-Jewish weeklies in America.

At present, 51 English-Jewish weeklies are published in 43 cities in 33 States.

There are two Jewish news services—the Jewish Telegraphic Agency and Seven Arts Feature Syndicate. The Independent Jewish Press Service folded 2 months ago after about 12 years of circulating news and feature articles.

The American Association of English-Jewish Newspapers, organized 6 years ago, includes in its ranks the leading English-Jewish periodicals. The association uses the term English-Jewish instead of the previous reference to Anglo-Jewish papers in order to differentiate between Jewry's English newspapers published in America and those appearing in England.

The American Jewish community in the days of the Asmonean numbered 50,000. Today, we are the largest Jewish community in the world, with a population of more than 4,750,000. The important role played by American Jewry in the rebirth of the state of Israel is ascribable, in great measure, to the influence of the English-Jewish press, which has assumed an important place in the molding of public opinion in this country and in advancing the most liberal causes.

A new era begins for the English-Jewish press in 1949—the first year of the second century of this press, whose beginnings were with the Asmonean in 1849.

American Teachers and the American Congress

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 21, 1949

Mr. WILEY. Mr. President, in the February 1949, issue of the magazine Wisconsin Journal of Education, published by the Wisconsin Education Association, there is carried an article which I prepared. The subject of the article is the interrelationship between America's educational system and the American Congress.

I am indeed grateful for the opportunity of having my thoughts appear in this splendid periodical, which speaks for the forward-looking, forward-moving educational system of my State.

I ask unanimous consent that the text of my article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN TEACHERS AND THE AMERICAN CONGRESS

(By ALEXANDER WILEY, United States Senator from Wisconsin)

"How soon will the Federal aid to education bill come up in the Eighty-first Congress?" "What will be the decision of the House of Representatives on it?" A decision

that seems more in doubt than that of the Senate, since the Senate already voted for the predecessor bill, S. 472, in the Eightieth Congress, while the House refused to act on that bill?

These are questions with which American teachers, school principals, and superintendents are deeply concerned, which engage the attention of all thinking American parents and which in turn are high on the agenda for consideration by Members of Congress.

If the debate on the Federal aid to education bill during the Eightieth Congress served no other purpose, it did bring into the sharp focus of national attention the whole matter of the crucial relationship between our national government and those who mold the Nation's youth in American classrooms.

PROBLEM OF UNDERPAYMENTS

During my 10 years in the Senate, I have seen the problems of American education change dynamically with changing times, but the problem of a comparatively very low schedule of compensation for teachers has remained. American education has experienced the GI floodtide of students; it has experienced classrooms crowded with youngsters born during the war years and it has experienced other changes, but always there has remained this one fact: The American teacher has been paid a disproportionately low salary in relation to the compensation in virtually any other profession, and, for that matter, any other significant job when one considers the years of patient and costly study as well as other preparation for the career of pedagogy which a teacher must undergo.

The debate on the Federal aid to education bill did, however, bring home to the United States Senate the fact that the teacher as one element of the white-collar class was, by and large, still a forgotten man and woman, although some important improvements had been made in his or her living standards. The debate showed, too, how crucial was this aid legislation, considering such facts as the United States census estimate, which showed that in 1945 more than 4,000,000 children between the ages of 5 and 17, inclusive, attended no school whatsoever.

NEGLECT OF EDUCATION

Teachers who are my readers are more than familiar with the sorry tale of under-education in our supposedly well-educated population. They are familiar with the fact that in World War II 8 percent of the young men examined by selective service were rejected for educational deficiencies. Teachers know that between the years of 1941 and 1945, some 350,000 qualified teachers left their life work, many never to return, particularly because of the low pay which they received and, too, because of lack of public appreciation of the staggering burden on teachers. 1946–47 estimates indicated that around 54 percent of the teachers in public schools were paid less than $2,000 for the year, and 16 percent were promised salaries of less than $1,200. So serious had the situation become that in 1946–47 only 67 percent of teachers' college enrollments were actually in teachers' preparatory courses, as compared to 90 percent taking courses leading to employment in teaching in 1941.

These are some of the facts which I personally bore in mind when the vote came up on the Federal aid to education bill. To be sure I recognized how strained the Federal budget is at the present time, the vastness of our defense and foreign commitments. Yet it was very obvious that if America is to be adequate to her responsibilities in these technological times, she cannot afford the terribly high rate of illiteracy and under-education in her youth, nor can she afford to ignore and neglect her teachers, to permit overcrowded classrooms, completely obsolete textbooks, supplies and equipment and other alarming conditions. Acting upon that basis, I cast my vote for Federal aid to education. This bill, S. 472, would have, as you know, assured for Wisconsin an allotment of around $3,300,000. It is estimated that Wisconsin would have received an allotment per child, age 5 to 17 years, of $5 apiece, whereas in Mississippi, where the need is much greater, the allotment would be as high as $28.50 per child.

OPPOSITION TO LEGISLATION

There have been and will undoubtedly be many sincere-minded and expert folks and organizations arrayed against future Federal aid legislation. Many of these folks fear Federal regimentation of education—something which I'm sure I don't want and which my readers don't want. We feel, however, that by carefully drawn aid legislation, we can prevent Uncle Sam from unduly interfering with State and local jurisdiction in the education field, while affording needed help.

Proponents of this legislation know, too, that passage of the Federal aid to education bill will not, of course, relieve the State and localities of doing their utmost independently and cooperatively for improvement of education. Teachers know from their study of social sciences that, too often, when the Federal Government shows an interest in a particular field, State governments and localities take this Federal interest as an excuse for showing less and less interest themselves. To be sure, the States and localities may match funds in accordance with Federal legislation, but unless with that matching of funds, the States and localities demonstrate an increasing attention and constant desire for improvement in educational administration, then the major purpose of Federal action will not have been achieved. We all recognize the heavy financial burdens upon our States and localities, but we recognize too, that the Nation's youth is the Nation's hope, the Nation's future, the Nation's responsibility.

It is to be hoped, therefore, that the Eighty-first Congress will take prompt action on this Federal aid to education bill. Only by giving this legislation high priority can we begin to meet the long-present challenge to American education.

The new Congress, too, should give prompt and careful attention to other legislative fields in which teachers are deeply interested such as the oft-proposed legislation to exempt the first $1,440 of teacher's retirement pensions from taxation plus a long list of other bills with which educators are concerned.

LETTERS ON LEGISLATION

I am glad to say that many letters come to me from the Wisconsin Education Association, from Wisconsin teachers, from members of Parent-Teacher Associations, and others deeply interested in educational problems, as affected by legislation. Although it is not always possible for me to answer this correspondence in as great detail as I would like, I try to promptly and carefully read, answer, and act upon each letter and telegram that comes in and then, later on, to review the communications' contents at the appropriate time when, for example, a particular bill actually comes up for a floor vote.

This then, is the first major front on which Congress has relationship with American teachers—the actual legislative front.

There is a second front, and that is through formal visits of legislators with teachers and with pupils in Washington and back home. In the last few months, we in the Wisconsin delegation in Congress have been glad to see several groups visiting from Wisconsin schools and colleges. Various enterprising teachers conduct their students to Washington to see, at first hand, their Nation's legislators in action. This is a part of the same wonderful but, we recognize, oftentimes difficult process which sends Wisconsin pupils and teachers to Madison and to other important locations in our State for study at first hand.

If any educator who reads these words is thinking of bringing a school group to Washington, I hope he or she will write me so that I can cooperate with the Washington Board of Trade and other public and private officials in helping to make arrangements for their visit.

SUPPLYING LITERATURE

There is a third front on which Congress has relationship with the teacher, and that is through the supplying of numerous informational materials and literature. Although a Congressional staff is necessarily limited, and the number of items that can be obtained on a complimentary basis is also restricted, we do try to send out to Wisconsin's teachers and schools interesting booklets, copies of bills, CONGRESSIONAL RECORD copies, debating materials, and other items which they can find helpful in their work, particularly in social-science classes.

We want and need your requests, your suggestions, your candid comments and constructive criticisms.

OUR MUTUAL WORK

Congress and American teachers are, of course, engaged in the same vital work, that of maintaining and building this Republic. Certainly, there is no more important job in the world today than perpetuating the last best hope of earth by strengthening the foundations of freedom and liberty.

You and I are indeed engaged in the same patriotic job, and I hope that we will cooperate toward it. I, like all my family, am a product of Wisconsin's educational system. We are proud of the wonderful educational advances that Wisconsin has made, pioneering in paths that have been followed by many other State educational systems throughout the Nation. You and I know that Wisconsin educators will ever be on the march for self-improvement of our Badger system. We are, after all, always confronted with the challenge of making our educational process even more adequate to the changing needs of America in the atomic age.

With courage, with confidence, with understanding, we can be adequate to that challenge and to the even greater challenge of maintaining this blessed Republic.

Rural Electrification

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. CANNON. Mr. Speaker, under leave granted to extend my remarks I desire to include a notable address delivered by Hon. Claude R. Wickard, REA Administrator, before the National Rural Electric Cooperative Association:

It is a great honor and pleasure for me to attend and address again your national convention. It is a privilege indeed to be associated with the men and women who are working so energetically, unselfishly, and effectively in making the REA program one of the most beneficial movements in American history.

This occasion gives me an opportunity to carry out one of the responsibilities that I have under the REA Act. Section 2 of the act says: "The Administrator is authorized and empowered to make loans * * * for rural electrification * * *; to make

* * * studies, investigations, and reports concerning the condition and progress of the electrification of rural areas."

This is one of the best opportunities I have to make such a report and to discuss the condition and progress of rural electrification. I am most grateful to you for it.

The calendar year just closed was by all odds the greatest in REA history. A total of 147,000 miles of line and 468,900 consumers were added on REA-financed systems. That is, 106,700 consumers more than the highest previous record established in 1947.

Today 70 percent of American farms have central station electric service—as against 11 percent when REA was started less than 14 years ago. There are now a total of 2,500,000 consumers on REA-financed systems.

These are impressive figures, but they are not the sole measure of the progress that has been made. The most important thing, of course, is the tremendous increase in the happiness, health, and economic well-being of rural people which the program has brought about. Rural people are using electricity in ever more ways and in ever greater amounts to achieve a better life. We estimate that REA co-op members who were getting service 5 years ago have about doubled their consumption since that time.

I am proud to report that the REA program continues its record of outstanding financial success. Our financial record must command respect even here in New York, the financial center of the world. Since the start of the program we have advanced $1,100,000,000. I want to call attention to the fact that approximately 60 percent of this amount has been advanced in the last 3 years. This means that much of the REA-financed construction is so new that it has not yet had a chance to contribute toward the amortization of the indebtedness. Despite this fact, REA borrowers have paid, as part of their debt service, a total of $185,000,000, of which $106,000,000 has been paid on principal. Does anyone know of a better record in the electrical-utility business?

From every standpoint this program has made a remarkable record. How that record contrasts with the prophecies of failure which were made by the people who opposed this program! The prophets of doom said that farmers would not use enough electricity to make it profitable to serve them. They also said that only men of long experience in the utility field could make a success of managing an electrical enterprise. They predicted that they would have to take these systems off your hands, after a great financial loss to the taxpayers. They have been wrong on all counts. Incidentally, one company learned the hard way, down in Virginia, that it couldn't take over—even by slipping up on the blind side.

Let us look ahead to the future. You directors and managers have shown what can be accomplished when a conscientious, intelligent, and determined effort is made to reach a worthy objective. We are going to need that same kind of effort to attain our ultimate objective, which is to make plenty of reliable, low-cost power available to every rural community of this Nation. There are many difficult problems to solve; there are many important decisions to make. Many of these decisions involve not only the success of the REA program but the welfare of the Nation and even its leadership in world affairs.

Let us consider first those problems which pertain directly to the bringing of service to every rural community. There is the matter of loan funds. Although the Congress has made large amounts available for loans in the postwar years, substantial amounts are still needed if construction is to continue its rapid progress.

Materials are needed in larger quantities. The availability of aluminum conductor is the controlling factor in construction for many REA borrowers. The supply situation on the other types of conductor has been tightening. The Wisconsin Electric Cooperative's contract with the Reynolds Metals Co. for aluminum conductor offers a bright ray of hope on what otherwise is a darkening picture in this field. It deserves your careful consideration.

Despite our combined efforts to hold costs down, construction and operating costs have gone up, increasing the difficulty of establishing economic feasibility in areas of low financial return. This places on us the responsibility for being ever more persistent in our efforts to resist the inflationary tendencies and to find economies wherever possible all along the line. We may have to look to other solutions as well. In some instances a lengthening of the amortization period from 35 to 50 years would help to insure economic feasibility.

Of vital importance to REA consumers everywhere is the problem of power. In fact, solution of this problem on a broad front is vital to the welfare of our entire Nation. We find sometimes that we cannot make loans for distribution lines until the power problem is solved. The energization of lines already completed has been delayed in some places because of lack of power. In other areas service is poor because of power shortage. Rising wholesale power costs are hampering the program in many ways.

Steady growth of our national economy to meet the expanding needs of our people is essential to our national welfare. This growth is being restricted today by the shortage of electric power. That shortage must be eliminated by Nation-wide action. We have the natural resources. They must be developed to insure that our national well-being will not continue to be jeopardized again by power shortages.

First, we must develop our great hydroelectric resources. This can be done effectively only through the Federal agencies which are charged with responsibility for flood control, navigation, irrigation, and reclamation. We can double our generating capacity by proper development of these resources. Fortunately, in many instances, they are situated adjacent to plentiful supplies of cheap fuel which can and should be used for firming up the hydrogenerators.

Second, the power from our river developments must be made available to the consuming centers at low and equitable rates if the country is to get maximum benefit from its own resources. This can best be accomplished through the Federal financing of the necessary transmission systems. The decisions in all these matters must be made in the interest of the consuming public and not for the benefit of the power monopolies.

The growing needs of REA cooperatives and the shrinking supply of low-cost wholesale power has made it necessary for REA to make an increasing proportion of its loans for the construction of generation and transmission facilities. From July 1, 1948, up to the middle of January we have loaned $45,000,000 for generation and transmission systems. We anticipate we will have to more than double this amount of loans before the end of the fiscal year because of the inadequacy of low-cost power. The increase in these loans is not due to any change in REA policy. That policy, as you know, is to make such loans only when it is necessary to solve a power shortage or to effect savings for consumers. It was established at the very beginning of the REA program and has been discussed and confirmed in congressional debates.

Despite the strict standards we are following, virtually all of the generation and transmission loans which we have made recently have been violently opposed by the commercial power companies. It is apparent that they are going to continue to seek legislative action to stop us from following our policy. Your representatives in Congress are the only people who can make a change in the policy. Until there is a change, I am going to follow conscientiously our present policy in regard to these loans.

So far I have reported to you briefly on the condition and the progress of rural electrification. I have pointed out some of the problems and decisions facing us and our fellow citizens as we continue to move forward in this program. Now I would like to discuss with you some of my thoughts as a farmer and as a citizen about this program in which we are engaged.

In the future we should devote more thought and effort to gaining a better understanding of the opportunities and responsibilities that we REA members and officials have in this great program. The principles and objectives of our program are basic to our democracy.

As many of you know, I am a member of an REA cooperative by choice rather than by happenstance. You see, before REA was created I had tried for years to get the power company to build a couple of miles of line to serve my neighbors and me. The power company officials were not interested unless we would agree to build the lines and then turn them over to their company. When, in 1936, there was talk of REA in my neighborhood, the power company people suddenly changed their attitude and offered to put the lines in at their expense and do it immediately. I said, "No; I will wait until I can get service through my own cooperative." I waited a couple of years. I am very happy that I made that decision. Together with all of my neighbors, I am enjoying reliable and adequate electric service today. We have no complaint of any kind. Every year we have an annual meeting, at which reports are made and policies and plans are discussed. The directors are democratically elected from the nominations which are made in our smaller district meetings. These directors are my neighbors and friends. They are capable, conscientious public-spirited men. They have selected a manager who is courteous, efficient, and interested in our community. I know these men are always thinking and working in the interest of my neighbors and me.

I know that none of the money I pay for electricity is being used for high-priced lobbyists, high-pressure propaganda, fancy entertainment, retainer fees, and other questionable activities which are completely unrelated to the service I use. I know that all money not needed for legitimate operating expenses is being used to retire the indebtedness of my cooperative. I know I am being credited for my contribution to the capital of my cooperative under the capital credits plan adopted by my cooperative.

I am pleased that my co-op is a member of the State Association for the purpose of representing my interests at that level. I am glad that it is a member of the National Rural Electric Cooperative Association which is so effectively and wisely protecting and promoting the REA program at the national level.

From a purely self-interest standpoint I am very glad that I am a member of an REA cooperative. However, there is a broader and more important reason for my being proud to be identified with the REA program. I believe that this program offers a most effective way of preserving and promoting free enterprise and democracy.

As you know, we have in the world today two divergent and conflicting ideologies concerning the proper function of government. One is that government should dictate and dominate the lives and activities of all citizens—in the interest of the State. The other is that the true and only function of government is to provide opportunity and protection for its people—in the interest of the people. We liberty-loving Americans hold to the latter concept. We know it is sound

and satisfying in practice as well as in principle. Under it we have enjoyed both liberty and prosperity.

But we must be ever alert if we are to preserve and promote democracy and free enterprise.

We Americans look after the political responsibilities pretty well. We exercise our voting privileges. We debate political issues in and out of our legislative halls. Our government, in my opinion, is more responsive to our wishes than ever before.

However, our free-enterprise system is being jeopardized a little more all the time by big corporations and monopolies. For several decades we have worried about this problem. We have passed antitrust legislation. We have set up regulatory bodies. We have sought remedies in our courts. These are all proper and in the interest of our people. Yet they have failed to halt the alarming concentration of power in the hands of the officials of a few big corporations. That increase in power is stifling free enterprise in many fields today and, ironically, is doing it in the name of free enterprise. In 1939, one-tenth of 1 percent of all business firms employed 40 percent of all wage and salaried workers outside agriculture. I suspect this concentration of economic power may be even greater today when 200 corporations own 55 percent of all of the assets of all the nonfinancial corporations of the country.

We are told that big corporations insure efficiency. That is the way defenders of big business rationalize the absorption and elimination of one after another of their competitors until they completely dominate the field. When there is a monopoly there usually is little incentive to try newer and more efficient methods. Moreover, under monopolistic conditions big corporations are in a position to dictate when and to what extent the public may have their services without being challenged by competition. These corporations have been known to hold back the use of patents and inventions to further their own ends. If steps are taken to introduce competition into their fields, corporation officials weep bitterly about the interests of their stockholders. What control does the average stockholder have over the big corporations? For all practical purposes—none. And neither does the customer.

We are told that it takes big corporations to fill our needs for goods and services, usually the basic goods and services. We are told to wait—that everything will be provided in proper time and in the quantities needed. Let us examine that theory in the light of the present situation—in the light of our own experience.

Steel is a monopoly that is big. Yet it has not produced the steel we need for national well-being. Aluminum is a monopoly that is big. Yet it is not giving us the aluminum we so sorely need. Perhaps the Wisconsin Electric Co-op-Reynolds plan is a step toward breaking this very type of monopoly.

The telephone business is in the hands of the biggest corporation of all. Yet the telephone monopoly has not given us farmers the kind of telephone service as far as coverage, rates, and quality of service are concerned, which we must have in this modern age.

As a matter of fact, instead of promoting efficiency, monopoly too often stifles it. The electric power monopolies failed to use their opportunity to provide rural people with electric service. Not only have they failed to take care of the power needs of the Nation, they have vigorously opposed the efforts of the people to provide adequate power for themselves.

Further concentration of power in the hands of the officials of a few big corporations must be stopped if we are to satisfy the ever growing needs of our people, and in order to protect our competitive free enterprise system which I consider in turn, absolutely essential to the preservation of our democracy.

One effective way of counteracting this dangerous trend toward concentration of economic power into fewer and fewer hands is exemplified by the REA program. To my knowledge, this program is unique throughout the world in its demonstration of how a government nationally and the people locally can work together to promote the economic welfare of people and communities within the framework of the private enterprise system.

The REA Act contemplates no ownership or operation by the Government. It is clearly designed to aid the people locally to own, operate, and control the electric systems serving them. Instead of making for greater and more centralized ownership and control by the State, or by huge private profit concerns of monopolistic tendencies, this program actually leads to decentralization of ownership and control back to the grass roots, back to the people who use the service and pay the bills.

The formula which made the REA program so successful is really a simple one. It is based on the belief that farm people are capable of working together effectively in their joint interest and that they assume obligations with an adequate sense of responsibility. It grows out of the philosophy that, in a democracy, it is the function of government to encourage, instead of suppress, the initiative and desire of people to do things for themselves through voluntary organization and action, provided such action is not in conflict with the public welfare. The formula itself merely provides for the Government to supplement the limited financial and technical resources of a given group of people with loan funds and technical advisory services as needed until the group has developed its enterprise and has learned to operate it effectively without further need of governmental assistance.

Curiously enough, while I was organizing my thoughts for this talk, I received a rather unusual letter from Dr. Horace M. Gray, professor of economics at the University of Illinois Graduate College. I am sure you will be interested—as I was—in his appraisal of one aspect of the REA program. I quote:

"Aside from the sheer physical feat of making electricity available to rural people, I have always felt that the greatest social contribution of REA was the demonstration that the distribution of electricity is, after all, a rather simple undertaking which people can manage cooperatively for themselves without benefit of billion-dollar corporations, expensive legal counsel, public-relations experts, New York headquarters, holding companies, utility commissions, and all the other elaborate impedimenta that is associated with large private utility organizations. Until REA proved this, I could never quite convince my students that large, complicated, expensive organizations were unnecessary to get electricity distributed. After all they have been brought up on a steady diet of propaganda designated to convince them that large-scale operation is always more efficient and it requires a clear-cut demonstration to shake them loose from this conviction."

That is what the professor of economics at the University of Illinois wrote me the other day. Far too few people seem to be adequately aware of what the REA program is demonstrating in actual practice.

How effectively the REA approach can be made to work is readily apparent if we contrast the utility industry's long record of failure with the records which have been established by your REA cooperatives in so short a time. You have extended an essential service to millions of rural people who otherwise might never have received it. You have set new standards for quality of service. You have made a financial success where officials of power monopolies said success was impossible. You have kept the ownership and control of your organizations in the hands of the members. You have made your organizations responsive to the welfare of the people dependent on you for service. You have gone about your business in an open, forthright, and efficient manner.

Above all, you have demonstrated that it is possible to have opportunity and prosperity without sacrificing liberty and democracy.

Has a Depression Already Started?

REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. BURDICK. Mr. Speaker, there are some Members here who, like President Truman, cling to the idea that we are not going to have any depression and that all that has happened so far is a "leveling off" process. There is not a better criterion as to what the future holds for us than a careful examination of what has happened in the past.

In the United States we have never had a disastrous depression that did not start first with a fall in the price of farm commodities. Those who are supposed to know the most about national economics, seem to know the least. Right now farm prices have already fallen to disastrously low points, yet the everyday cost of living has not followed this decline. Wheat at $3 a bushel saw bread selling at 14 cents per loaf, and now that wheat has fallen $1.03 per bushel from the highest point, bread sells for 15 cents per loaf.

The price of beef steers has fallen in Chicago from 39 cents per pound to 24 cents for the tops, yet beefsteak has not followed suit.

The next thing I have noticed about a depression is that after farm prices have fallen, unemployment begins to grow. In normal times we have about one and one-half million people unemployed, but since December 15 to date we have increased this number to 3,000,000. Few soup lines have yet shown up but it is now apparent that there will be plenty of them in the next 6 months.

Conditions here may absolutely prevent the United States from playing Santa Claus to the world. We cannot keep up this process of giving away billions to foreign countries. We can afford that only when we are operating under a sound economic standard here at home. With the drop in farm prices and the increase of unemployment, plenty of notice is given that we must stop this flow of exorbitant tax money to foreign countries. It will be well to stop and examine what good our flow of money to China has done; what good has it done in Greece, what good did it do in Czechoslovakia? Our ostensible purpose was to stop the spread of communism, but in Czechoslovakia and China our altruistic contributions have only helped

the spread of that ism. Will it not be so everywhere?

There is some reason why communism spreads and we have not discovered what that reason is. Or, if we have discovered it, we have taken no heed of it. If this flow of our money were stopping hunger, suffering and want, and was putting teeming millions back on the soil where they could make a living, I would say go ahead. But the landless millions are still landless except in Russia where large estates have been confiscated and turned over to the people with a string to it. They pay no attention to strings as long as they can find a home on the land. Homeless people are not acutely concerned with who rules them, so long as they are promised the prospect of eating again.

A great force to bring Christianity to the Indians in the West was Father DeSmet. But he never talked religion to Indians who were destitute and hungry. He fed them first, and then his brand of Christianity took effect.

In Greece we have done nothing to force that monarchy to apportion land among the people. We have been backing a ruthless monarchy with our money, guns, and ammunition. What we have done will continue the struggle between the landed and the landless, but this action on the part of the United States will not and cannot put out the fires of want among the "have nots" of the Greek Nation.

If America is sliding into a depression, and I am certain we are, should we not look to the condition of our own people rather than be so concerned with people everywhere else?

Here are some other aspects: This Government will soon learn that the farm population is one of our best taxpayers. Can we keep on giving away our money when one of our big taxpayers has been put out of business?

We can tax a thing too much. Taxes have gone up on telegrams 25 percent but what about the income when a tax is too high. The tax that is too high kills the goose that lays the golden egg. Chairman Doughton once said in one of his characteristic speeches, "You can shear a sheep every year, but you can skin it only once."

Taxes have gone up on packages sent by mail, but will that bring more revenue? It is doubtful for there will probably be fewer packages sent. And there will be no revenue from income taxes, no matter what the rates are, when there is no income to get more money to send to Europe, we will have to have more taxes, and in increasing the tax, are we not liable to actually lessen the amount collected?

If a real hand-sewn depression starts here, millions of taxpayers will be taxpayers no longer. Who will be left to pay the tax? Isn't it a better policy to go slow with increase of taxes until we find out where we are? Should we not consider that with the fall of prices of farm products and the increase in unemployment, the crop of taxpayers will grow steadily smaller?

Indiana's Interest in Forest Restoration and Conservation

REMARKS
OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. CROOK. Mr. Speaker, we of Indiana, as well as the many fine citizens of our sister States, are fast growing cognizant of the deplorable deterioration of our forest resources and we realize that it is time to give the serious situation our careful concern.

When the Creator designed the universe He did the magnificent piece of work with microscopic nicety, and it is safe to assume that He trusted mankind to render the type of stewardship that would not deface His handicraft with devastation and unsightly scars.

However, in our great United States, the scenic and garden spot of the world, man, in his struggle for higher standards of living and grabbing for the almighty dollar, has spread barren waste to millions of our acres, resulting in soil erosion, loss of soil fertility, countless destructive floods, tremendous reduction in the supply of our valuable hard woods, unemployment to thousands of our citizens employed in the lumbering companies and industries connected therewith, dust storms injurious to health and unsightly impressions engraved on the scenic face of the earth to commemorate man's bad judgment and lack of foresight. In fact, if we pause to give retrospection to our stewardship of God's priceless gifts to humanity, we will quickly discover we have been a most extravagant and wasteful people and our carelessness rises to haunt us in many disturbing ways.

Our neglect has reached the stage where just a conservation program will no longer suffice. In far too many places we have to inaugurate and promote a restoration program in order to have something to conserve. Thus, our timely program takes on a dual complexion and we are compelled to think of it as restoration and conservation.

There are many fine pieces of legislation pertaining to forestry already introduced in this Eighty-first Congress, and I want you to know that I join with the Honorable Ralph F. Wilcox, State forester, of the State of Indiana, in asking that every Member of Congress give these measures his most serious consideration.

I quote from bulletin No. 9 a suggested policy for Indiana by the Indiana Economic Council, which is as follows:

WHO WOULD HAVE TO PAY THE COST OF PUBLIC OWNERSHIP?—NO ONE

The money would, almost literally, grow on trees. There would be nothing but money saved for everyone—farmers, labor, businessmen, the general public, and the State of Indiana itself.

Studies in sample areas indicate that about 90 percent of the cost of services furnished by Government to such areas comes from outside the areas themselves—from the State, and from better-land areas in the same township and county.

School costs are high because the population is so widely scattered; roads and bridges have to be maintained for isolated settlers; a high percentage of the population receives relief and old-age assistance; losses on school fund loans are high; and so it goes.

FOR EXAMPLE

Studies in one Indiana county, where some 20,000 acres were purchased by the public in 1935–37, indicate that reduction of Government costs over a 12-year period would equal the cost of the land itself. For every $1 decline in tax revenue to the State from the land purchased, there was a $10 decline in the cost of local government.

Since 1905, when the State school-relief system began, Indiana has distributed about $1,000,000 to another county for school-relief purposes. Yet that county's land use planning committee has classified some 100,000 acres as unsuited to agriculture. So the situation there is no nearer solution in 1947 than it was in 1905. A program of public-land acquisition would gradually reduce the need for State school relief there.

Such a program would be eminently fair to the individual farmers themselves. Most of such land is occupied by transient occupants or by those who would like to move on to better land if they could. When newcomers arrive they are unfamiliar with the land's poor productivity. They waste time, money, and energy trying to make a living where others have failed. They soon exhaust their resources and move on, or apply to the township trustee for relief.

SO, WHAT SHOULD BE DONE ABOUT IT?

The facts, plus logic, dictate a threefold objective:

1. Increased productivity (through sound forest management) of Indiana's approximately 4,000,000 acres of privately and publicly owned land best suited to forests.

2. Increased efficiency in the utilization of trees, and increased processing of wood produced in Indiana—to provide additional income for local labor and industry.

3. Development and administration of publicly owned forests for maximum multiple-use benefits (soil conservation and rehabilitation, flood control, hunting, fishing, other recreation, etc.), and encouragement of similar development of privately owned forests.

This objective can be attained in five main ways:

1. Protect present woodlands from grazing and from fire—

(a) By construction, operations, and maintenance of fire towers.

(b) By providing fire-fighting equipment.

(c) By developing an organization of trained fire fighters.

(d) By an educational program stressing the full importance of protection from grazing and fire, and demonstrating most effective fire-fighting methods.

2. Encourage farmers and other owners of the 2,400,000 acres of forest land which should remain privately owned to follow sound forestry practices in the management of their woodlands—

(a) By expanding State nurseries to meet the planting-stock demands of farmers and other landowners.

(b) By educational programs in soil conservation, fire prevention, forest-management principles, timber estimating and appraisal, harvesting, and wood utilization.

(c) By giving woodland owners on-the-farm assistance in soil conservation and woodland management.

(d) By increasing woodland acreages in classified forests.

3. Undertake research sufficiently comprehensive to solve the many problems inherent in the production and utilization of Indiana

hardwoods, and establish adequate facilities for the training of professional foresters—

(a) By increasing teaching and research personnel (despite the fact that findings in other States are not always applicable to Indiana's problems, Purdue University now offers the only accredited forestry course in the north central hardwoods region—Indiana, Ohio, Illinois, and northern Kentucky).

(b) By increasing laboratory and classroom facilities (identical facilities in many instances can meet both teaching and research requirements).

(c) By establishment of research and instructional areas.

4. Expand State and Federal forests (the potential contribution of county forests to solution of this problem is inconsequential) to include all of the 1,600,000 acres of land unsuited to private ownership, except areas reserved for public and private recreational uses—

(a) By developing closer working relationships between local landowner advisory groups in the establishment of purchase-area boundaries and in the determination of base prices and purchase priorities.

(b) By more comprehensive land-classification studies to determine which parts of given areas should be purchased by the State —which should remain under private ownership.

(c) By legislation enabling exchange of lands between the State and Federal Governments.

(d) By continuous, rather than spasmodic, appropriations for land acquisition (to avoid too rapid purchase at one time, and the inability to purchase at other times).

5. Develop, manage, and administer public forests for timber production and for public uses—

(a) By stand improvement.
(b) By tree planting.
(c) By fire prevention.
(d) By timber harvesting.
(e) By provision of recreation and hunting areas.
(f) By construction of ponds and lakes.

Lives there a man with soul so dead who never to himself has said, in the words of Joyce Kilmer:

"I think that I shall never see
A poem as lovely as a tree.
A tree whose hungry mouth is prest
Against the earth's sweet flowing breast;
A tree that looks at God all day,
And lifts its leafy arms to pray;
A tree that may in summer wear
A nest of robins in her hair;
Upon whose bosom snow has lain;
Who intimately lives with rain,
Poems are made by fools like me,
But only God can make a tree."

Overtime on Overtime

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. RIVERS. Mr. Speaker, in the two cases before the Supreme Court, Bay Ridge Operating Co., Inc., against Aaron and Huron Stevedoring Corp. against Blue, the 5-to-3 decision and a 10,500-word majority opinion, and a 6,500-word dissenting opinion, the latter written by Mr. Justice Frankfurter, is a new chapter in American jurisprudence. In the majority opinion "regular rate of pay" under the Fair Labor Standards Act, was defined. As a result today, employers in the stevedoring and building-construction industries, and others, are potentially liable to employees, due to alleged overtime pay in the amounts of hundreds of millions of dollars of windfall wages, even though never contemplated by the Fair Labor Standards Act or collectively bargained for between the employers and employees. This screwball theory, vehemently denounced by Mr. Justice Frankfurter, is called "overtime on overtime." In order to relieve employers of their liability in the future, H. R. 858 was introduced, and is before the House today. In effect, the courts held that "time on overtime" is computed on the theory that "regular rate" should be defined as whatever wages, overtime and other compensation were earned during any particular week added together and divided by the number of hours worked during the week. The amount so arrived at then becomes the so-called regular rate basis for computing statutory overtime after 40 hours. Hence, the term, "Overtime on overtime", and hence additional wages retroactively and prospectively. One witness sometime ago made the following observations before the Committee on Education and Labor:

Unfortunately, some unscrupulous persons saw the possible opportunity of large windfall payments because of a lack of proper definitions in the law. The suits so far brought have been on a narrow front. We believe this to be strategy on their part to establish the principle, after which all American industry operating under the Fair Labor Standards Act can expect a similar attack.

The amounts involved are almost unbelievable. The labor pay roll of the United States is a gigantic amount. The retroactive feature will reach backward probably 6 years. It requires only a small percentage of such an amount, together with penalties and costs, to run into billions.

A good example of the far-reaching possibilities of the above-mentioned cases was ably discussed, I think, in an editorial in the Washington Post under date of Monday, June 14, 1948:

In the portal-to-portal cases the Supreme Court adopted a definition of working time that resulted in claims for back pay amounting to billions of dollars. In the Mount Clemens Pottery case, for instance, the Court declared that the time spent by employees walking to their jobs after punching time clocks and performing various preliminary tasks must be paid for regardless of contrary custom or contract. As a result of that decision thousands of firms faced bankruptcy and Congress promptly passed a law barring such portal-to-portal pay claims unless employers had been previously compelled by custom or contract to make such payments.

Now the Supreme Court has done it again. This time it was called upon to deal with the question of what constitutes the regular rate of pay to be used in computing overtime rates for work in excess of 40 hours, as required by the Fair Labor Standards Act. By a 5-to-3 decision, in a case involving dockworkers employed by two New York Port stevedoring contractors, the Court held that the time and a half rates of pay agreed to under union contracts for night work and work done on Saturday afternoons, Sundays, and holidays were not overtime rates of pay in the legal sense of the word, but rather premium rates paid to employees to induce them to work at undesirable hours. Accordingly, the Court said, those payments must be included in any computation of regular rates of pay, which in turn become the basis for computing rates of pay for real overtime. The result of this decision is to make the employing companies liable for back pay computed in such fashion as to justify the complaint that overtime is pyramided on overtime.

Once more anguished cries arise. One stevedoring concern estimates its liability under the overtime-on-overtime formula for back payments at $43,000,000. Just the accounting work connected with going over pay rolls and determining the amount of back payments due would cost another firm about $265,000. An estimate of total costs, not only for the stevedoring industry but other industries affected by the Supreme Court ruling, runs to fantastic figures.

Employers are not the only ones to complain bitterly of the Supreme Court's latest interpretation of the Fair Labor Standards Act. For in a dissenting opinion of Justice Frankfurter, concurred in by Justices Jackson and Burton, the majority decision is described as "another doctrinaire construction" of the act applied "in disregard of industrial realities." Justice Frankfurter goes on to say, with his usual vehemence, that the majority decision treats the words of the act as though they were parts of a crossword puzzle. Against the protests of the union, as well as the employers, the decision dislocates arrangements of long standing designed for the benefit of both employers and employees. "The present decision," Justice Frankfurter adds, is "heedles of a long standing and socially desirable collective agreement and is calculated to foster disputes in an industry which has been happily at peace for more than 30 years."

Since the phrase, "regular rate," is not defined in the Fair Labor Standards Act, Justice Frankfurter concluded that the term may be properly used to mean what the parties to the wage contract understand by the term, provided there is no intention to circumvent the policy of the statute. Hence he is of the opinion that the regular rate of pay for the Port of New York longshoremen should be the straight time scale of the union contract. To call the longshoremen's one for overtime pyramided on overtime "is not to use a clever catch phrase, but to describe fairly the true nature of the claim."

The next step will be a movement to nullify the Supreme Court decision by remedial legislation, as was done after the portal-to-portal decisions. But this kind of piecemeal legislation obviously does not meet the needs of the time. What is called for is a thoroughgoing overhaul of the Fair Labor Standards Act to clarify it and relieve the courts from the necessity of interpreting obscure provisions of the law. At present our judges are compelled to grapple with technical details of interpretation of labor laws with which they are not qualified to deal.

It can readily be seen from the able editorial that the courts differ on their interpretations of the Fair Labor Standards Act. It is time for the Congress to redefine overtime liability. Before the Fair Labor Standards Act, longshoremen and shippers, through many years of negotiations, arrived at a solution for overtime compensation. Their president, Joseph P. Ryan, of the international longshoremen, appeared as a witness in a Federal court and repudiated the suits mentioned above as well as the thousands of suits which may be brought as a result.

In New York, Judge Rifkind stated that to require the payment of overtime on overtime would create havoc with established labor relations by collective bargaining in the category of false pretenses and probably restrain the re-

sources of a substantial portion of American industry, and he goes on to state that it would restrict the scope of collective bargaining as well as affect the developments of agreements more favorable than the required standards established by the Wages and Hours Act, as well as retarding the use of overtime when the national interest required.

The Congress must act. We must save private industry.

The Issue of Our Times

REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. CASE of South Dakota. Mr. Speaker, shall we let Russia, or any other foreign power, select the times and places for unlimited commitments of American forces?

Or, shall the United States, while making clear to the world a firm policy of working for and protecting free institutions, reserve to ourselves the deployment of our forces?

Those are basic questions which should be considered in the making and carrying out of foreign policy these days. They are, in essence, the questions which I raised in my letter to President Truman following the vote on the original bill for aid to Greece and Turkey.

They are the questions implicit in an address by Chief of Staff Omar N. Bradley in an address, last fall, when he said:

> If we are to hop, skip, and jump every time a paper is rustled east of the Elbe, we shall place ourselves supinely and helplessly at their feet, the Russians', while they call the tune.

Mr. Speaker, in an era which Sir Oliver Franks has called a possible plateau of tension, we must not permit ourselves to be drawn out of position and be teased into galloping off into every direction when someone cries "The Commies are upon us."

We can no more maintain peace with freedom that way than a football team could win if its captain permitted his ends to be sucked in and his secondary defense to be drawn forward when the opposing quarterback called a trick line play and then sent his backs on a wide end run or shot the ball overhead with a long pass.

The United States has taken extensive positions in widely scattered places. Our commitments we should keep; our general over-all policy should be made clear; our resolutions should be firm; but we should remember that there is no surer way to die than to bleed to death.

And there is no surer way to lose the great contest of this age for the freedom of the individual than to give to uninformed parties, least of all an opponent, the power to spread us so thin that we lose the power to mount an offensive in our own time and on our own choice of lines.

Indeed, the very hope of winning the world to a way of peace without another bloody war rests upon consolidating a total strength which commands respect for its striking power. No bully is impressed by a flurry of feather dusters.

This central problem in our developing foreign program was so well pointed up in Walter Lippmann's column in the Washington Post this morning that I have asked permission and will insert it in the RECORD at this point:

TODAY AND TOMORROW

(By Walter Lippmann)

The Royall incident—leaving the journalistic aspect of it aside—points up the hardest and the least clarified problem of our foreign policy. There is no dispute, for it is a matter of record that General MacArthur has asked for reinforcements and that the Joint Chiefs of Staff have had to say "No."

They have had and are having to say "No," or something very like it, to many similar requests—to those who argue that we must hold on strongly in Korea, to those who wanted to give Chiang Kai-shek strong military support, to intimations that southeast Asia is threatened and must be strengthened, that Iran is threatened, that Greece needs still more military aid, that the Berlin airlife needs to be enlarged, and most recently that Norway needs to be reinforced.

All of these claims are in addition to the project of rearming western Europe under the Atlantic pact.

We have here, in the concrete and no longer in the form of diplomatic rhetoric, the test of the famous policy of containment, otherwise known as the Truman doctrine.

As stated 2 years ago by Mr. Truman "it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or outside pressure." As understood by General MacArthur and the Japanese, by Chiang Kai-shek and Congressman JUDD, by the Greek Government, the western Germans, the peoples of western Berlin, Mr. Lange of Norway, by the Dutch, the Belgians, and the French, this is an American commitment to defend them, to create the equivalent of a Maginot Line for them, to give them an automatic guaranty that American force would be available on their frontiers to contain the Russians.

That has never been the view of the American Chiefs of Staff.

They have known that it was an absurdity to suppose that adequate local force could be developed on the whole vast periphery of the Soviet Union in Europe, the Middle East, and Asia. To attempt that would be like sending three policemen to surround a building that has 25 exits.

They have known always that a power like Russia cannot, if it wishes to make war, be contained by local defenses—that it can only be held in check by the deterrent power of the over-all force of the United States.

CONTRADICTION IN PLANNING

During the 2 years of the Truman doctrine there has, therefore, always been a deep contradiction between America strategical planning and American diplomatic planning.

Mr. Lange, relying on our diplomatic declarations, was quite right in coming to Washington to find out—not whether the United States would go to war if Norway were attacked but—whether the United States could and would defend Norway against invasion. This is also the issue between General MacArthur and Secretary Royall. It is not whether the United States will go to war if Japan is attacked. It is whether in case of war Japan is to become another Bataan.

That is what really interests the French, the Belgians, the Dutch, and also the western Germans, and the western Berliners.

We are misapprehending the realities altogether if we spend time arguing whether the United States will go to war if the Soviet Union goes to war. Nobody in his senses thinks we would not go to war. What the Europeans want to know is not whether we shall go to war "automatically."

They want to know whether we can defend them successfully if we are unable to prevent a war.

Just as General MacArthur does not want to be in another Bataan, so they do not wish to be in another Dunkirk.

That is why the real issues, as they become concrete, become so much sharper. That is why Mr. Acheson is entering upon a period when major decisions of high policy will have to be taken—in conjunction with General Eisenhower. Mr. Acheson is not able merely to carry on and administer as a going concern a policy laid down for him by his predecessors. For that policy is coming apart at the seams from Korea to Norway, from China to Greece, from Tokyo to Berlin.

Rural Electrification in the National Farm Program

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. COOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following talk by Secretary of Agriculture Charles F. Brannan before the National Rural Electric Cooperative Association, New York, N. Y., January 31, 1949:

It is a pleasure to greet this great group of representatives of business-managed, taxpaying organizations. It is a pleasure to greet you as a part of the Department of Agriculture family. You have achieved a record of service to farmers that is difficult to duplicate in the history of American agriculture. You have added another page to the long record of farm co-op accomplishment.

You have built a record of excellence in business management that rates with the best. Where else can you find an enterprise in which more than 99 percent of the loans are being paid on schedule or ahead of schedule? Many a banking house would be proud to have borrowers with a record like that. In the 14 years of the program REA has had to foreclose on only one operating borrower, and that borrower was a commercial power company.

The excellence of your management skill speaks for itself. It is especially remarkable in view of the fact that you are operating power systems to a considerable extent in territory that the utility industry refused to electrify because it supposedly lacked sufficient revenue to pay out. Well, it is paying out. All that was needed was a group of determined farmers to make it pay. And, come to think of it, I wonder what all the fuss is about. Is there any good reason for opposition to REA co-ops? Why should a utility company worry about business management or tax collections in an area which the utilities thought only a few years ago was worthless as an investment?

Now how about that tax-equality line? Who says you don't pay taxes? I don't think many people are fooled by the tax-equality slogan. It isn't difficult to recognize a smoke screen devised to hide the real objectives of a group hostile to co-ops.

The fact of the matter is, of course, that in most States co-ops pay many taxes. You know and the hostile utility companies know that co-ops pay real-estate taxes, personal property taxes on equipment, occupational license taxes, social-security taxes, various excise taxes, sales and use taxes—just as any other business. You know, of course, what the general public perhaps doesn't know, that one objective of those hostile to farmer co-ops is to force them to pay Federal corporation income tax on all amounts received from patrons in excess of the cost of service, including amounts which are returned to the patrons as patronage refunds or credited to them as capital contributions. Some people seem to forget that co-ops are not in business for profit and that you can't pay a tax on a profit that doesn't exist.

Cooperative rural electrification is an integral part of our national farm program through which farmers themselves are employing the homespun brand of private enterprise to improve their living and working conditions.

Farmers found long ago that cooperatives were an effective method for solving many problems that were not being met satisfactorily in any other way. Getting electric power was one such problem. The development of farmers' co-ops is a familiar story that goes back more than a hundred years. Marketing co-ops, production and processing co-ops, purchasing co-ops, farm-machinery co-ops, fertilizer co-ops, and many others have long been used by farmers to improve their production, their incomes, and their living. And we work for those same objectives in our whole national farm program.

Cooperative rural electrification is an essential part of the national farm program. However, under the able guidance of Administrator Wickard, REA has had complete freedom of action within the Department of Agriculture. There is a big job yet to do in rural electrification and it must be the concern of all of us who understand the full significance of what this program means to make sure that the work of REA will not be hampered. In building its record of accomplishment, the REA program has operated pretty much under its own steam and appears to be entirely capable of continuing to do so.

We in this country have come to recognize that the Nation as a whole has a big stake in the welfare of agriculture. Out of that recognition has come our national farm program. Because success of the over-all effort depends so much on the effective planning and working together of groups such as you are leading, I think we may well examine briefly some of our joint long-range objectives for American agriculture.

Someone has said that in these days of fast-moving progress, a man has to go 60 miles an hour just to stand still. Whatever the truth of that, agriculture surely has not been standing still this past decade and a half. The very face of agriculture in America has been changed. I am not thinking only of income—of the fact that farmers have climbed from the depths of the worst depression in history to their greatest prosperity. I am not thinking only of the ability of farmers today to protect themselves against ruinous price collapses. Nor am I thinking merely of the vast increase in agricultural productivity—so that today agriculture's ability to produce an abundance of food and fiber at reasonable cost is demonstrated beyond question.

I am thinking of all these things—but I'm thinking also of the particular changes that have been wrought by the giant hand of electricity.

A decade and a half ago, 9 farm homes out of 10 were illuminated at night by smoky, dangerous kerosene lamps or by some other dim, unsatisfactory form of light. The broom and dustpan were the instruments by which floors and rugs were cleaned. Lack of refrigeration resulted in food waste—and no end of inconveniences. Water was pumped by hand. Other chores were done the same way—the hard way. It's hard to realize now that all that was less than 15 years ago on 9 farms out of 10. The fact that more than 7 out of 10 farmers and their wives are today able to call on electricity for modern convenience and help with the hard work stands as great tribute to the ability of farmers to work with Government and with each other in solving problems that can't be handled individually.

Yes, the past decade and a half has been a period of immense progress in virtually all phases of agriculture—but nowhere more so than in rural electrification. The fact that 7 farms out of 10 are electrified is good. But the fact we need to concentrate on now is that 3 out of 10 farms are not electrified. That is our challenge.

In our consideration of the future of rural electrification, there are important facts about the past that we should not forget. The great progress that has been made by REA co-ops has paralleled the great progress that has been made in national farm programs generally. Progress in rural electrification has paralleled the most dramatic rise in farm income we have ever seen in any similar period of years. Without this improvement in farm income, progress would have been slow.

While we recognize that rural electrification has been an important factor in helping to build farm income we realize, at the same time, the importance of farm program provisions that protect farm income, because that will help to assure further extension of rural electrification lines.

Rural electrification, then, does not stand alone. It is part of the national farm program. The substance of that program has been summed up in the phrase "organized, sustained, and realistic abundance." This is the basic goal of our national farm policy. I believe it to be the only practical goal. For when we look back down the corridors of history which man has traversed, we find that the basic strength of nations is in their land. No nation—no people—seems to have been able to remain permanently strong after it has allowed its capacity for agricultural abundance to be dissipated.

We need abundance to fill the gap that exists between the ideal of a good diet for the American people and the realization of that ideal. We need it to provide strength, vigor, and alertness to our growing population.

But this is not all. For a century or more there have been demands from abroad upon our land. Huge quantities of American wheat, lard, and cotton have crossed the seas to sustain life in other lands. But in this our own day the demands upon American agriculture from abroad have been far greater than ever before—so great, in fact, that our Nation has been supplying half of all the wheat that moves in international trade.

We need abundance not only for our own health but for world peace. Food still is an important weapon in our effort to help bring about stability in the world. And it seems to me that, if we who are concerned with agriculture use our land, our energies, and our technological skills to build a permanently sound and productive agriculture in America, we shall be making a fundamental contribution to peace.

If we are to do that job, we shall have to accomplish it through an over-all, long-range program in which electrification, conservation, price supports, storage programs, and research all contribute to improved rural living.

We have made good progress.

We have well-tested methods to help agriculture avoid wasteful production.

We have had experience in the orderly handling of surpluses.

We have the means of helping farmers meet their credit needs.

We have a national conservation policy of protecting the land and programs to back it up.

We have expanded research programs to help farmers lower costs and increase efficiency.

We have price-stabilization policies and the machinery for price protection.

The fact that we have all this means that rural electrification can be more effective.

I am proud of all these things. They represent more programs in the space of 16 years than was achieved in the whole previous century of American agricultural history. But, as you know, we do not yet have a complete and a wholly effective long-range farm program.

Last year farm net income turned downward for the first time in a decade. This year there may be some further decline. This would indicate a repetition of the traditional trend with agricultural prices making the adjustment first. It's a reminder that we must be doing our best to build a more stable agricultural prosperity than American farmers have ever enjoyed in the past.

For more than a decade farm production has been increasing and we have needed as much as could be produced. We shall continue to have need of full farm production in the future—with some crop adjustments in our pattern or production in line with changes in demand and the needs for soil conservation. In spite of our vast shipments of grain abroad, the American people are eating substantially more food per capita than they did before the war. They are eating more meat, more fruit, more vegetables—except potatoes—more eggs, more dairy products.

But can we go on finding markets for our abundant farm production? Many farmers are looking fearfully at the decline in prices of some commodities from the peaks of a yeat ago. They wonder what lies ahead.

Well, I'd like to say here what I have said before. I am not pessimistic about the future. I do not believe that our enjoyment of abundance must be adjusted downward. I believe, on the contrary, that we can have an expanding economy. But we shall need a strong and prosperous agriculture to do its part, and that means having a fully effective farm program.

I am a firm believer in a price-support system that will protect farm income. Along with a good support program we need ample storage. And if we are going to have real abundance, we may have to revise somewhat for the future our estimates of ample storage. We used to think a corn carry-over of one hundred to two hundred million bushels was plenty. A carry-over of four hundred or five hundred million bushels would have looked like a surplus. As long as we continue to demand more meat and milk and eggs we'll need more corn to produce them and a bigger margin of reserves as insurance against crop failure.

We know from experience that people want and will buy an abundance of livestock products and other foods as long as they have good purchasing power. The quantity and quality of food consumed in this country varies substantially with the level of national income.

So the first essential in the maintenance of farm prosperity is full employment at good wages. But I think we must be prepared if necessary to go even further in assuring markets for abundance. If people find their food dollars running short, we cannot afford to allow surpluses to pile up—for that means terrific pressure on farm prices. Nor can we afford to allow food to be wasted because people who need it are unable to buy enough food. I believe that the American people will want to have a floor under food consumption.

In addition to abundant consumption in this country we shall need foreign markets for some farm products. The foreign market

has long been important to American agriculture. It will be important in the future—not only to the corn-hog farmers—to the wheat farmers—to the cotton growers—but to all agriculture and to all Americans. For we are so closely interdependent in the modern economy, that what affects one group inevitably spreads out and affects others. One of the efforts being made right now to meet this need of foreign markets for farm products is through a revival of the International Wheat Agreement Conferences.

In a well-rounded farm program, we shall also need increased conservation efforts. We can produce abundantly now. But what about a century from now? Only if we take care of our resources, can we be certain that generation after generation we shall be able to produce abundantly.

A well-rounded long-range program calls for adequate research which is basic in any program of abundance because of its importance to increased output and greater efficiency.

Finally, rural people have as much right to good living as anyone else and the long-range welfare of farm people should include improved housing, better schools, more hospitals and other medical facilities, and more telephones.

Farm homes ought to have telephones as a matter of convenience, but, in a farm home especially, a telephone is more than a convenience. It's really a necessity. A telephone might easily prove to be a necessity for fire protection or health protection. In our efforts toward better living for farm families, we are lagging seriously in the expansion of telephone service. According to a recently published telephone company booklet, only 45 rural homes out of 100 have telephones. It doesn't seem reasonable to me that less than half of the rural homes of America have telephone service when more than two-thirds of them have electric service. In view of this situation it appears evident that Federal loan assistance to existing or new exchanges would be helpful in speeding up the job of making telephone service available to rural people.

The attainment of national farm program objectives depends, among other things, on the availability of abundant, dependable, low-cost electric power to all of our farmers. Modern agriculture, like modern industry, goes forward on power.

Low-cost electric power can make a great contribution to more efficient farm production, more stable farm income, improved farm family living, and the revitalization of rural communities—all of them major objectives in our national farm program.

The co-op rural-electrification program calls for good engineering, but it is more than an engineering job. It calls for sound financing, but it is more than a banking operation. Rural electrification is one of the major tools for achieving the goal of better farm living that I have been talking about today. I know that as long as the program has in its leadership the caliber of men represented here, this real objective will continue to be uppermost.

Reclamation Policies on Water Allocation

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. ENGLE of California. Mr. Speaker, the growing shortage of water in California has focused attention on Bureau of Reclamation policies with reference to the allocation of water under reclamation law especially as that policy relates to the exportation of water from one region for use in another. The letter which I received from the regional director of the Bureau of Reclamation under date of November 15, 1948, will be of interest to all Californians concerned with that problem. I wish to insert it at this point in the RECORD:

DEPARTMENT OF THE INTERIOR,
BUREAU OF RECLAMATION,
Sacramento, Calif., November 15, 1949.

Hon. CLAIR ENGLE,
Red Bluff, Calif.

MY DEAR MR. ENGLE: In response to your request to Mr. Carr, we have assembled excerpts from various statements by Bureau and Department officials relating to the subject of diversion of water from the Sacramento Valley to the San Joaquin Valley through the operation of the Central Valley project.

A factual review of available water supplies over a period of more than 40 years of record and the estimates of future water requirements made by State and Federal agencies makes it clear that there is no reason for concern about the problem at this time.

For your convenience, I have summarized policy statements that have been made by Bureau of Reclamation and Department of the Interior officials. These excerpts are in the following paragraphs:

On February 20, 1942, in announcing the capacity for the Delta-Mendota Canal, Commissioner John C. Page said, as a part of his Washington, D. C. press release:

"The capacity of 4,600 cubic feet per second was approved, with the understanding that the quantity in excess of basic requirements mainly for replacement at Mendota Pool, will not be used to serve new lands in the San Joaquin Valley if the water is necessary for development in the Sacramento Valley below Shasta Dam and in the counties of origin of such waters."

On July 18, 1944, Regional Director Charles E. Carey wrote a letter to Mr. Harry Barnes, chairman of a committee of the Irrigation Districts Association of California. In that letter, speaking on the Bureau's recognition and respect for State laws, he said:

"They [Bureau officials] are proud of the historic fact that the reclamation program includes as one of its basic tenets that the irrigation development in the West by the Federal Government under the Federal reclamation laws is carried forward in conformity with State water laws."

On February 17, 1945, a more direct answer was made to the question of diversion of water in a letter by Acting Regional Director R. S. Calland, of the Bureau, to the Joint Committee on Rivers and Flood Control of the California State Legislature. The committee had asked the question, "What is your policy in connection with the amount of water that can be diverted from one watershed to another in proposed diversions." In stating the Bureau's policy, Mr. Calland quoted section 11460 of the State water code, which is sometimes referred to as the county of origin act, and then he said:

"As viewed by the Bureau, it is the intent of this statute that no water shall be diverted from any watershed which is or will be needed for beneficial uses within that watershed. The Bureau of Reclamation, in its studies for water resources development in the Central Valley, consistently has given full recognition to the policy expressed in this statute by the legislature and the people. The Bureau has attempted to estimate in these studies, and will continue to do so in future studies, what the present and future needs of each watershed will be. The Bureau will not divert from any watershed any water which is needed to satisfy the existing or potential needs within that watershed. For example, no water will be diverted which will be needed for the full development of all of the irrigable lands within the watershed, nor would there be water needed for municipal and industrial purposes or future maintenance of fish and wildlife resources."

On February 12, 1948, Acting Commissioner Wesley R. Nelson sent a letter to Representative Clarence F. Lea, in which he said:

"You asked whether section 10505 of the California Water Code, also sometimes referred to as the county of origin law, would be applicable to the Department of the Interior, Bureau of Reclamation. The answer to this question is: No, except insofar as the Bureau of Reclamation has taken or may take assignments of applications which have been filed for the appropriation of water under the California Statutes of 1927, chapter 286, in which assignments reservations have been made in favor of the county of origin.

"The policy of the Department of the Interior, Bureau of Reclamation, is evidenced in its proposed report on a Comprehensive Plan for Water Resources Development—Central Valley Basin, Calif., wherein the Department of the Interior takes the position that 'In addition to respecting all existing water rights, the Bureau has complied with California's "county of origin" legislation, which requires that water shall be reserved for the presently unirrigated lands of the areas in which the water originates, to the end that only surplus water will be exported elsewhere'."

On March 1, 1948, Regional Director Richard L. Boke wrote to Mr. A. L. Burkholder, secretary of the Live Oak Subordinate Grange No. 494, Live Oak, Calif., on the same subject, and said:

"I can agree fully with the statement in your letter that it would be grossly unjust to 'take water from the watersheds of one region to supply another region until all present and all possible future needs of the first region have been fully determined and completely and adequately provided for.' That is established Bureau of Reclamation policy and, I believe, it is consistent with the water laws of the State of California under which we must operate."

On May 17, 1948, Assistant Secretary of the Interior William E. Warne wrote a letter to Representative Lea on the same subject, in which he said:

"The excess water made available by Shasta Reservoir would go first to such Sacramento Valley lands as now have no rights to water."

Assistant Secretary Warne goes on to say, in the same letter:

"As you know, the Sacramento Valley water rights are protected by: (1) Reclamation law which recognizes State water law and rights thereunder; (2) the State's counties of origin act, which is recognized by the Bureau in principle; and (3) the fact that Bureau filings on water are subject to State approval. I can assure you that the Bureau will determine the amounts of water required in the Sacramento Valley drainage basin to the best of its ability so that only surplus waters would be exported to the San Joaquin. We are proceeding toward a determination and settlement of Sacramento Valley waters which will fully protect the rights of present users; we are determining the water needs of the Sacramento Valley; and it will be the Bureau's policy to export from that Valley only such waters as are in excess of its needs."

On October 12, 1948, Secretary of the Interior Krug substantiated former statements of policy in a speech given at Oroville, Calif. Secretary Krug said, with respect to diversion of water:

"Let me state, clearly and finally, the Interior Department is fully and completely committed to the policy that no water which

is needed in the Sacramento Valley will be sent out of it."

He added:

"There is no intent on the part of the Bureau of Reclamation ever to divert from the Sacramento Valley a single acre-foot of water which might be used in the valley now or later."

We believe the foregoing is a summary of the main policy statements by Government officials on the subject of importation of Sacramento Valley water to the San Joaquin Valley. Please inform me if you wish additional information.

Sincerely yours,

RICHARD L. BOKE,
Regional Director.

Eightieth Congress Distributed Free Several Hundred Thousand Copies of Communism in Action but Refused To Permit Any Free Copies of Fascism in Action To Be Distributed—Resolution for Free Distribution of Fascism in Action Now Before Committee on House Administration—Dangers of Fascism, as Well as Communism, Should Not Be Overlooked—Fascist Cartel System, Deadly Enemy of Small Business, Being Revived in Germany

---

EXTENSION OF REMARKS
OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. PATMAN. Mr. Speaker, January 7, 1949, I introduced House Resolution 38, providing for the printing for use of the House one hundred thousand copies of House Document 401, Eightieth Congress, entitled "Fascism in Action." I am asking the chairman of the committee for a hearing and favorable report on this resolution.

One cannot prove that he is an ardent believer in political and economic democracy merely by the violence of his opposition to communism. No more vehement renouncer of communism ever existed than Hitler. A real American is opposed to every form of totalitarianism and tyranny, whether left wing or right wing. The Communists would fasten our attention so completely and exclusively on fascism that we ignore the dangers of communism. Those who are sympathetic with Fascist economic policies—the monopolists, the cartelists, the hatemongers—would so exaggerate the dangers of communism that we would become as did Germany, Italy, and Japan, the easy prey of Fascists. The democratic way is the middle way—the road of all-around alertness, of informed, intelligent opposition to totalitarian tyranny in all its disguises. To this end the greatest single need is complete information constantly provided to the masses of the citizens. It is high time that this House authorize the printing and free distribution of thousands of copies of Fascism in Action.

INFORMATION AGAINST COMMUNISM FREE—INFORMATION AGAINST FASCISM 40 CENTS PER COPY

In a letter to me dated January 31, 1949, the Public Printer, Hon. John J. Deviny, stated:

> The Superintendent of Documents has ordered 39,000 copies of Fascism in Action, of which 36,790 copies have been sold at the established selling price of 40 cents. As requested by you, it may also be stated that the House of Representatives has not passed a resolution authorizing the printing of additional copies of Fascism in Action for distribution to Members of Congress.

In this same letter, it was disclosed that 482,145 copies of Communism in Action were printed and made available for free distribution to Members of Congress, March 19, 1947.

In all, 536,856 copies of Communism in Action were distributed free, but in order for any person to get a copy of the booklet Fascism in Action, it was necessary that it be purchased directly from the Superintendent of Documents for 40 cents per copy.

May I state in support of House Resolution 38 that I regard its passage as an important step toward overcoming totalitarian tyranny in all its disguises.

We in this House have often been warned against the tyranny behind the iron curtain. And rightly so. On more than one occasion I have led such campaigns. Nearly 3 years ago, September 24, 1946, I expressed myself on that subject in a letter to Dr. Ernest S. Griffith, in the following terms:

> I am opposed to communism in any form. It should be fought with every means at our command. It is obnoxious to our American democratic system of free enterprise based upon initiative, intelligence, ability, and hard work. Our system is the best in the world, and, because it is so much better than communism, I just can't believe that communism can get any hold in America, yet we must be on the alert and make sure that there is no formidable start toward communism.
>
> At the same time I dislike fascism. I think fascism is just as bad as communism. They are both equally mad. I would not attempt to say which is worse. To my mind fascism has a stronger hold in our country today than communism because its roots have become so firmly planted by so much abler and stronger hands and minds. Facism in our country today is backed by plenty of wealth and a day never passes that the people of our country are not flooded with literature which would lead them down the road to fascism.

On the subject of communism I feel that I can say beyond possibility of contradiction that this House has been fully alert. At a cost to the taxpayers of the United States of nearly $35,000 we have printed for free distribution almost 600,000 copies of Communism in Action.

TYRANNY OF RIGHT CAN BE AS DANGEROUS AS TYRANNY OF LEFT

But let me remind you that totalitarian tyranny has other symbols besides hammer and sickle and the red flag. The perpetual ideological competition and warfare in which our system of democracy and free enterprise is engaged is not a one-front war but a two-front war. The tyranny of the left is intolerable. Quite so. But that of the right is equally dangerous. It is but yesterday that right-wing totalitarianisms cost us hundreds of thousands of lives of our best young men and hundreds of billions of our treasure.

I was afraid then that we might keep our eyes glued so tightly on the left-hand side of the road and try to steer our course so surely away from the dangers on our left that we might forget all about the abyss on the right-hand side of the road.

FASCISM IS TODAY AN EVER-PRESENT DANGER

It was but natural that we should do so. Consequently, I asked that a study be made by experts of what this right-wing tyranny really is. Their findings were compiled in a book called Fascism in Action. In a foreword to that book I warned that though—

> To most Americans the threat of fascism vanished with the defeat of Germany and Japan. * * * There is a real question whether we defeated the evil itself in destroying its two principal exponents. Public opinion appears in general to hold that fascism is a wholly European, or at least a wholly foreign, movement. Yet there are many strong symptoms of fascism in our own democratic society. True, this movement in the United States masquerades under other names than the discredited one of fascism, but, whatever it may be called, its peculiar characteristics are alarmingly evident.
>
> If we are to combat successfuly such an insidious movement, many Americans must understand clearly what fascism is.
>
> * * * Fascism is today an ever-present danger to our democracy. We must consider not only how to recognize its manifestations but also what we can do to combat it. * * *
>
> Perhaps the best means of fighting fascism is to recognize it, no matter under what title it masquerades. Not all "hate" organizations are necessarily Fascist, but they have certain definite trends toward such a policy. If members of groups of this type can be made to realize the dangers inherent in such beliefs, a long step toward overcoming fascism will have been taken.
>
> It is my belief that persistent and fearless exposure will kill pro-Fascist organizations and discredit the individuals who have formed them. (Library of Congress, Legislative Reference Service, Fascism in Action, H. D. No. 401, 80th Cong., 1st sess., 1947, pp. v, vi.)

This House will be happy to know that its effort to keep the American people informed about Fascism in Action has had a large measure of success. Despite the fact that virtually no copies were printed for free distribution even to Members of Congress—as opposed to more than half a million given away of Communism in Action—as of January 31 of this year Fascism in Action was a governmental best seller, nearly 37,000 people having plunked down their cash for a copy.

CLEVER DISGUISES OF FASCISM

It is very easy to be deceived by the various innocent-appearing forms and clever disguises that fascism takes, for it goes by different names in different countries and readily adapts itself to any political or economic climate. But, as the volume Fascism in Action demonstrates, the underlying principles are the same everywhere. They have been put together in this book, which represents the results of a careful study of fascism in

Germany, Italy, Spain, and Japan. In its concluding chapter, after careful comparison of all the facts, the men of international reputation who, in this book, pooled their knowledge of fascism in action devoted several paragraphs to a summary of the meaning of fascism. Permit me to quote the seven items receiving top billing:

1. Fascist government is rule by a leader possessed of dictatorial powers supported by a single political party, and an elite class. (That clearly points to Russia and her satellites, Franco, Perón, and some others.)

2. Education and thought control are used to condition the mind of the masses at home for the Fascist struggle by all the devices which create, mold, or influence ideas, beliefs, and impressions. (Again characteristic of the East, but not unknown in the West.)

3. Fascist foreign policies are dynamic and aggressive. (Among many of our great neighbors this is frequently considered to fit other nations besides Russia.)

4. Finance and fiscal policies direct banking and private investment decisions in accord with general Fascist policies.

5. Foreign trade is no longer simply an economic phenomenon but becomes one of the many instruments through which the state achieves its political objectives.

6. The economy generally favors big business, strengthens the position of heavy industries, retains enough of the profit system to permit the elite to build up personal fortunes, emphasizes self-sufficiency, institutes higher tariffs, facilitates cartelization, and spends huge sums for military purposes. (The problems of monopoly and huge military outlays are likewise not restricted to foreign countries.)

7. Labor is regimented with the result that free collective bargaining and self-government by labor organizations is abolished. (Fascism in Action, p. 204.)

I wish that it could honestly be said that the fascism which our heroic veterans destroyed abroad has been permanently ended. But that flies in the face of unmistakable evidence and events since VE-day. I wish there were time to go into this matter thoroughly. Only a full-dress investigation by some alert committee of this House could do that. So I shall limit myself rigidly to a few recent happenings in Germany.

OUR COUNTRY FOR SMALL BUSINESS AND AGAINST MONOPOLY

You all know, of course, that this country has a traditional policy of opposition to monopoly, expressed not only in our antitrust laws, but in the protection which we have placed on the statute books for small business, for farmers, for independent merchants, and for the public. It was not only logical and natural, it was unavoidably dictated by our historical traditions and our love of Americanism that this basic cornerstone of our economic policy should be laid down as a foundation for our occupation policy, first in the original order 1067 of the Joint Chiefs of Staff and then in the Potsdam agreement.

Let me recall here the pertinent passages from that document:

At the earliest practicable date, the German economy shall be decentralized for the purpose of eliminating the present excessive concentration of economic power as exemplified in particular by cartels, syndicates, trusts, and other monopolistic arrangements.

It was restated and carried over into the controlling directive of July 15, 1947, as follows:

Pending agreement among the occupying powers you will in your zone prohibit all cartels and cartel-like organizations and effect a dispersion of ownership and control of German industry through the dissolution of such combines, mergers, holding companies, and interlocking directorates which represent an actual or potential restraint of trade or may dominate or substantially influence the policies of governmental agencies. You will not, however, prohibit governmental regulation of prices or monopolies subject to governmental regulations, in fields where competition is impracticable.

The last sentence was designed to apply primarily to transportation and communications services.

FIGHT AGAINST MONOPOLY NEVER WON BUT NEVER ABANDONED

It is likewise an historical fact that the fight against monopolies is a continuing fight. It has been so in our own country, and it will be so in all democratic-capitalistic societies. Once the fight is relaxed the monopolies grow. The fight against monopoly is never won, but at the same time it is never abandoned.

There is evidence that our Government has no thought of abandoning it.

Nor is the antimonopoly fight a political fight. The basic antitrust law was enacted by a Republican administration, and in every campaign year for the past half century there have been planks in both the Democratic and Republican Party platforms pledging vigorous enforcement of the antimonopoly laws. It is doubtful if any other public program in the history of our country has received such consistent and unanimous public support.

POLL ON CARTELS

In 1947 the Council on Foreign Relations polled the leading citizens in 22 cities on the question of German cartels, and 68 percent answered that they thought German cartels should be eliminated, 17 percent were uncertain, and only 14 percent favored keeping the cartels. When arranged by groups it was revealed that the editors, to a greater extent than any other group, felt that German cartels and monopolies should be eliminated.

The Charter for the International Trade Organization of the United Nations, approved by 53 participating nations, contains a sweeping prohibition against business practices which restrain competition, limit access to markets, or foster monopolistic control, and it sets out six specific prohibitions comparable in their essence to those contained in our decartelization law.

PRESIDENT TRUMAN'S WARNING

In all of the array of policy indications available there has not been a single statement indicating any desire or intention on the part of our Government, or on the part of the vast majority of the American people, to temper their demand that German cartels and monopolies shall be eliminated. On the contrary, numerous Congressional inquiries, one of which was chairmanned by President Truman, when he was Senator, warned this country against the revival of German cartels.

BACKWARD STEP IN GERMANY

Yet today our whole program of breaking up monopolies in Germany has been abandoned. To get German production back up to self-supporting levels those who make economic policy in Germany say that they must revive cartels. This is an absurd policy. Cartels fix prices, limit production, allocate markets, and do away with competition. How can we get efficiency if there is monopoly?

CAMPAIGN TO HAMPER ANTIMONOPOLY ENFORCEMENT

I am not talking about size or large-scale production. Some people seem to think that those who want to get rid of the wastes of monopoly are against business as such, or bigness as such, or want to break down the economy into a lot of little units without regard to optimum efficiency. This is a false and malicious misrepresentation of the views of those favoring the good old American system of free competitive enterprise. It is the historic tactic employed by representatives of special interests to retard and embarrass antimonopoly enforcement.

Those who are ardent supporters of the capitalistic system, of the profit motive, and of free competition know that it is necessary in doing away with German cartels to deal with three general categories, as follows:

First. Isolated agreements among the independently owned enterprises which are designed to eliminate specific types of competition;

Second. Association of independently owned companies into a cartel for the purpose of eliminating competition in an entire industry; and

Third. Monopolistic control of an industry by a single enterprise.

Unless domination of a whole industry by one enterprise is removed little is accomplished by attacking the other two. As a matter of fact, unless the excessive concentrations are dispersed at their roots, it might be actually harmful to engage in something suggestive of harassing actions against the smaller enterprises which may have banded together for protection against the dominant enterprises of the industry.

Moreover, all cartels must be dealt with. Those in the consumer-goods industries are no worse than those in the heavy industries. Consumers ultimately foot the bill, no matter where cartels limit output or raise prices. Thus before the war, because of the high prices set by the steel cartel, Germany was paying approximately $80,000,000 annually more for its steel than world market prices. It is true, of course, that there was only one principal customer, the German Government, but surely no one can contend that the monopoly differential of $80,000,000 a year was not ultimately paid by the same consumers who bought food and clothes and housing within the German economy.

A consumer does not buy a railroad locomotive, but when monopolization forces the Reichsbahn to pay a notoriously high price for its locomotives, the differential finally finds its way down to the consumer who pays a little more in freight for his food, his clothes, and the materials that go into his house. Multiply this situation by the number of heavy

industries and it presents a monopoly tax on the consuming public which has been conservatively estimated to run in excess of $5,000,000,000 a year.

PREVENT ANOTHER WAR BY BREAKING UP GERMAN CARTELS

Nothing, therefore, is clearer than that the break-up of the big monopolistic combines in Germany is necessary not only to take the fetters off the German economy, but necessary to prevent these cartelists from fomenting another war. Yet a vicious un-American policy of rebuilding German cartels is now being followed with full vigor.

This House has been warned about this affair several times during the last 12 months. On March 25 of 1948, Congressman SADOWSKI stated:

Before our eyes, Germany is being rebuilt by the same despicable pack of militarists, cartelists, and Junkers who made Hitler's war machine.

He specifically named 24 top Nazis who were given supreme executive positions by our military government.[1]

On May 6, 1948, Congressman CHET HOLIFIELD added more documentation to what he termed—

the current emasculation, I might even say the deliberate sabotage, of our program of eliminating German cartels. * * * Detail for detail, it repeats the process that took place following World War I. If successful, this drive on behalf of the monopolies and the monopolists of Nazi Germany will seriously weaken our efforts toward world recovery and provide a new totalitarian threat to our national security.[2]

Congressman HOLIFIELD then placed his finger squarely on the reason for our abysmal failure to carry through the traditionally American anti-cartel policy which President Roosevelt, Cordell Hull, and President Truman and this Congress have so consistently championed.

The change in policy—

Said Congressman HOLIFIELD—

is to be attributed to the fact that in places of authority are too often to be found men who have had previous connections with the very business firms who have engaged in cartel practices in the past.

He specifically named them, yet to this day, they continue to hold their positions of power and are vigorously continuing their Fascist un-American policy of rebuilding German monopolies. Who are these men?

Since the order of March 13, 1948, which set aside the decartelization program of this Government, the recartelization program in Germany has been in charge of Phillips Hawkins, son-in-law of Under Secretary of War Maj. Gen. William H. Draper, Jr. Before entering Government service, Mr. Hawkins was connected with the Hercules Powder Co. His deputy, C. H. Collison, was a former member of the legal staff of the United States Steel Corp. General Draper, who for some time headed the Economics Division of the American Control Council, was formerly with the firm of Dillon, Read & Co. This Wall Street firm prior to the war floated in the United States a $30,000,000 bond issue on behalf of the Thyssen Vereinigte Stahlwerke, the German steel trust. Deputy assistant to Dr. Willard Thorp in the State Department and backstopping the revival of German cartels at high levels here is Mr. Paul Nitze, another vice president of Dillon, Read & Co. His record was made public in the June 1948 number of the magazine To Prevent World War III in an article entitled "The Right Men in the Right Places."

FASCISM IN JAPAN

Not only has General Draper obstructed decartelization and denazification in Germany, but it is notable that he has also taken a hand in urging modification of the policy of the far eastern command designed to break up the concentration of the economic power in the hands of Japanese feudal combines known as the Zaibatsu.

Two recent books[3] have explored this whole situation. One was written by Howard Ambruster, author of the monograph on Cartels in the Encyclopedia Americana. The other was written by Richard Sasuly, who served under Colonel Bernstein in Germany. Mr. Sasuly states that the policies embodied in Directive JCS 1067 were frequently ignored by officials of the United States military government and that by mid-December 1945 only a few units in two I. G. Farben plants within the United States zone had been destroyed of those built entirely for war purposes. "In all respects the picture was one of regrowth of I. G. Farben," he stated.

CARTELS PROTECTED BY NEW POLICY

Congressman SADOWSKI has already put in the RECORD the following documentation concerning the episode in March 1948 when our entire decartelization policy was scrapped. Practically the entire staff in the decartelization branch resigned in protest. I have here the memorandum which 19 members of that staff signed, and submit it for the RECORD:[4]

OFFICE OF MILITARY GOVERNMENT
FOR GERMANY, UNITED STATES,
Berlin, Germany, March 13, 1948.

Subject: Decartelization policy.

To: The Military Governor, Office of Military Government for Germany, United States, APO 742, United States Army.

1. On March 11, 1948, Mr. Bronson called a meeting of all the members of the Decartelization Branch and read excerpts from a memorandum which he said you had approved and had been approved in principle by the State Department. This memorandum announced a new policy for decartelization. In the opinion of the members of the staff, it virtually repeals the decartelization law and contravenes the July 15, 1947,[5] directive. We asked Mr. Bronson to furnish us copies of this memorandum, and he refused. Therefore, many members of the staff prepared memoranda and we herewith respectfully submit a composite version for whatever clarification you might consider necessary.

2. Mr. Bronson stated that your orders were as follows:

(a) No deconcentration action is to be taken against enterprises in the capital goods or heavy industry field but only against enterprises having monopolies in consumer goods.

(b) No action is to be taken against vertical integrations.

(c) The only standard to guide our future proceedings is a rule of reason.

(d) No action is to be taken against Henschel, although the Bipartite Decartelization Commission had found it to be an excessive concentration within the terms of law No. 56, and no action is to be taken against VKF.

(e) Enterprises against which no action is contemplated are to be officially given a clean bill of health soon.

(f) Violations against trade practices provisions of law No. 56 are to be pursued, and eight such cases against now unknown companies are to be submitted by May 2, 1948.

3. It appeared to be the unanimous opinion of the staff of the Decartelization Branch, or at least no contrary opinions were expressed, that the order given by Mr. Bronson excludes from decartelization action the principal group of monopolistic enterprises which the law says must be eliminated. We do not believe that such amendatory restrictions should be made except by either repeal or drastic revision of the law itself. The law does not draw any distinction between capital-goods industries and consumer-goods industries. On the other hand, it is our view that monopolies in the capital-goods industries are more frequent and more repugnant to the purposes of the law than are concentrations in consumer-goods industries. The effect of such an amendment, we believe, would be to leave the fundamental concentrations of economic power intact while engaging in little more than harassing attacks on the smaller companies. This, of course, aside from being in contravention of the law, would tend to make its enforcement unpopular and completely ineffectual.

4. We also think there are very serious objections to giving immunity to "vertical integration" since the law makes no such exceptions; we believe that to give a clean bill of health to subjects of investigation is contrary to all established principles of law and law enforcement; and we think that being guided by a rule of reason rather than standards in the law offers many obvious dangers.

5. Since it is inevitable that such a new policy, given only by verbal instructions, has produced a state of demoralization throughout the staff we respectfully request that you give us a clarification.

6. It is of importance to add that no solicitation was made in behalf of this memorandum. The following members of the staff are among those who voluntarily asked to join in this expression.

(Signatures.)

The requested clarification came. On March 25 General Clay interviewed the staff of the Decartelization Branch and informed them that the revised policy as announced was official and would not be altered. General Clay further stated that he personally had ordered the case against VKF and Henschel dropped. The New York Times reported of this conference:

General Clay was flanked by Lawrence Wilkinson, his economic adviser, and Phillips Hawkins, chief of the Property Division, of which the Decartelization Branch is a part. His manner was cold and military through most of the conference and he seldom smiled.

Gradually one by one most of the 19 men and women in the Decartelization Branch found their way back to the

[5] Elsewhere given "as July."

United States either to private life or to the Antitrust Division and other Government agencies.

Early in December of 1948 at the request of the President, the Secretary of the Army sent an investigation committee to Germany to get the facts on the administration of the decartelization program. This committee was headed by Mr. Garland S. Ferguson, a member of the Federal Trade Commission. Its report has never been made public. One incident, the Alexander Sacks case, was reported in the New York Times for February 8 of this year. I hold in my hands and submit for the RECORD a copy of a letter by Mr. Wendell Berge, former head of the Antitrust Division, to assistant Secretary of the Army Gordon Gray.

POSNER, BERGE, FOX & ARENT,
Washington, D. C., February 4, 1949.

Hon. GORDON GRAY,
Assistant Secretary of the Army,
Washington, D. C.

DEAR MR. SECRETARY: I represent Alexander Sacks, formerly an attorney in the Bipartite Control Office, United States Decartelization Element, Frankfort, Germany, but now a member of the staff of the Civil Administration Division, Legislative Branch, Berlin, Germany. As you know, Mr. Sacks has been charged with "making statements attacking the integrity and good faith of the Under Secretary of the Army and of key United States military government officials charged with the formulation of policy and the implementation of the decartelization program in the United States zone of Germany." The statements on which the charges purport to be based were made by Mr. Sacks in a memorandum dated December 20, 1948, which he prepared in response to a request from a member of the Ferguson investigation committee after Mr. Sacks had testified before that committee. The committee, as I understand it, had been designated by the Secretary of the Army to investigate certain charges involving the administration of the decartelization program in Germany that had been made by former members of the staff.

I have not seen the transcript of the oral testimony before the Ferguson committee, but I have a copy of Mr. Sacks' memorandum of December 20, 1948, referred to in the charges preferred against him. Although there are a number of statements in Mr. Sacks' memorandum which might be construed to fall into the scope of the charges, I presume that the principal language to which offense was taken is the following:

"The men charged with the highest responsibility by the Commander in Chief have failed signally to carry out the explicit orders of July 15, 1947, Directive to the Commanding General and Military Governor in Germany. The policy of the Roosevelt and Truman administrations has been flagrantly disregarded by the very individuals who were charged with the highest responsibility for carrying them out. Instead, these individuals have let themselves be guided by subjective standards, not to be found in the July 15 Directive, or in Military Government Law 56. They have permitted the intrusion of other agencies in military government who either do not understand, or do not care to understand, the purposes and techniques of the decartelization law.

"By the application of extra-legal and purely personal standards of judgment, they have succeeded in killing the action against the VKF ball-bearing monopoly and Henschel & Son. It is no answer to say that these individuals had the authority to do what they did. Their actions were clearly a usurpation or abuse of their authority and function, and cannot be regarded as having been instituted or carried out in pursuance of their legitimate functions.

"It is no secret that the operations of the decartelization program have been hampered by Major General Draper and his associates in military government, and by Leland Spencer, of Commerce and Industry. They have done whatever they could, by innuendo and misstatement, to discredit a program which they either did not understand, or did not like. These individuals, and others assisting them, have persistently maintained that the decartelization program would injure production, that it would make unprofitable the operation of business enterprises, etc. Their accusations and criticisms are full of unfounded assumptions, none of which have been proved, or could be proved. But the prestige of their positions has lent weight to their criticism, and although they do not have the legal authority to stop the decartelization program, they have, in fact, succeeded in paralyzing it by involved procedures, devious interpretations, and by obtuse improvisations of policy."

As a result of making these and other statements in the memorandum, Mr. Sacks was suspended and advised that his retention in an active-duty status pending the outcome of the consideration of the charges against him would be detrimental to the interests of military government. Mr. Sacks has been advised that it is proposed to separate him from the Department of the Army rolls with the Office of Military Government for Germany, and he has been formally advised of his rights to reply to the charges and request a review of the proposed action, as well as his rights under the twenty-fourth article of war. A cable recently received in this country by one of his friends indicates that a grievance hearing has been scheduled in Germany for the morning of February 10, 1949.

I have just entered the case and have not had an opportunity to review the various technical regulations alleged to be applicable. For the time being, I am not concerned with whether the action proposed to be taken is technically authorized by law or valid rules and regulations. For reasons not in any way related to the technical legal situation, and which I shall set forth below, I request on Mr. Sacks' behalf: (1) that the proceeding against him be immediately terminated without prejudice to Mr. Sacks' status in the Military Government for Germany, or (2) in the alternative, that a public hearing on the charges against Mr. Sacks be held in Washington, D. C., where all of the witnesses who are in a position to testify in Mr. Sacks' behalf would be available, whereas no witnesses in a position to testify in Mr. Sacks' behalf are available in Germany.

Mr. Sacks will make no issue of the fact that he prepared, at the request of a member of the Ferguson committee, the memorandum of December 20, 1948, or that, at the request of the committee, he testified as the transcript of the hearings will show. Therefore, the only substantial issue pertinent to the question of whether Mr. Sacks should be separated from his position is whether he told the truth. The witnesses whose present positions permit them freedom to testify in support of the statements made by Mr. Sacks are all in this country.

The formal statement of the charges against Mr. Sacks appears to proceed on the theory that the making of statements by a subordinate employee criticizing or attacking the policies and actions of his superior officers constitutes a type of disloyalty which per se warrants separation from the service, irrespective of whether the statements are justified or true. This theory is apparently being carried even so far as to apply to statements made by a subordinate employee in response to questions from a committee appointed by the Secretary of the Army for the very purpose of investigating the policies and actions of his superior officers. I submit that this theory should be totally rejected.

I respectfully suggest that the Department of the Army make it abundantly clear to the public that, at least in the execution of economic policies under the administration of the Army, employees will not be disciplined or discharged for making bona fide responses to questions or requests from investigating committees concerning the policies and conduct of their superior officers. Otherwise an iron curtain will descend around such investigating committees and they will be unable to get at the truth of situations which they are commissioned to investigate. Obviously, if Mr. Sacks is now separated from the service, other employees cannot afford to take the risk of cooperating with the Ferguson committee. As a matter of fact, one witness presently in this country declined by letter to come to Washington to testify before the Ferguson committee because of the fact that he holds a commission on the retired list of the Navy and cannot afford to run the risk of retaliatory action should his testimony be displeasing to the military authorities. I am also reliably informed that there are many persons on the staff in Germany who share Mr. Sacks' view, but obviously they could not afford to testify in his behalf because to do so would subject them to charges similar to those already preferred against Mr. Sacks.

It is Mr. Sacks' position, which I propose to urge wherever appropriate, that a civilian official has a duty to tell the truth as he sees it, particularly to investigating committees, and that it is not "disloyalty" under such circumstances to recite facts as they have occurred or to express opinions which may be contrary to those held by superior officers. The official charges against Mr. Sacks seem to rest upon the erroneous notion that a civilian employee's primary loyalty is to his immediate superiors irrespective of whether they are acting within the law or are faithfully executing officially declared policies. I submit that the primary loyalty of such an employee is not to his immediate superiors but to the United States Government and the people of the United States. Such a civilian employee is a public servant and not a servant of his immediate departmental superiors. I go further and urge that it is not only appropriate for a civilian employee to speak up when in good faith he has reason to believe that his superiors are mishandling public matters, but that it is even his duty to do so. Not to do so would be in violation of his primary loyalty to the public. If this principle were not accepted, then the lips of subordinate officials would be sealed even though they had knowledge of misconduct, violation of law, or action contrary to officially declared policy on the part of their superiors. Important avenues of information necessary to keep the administration of our Government clean and responsive to the mandates of Congress and the announced policies of the President would be obstructed.

It must not be overlooked that the officials who have been sent to Germany in connection with the carrying out of our decartelization policy were sent there to execute a policy, not to make it. Long before the termination of the war responsible public officials in this country announced that it would be the purpose of this Government after the war to deconcentrate German industry and break up the power of the German cartels. That policy manifestly has the approval of Congress. It was stated in JCS 1067, in the Potsdam Agreement, and it was restated in the revised directive from the Joint Chiefs of Staff as late as July 1947. So, clearly, it is not a question of an argument between a superior and subordinate officer over policy which the superior is charged with making. This is clearly demonstrated by the fact that Secretary Royall

sent the committee to Germany for the express purpose of determining whether or not the policies of the Government were being properly carried out by Mr. Sacks' superiors. Certainly Mr. Sacks' opinions, as well as his knowledge of facts, are pertinent to the inquiry of the committee.

I maintain that the only pertinent issue is whether Mr. Sacks told the truth. If it is proposed to press this matter, the hearings should be held at a place where the witnesses who are necessary to Mr. Sacks' defense are available. To hold a hearing otherwise would be a mockery of justice and would amount to a star-chamber proceeding. I should advise you that in presenting Mr. Sacks' defense it will be necessary, among others, to call as witnesses the following:

Hon. William H. Draper, Under Secretary of the Army.

Hon. Garland S. Ferguson, chairman of the investigating committee.

A. Thomas Kearney, member of the investigating committee.

Samuel S. Isseks, member of the investigating committee.

Johnston Avery, special assistant to the Attorney General, Department of Justice.

John C. Stedman, special assistant to the Attorney General, Department of Justice.

Col. William H. England, chief economist (retired), Federal Trade Commission.

James S. Martin, former chief of the decartelization branch, now living at Annapolis, Md.

In addition to the above principal witnesses, it would be necessary to call several other civilians resident at different points in this country who formerly were associated with the decartelization staff in Germany.

I hope that the Department of the Army will conclude that an unfortunate mistake was made by the officials in Germany who preferred the charges and that it will direct those officials to withdraw the charges immediately and to restore Mr. Sacks to his previous status without prejudice. But if for any reason such a decision cannot be made without further investigation, then I submit that common justice requires that the case be transferred here so that witnesses necessary to Mr. Sacks' defense may testify.

Yours respectfully,

WENDELL BERGE.

FASCIST POLICIES IN JAPAN

If time permitted I could document with equal ease how Fascist economic policies are being put into operation again in Japan. There, too, the breaking up of cartels or Zaibatsu has been stopped by direct order and official activities of the same persons who have scuttled the reestablishment of free private competitive enterprise in Germany. The evidence is unmistakable that we have not been sufficiently alert to prevent the rebirth of fascism and Fascist economic policies, even in the countries we occupy. It is high time we watched the right-hand side of the road a bit from time to time.

BASING POINT PART OF GERMAN CARTEL SYSTEM

The basing-point system as used by the cement and steel trusts and outlawed by the Supreme Court recently came from the cartel system as practiced in Germany. It is against the public interest.

HEARINGS ON RESOLUTION TO PRINT FASCISM IN ACTION

In the early part of 1947 I introduced House Resolution 83, providing that the book on Fascism in Action be printed as a public document. A hearing was granted on the resolution by the Honorable KARL M. LECOMPTE, chairman of the Committee on House Administration, June 3, 1947.

The hearings were conducted June 3, 4, and 5, 1947. Thereafter, the committee authorized the printing of the book as a public document, with the understanding that certain comments of one of the members on the then majority side should be inserted in the preface; but the committee during the Eightieth Congress repeatedly refused to make any copies available for free distribution by Members.

The book, Fascism in Action, a documented study and analysis of fascism in Europe, was prepared at the instance and under the direction of myself by the Legislative Reference Service of the Library of Congress under the direction of Ernest S. Griffith, director. In other words, it was prepared by the same organization that prepared the book on Communism in action. It has 206 pages on what is fascism, how it operates, some origins of fascist doctrines, and chapters as disclosed by the following table of contents:

TABLE OF CONTENTS

	Page
Foreword	x
Preface	ix
Introduction	1
Part I—Political:	
Chapter I. Government and Political Parties	7
Chapter II. Education and Thought Control	23
Chapter III. Foreign Policy	37
Chapter IV. Finance and Fiscal Policy	56
Chapter V. Foreign Trade	75
Part II—Economic:	
Chapter VI. Organization of the Economy: Germany	88
Chapter VII. Organization of the Economy: Italy, Spain, Japan	106
Chapter VIII. Labor	119
Chapter IX. Agriculture and the Farmer	131
Chapter X. Transportation	142
Part III—Individual:	
Chapter XI. Living Standards	156
Chapter XII. Use of Leisure Time	169
Chapter XIII. Religion	187
Chapter XIV. Freedom	197
Part IV—Conclusion	204

In my testimony, June 3, 1947, before the Committee on House Administration, I stated:

I would invite your attention here to one thing. On page 20 it says: "Financed at first by men of wealth as a defense against socialism, the Fascist Party later became dependent on membership fees, special letters, and so forth, which brings in ample funds."

In other words, the very wealthy people—not all of them but some—tried to organize the Fascist Party and take over the Government, and they did that on the pretense that they were fighting socialism, and I hope that we do not have a situation in this country where we are fighting the Communists here on the left, while we are overlooking an equally bad enemy on the right.

Mr. MORRIS. And that could be easily done.

Mr. COLE. If there is so much interest in this book, why can it not be published personally?

Mr. PATMAN. It can be.

Mr. COLE. Is there any likelihood of slander suits or anything of that sort?

Mr. PATMAN. I certainly would be criticized if I were to take the work of the legislative service and commercialize it. I would be open to criticism. They are working for the Government. If this committee does not want to do it, it will be printed, all right, I think. I honestly and sincerely hope you will make some kind of report, either favorable or unfavorable. If it is unfavorable, I hope to get it in the CONGRESSIONAL RECORD, and if I do not, as a last resort, I will get private printers to print it, because I think it is of such tremendous importance that the American people are entitled to the facts that are in this book.

* * * * *

I do not think the Communists, if they are true to form, if they are working like they worked in other countries, will object to the growth of fascism. I think they want that in this country, because it will be so much easier for the Communists to take over the Government from the Fascists than it would be to take it over from a democracy such as we have now. Their policy is to divide and conquer, weaken, cause confusion, and everything else, which would be the case if fascism were to grow and prosper in this country.

I think the Fascist element in this country is in very strong hands. They have money, they have wealth, they have power. It is in much stronger hands than the Communists. The Communists fight just as hard, or probably harder than the Fascists, but the Fascists are in stronger hands in this country than the Communists or any other group. But we do not want either one of them to prosper. We want to keep our own system of private enterprise, our own system of government, which is the finest, best Government on the face of the earth, and when we teach the people what fascism is, and what communism is, and then compare it with our own Government, we do not have to wonder what they are going to do. We know what they are going to do. They are going to stay with our own Government, and that is the object of this publication, to let the people know the danger signs which can be seen in certain movements. It takes an alert person. You have to be rather clever sometimes to detect these things. But if we can point out to them the danger signs, that will help them in warding off both communism on the left and fascism on the right, then we will be rendering a great service to our country. And it is because of that great service to our country that I would like to see this made a House document.

If the committee does not feel that way, I will not criticize the committee. I consider each Member of Congress has his own responsibility. It would be very undignified of me to criticize a Representative of some other district. That is not my duty or my obligation. Each one of us has his own duty and responsibility. I am not criticizing any member of the committee or Member of the House. I never do that. But if the committee, in its wisdom, decides not to make this a House document, I hope it will say so, and I hope you do it with the understanding that I am at liberty to have a private publisher print it and distribute it.

I do not think I am privileged to do that now, because the Government has put money into this publication, and I would certainly be subject to criticism, and should be, if I were to take this document, prepared by people paid with Government money, and let some private publisher publish it for profit and distribute it over the Nation. But if this committee should turn this down as a House document, I want you to at least make a recommendation along that line. I certainly feel we should not try to stop a publication of this sort. So, if you do not make a House document of it, I hope you will give me the green light to have it published, as a last resort, by private publishers, because I think the story ought to be told.

If the committee had not made the book a public document, it would have

received much wider distribution through its publication in the CONGRESSIONAL RECORD or by a private publisher. I never expected the committee to make it a public document and then not authorize a generous number for free distribution in the same way and manner that the copies of the book on communism were distributed.

My testimony on the printing of the document before the committee June 3, 1947, was as follows:

Mr. MEADE. How many copies do you contemplate asking to be printed?

Mr. PATMAN. I thought of asking for the same number Mr. Dirksen did.

The CHAIRMAN. Mr. Dirksen's original resolution called for a half million, and I believe it was amended down to 375,000.

Mr. PATMAN. I would say 100,000. I expect 100,000 would be enough, and as the demand grows, if it does, I presume additional copies will be requested. I do not think the cost should enter into it much. The importance is what we should consider. The cost is the smallest part about it.

The book on fascism in action is approximately the same size as the one on communism in action.

The City of Democracy

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. HARVEY. Mr. Speaker, the city of Greensburg, Ind., within my district, has been chosen by the United States Junior Chamber of Commerce as the City of Democracy. This very high honor means that Greensburg will represent the junior chamber of commerce at the International Congress at Brussels, Belgium, in April. Under leave to extend my remarks in the Appendix of the RECORD, I include a newspaper article from the Greensburg News:

NAME GREENSBURG "CITY OF DEMOCRACY"—MODEL TO BE SHOWN AT BRUSSELS, SITE OF JAYCEE CONGRESS

Accorded special recognition by the United States Junior Chamber of Commerce as "the City of Democracy" of the Nation, Greensburg is to be shown in miniature at the International Congress of the Junior Chamber of Commerce at Brussels, Belgium, in April.

A scale model of Greensburg—the one city in the entire United States to be shown at the international congress with representatives from 44 nations—will be constructed, according to plans formulated by the Greensburg Junior Chamber of Commerce.

Approval of Greensburg as the representative small city in the United States has been made, according to word from Paul Bagwell, of Lansing, Mich., president of the United States Junior Chamber of Commerce.

Plans for proceeding with this project, which will give Greensburg national and international publicity, were formulated Monday night at a meeting of Jaycee leaders with directors of the Greensburg Chamber of Commerce.

CITY OF DEMOCRACY

Explanation of the project and its possibilities was outlined at the meeting by Charles F. Scheidler, president of the Greensburg Junior Chamber of Commerce, and Ray Lindboe, first vice president of the Indiana State Junior Chamber of Commerce. The replica of Greensburg will be captioned "Greensburg, Indiana, U. S. A.—The City of Democracy." Presented in miniature in the scale model will be churches, schools, industrial plants, public buildings, businesses, and areas with individual homes.

ARMY TO PHOTOGRAPH CITY

Announcement was made that aerial pictures will be taken in the near future by fliers of the United States Army Air Forces, as the first step in providing the background for the scale model. Assurance was made that the model can be completed in time to be loaded in a plane at New York City on April 18. The scale model will be divided into several pieces and will be 15 feet square. It will be exhibited at numerous State and national conventions and meetings following the display abroad.

Several national publications are reported already to be interested in preparing articles regarding Greensburg, in view of the signal honor accorded this community. The State Department of Commerce is interested, according to Mr. Ayres, because it will afford unusual publicity to Indiana as a whole.

Detroit Common Council Supports St. Lawrence Seaway Project

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. SADOWSKI. Mr. Speaker, at a recent meeting of the Detroit Common Council the following resolution requesting expeditious fulfillment of the St. Lawrence seaway project was unanimously adopted:

Whereas the President of the United States, in his recent message to Congress, has pledged full support to the St. Lawrence navigation and power project for the deepening of the present channels in the St. Lawrence River and the building of locks and dams that would permit its navigation by large ocean-going vessels; and

Whereas the President of the United States has recommended an initial appropriation of $20,000,000 in the budget now under consideration, to be used to commence this work; and

Whereas this project, after thorough consideration covering a considerable period of time, has been recommended by congressional committees and has been shown by United States engineering surveys to be a practical project beneficial to the entire Nation and by the imposition of tolls self-sustaining over a period of years; and

Whereas the city of Detroit, the State of Michigan and the great midwestern section of the United States are vitally interested in this project, as more production for export originates in the Detroit industrial area than in any other area of the country, more agricultural commodities and manufactured goods are produced in the midwestern section of the United States than in any other area, and therefore a substantial portion of the workers in this area are continuously employed in the production of goods for shipment to foreign countries and a direct water route to the Atlantic Ocean will give this area ready access to all of the ports of the world without a transfer and would constitute a vital stimulant to the employment of additional labor in the area as well as creating new industries in Detroit, in Michigan and the Midwest; and

Whereas the depletion of iron ore deposits in Michigan and Minnesota is having a serious effect upon this important and vital industry, which, in order to maintain the economic stability of the Great Lakes region, needs direct access to the high-grade Quebec-Labrador iron ore; and

Whereas making the St. Lawrence waterway navigable for ocean-going vessels would be of immeasurable benefit not only economically but defensively to the entire Nation: Now, therefore, be it

Resolved, That the city of Detroit, by its mayor and common council, hereby reaffirm their whole-hearted approval of the St. Lawrence seaway project, and respectfully urge the Congress of the United States to enact the necessary legislation for its successful completion; and be it further

Resolved, That the city clerk be and he hereby is directed to forward a copy of this resolution to the Representatives and Senators in Congress from the State of Michigan; and be it further

Resolved, That he forward a copy of this resolution to the American Municipal Association, the United States Conference of Mayors, the Municipal Finance Officers Association, the Michigan Municipal League, the National Institute of Municipal Law Officers, and the Great Lakes Harbor Association, with the request that these organizations request their members to adopt similar resolutions and forward them to their Senators and Representatives in the Congress of the United States.

We Must Preserve Our Dairy Industry

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 25, 1949

Mr. WHITE of Idaho. Mr. Speaker, there is no industry more beneficial to the human family and to agriculture itself than the dairy industry. Dairying is the backbone of agriculture. It builds the bone and sinew of the rising generations.

It is the main dependence of the farmer to build up the fertility of the soil. The importance of dairying has long been recognized by our national leaders and the Congress in its wisdom has established a policy and enacted laws to safeguard our principal dairy product—butter—from destructive competition of cheap butter substitutes to enrich profiteering manufacturers at the expense of the American farmer.

There is inserted herewith a letter expressing my views on this vital issue to one of my constituents:

FEBRUARY 21, 1949.

Mr. GEORGE A. WITTE,
Post Office Box 231, Caldwell, Idaho.

DEAR MR. WITTE: Answering your letter of February 9, concerning the production and marketing of oleomargarine, as a boy I was impressed with the comparison made in the adage "Carrying coals to Newcastle," but I never expected to get a letter from the seat of one of the most important and successful dairy cooperatives in the United States, the town of Caldwell, advocating the unrestricted competition of cheap butter substitutes with the products of our dairy industry, which as I see it, is the backbone

of agriculture, the main dependence of the farmer to increase the fertility of his farm, a farm product that builds the bone and sinew of the rising generation.

I cannot bring myself to support a plan that would permit profiteering packing-house companies and butter-substitute manufacturers, using cheap vegetable oils and surplus tallow and grease to come in and take away the market of the farmer engaged in the dairy industry of this country.

Since oleomargarine has been invented as a cheap butter substitute, we have followed a long and tedious course in formulating a Government policy and enacting the necessary law to protect our dairy industry, and at this late day to meet a temporary emergency caused by inflated prices, I cannot bring myself to support a program that would tear down the laws that have been wisely enacted to protect our dairy industry.

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

Economy in Government

REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. RICH. Mr. Speaker, economy in government is essential if we as a Nation are to survive. Last week I stated on the floor that I hoped the President would talk economy, or have someone in the Government who could and would talk economy in Government spending. No word was forthcoming, until last Thursday I noticed an item that the President in speaking against the Rankin veterans' pension bill said that we would not be able to pay the veterans more pension.

Well, I am glad that the President has found out that we cannot do everything that everybody wants, notwithstanding the fact that he has advocated taking care of everybody from the cradle to the grave. You will recall that in his state of the Union message he requested more subsidies for the farmer, more subsidies for mining, more power projects in Tennessee, power projects on the St. Lawrence Seaway, more social security benefits, more Federal aid to the schools, socialized medicine for the general public, more low-rent housing at less than cost, more military training when we already are spending $15,000,000,000 for our military forces, more money for foreign countries under ERP, and suggesting that we arm all the countries of Europe.

Now if the President is unable to find money to take care of the veterans, how can he find the money to do all these other things? It is not common sense, it is not good business, and if we continue this trend, there is an inevitable wreck ahead, tax bill of $4,000,000,000 or no tax bill. You know it and so do I, and it is the responsibility of everyone of the Members of Congress to stop this squandering.

We cannot stand more taxes. Everybody is protesting now about the high taxes, yet all seem to think we can do more spending. That simply does not add up right. Before you vote "yea" on any legislation, consider whether it stands this test:

First. Is it right?
Second. Is it sound?
Third: Will it work?
Fourth. Can this country afford it?

Unless it passes these four tests, vote "nay." Use your good common sense, your brain and will power, and remember the oath you took to uphold the Constitution of the United States. Let us all do our duty as sound Americans, for unless we change the present policy I can see nothing but a wreck ahead, and it is coming only too fast.

Federal Aid Costs Too Much

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

FEDERAL AID COSTS TOO MUCH

(By H. J. Stuhlmiller)

Federal aid, in its many forms, costs the American people more than it is worth. Such aid was practically nonexistent in the United States until the thirties when it was a measure taken presumably for emergency purposes only. Now this aid is running into billions of dollars annually. Yet more of such aid is being proposed. If enacted into law, the Government will pay part of our teachers' salaries, as well as help build our school houses and other public buildings; it will help us pay our doctor bills; social security will be expanded. Government money will go for farm housing as well as for extensive city housing projects; high price supports will be continued along with all of the other present aid projects. All of this sounds good. Eventually this help will do us harm; for the Government has no source of income other than the local communities which it means to aid.

We recall the promises that something will be done about the high cost of living. People who are being hurt by rising living costs are increasing in numbers. But it is the pouring out of money by our Government that has directly been responsible for these high prices about which we complain. It is the pump-priming of the thirties, the war costs, and the Federal-aid projects of the more recent period that is shrinking the value of the dollar. In only two of the past 16 years has the tax money been sufficient, so the deficits had to be made up mostly by diluting our money supply with the unavoidable result of raising prices.

The bad effects of Federal aid more than cancel out the good intended. Even public projects are becoming harder to finance. Adair County, for example, is getting a substantial Federal grant to build a new hospital. But rising costs caused by the very Government that wants to give aid have made it necessary to redraw the plans for a smaller building. Again, there is the 23-mile gap in the pavement on State Highway No. 92—the traveling public needs to have it paved. And we need more surfaced farm-to-market roads. But even with the help of Federal money it is harder to finance these necessary improvements now than it was in the twenties, when Federal aid was not so extensively available. Indeed, most of the paving of Iowa roads was then put in.

Federal aid has to be paid for. The money comes from two sources: First, oppressive taxation (the Government now takes more than 80 percent of all the taxes we pay, leaving too little to support our local and school governments; second, deficit financing (this is what shrinks the value of the dollar and is likely to bring on rationing again and more crippling Government controls).

Of course, all communities take Federal aid when they can get it. In fact, it is their own money in the first place. Therefore, each community has to compete with all others in attempting to get back as much of its money as possible. The biggest share often goes to those who have the most political pull. It would probably be shocking if we knew how large a share was never returned to us.

When we receive Federal aid, it seems we are getting something for nothing. We should not be deceived. We actually are the losers.

Daylight-Saving Time

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article on daylight-saving time by Charley Stookey, farm editor of Station KXOK, in St. Louis, Mo.:

CHARLEY STOOKEY SAYS

People who come to St. Louis or any part of the metropolitan area, any time between the first of May and the first of October know the confusion which is caused by daylight-saving time.

Personally I think daylight-saving time is absurd.

However, we are going to have to put up with it because of the attitude in the eastern half of the United States and because of the short-sightedness of a minority in the cities like St. Louis.

So I have suggested that we have daylight-saving time on a Nation-wide basis but for the months of June, July, and August only. Following up the suggestion I wrote Congressman MEL PRICE, of East St. Louis, Ill., on the subject:

Here is his reply dated from Washington, D. C., January 5:

"This has been a difficult question ever since the Congress, through the war years, exercised authority in setting daylight time throughout the country. Except during the period of war emergencies, Congress has avoided this question, but there has been a growing concern on the part of people everywhere for a national decision on the matter. Railroaders, farmers and a lot of people are disturbed about conflicting times in all sections of the country, and I think that most people would appreciate a standard settlement on the matter. I certainly would be glad to cooperate in any manner possible.

"MELVIN PRICE,
"Member of Congress."

I read the letter on my Town and Country program over KXOK one morning recently and asked for opinions. The replies came in. Folks from St. Louis as well as from the farm wrote me.

Most of them detest daylight-saving time, but agreed that national daylight-saving time for only 3 months would be better than regional and for 5 months as it now stands in many areas.

A dairy farmer on Route 3, St. Charles, Mo., wrote: "Rather not have it at all, but if it has to be, June, July and August won't be too bad. Our cows don't even like the change."

A lady in St. Louis said about daylight-saving time, "Kick it out all together. It only benefits school kids and golf players."

From Mount Vernon, Ill., a farmer wrote to say he hoped the Nation would establish "sun" time for the year around, and two listeners at St. Clair, Mo., raised cain with me for even suggesting it be made national for 3 months.

The proprietor of a hardware store in a coal mining town in Illinois is in favor of making it Nation-wide or not at all.

What do you think about it?

I'm convinced we'll never be able to get the East to go back to standard time in summer and when cities like St. Louis insist on throwing the Midwest out of joint by having local daylight time, why not make it Nationwide but for the months of June, July, and August only?

Congressman PRICE said he'd be glad to cooperate in any possible manner. If you'll send me enough mail on it, we'll send it on to Congress and see if we can get something done.

Write to me, won't you?

Americans All

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Dr. Daniel A. Poling which appeared in the New York Post on February 17. Thank God, we still have enough brave Americans who are not afraid to stand up and be counted.

AMERICANS ALL

(By Dr. Daniel A. Poling)

The Americans All orchid of the week goes to Governor Warren, of Florida. A colorful personality he is is, rugged and dynamic, given perhaps to the spectacular (but then why shouldn't he be?) and always human. He surprised the rest of the country when he came out with a smashing attack on the Ku Klux Klan, surprised those who did not know him, but not many of his friends. Fair play is his second name and a good American name that is. What this Governor now attempts will do more for a brave cause than anything that I could write and much more than any nagging from the North. Always courage on the spot and wisdom too is more difficult than when we offer it as advice to our neighbor. Governor Warren has courage on the spot, and wisdom too.

Dr. Hugh A. Brimm, one of the leaders of the Southern Baptist Convention, also has courage on the spot. In an article sent to the editors of all publications of his church in 21 States he describes a recent incident near Chattanooga, Tenn., when the local Klan came hooded into a church and made a contribution to the pastor. He then said, "The incident will probably be repeated many times now that the Klan has sunk to such a low level in the thinking of decent and respectable people."

The Baptist clergyman describes these contributions as bribe money. Bringing them into the church should be openly resented and refused by Christian people, he declares.

Dr. Brimm is a realist, he knows that it will take courage for preachers, particularly in small Southern communities to follow his advice, so he breaks it down into these suggestions: (1) Keep cool, no one should be afraid of cowards who won't show their faces. (2) Remember that superficial piety is hypocrisy before God and man. These men cannot wash the blood stains of lynched victims from their skirts by merely walking into a church with blood money. (3) Refuse any gifts and invite the Klansmen to stay only if they remove their masks.

In these uncertain times the Governor and the preacher have set a brave example for all Americans.

Army Engineers Know Their Place

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Portland (Oreg.) Journal of February 2, 1949:

THE ARMY ENGINEERS KNOW THEIR PLACE

Army engineers, now holding a series of hearings on the new 308 report, a master control plan for development of the Columbia basin, are 100 percent right in barring discussion of a Columbia Valley Authority.

It is the function of the Army engineers to deal with the physical and engineering phases of Columbia Basin development. It is their function at the direction of the Congress to evolve plans and specifications for flood control, navigation and power projects, indicating suitable locations, estimating costs and benefits.

It is not their function to determine the priority of these projects, or how rapidly they shall be built. That is the function of the Congress. Nor is it the function of the Army engineers to engage in an ideological controversy over CVA or any other administrative device for coordinated development and control of the region. And they are wise enough to know it and state it publicly.

The Army engineers have done a magnificent job of developing a major control plan for Columbia Basin. It is the most thoughtful and comprehensive job ever undertaken for regional development. Current hearings prove that it is rapidly winning friends throughout the Pacific Northwest, and is destined, we believe, to supersede all previous plans. It projects seven great dams on the Columbia and recommends other multiple purpose works on its principal tributaries, works designed to beat the critical power shortage, control rampaging rivers, and add to the industrial and agricultural wealth of the region.

The acclaim given this coordinated report by representatives of the Department of the Interior (whose Bureau of Reclamation brought out its own comprehensive plan for western development 2 years ago) and by private and public power agencies, chambers of commerce, labor-management groups, and State and municipal officials tells its own story. It indicates clearly enough the belief of many residents of the Pacific Northwest that coordinated regional development is practical, and preferable to a super-State authority such as that superimposed upon the Tennessee Valley.

But again, this is not the concern of the Army engineers. It is the concern of the people of the region and of the Congress. Theirs is the final decision.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio script written by Kerron Johnson, of St. Paul, Minn.:

I speak for democracy, and so I speak for all men everywhere. Not famous or lionized, but the creators of wealth, the masses that are the power and the essential glory of the world. The people are the wealth of a country, the unacknowledged masters of kingdoms, empires, and governments. They are those to whom all leaders are accountable, no matter the divine right of kings or the mailed fists of dictators.

If oppressed, they will rise. No army shall hold them, for they are unconquerable. Yet the people do not cry for war, for they do not glory in it. They rather cry for peace—to live and love as is their birthright. Some may have money, some power, and some great minds. But they, as well as an unknown laborer will fall even as flowers in a field—for the grim reaper does for all men the same.

It is only under democracy, however, that men can find their hopes fulfilled whether it be that he would speak and criticize without fear, or own a piece of land. Only in a democracy can men go to a church or stay away with their only censor that of their own beliefs. Only in a democracy do the lights of justice, freedom of religion, freedom of speech and freedom from fear, stand side by side. In her lamp, the Statue of Liberty holds all these and more. The greatest possession a man can have is his liberty. Here he may have liberty if he will but abide by the Golden Rule—"Do unto others as you would have them do unto you."

What is democracy, you ask? There is no cut and dried answer to that question. Democracy is many things. Democracy, if properly developed, could grow to mean all things to all men. Democracy allied with faith in God and man could be the great living symbol needed to encourage every man to freedom.

It means that you have a right to trial by jury, or that you can travel wherever you will over this land, and give no one any reason, nor ask any permit. It means that you are free to work or pray or play without being so ordered by the State or by any individual. You can take a ride in the country or see a ball game, You can be an engineer or a ditch digger.

Your fate is in your hands. With ability, talent, and opportunity, there is no limit to your rise in a democratic country. But let it not be supposed that all this is to be had merely for the asking. There is a price for everything, but the price of freedom is exceedingly low for such a great possession—it is responsibility.

Your responsibility is that of voting, of knowing about public affairs, in seeing that justice is done, as much as is in your power to do so. Your rights lie in taking jury

duty, in doing your best to abolish racial and religious prejudice. It is the duty and privilege of every man to serve his country by upholding her laws, her creed, and her ideals.

In a true democracy, it should be a well-taken privilege to pay taxes, knowing that they are not diverted into the pockets of a favored few, but are used for the benefit of all. It is one of the best points of democracy that every man can serve his country in some civil or political office. Thus will he obtain a greater understanding and insight into the affairs of his country and his fellowman. He will learn as he could by no other course the ways of democracy. These are some of the ways in which democracy can be served.

The benefits of democracy are many and varied. Its gifts will contribute to the building of a better world, in which freedom, justice, mercy, and tolerance will be the tenets of civilization. Now, again, in these trying days, the good way of life is being threatened as it has been so often in the past.

But, the common man, who is, after all, the last judge before God, has made up his mind. He knows that democracy in its finest form can be the only path to world union and the ending of wars.

Let us hope that with the grace of God, he will win through to make on earth a true brotherhood of man—democracy.

Need for Veterans' Hospital in Illinois

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith House Resolution 24 adopted by the House of Representatives of the Sixty-sixth General Assembly of the State of Illinois:

House Resolution 24

Whereas the needs of sick, aged, infirm, and convalescing veterans in the various parts of the country continue to require the establishment of hospitals for their care by the Government of the United States; and

Whereas it is desirable so to locate these institutions as to best serve the interests and convenience of veterans residing in various portions of the United States; and

Whereas the State of Illinois, recognizing the conditions stated above and responsive to her obligations to those who served their country, has for some 60 years maintained a home for soldiers and sailors at Quincy, Ill.; and

Whereas there are now domiciled at this home approximately 1,200 veterans, many of them sick, aged, and infirm, with a long waiting list of applicants for admission to this home already in existence; and

Whereas there does not exist at this time anywhere in this region adequate Federal facilities for full hospitalization of sick, aged, infirm, or convalescing veterans, because other veterans' hospitals in Illinois are not located so as to serve west-central Illinois and adjoining areas in neighboring States; and

Whereas there is sufficient vacant land adjacent to the Illinois Soldiers and Sailors Home at Quincy now owned by the State of Illinois which is particularly suited for use for a veterans' hospital and convalescing home; and

Whereas the proper agencies of the State of Illinois are ready and willing to offer a full measure of cooperatiton to the Federal Government in locating a new institution at this site: Therefore be it

Resolved by the House of Representatives of the Sixty-sixth General Assembly of the State of Illinois, That the proper authorities of the United States Government be and are hereby urged to examine the need for veterans' hospital services in the territory surrounding Quincy, Ill., and to examine the desirability of utilizing the land located and now unused by the State of Illinois; and be it further

Resolved, That the Illinois Veterans' Commission and other appropriate agencies of the State of Illinois are hereby authorized and instructed to confer with the proper authorities of the Federal Government as to the desirability of carrying out the provisions and purposes of this resolution; and be it further

Resolved, That copies of this resolution be prepared and forwarded by the secretary of state to the Honorable SCOTT W. LUCAS, the Honorable PAUL H. DOUGLAS, and to the 26 Representatives of the State of Illinois in the Eighty-first Congress of the United States.

Adopted by the house, February 15, 1949.

PAUL POWELL,
Speaker, House of Representatives.
CHAS F. KERWIN,
Clerk, House of Representatives.

Big Brother Movement

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. MULTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the Big Brother Bulletin for February. I know of no more worthy project in this country than the big-brother movement. We should all support it.

The article follows:

FOUNDER OF BIG BROTHER MOVEMENT IN NEW YORK TELLS HOW WORK AIDED 22,000 BOYS IN 45 YEARS

(By Col. Ernest K. Coulter)

(When clerk of the newly established New York Children's Court in 1904, the author made a suggestion to the Men's Club of the Central Presbyterian Church that each man take a friendly interest in one boy brought before the court. From this suggestion grew the big-brother movement.)

The big-brother method is so sane and humane that it must appeal to all men of good will who want to do something for their less fortunate little neighbors.

It costs nothing in money to the men who engage in it and it pays bigger human dividends proportionately than any philanthropy I know of. What reformatory can show more than 90 percent salvage of its charges; And this without expense to the State.

"Great oaks from little acorns grow" and surely when the idea of the big brother "one-man-one-boy" therapy was planted 45 years ago its beginning was small. But like the oak its growth has been steady and strong.

HOW MOVEMENT WAS STARTED

The original group of big brothers in New York came from all walks of life—architects, lawyers, doctors, printers, bank clerks, etc. They were members of a club studying civic betterment. When speaking to them, I asked "Why not do something for civic betterment?"

Someone asked: "Is there something we can do?" The answer I gave was: "If each of you will be neighbor to one of the youngsters whose name I shall send you, show him there is someone who cares whether he makes good or not, you will be doing a fine job for civic betterment."

Forty-some men volunteered. They were told that a definition of a friend which a neglected boy gave years ago was "a fren's a feller who knows all about you and likes you jes the same."

These men went into wretched homes as friends. Three don'ts were laid down in the beginning: "Don't preach," "Don't patronize", "Don't pauperize." If a youngster was given money, the Big Brother was to see that he performed some service for it. In other words, the boy was to be helped to retain his self-respect. These don'ts have been adhered to strictly through the years.

The magic miracle-work of friendship has been applied with great profit to boys who came from rich homes as well as poor. Boys from wealthy homes too have been driven to crime by parental neglect.

INNER SATISFACTION IN WORK

Big Brother work is a quiet, personal work which has no place for self-seekers; there is that tremendous inner satisfaction of having had a deciding hand in the saving of a delinquent or predelinquent boy for good citizenship.

Some of the finest men in New York have been and are Big Brothers, and some of the best have formerly been little brothers.

The Big Brother Movement of Greater New York, in its 45 years alone has aided 22,000 delinquent and predelinquent boys. Of the boys referred to it by the courts, over 90 percent do not appear in courts again.

After more than 45 years in the field of legal protection of children from cruelty, neglect, and wretched living conditions, I claim the right to make a statement that while crime can never be completely eliminated, the Big Brothers of the United States and Canada have the best approach to checking the criminal army and reducing our alarming delinquency problem of any philanthropic endeavor.

Freight Rates

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. BECKWORTH. Mr. Speaker, I include in the CONGRESSIONAL RECORD some information which I have received from the Interstate Commerce Commission in connection with a bulletin of the Agricultural and Mechanical College of Texas described as A Comparison of Freight Rates and Estimated Weights on Carrots, Carload:

INTERSTATE COMMERCE COMMISSION,
Washington, February 17, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

DEAR MR. BECKWORTH: This will have reference to your memorandum of February 14, 1949, with which you transmitted a pamphlet prepared by the Agricultural and Mechanical College of Texas relating to a comparison of freight rates and estimated weights on carrots, carload. As requested, the pamphlet is returned herewith.

The pamphlet discusses our report and order in Docket No. 29645, Transcontinental Rates and Estimated Weights on Vegetables. I asked Examiner Mohundro of our staff, who conducted the hearing and issued the examiner's proposed report in that proceeding, to give me the benefit of his study of the pamphlet. Enclosed is a copy of his memorandum, together with a copy of the Commission's report in Docket No. 29645, a decision of the Federal court before whom certain parts of that report and order were contested, and a petition filed on February 11, 1949. The examiner's memorandum and attachments appear to contain a rather complete report on the matter, and I trust it affords you the information desired. Please advise if I can be of further assistance.

Yours very truly,

CHARLES D. MAHAFFIE,
Chairman.

FEBRUARY 17, 1949.

CHAIRMAN MAHAFFIE: I have examined the bulletin of the Agricultural and Mechanical College of Texas (5th series, vol. 4, Oct. 1, 1948, No. 10), a comparison of freight rates and estimated weights on carrots, carload, by Jean D. Neal and W. B. Langford.

The bulletin reflects an excellent study of the subject from the approach made by the authors. It appears to me to be largely an analysis of the Texas phase of our docket No. 29645, Transcontinental rates and estimated weights on vegetables. That proceeding was instituted on the Commission's own motion for reasons stated in the press notice which was released with its order of July 6, 1948. I conducted the hearings, issued an examiner's proposed report, and assisted in the preparation of the Commission's decision in the matter. Many of the topics discussed in the bulletin are maturely considered in the Commission's report, copy attached. The Commission's order, except as to the lawfulness of the rates, was contested in the statutory court and sustained in civil action 546. A copy of the per curiam opinion of the court is attached.

The bulletin appears to be dated October 1, 1948. Certain statements made in the bulletin as matters of fact were changed by the postponement of the effective date of the Commission's order from December 1, 1948, to March 1, 1949. Certain phases of the order are under appeal by petition filed by the Western Growers Association on February 11, 1949. It was stated by the western shippers that it was expected that the Texas shippers would concur in this petition. This petition was served on the Texas interests, but their reply or advices in connection with the request contained in the petition has not been received.

The issues with respect to reasonableness and lawfulness of the rates applicable from Texas are pending before the Commission in docket No. 30074, *Texas Citrus and Vegetable Growers and Shippers* v. *The Atchison, T. & S. F. Ry. Co., et al.* The complaint in that docket was received here September 13, 1948, the day before the hearing in the court in the proceeding referred to above. Certain corrections were required and the complaint was not docketed until September 23, 1948. The complaint is broad and brings under attack practically all phases of the lawfulness of the Texas rates. In my judgment, it is not proper therefore for the Commission to express any opinion on the details in this bulletin as they relate to rates. I recognize several of the tables and comparisons as being similar to those offered in evidence in No. 29645 and which were stressed in brief and fully considered along with the rate evidence.

As stated above from the approach made in this study, I think the authors have done an excellent job. Counting the interveners there are now more than 100 parties to the proceeding in which the Texas rates are under attack. Certain of the defendants have asked that the proceeding be not heard until the Commission has concluded ex parte No. 168, the general increase rate proceeding. Copies of the request were sent to all parties of record and there is no opposition evidenced to it. Apparently all parties to the record and the Chief Examiner have acquiesced in the request. With the proceeding No. 30074 pending, I think of nothing more that can be said about the bulletin because it certainly should not be expected that we could prejudge the pending case with nothing but the pleadings and correspondence in the docket.

MOHUNDRO, *Examiner.*

The Outlook for Government Control of Business

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by J. L. Nellis, attorney, Washington, D. C., to delegates of the Forty-fifth Annual Convention, United Fresh Fruit and Vegetable Association, Stevens Hotel, Chicago, Ill., February 17, 1949:

Mr. Chairman and fellow delegates to the convention, I am very pleased to be here with you this afternoon to discuss with you some of the high points involved in the outlook for Government controls and the relation of your industry to the work of the National Security Board.

Many of you here today will recall the hectic times during the war years under OPA. You will remember that I played a modest part in the formulation and enforcement of regulations for your industry from the inception of food price control. Therefore, I feel that in this room we have as much experience as can be mustered by any industry in a program designed to serve both our needs and the needs of the Government if another national emergency should arise.

Among the lessons from the past, we have learned that when an emergency arises there is a great tendency on the part of government to experiment until it reaches what it thinks is a fair and logical conclusion to the many problems. Speaking now of price control as an example of the type of emergency controls which we are likely to face should another emergency arise, you will recall the inadequacy of so-called voluntary agreements between producer and customer to limit prices. This was the first attempt on the part of the Government to exercise its influence toward a limitation of price. This idea failed for the same reason that present efforts by the steel industry to effectively allocate steel on a voluntary basis, are unsatisfactory.

The inadequacy of planning on both the Government side and the industry side was such that even the obvious problems had to be solved by a roundabout and wasteful method. It was the Pearl Harbor of the domestic scene. A good deal of this was due to the lack of understanding on the part of the Government of your business problems and your business structure. Conversely, the rest of it was probably due to the absence of understanding on the part of your industry as to what the Government's program was and what the Government was attempting to do. No specific persons or groups could or should be blamed for it. It was part of the general atmosphere of shock and alarm brought about by the manner in which we were thrown into the war.

We therefore come to the first major thesis, and that is this: If there is to be no repetition of the wastefulness of the past, the industry and the Government must come to an advance understanding on principles; and if a national emergency occurs at a given moment, the time thereafter should be spent in perfecting mechanics and techniques best suited to your industry and involving the least amount of friction, rather than on fundamentals.

You will recall that shortly after the decision was taken to limit the prices of agricultural products, and the necessary authority obtained from Congress, the Government attempted to regulate prices by a number of methods, almost all of them unsatisfactory. It was not until the administration of Chester Bowles, the present governor of Connecticut, that a system for industry advisory committees was set up—and frankly, it was the first time that the Government had found it impractical to proceed further without full industry advisory participation. With the aid of the committee working on fresh fruits and vegetables, the Government was finally able to arrive at what was considered a fairly feasible method of control—that is, a fixed dollar-and-cent price at the grower and shipper level, allowance for freight, handling, icing, and for proper commissions, the end result culminating in a so-called terminal market ceiling price.

The problems which you had in the control of your prices were multiplied by similar problems in connection with freight, priorities, wages, allocations, containers, and manpower controls. In each case you had a separate Government agency to deal with, a separate set of officials to convince, and a separate set of conclusions to arrive at. We now come to the second major point of our consideration of this problem for the future, and that is this: In any future emergency, the Government will undoubtedly establish a single over-all control agency, and understandings on principle can be worked out with one central authority involving all of these possible controls. In anticipation of this, the National Security Board was established by the President. Its duties are to evaluate the mobilization of our civilian economy in the event of emergency.

For the present, most authorities agree that business itself is in the process of settling down. In most fields of commerce and industry, supply is beginning to catch up with demand, and we have entered a business era in which the keynote is a rebirth of competition. In the fresh fruit and vegetable industry, I do not know of any commodities commanding prices that are unreasonably high in relation to prices charged for other commodities making up the cost of living, nor is there much indication of a demand in excess of vailable production. On the contrary, many segments of your industry have a real sales problem. For this reason, I think you will agree that your business, and most business, has no cause to fear an immediate imposition of controls. And as to what the Truman administration has in store for business, I can only agree with Secretary of Commerce Sawyer's remark, on January 25 that the only thing business need fear is continued prosperity for the next 4 years.

You are aware that President Truman, in his message to Congress on the state of the Union, requested, among other things, standby authority to control prices. In general, the President's reelection, in the face of overwhelming odds, means more—not less—Government in business. But specifically, this does not mean that the Eighty-first Congress is likely to go along with even this stand-by authority, nor would it go along with demands for immediate imposition of price ceilings any more than it would for the imposition of wage controls. We are in a period

where the policy of the Congress, it seems to me, will be the same as that which the Government is following in relation to our national security—namely, a policy of planning a policy of preparedness, and a policy of watchful waiting. As the tensions of inflation and the tensions leading to war decrease, there will be much less inclination on the part of both Congress and the President to enact and make use of stand-by controls of this sort.

During the course of our discussion following, I hope you will make some suggestions, other than those which are about to follow, in relation to the question of what your industry can do in planning for its role in the event of a future emergency.

Let us be sure of one thing: We are in an emergency now. Government spending exceeds that of any peacetime year. Our relationships with Russia are so delicate that no one can tell when this economic and financial emergency might become a shooting emergency. If it goes to that stage, the controls imposed upon you during the last war will seem absolutely mild in comparison to those which are likely to be imposed. My major purpose, therefore, is to get your association to thinking about the domestic situation in which our country will find itself in the event of trouble. It seems to me that there is a substantial need for comprehensive planning now to assist and acquaint Government planners with the way you do business, the normal and natural charges which are made, and to develop a scheme for price, priority, wage, container, and manpower controls which could be put into instant operation should a national emergency be declared. Some of the vital questions to be considered by your committee of planners are these:

1. What are the historical and natural functions of the recognized factors in your business? Can you develop a flow chart to demonstrate the differences in marketing employed by the producers and shippers of all types of fruits and vegetables?

2. Should prices, wages, and freight rates be frozen at a fixed rate during a fixed period; and if so, how do you solve inequities?

3. Should the actual mechanics of control be essentially the same as those in effect during the last war?

4. What do you do about the relationship of quality to prices established, trade names, brands, and other differentials?

5. How do you avoid the friction which occurred the last time in providing for the operation of all legitimate factors in the business?

6. Should a system of zone pricing, zone freights, etc., be established for all commodities?

7. How can a system be established which will give a proper place in the scheme of things to your industry's demands for labor, materials, replacement parts, gasoline, etc.?

8. What type of a control agency would you recommend to the Government? Should it be a combined OPA and WPB establishment, or possibly a new type of civilian economy control agency?

These, it seems to me, are the type of questions with which you must concern yourselves as an industry in order to avoid the chaotic losses, both to yourselves as well as to the consumer and the Government, which occurred through time wasted and efforts spent in wrangling over fundamentals. The business policy your industry could follow concerning this important question is that to which I referred previously: intelligent planning for an emergency which we, as a Nation, are devoting all our efforts to prevent.

While we hope for an end to our present emergency of inflation, and for an end to the international tensions which might lead to an emergency of another type, we must now work toward solutions of the known problems, all of which we have met in our past experience, and all of which we will face again if the dreaded day comes.

Translating this principle into action for your association, I strongly recommend to you the creation of a special emergency planning committee within the framework of your organization, empowered to study the questions propounded and to report regularly to the membership on its progress. In addition, this committee should work closely with the National Security Board and all other Government agencies similarly engaged in civilian planning. Your association's executive vice president, Mr. Kitchen, has been in close touch with the National Security Board concerning various phases of this planning program; but I believe that this is the function of a committee of your organization, the burden on your executive vice president being too heavy as it is. I believe that this committee and this association will perform an invaluable service to all, even if, as is hoped, the plans resulting from this study are never put into practical use, but remain permanently in industry and Government archives as a contribution to the advancement of trade and commerce.

There is sometimes a tendency on the part of those of us close to the Washington scene to overemphasize the planning activities of the Government. On the other hand, the immense decisions already taken and those to be put into effect under existing emergency legislation are of such far-reaching nature that no individual and no industry can afford to be unfamiliar with them.

No industry can afford to have Congress unaware of its problems. Congress certainly can be either the fountainhead of prosperity or that of trouble. If it is not properly posted on the many problems your industry encounters, it will act on whatever information it has at hand. Your organization should be prepared to furnish your executives with a powerful vehicle, through professional knowledge, experience, and contacts, to enable them to act intelligently and quickly. Certainly, with no disrespect to labor or to the National Association of Manufacturers, this industry is just as important to the progress of this Nation and its people as are these two other fine major organizations. If you will help your executives to establish machinery with which they function on a major scale in a manner similar to that of labor or N. A. M., you will find that a job will be delivered which will be on a par with the success of the organizations just mentioned. You should have a committee of this organization which could have personal and immediate knowledge of all present or prospective legislation and all present and prospective departmental regulations.

Our Members of Congress are at all times eager and willing to listen to truthful data concerning any organization or industry which affects the progress of this Nation, and if we fail to keep our chosen instruments, these Members of Congress, properly acquainted with the problems of our industry, we are not then living up to our responsibilities of citizenship.

Washington at the present time and for long in the future is and will be the hub of the universe. We are financing, schooling, and feeding the world. Because of that, it is the fountainhead of banking and industrial activities. Legislation and instructions for the operations of industries and trades will emanate from that point. Therefore, it would be amiss for you at this time not to give serious consideration to the importance of proper and adequate contacts with all of those who are entrusted in Washington with our leadership.

In conclusion, I am reminded of a story which I think is thoroughly applicable to you at this time. There were two traveling salesmen who had been out on the road for 6 months, such a long time, in fact, that they became immensely homesick. Driving along the road, they saw a sign, home cooking, home atmosphere. Mike said to John, "John, hell, I'm homesick. Let's stop in here and have lunch and maybe get a little home atmosphere. Maybe it will carry us through until we do get home." So the boys went in. The lady came over and said, "What will you have, gentlemen?" One of them said, "Lady, we've been away from home about 6 months and we're so thoroughly homesick that your sign interests us. We would like to participate in this home atmosphere." The lady said, "Fine, gentlemen. Just what can I do for you, and just what will you have?" So they gave their order. "Will you please bring us in some soft toast, some 4-minute eggs, and coffee." The lady then turned away from the table, and one of them called her back and said, "Lady, I want you to bring in that toast burned black, the eggs so damned hard that we won't be able to eat them, and the coffee so weak that we can see through it—and then sit over in that chair, damn it, and nag." Now, gentlemen, if you do not properly prepare your program, you should be nagged, and you will have it coming to you.

Imprisonment of Protestant Ministers in Bulgaria

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a statement by Most Rev. John T. McNicholas, D. D., Archbishop of Cincinnati, and chairman of the administrative board of the National Catholic Welfare Conference, expressing his indignation at and condemnation of the arrest and imprisonment of the 15 Protestant ministers in Bulgaria:

STATEMENT OF ARCHBISHOP M'NICHOLAS—IMPRISONMENT DENOUNCED

"The whole Christian and religious world outside the sphere of Moscow-controlled governments" said Archbishop McNicholas, "will extend its sympathy to the 15 Protestant church leaders who are imprisoned in Bulgaria.

"These religious leaders will be tried according to the Moscow pattern. Such trials are iniquitous, shameful, and inhuman. Trumped-up charges are made; alleged self-confessions of guilt are broadcast to the world by the reporters of courts that have no freedom of action. The sympathy of all normal men goes out to all Christians and religious persons behind the iron curtain who are persecuted, degraded, and even liquidated unless they become slaves and tools of the perverted clique controlling the Communist Government of Bulgaria.

"Likewise, the leaders of the Orthodox Church, as well as Catholic, Protestant, and Jewish leaders who do not submit to the enslavement of Moscow must expect infamous defamation, persecution, exile, slavery, hard labor, starvation, and death.

"No credence whatever can be given to the alleged confessions of the imprisoned Protestant leaders in Bulgaria. The Communist courts know how to torture and to administer drugs that break down the physical and mental powers of their victims."

The Need for Expanded Veteran Hospital Facilities in the State of Michigan

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. SADOWSKI. Mr. Speaker, recently the Veterans' Administration has cancelled the construction of new veteran hospitals for Michigan which had been previously approved and were scheduled for construction. What we need most desperately are hospital facilities for tuberculosis and psychoneurosis cases. A few days ago the Governor of Michigan, G. Mennen Williams, together with many representatives from the State of Michigan, met with the Michigan congressional delegation to discuss this problem and to protest the arbitrary action that has been taken by the VA authorities. At the joint meeting that we held here in Washington, which was attended by Democrats and Republicans alike, we agreed as a body to oppose this unfair and discriminatory action that was taken against the veterans of the great State of Michigan. We had requested that a memorandum be prepared and the whole subject of veterans' hospitalization for Michigan be investigated. As a result of this investigation, I have received a report from the Comptroller of the State of Michigan stating that as of September 1948, the number of veterans of World War II resident in Michigan was 648,000. In addition, there were 237,000 veterans of World War I and all other wars, making a grand total of 885,000 veterans. There may have been some change in this number since last September, but it should not be significant.

The Veterans' Administration has the following facilities in Michigan for treatment and care of veterans:

	Beds
1. General Medical and Surgical Hospital, Dearborn	1,100
2. Marine Hospital, Detroit	175
3. Percy Jones Hospital, Battle Creek	200
4. Neuropsychiatric Hospital, Battle Creek	2,148

Making a grand total of facilities now in operation of 3,623 beds. In addition, the following facilities are under construction:

	Beds
General Medical and Surgical Hospital, Iron Mountain (open Sept. 1, 1949?)	250
General Medical and Surgical Hospital, Saginaw (open Jan. 1, 1950?)	250
General Medical and Surgical Hospital, Ann Arbor (open Jan. 1, 1950?)	500

After these hospitals are completed, the total number of beds available under the Veterans' Administration hospital program, will be 4,623.

That number will represent 1 bed for every 197 veterans domiciled in Michigan. Every adjacent State has a much larger number of veteran hospital beds available, in relation to population. After all projects now under construction are completed, the Veterans' Administration in Washington reports Wisconsin will have 1 bed for every 134 veterans; Illinois 1 bed for every 135 veterans; New York 1 bed for every 141 veterans; Minnesota 1 bed for every 138 veterans; Indiana 1 bed for every 158 veterans, and Ohio 1 bed for every 175 veterans. Throughout the Nation, there will be 1 bed for every 146 veterans.

It appears to us that there has been, and continues to be, very severe discrimination against the veteran population of the State of Michigan in comparison with other areas of the United States.

Under the former program of the Veterans' Administration, two additional veterans' hospitals were projected; one was a 500-bed tuberculosis sanatorium to be located in Detroit, and the other was a 200-bed general medical and surgical hospital at Grand Rapids. These projects were cancelled last December, under Presidential directive, which at the same time stopped the plans on 15,300 other hospital beds elsewhere in the United States. The Presidential directive merely cut back 16,000 beds on the whole program; it left the decision concerning which projects should be cancelled to the Veterans' Administration. We are informed that the basis of selection of projects to be cancelled was primarily the question as to whether actual construction had begun. Since neither of these Michigan projects was actually under way, they were among the facilities cancelled. However, even if these hospitals are actually built, there will be only 1 veteran hospital bed for every 168 veterans. This will still leave Michigan far short of the national average.

There is full recognition that service-connected cases of all sorts should be hospitalized in Veterans' Administration hospitals. At present, there are 150 service-connected patients hospitalized in State, county, and other tuberculosis sanatoria in Michigan. There are 200 other cases on which claims for service connection are pending. In addition, there are 250 veterans whose claims have been denied and who are in tuberculosis sanatoria in this State. Some of these are being appealed. In addition, veterans with Michigan residence are being treated in many veterans' hospitals outside the State. The number of Michigan veterans receiving treatment for tuberculosis at Sun Mountain, N. Y., and at Wood Memorial Hospital in Wisconsin is 110; while at other veterans' hospitals in the United States there are 340 others receiving treatment for tuberculosis. Altogether, there are 1,050 or more tuberculous Michigan veterans hospitalized, but without any Veterans' Administration facilities for their care in this State.

The justice of Michigan's claim to hospital facilities for tubercular veterans is recognized everywhere. It is reported that when the 500-bed sanatorium at Detroit was canceled, there was an allocation of $1,000,000 of Federal moneys to provide for the conversion of 200 beds at the Dearborn General Medical and Surgical Hospital to use for tubercular patients. However, there is no evidence presently available that this plan is being carried forward. If there is $1,000,000 available for construction of facilities for the tuberculosis veteran population of the State, it would not take many additional millions to provide for the original plan of construction.

As to the general need for hospitals in the various areas of Michigan, the 1946 Michigan hospital survey, entitled "Hospital Resources and Needs," shows that the additional number of hospital beds required in the Detroit area was 2,231, and the number of additional beds needed in the Grand Rapids area was 1,107. Except for the Saginaw-Bay City area, where part of the need is being met under Veterans' Administration construction now under way, these are the largest numbers of additional beds necessary to meet a decent standard in any of the areas of the State of Michigan.

Perhaps the discrimination being practiced against the State of Michigan under the present Veterans' Administration program is due to the fact that this State is making unusual efforts itself to provide State care for veterans. At Grand Rapids we have a veterans' facility with a rated capacity of 1,050 beds of which over 950 are filled, although the most recent wing was completed less than 12 months ago. Less than half the cost of this facility is reimbursed from the Federal Treasury, so that this State is carrying a rather heavy burden in connection with veterans' hospitalization entirely on its own. That does not appear to be any reason for justification, however, for the failure of the Federal Government to assume its full responsibility.

The general hospital-bed space needed by the major regions in Michigan, as shown by the 1946 Michigan hospital survey, was as follows:

Region and community	1940 population	Occupied beds needed
Detroit	2,346,583	7,435
Saginaw-Bay City	401,271	1,540
Grand Rapids	381,522	1,455
Ann Arbor	132,856	1,053
Flint	316,063	1,034
Kalamazoo	186,787	752
Lansing	186,624	669
Muskegon	163,543	616
Battle Creek	136,886	592
Jackson	153,855	588
Traverse City	118,701	530

Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Walden Citizen-Herald:

HE NEVER WOULD HAVE BEEN

Former Governor of Kansas, Henry J. Allen, recently had the following comment to make about Abraham Lincoln, according to the New Mexico Free-Mason.

"Had Abraham Lincoln been living today: The Rotary Club would supply him with a set of books. The Lions Club with a good

reading lamp. The Cosmopolitan Club with writing equipment. The Kiwanis Club with a wooden floor for the cabin. He would have the protection of the child-labor law and Government old-age insurance. A kindly philanthropist would send him to college with a scholarship. Incidentally, a case worker would see that his father received a monthly check from the county, the OPA would reduce his rent by 50 percent. He would receive a subsidy for rail splitting; another one for raising some crop he was going to raise anyway, and still another subsidy for not raising a crop he had no intention of raising.

"Result: There would have been no Abe Lincoln."

Dodging Taxes

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of February 19, 1949:

DODGING TAXES

There is one type of political shell-game that seems to work at least once on each generation of voters.

This gold-brick scheme is for political leaders to tell large groups of people they are going to give them batches of government checks or other benefits—and make someone else foot the bills.

We're up against it in this country. The basis of President Truman's program is his pledge to give out a flood of new Government checks, which will boost our national budget by 50 to 100 percent—but at the same time to reduce or eliminate the taxes of Americans who earn less than $6,000 a year.

It may be that this touches on a fatal weakness in what we call the democratic form of government. The historian Macauley warned long ago that wherever the people themselves rule a country, the time will come when the majority will cut themselves so many benefits out of their government it will go broke. Maybe that's what's happening to us.

One would think that in a country like this, which has given its people freedom, the highest standards of living in history, and opportunity for unlimited personal advancement, the humblest citizen would be proud to help pay the tax bills which make this possible.

Not so! Already millions of persons have been eliminated, through their own pressure, from at least the income-tax end of taxation. The New Dealers have preached for years that taxes on the low-wage groups were unjust. President Truman unsuccessfully vetoed the present tax law on the grounds that it eliminated only some 6,000,000 persons from the income taxes—that wasn't anywhere near enough to suit him.

Ambitious politicians have used many tricks to convince voters that they could get money to run the government, and make it still more "liberal," without making the recipients of its spending pay the cost.

Hitler was going to take it out of the savings of the German Jews; the Russian Communists were going to take it out of the hides of the "landed aristocracy"; the British Socialists have been promising to wring the income out of private industry—what part they couldn't collect from the American taxpayers. Hirohito was going to make the Chinese pay the bills for the Japanese Government, and Mussolini was going to make Ethiopia finance the Fascist regime in Italy.

Looking back at these events, we can see clearly how these unscrupulous leaders played their own people for suckers. The pretense that someone besides the citizens was going to pay the government's bills was only a pretense. In each case, the people wound up paying these bills themselves—in blood as well as in wealth.

On the face of it, the English are the only ones who have found a "cinch." Over there, if that was your home, you could make the Government help furnish diapers for your baby, get it to buy a wig if your hair fell out, have it furnish you a dental plate if you got tired of your own teeth, or arrange for it to supply the coffin for your funeral.

Moreover, if you lived in Britain, you would know that every time your Socialist government had obtained a new "loan" from the United States, they reduced the taxes you had to pay—perhaps took you clear off the tax rolls.

But does anyone seriously question that the English people are paying for this experiment in tax-dodging far more than they are saving—paying for it many times over in scarcities of food, clothing, shelter, fuel, electric power; paying for it in a substandard living; paying for it in loss of personal liberty, of opportunity, of self-respect?

Sixteen years ago the New Dealers pulled a trick out of the hat as a means of convincing the American people that they were clever enough to spend billions of public moneys without making the present generation pay for them. They invented "deficit-financing." What that means is spending all they could find an excuse for spending—and passing the bills along to future generations.

Only a little thought is needed to convince anyone that the American people already have lost far more, in reduced value of savings, investments, securities and currency, than it would have cost to keep all the New Deal spending on a cash basis—and we still haven't paid off the national debt.

The debt chickens of 16 years ago are now coming home to roost. The bonds are coming due, in steadily larger amounts. Hereafter, if Uncle Sam can sell new bonds fast enough even to keep up with the repayments on his old ones, he will be doing well. The Federal Government has passed the stage where it can raise spending-money by selling bonds.

But President Truman, determined not to retrench the spending, is on deck with a new device to make what he assumes to be a majority of the American people think he can increase the flood of government checks—and still make someone else pay the bills.

He's going to saddle onto the 5 percent or so of the American people who earn $6,000 or more a year the bulk of the costs of running the National Government at a sixty- to eighty-billion-dollar a year level.

Can he get away with such a program? Not in the sense of making it work. But he can try—and he could wreck the country in the effort, too.

There are a couple of jokers about the Truman scheme. For one thing, there isn't enough income in the $6,000-a-year-and-up end of the American population to pay for government on the scale which Mr. Truman has in mind. Approximately 80 percent of the Nation's income goes to the 95 percent of the people who earn less than that amount. If you took every cent from those who get over $6,000 there would still be far too little to finance the Truman program.

Here's another joker: The small, high-paid group contains the brains and initiative which makes industrial enterprises successful. Tax them out of business, and you will lose not only their share of the tax resources, but slow down the machinery so that no one will be earning enough to pay taxes.

And here's still another joker: The bulk of the big-money incomes in this country come from industrial operations—from the making and selling of commodities. In this field, heavy taxes on the industry itself, or on its owners, in the long run get passed along to the consumer, in higher prices. If the low-income majority insist on trying to shove their proper burden of taxes over to the management and owners of industry, all that will happen is that these low-income groups, who are the consuming public, will wind up paying these higher taxes themselves, whenever they go shopping.

At any event, you can't get blood out of a turnip—and you can't collect taxes equaling a fourth of national income if you start out exempting those who receive 80 percent of that income.

Power Shortage in Northwest

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Oregon Journal, Portland, Oreg., of February 7, 1949:

NORTHWEST POWER SHORTAGE MOST CRITICAL IN THE UNITED STATES

(By Tom Humphrey)

No half-way measures for us! It's feast or famine.

Eleven years ago, when I wrote More Power to You for the Journal—when Bonneville and Grand Coulee were just coming into the picture—we had so much power on the line and in sight that it scared the pants off all of us—all but wise old J. D. Ross, first Bonneville Power Administrator.

Power was literally running out our ears in those days—at least we thought it was. It had us worried to the point where we were seeing white elephants and beating the bushes for customers, public and private, anywhere we could find them.

Today, with almost three times as much installed capacity as we had then, we're starving for power. Literally starving.

ELEVEN SYSTEMS BOGGING DOWN

Every plant we have in the Northwest power pool (11 great systems, 300 plants with a total capacity of 4,000,000 kilowatts) is producing every kilowatt it possibly can. Every generator, every transmission line, every transformer is overloaded—straining to meet unprecedented demands.

At times, in cold weather, we have had actual peak demand deficiencies of 300,000 kilowatts (roughly 8 percent), and we have a continuing peak shortage of 150,000 kilowatts which can only be met by voluntary curtailment.

Sometimes in the later afternoon or early morning hours the load on the power pool is so heavy that frequency drops from a standard 60 cycles to 59½—and 59.6 is considered the danger mark. Generators slow down, so do our electric clocks and the motors that drive our machines.

The whole interconnected system is in danger of breaking apart, getting out of step, and staying that way for hours, meanwhile blacking out a region 700 miles wide and 1,000 miles long.

LIFEBLOOD OF ECONOMY

Since power is the lifeblood of our economy and generators the heart of it, our power system reacts like a man suffering from pernicious and secondary anemia and their byproduct, enlargement of an overworked heart. He hasn't blood of sufficient quality and quantity (power, that is) to satisfy the insatiable demands of his muscles, brain, vital organs, and nervous system (consumers to you).

He's actually starving for oxygen and food. The old heart (corresponding to the power generators) can't pump fast enough to force the depleted corpuscles through his arteries (the transmission and distribution system) to do the job thrust upon them.

His heart develops leaky valves. He tires. He pants. He slows down. If he doesn't find relief or get a transfusion, he dies.

Before you conclude that this is just idle talk, let's look at the record:

In recent weeks I've consulted the governors of the four Pacific Northwest States, the presidents of all the principal power companies, the Bonneville Power Administrator, district and division Army engineers, Department of Interior and Bureau of Reclamation officials, the men who run the Northwest power pool, the superintendents of the principal municipal systems of the region, and our Congressmen.

I've asked them about the power shortage, present and future, what they are doing about it, how we got into it, and what we can do to alleviate it. And they've all told me the same story:

The power shortage is critical.

It is more critical here than anywhere in the United States.

It will remain critical for the next 5 years, or until McNary Dam is brought into production, probably in mid 1954. Longer if we don't build to needs.

If we get a low-water year meanwhile, it will be disastrous.

WHAT TO DO

The only thing we can do about it right now is take full advantage of the great northwest power pool—it's the equivalent of another Bonneville Dam—and continue our voluntary curtailment program—that and pray for better weather and normal water conditions.

To be safe, we should now have a usable reserve capacity of some 450,000 kilowatts, that is, it's good practice to have your biggest—Grand Coulee—generator plus 10 percent of your installed capacity in reserve. Instead, we're using every hydro and steam generator in the region, depleting our storage reservoirs, importing what power we can from British Columbia and eastern members of the power pool, and we're still short—dangerously short.

Army engineers, BPA and bureau officials agree that we must install another six to eight million kilowatts of power in the next 10 or 12 years if we hope to catch up with current needs and meet future demands.

And just to put that in proper perspective, it means the equivalent of 12 to 16 Bonneville dams. Our peak demand is conservatively estimated at ten to twelve million kilowatts by 1960—three to five million of it for heavy industry.

Our power needs doubled during the war, after 40 percent of the Nation's aluminum industry and the Hanford atomic energy plant were located here. They're in the process of doubling again, after a very temporary postwar slump. And they're likely to triple in the next 12 years.

It's fantastic, but unless experience is meaningless and all signs fail, it's true.

IRONIC SITUATION

It's ironic, when you think of it, that we should have a critical power shortage here in the Pacific Northwest. In the Columbia River and its principal tributaries, we have the greatest hydroelectric power potential in America.

Because of the basin system's great volume of water and its comparatively rapid fall to the sea, it is capable of producing from thirty to fifty million kilowatts of power—almost as much as the entire installed capacity of all existing power plants in the United States.

We have 40 percent of the hydroelectric power potential of the United States right here in Columbia Basin, yet we have malnutrition amid plenty. We've actually developed less than 10 percent of our power resources even though we have twice as much installed capacity per person than the national average.

And how did we get into this power jam?

First, no one, not even the wildest enthusiast, could anticipate that the Pacific Northwest would continue to grow as rapidly after the war as it did during the war. Yet we're gaining in population at three times the national rate.

Oregon has shown the greatest growth of all States, percentage-wise, and Washington is pressing California for second honors. Almost one and one-half million new people have poured into these two States in the last 8 years. And industry has followed them.

Furthermore, no one anticipated that the aluminum industry would continue to boom after the war. But it did. It takes from 42 to 48 percent of all BPA power and wants more.

There is the further fact that domestic consumers of the Pacific Northwest who enjoy the cheapest power rates of the Nation—cheaper even than TVA—use 2½ times more power each month than the national average. They have more electric ranges and more electrical gadgets than any other regional group.

And up to recently they were using more power for space heating than any other group—until the power stringency forced both public and private power distributors to put on the brakes.

Finally, we in the Pacific Northwest, seeking to balance our unbalanced agricultural, timber, and tourist economy with more year-round industry (light metals, plutonium, electro-chemical and electro-metallurgical industries) are attempting to do an industrialization job in 25 years that took 200 years in the East.

And power is the key—great blocks of cheap power.

Thus we use more power proportionately and need more power than any other region, bar none. We must have it if we expect to achieve our destiny.

But right now we have no more power to sell. We're saying "No" oftener than the Russians. We can't supply the power needs of existing industry, let alone new industry. You simply can't invite new industry into the Pacific Northwest to share a power shortage.

Bonneville Power Administration alone has turned down applications from electrochemical and electro-metallurgical industries seeking 225,000 kilowatts of power for plants costing $25,000,000. And these industries would have meant 25,000 additional jobs.

SAME ELSEWHERE

And every power system in the region, except those on the eastern rim of the power pool, reports similar experiences. They're even spending good money on newspaper ads and on radio time to ask their customers please to use less power. The response to these pleas has been so good, on the part of all classes of consumers from big industries to householders, that a power system collapse so far has been averted. We're lucky.

The emergency has also had the effect of uniting the entire region in a drive to develop every possible kilowatt of power in the shortest possible time.

The feud between public and private power agencies has been set aside. Presidents of private companies have teamed with Bonneville and municipal power officials not only in trading power from system to system as the need arises, but in seeking appropriations to keep approved Federal projects going and to obtain authorization of other projects.

A series of Pacific Northwest utilities conferences has been held at Tacoma, to work out uniform curtailment programs. The Columbia Basin Interagency Committee has done much to iron out conflicting views and unite all interests.

Bonneville Power Administration has obtained approval by the Corps of Engineers and the Bureau of Reclamation of schedule R, which not only conforms to the longer range plans prepared by each for the comprehensive development of the Columbia and its tributaries, but also is the fastest construction program that can be evolved under normal construction procedures.

Though some conflicts still obtain, some encouraging compromises have been worked out between fish and wildlife interests and proponents of more dams, to the end that we may have both fish and power.

Necessity is a great persuader.

Luxury Taxes on Purses

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. DAVIS of Georgia. Mr. Speaker, Doris Lockerman, able and energetic associate editor of the Atlanta Constitution, who has made a distinguished place for herself in journalistic circles, had an article in the Atlanta Constitution, Thursday, February 17, 1949.

The title of this article is "That's No Luxury—That's My Purse." It opens with these lines:

I am going to see my Congressman.

We are going to discuss luxury taxes and the first thing I am going to ask him is to tell me whether he considers his pants pockets a luxury or a necessity.

Then she proceeds, from a woman's viewpoint, to show that women's handbags are not luxuries, and that such things as baby oil, wedding rings, face powder, toilet preparations, and so forth, are as much entitled to be free from Federal taxes as razor blades, and other masculine necessities and luxuries.

I am writing her that it is not necessary for her to see her Congressman to enlist his interest in the removal of the taxes she referred to. I concur in her statement that they should be removed, along with some she did not mention, such as taxes on school basketball games, parent-teacher plays, charitable entertainments, and a number of other items which Uncle Sam now seizes upon as a source of revenue to finance his $42,000,000,000 budget.

I have been advocating repeal of these taxes for some time. I know that if taxes are to be removed, spending must be reduced. I favor that action also, and I hope that there are enough Members of

the Eighty-first Congress who favor it that we vote it into effect.

Mrs. Lockerman's article deserves to be read by every Member of Congress, and I insert it herewith:

THAT'S NO LUXURY—THAT'S MY PURSE

(By Doris Lockerman)

I am going to see my Congressman.

We are going to discuss luxury taxes and the first thing I am going to ask him is to tell me whether he considers his pants pockets a luxury or a necessity.

I will hate to embarrass him, but I will then ask him if he thinks baby oil is more luxurious than a shaving cream, and after he answers that one, we are going into such intimate problems as shiny noses, chapped hands and personal daintiness. And I do mean deodorants.

All this will lead us to the subject of taxes that have been unfair to women and children since their inception during the war.

We have been asked, for many weeks, really, to do some verbal protesting on the subject of unfair taxes against certain feminine items, but it never came to a crisis until yesterday when I fell in love with a handbag.

It was a big, beautiful thing, with enough space to pack an overnight wardrobe, and it was made of leather the color of a Palomino pony, with the supple resilience of a pair of kid gloves.

Besides that, I needed it.

On normal days I carry 10 pounds of notes, lipsticks, keys, pencils, receipts, and ticket stubs around in my bulging little purse and now I am confronted with the kind of traveling that will double the requirement.

I compromised with my soul for its price, clicking it off in the kind of amortization figures one uses for the purchase of a house, and I thought I had it all figured out when I glanced down and saw, to my horror, the sales clerk adding 20 percent of its cost for luxury tax! The total cost will probably engulf me and someone more hardy will inherit the Palomino pocketbook.

Until that moment comes, I will continue to be aroused over a situation that permits a tax on baby oil and leaves a $1.50 cake of perfumed soap tax free, that exempts shaving cream and razor blades but taxes face powder, that does not count a billiard table a luxury but socks talcum to the hilt.

By what logic is cold cream taxed as a luxury while cabin cruisers are tax free? Why are race horses not taxed when electric irons are, and why are roulette wheels exempted while $20 wedding rings are called luxuries?

No carefree bachelor pays a tax on cut flowers or candy, but when he marries he will provide a tax for his wife's lipstick and his baby's unguents. He may buy a $1,000 toy train to play with himself, but when he buys an electric fan or a heater to keep the little nest comfortable, there is an extra fee.

His wife can get a sewing machine and a vacuum cleaner, but a hot water heater is taxed, and so is the electric grill on which to warm the baby's midnight bottle. Who, once a parent, ever thought a bottle warmer was a luxury?

Now, according to current rulings, one may pay any amount for a cloth coat with collars and cuffs of furs, with no tax whatever, but the shivering little budgeteer in a cold climate will have to put out her 20 cents on every dollar she pays for the mouton that keeps her warm in zero weather.

No fur coats may be bought without tax * * * unless, of course, you are eccentric and wear the fur on the inside. Then it is tax free.

By the time I have finished with this tirade, I know our Senator or Congresman will have counted his pockets and discovered he has at least 12 of them, built in, and stuffed with indispensable objects.

When he sees me carrying my miserable belongings in a brown paper sack, maybe he will relent and speak his mind * * * and mine.

And maybe it won't be too late to get my big blond purse on Peachtree Street.

Electoral College—Proposed Change in the Election of a President Should Have Adequate Safeguards Against Minority Rule

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. PATMAN. Mr. Speaker, the Gossett-Lodge resolution proposing an amendment to the Constitution to change our present method of electing a President has one provision that should be very carefully considered before approval. It is the provision that permits the candidate for President on the ticket receiving the highest number of electoral votes to be elected, without requiring a majority of the electoral votes, as at present.

It is noticeable that strong organizations representing the very reactionary and conservative groups in the Fascist-minded class are not opposing this resolution. Is it because they think it is possible for the electoral votes to be spread so thin among many parties that they will have a chance to elect a President?

The extreme leftist groups in the Communist-minded class are not opposing this resolution. Is it for the same reason?

TWO-PARTY SYSTEM

Our two-party system has worked well during the past 160 years. Minority parties have not been encouraged under our system but under this new proposal they would have plenty of encouragement. It would be possible for 10 or 15 different political parties to divide the electoral votes in a way that 10 percent of the voters could elect a President.

DIFFERENT PARTIES, PAST AND PRESENT

The Legislative Reference Service has prepared for me a list of the political parties, past and present. It is very interesting and discloses 105 such parties, as follows:

A LIST OF POLITICAL PARTIES IN THE UNITED STATES, PAST AND PRESENT

(a) Parties that have elected one or more Members of Congress; or have nominated a Presidential candidate:

NAME AND YEARS OF CHIEF ACTIVITY

Administration, 1789–1791.
Opposition, 1789–1791.
Federalist, 1791–1825.
Republicans, 1791–1825.
Democratic-Republican, 1792–1812.
Anti-Federalists, 1796.
Independent-Federalists, 1796.
Fusion, 1812.
No Party, 1824.
Administration, 1825–1827.
Jacksonian, 1825–1831.
Democratic, 1828.
National-Republican, 1828–1832.
Anti-Masonic, 1831–1835.
National Republican, 1831–1835.
Independent-Democrat, 1832.
States' Rights, 1833.
Nullifiers, 1833–1837.
Whig, 1836–1856.
Conservatives, 1837.
Sub-Treasury Whigs, 1837–1839.
Abolition, 1840–1848.
Tylerites, 1841–1845.
Native Americans, 1845.
Free Soil, 1848–1855.
Liberty League, 1848.
Industrial Congress, 1848.
Free Soil-Democratic, 1852.
Republican, 1855.
American (Know Nothing), 1855–1861.
Anti-Lecompton Democrats, 1857–1861.
Constitutional Union, 1860.
Unionists, 1861–1867.
Republican (Radical), 1864.
Liberal, 1871–1877.
Anti-Monopoly, 1884.
American-Prohibition, 1884.
Woman's Right (Equal Rights), 1884–1888.
United Labor, 1888.
Union Labor, 1888.
Prohibition, 1872.
Liberal Republican, 1872.
Labor Reform, 1872.
Independent National (Greenback), 1876–1884.
American-National, 1876.
Progressive, 1876.
Readjuster, 1879–1885.
Nationalist, 1879–1887.
Labor, 1887–1889.
Farmers' Alliance, 1890.
Peoples, 1891–1908.
Populist, 1892–1904.
Middle-of-the-Road (Populists), 1900.
Socialist-Labor, 1892.
National Democratic, 1896.
Nationalist, 1896.
Silver, 1896–1929.
Fusionist (Democratic and Peoples), 1897–1899.
Democratic and Populist, 1900.
Silver-Republican, 1900.
Socialist-Democratic, 1900–1904.
Socialist, 1904.
Progressive, 1913.
Progressive-Republican, 1912–1915.
Farmer-Labor, 1920–1945.
Communist, Farmer-Labor, 1928.
Workers, 1928–1932.
Communist, 1936–1940.
Union, 1936.
American-Labor, 1939.
American Vegetarian, 1948.
Christian-National, 1948.
States' Rights, 1948.

(b) Splinter parties or factions (in alphabetical order):

American, Anti-Nebraska Men, Barnburners, Bucktails, Bull Moose, Copperhead, Conservative Democrats, Conscience Whigs, Constitutional Union, Coodies, Cotton Whigs, Democrat and Liberal Republicans, Democratic and Populist, Democratic-Republican, Equal-Rights (see Locofocos), Hunkers, Fire Eaters, Forty-eighters, Locofocos, Loyal Legion, Native American, National Unionist, Peace Democrats (see Copperheads), Radicals (Republican), Socialist-Worker, Temperance, Tory, Union-Labor, Union League, War Democrats, Wide Awakes, Workingmen's Party (see Locofocos).

fred A. Knopf, New York, 1943, 407 pages, plus index. McKee, Thomas Hudson, The National Conventions and Platforms of All Political Parties, 1789–1905; Friedenwald Co. and the Lord Baltimore Press, Baltimore, 1906, 418 pages, plus appendix. McLaughlin, Andrew C., and Albert B. Hart, editors; Cyclopedia of American Government, volume I, pages 388–393; D. Appleton Co., New York, 1914, three volumes. United States Congress; House; Platforms of the Two Great Political Parties, 1932–44, pages 437–447; compiled by William Graf under the direction of South Trimble, Clerk of the House; United States Government Printing Office, Washington, 1945, 459 pages. United States Library of Congress; Legislative Reference Service; Political Classification of the Congress of the United States, 1789–1948; Lewis J. Williams, General Research Section, January 20, 1948, 7 pages (manuscript).

COMMUNIST

If this new proposal had been in effect last year, 1948, the Communist Party would have received a substantial number of electoral votes. This would have encouraged members of this party and possibly by 1952 there would be several other minority parties that would receive electoral votes. Under the present system they are not encouraged but under the new system they will have a chance to divide up our country like France has been divided for sometime.

FRANCE

The following information concerning political parties in France prepared by the Legislative Reference Service is also very interesting:

Political parties in France and certain election returns

[From Foreign Policy Reports, Jan. 15, 1949]

SEATS WON IN FRENCH NATIONAL ELECTIONS

Party [1]	Constituent Assembly		National Assembly		Council of Republic, December 1948
	October 1945	June 1946	November 1946	December 1946 (Council)	
Communist	159	153	181	84	21.
Socialist	146	129	106	62	62.
MRP	150	167	167	70	18.
Radical Socialist	29	32	43	RGR 44	79 (22).[2]
UDSR	31	20	27		
Independent Republic	14	23	28	28	38 (23).[2]
Peasant Group	11	9	6	5	16 (7).[2]
PRL	39	35	37	11	12 (9).[2]
RPF			Intergroup, approximately 74.		Intergroup, approximately 56.

[1] Affiliates are counted in with each party.
[2] Members chosen on coalition lists with RPF.

EXPLANATION OF INITIALS

MRP—Mouvement Republicain Populaire (Popular Republican Movement).
UDSR—Union Democratique et Socialiste de la Resistance (Democratic and Socialist Resistance Union).
PRL—Parti Republicain de la Liberte (Republican Party of Liberty).
RPF—Rassemblement du Peuple Francaise (Assembly of the French People).
RGR—Rassemblement des Gauches Republicaines (Assembly of the Republicans of the Left).

According to the French electoral law, the assembly is made up of members of the parties in proportion to their voting strength in the elections. Hence, all available figures on the election returns are expressed in terms of number of Assembly seats won.

The conduct of the government in France the past decade is certainly not an argument in favor of adopting a policy in this country that could give us the same type government.

ELECTION OF PRESIDENT BY HOUSE

Possibly some change should be made in our Constitution concerning the election of a President in the event no one candidate obtains a majority of the electoral votes. At present, under this method, each State would have one vote. Possibly each Representative should have one vote instead. I hope the Judiciary Committee that is now considering this matter gives some thought to a change in this provision, but I sincerely trust that no change is proposed that will give 10 percent of the voters an opportunity to elect a President of the United States.

I appeared before the Committee on the Judiciary last Wednesday and pointed out the question that I believed should be very carefully considered in this resolution.

The Detroit Common Council Commends President Truman for Stand on Cardinal Mindszenty Trial

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution that was unanimously adopted by the Council of the City of Detroit condemning the trial of Cardinal Mindszenty, and commending President Truman for the stand he has taken. The resolution follows:

Whereas President Harry S. Truman, on February 10, 1949, denounced the treatment of Cardinal Mindszenty by the Government of Hungary "as one of the black spots" on Hungary; and

Whereas the State Department of our National Government is investigating the question of whether the trial of Cardinal Mindszenty violates the treaties between Hungary and the United States and other nations; and

Whereas the trial of Cardinal Mindszenty violates the spirit of every objective to which the charter of the United Nations is dedicated; and

Whereas the infamous and communistic treatment of Cardinal Mindszenty by the Hungarian Government and the threat to other church leaders by other iron curtain countries is to be deplored by God-fearing people of all faiths: Now, therefore, be it

Resolved, That the Common Council of the City of Detroit commends President Harry S. Truman for his forthright denunciation of these communistic acts which threaten the religious freedom of all peoples everywhere; be it further

Resolved, That the President urge and request the United Nations to intervene and prevent further persecution of peoples for their religious beliefs which will ultimately result in the complete destruction of the sacred right of religious freedom; and be it further

Resolved, That a copy of this resolution be sent to President Harry S. Truman and to Senators VANDENBERG and FERGUSON, and the congressional Representatives for the State of Michigan.

Communists Taking Over China

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including two magazine news items relating to China. This is a situation that must be approached with realism by our State Department, else our great military victory in the Pacific will have been lost.

The items follow:

[From Newsweek magazine]

THE PERISCOPE

UNITED STATES OUTLOOK IN CHINA

Washington diplomats freely admit that an all-Communist China would tilt the balance of power dangerously in favor of the Soviets. But at the same time they believe a Red China would suffer from three grave weaknesses: (1) The job of running the country would bring out among the Communists the same graft and incompetence that doomed Chiang's regime; (2) Chinese communism would develop the same nationalistic tendencies in Asia that now have developed in Yugoslavia—especially in view of the Kremlin's long-time effort to stir up far eastern sentiment against the west; and (3) Communist China would need outside economic help even more desperately than did Nationalist China, and the United States is the only country able to provide most of the things needed. Washington thinks the whole situation would lend itself to political and economic pressures which could be exploited by the west against Soviet domination.

[From United States News and World Report of February 4, 1949]

United States policy toward China, given this turn of events, has to be overhauled from stem to stern. New United States policy, accordingly, begins to look like this:

Military aid can be considered finished, not likely to be revived.

United States base at Tsingtao won't be retained very much longer.

Economic aid, though, is something else. United States agents are staying in Peiping, Tientsin, other cities to supervise distribution of United States supplies, may stay on quite a while, if Communists let them. And Communists may need help in feeding Shanghai, and later Canton. United States relief, in that case, may seem to Washington to have some propaganda value in China, may keep Chinese friendly.

Trade between China and Japan also is important, if Japan is to revive.

United States recognition of Communist China is thus ultimately to be expected.

United States reasoning will be to keep a foot in China's door, in order to get back in during the long years the Communists must have before they can swallow China.

Comparative Strength of United States and Russia

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. THOMAS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Associated Press article:

National power is measured in men, space, and natural resources.

The United States and Russia both are rich in population, land area, and mineral wealth.

Like our own Federal Union of 48 States, the U. S. S. R. is a federation of 16 national republics. Each nation spans a continent.

The Soviet republics include almost one-sixth of the world's land area and more than 200,000,000 people—almost a tenth of the world's population. The United States covers one-fifteenth of the world's land surface and has a population of less than 150,000,000.

While Russia still has a long way to go toward mechanization and industrialization, the United States now uses half the mechanical energy of the world. The vast expanses of Soviet-land have yet to be linked with adequate transportation and communication systems. The United States has the world's greatest economic strength.

Russia is runner-up to the United States in a number of vital natural resources. This is particularly true of such energy-producing necessities as coal and petroleum. Both are vital in an age which has hardly begun to harness the newer, more exciting potential of atomic energy.

Coal reserves in the United States are estimated at 45 percent of the world total. Russian reserves, second to our own, total 27 percent. Leading the world in petroleum, the United States has an estimated 31 percent of the total. The U. S. S. R. ranks fourth, with only 11 percent. Both nations are interested in the Middle East as a new source.

Water power is another source which the two great powers are developing. Hydroelectric plants are vital to the production of such products as aluminum, made from bauxite. The United States and Russia are equally poor in reserves of this vital mineral. Each has only 3 percent of the world's supply.

The two countries run first and second in reserves of zinc and iron ore. But United States zinc reserves total 34 percent, while the U. S. S. R. has only 12 percent. With 34 percent of the world's iron ore reserve, the United States is far ahead of Russia's 11 percent. Moreover, American steel producers are developing new ore fields in Labrador and South America.

The world-leading United States has 35 percent of the lead reserve, while Russia ranks ninth with only 2 percent. In copper the United States is second with 22 percent, and Russia is fourth with 16 percent.

While both countries are rich in strategic minerals, neither has within its own borders all the resources necessary to its industrial and military survival.

Soviet System Destroying Itself

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of February 21, 1949:

SOVIET SYSTEM WORKING FOR OWN DEFEAT

(By Anne O'Hare McCormick)

ROME, February 20—Discussion of the Atlantic Pact revives in Europe all the old questions regarding the attitude of the United States, but not to the extent the Government spokesmen and newspaper commentators imply. The ordinary European does not take too seriously the Senate opposition to including an automatic war clause in the proposed treaty. His offhand reaction is that terms and conditions of the defense arrangements should have been settled among the original five Powers before other countries were urged to join, but he does not make a great point of that maladroitness because he does not expect much wisdom and forethought from governments. On the main point he reasons simply that since without a pact the United States was unable to keep out of the European wars there is no question of the American position in the event of new aggression.

Because of its impact on the emotions, the Mindszenty case has perhaps contributed more than any single event to sharpening of the issue. As the most Catholic of continental countries and center of the Catholic Church, Italy feels the attack on the cardinal more than most countries. No demonstration of protest elsewhere could equal in size or solemnity the extraordinary gathering addressed by the Pope this morning in St. Peter's Square. These outdoor sermons of the Pontiff to the populace are new but increasingly frequent in Rome.

The Basilica of St. Peter's holds 50,000 people, but it is not big enough any more to contain the crowds that flock to hear Pius XII when he speaks, as he did today with unprecedented forthrightness, on the great question that divides Italy and disrupts the order of the world.

AN IMPORTANT REACTION

This is not so much a sign of a religious revival as of growing awareness among ordinary people of what is at stake in the so-called east-west conflict. Italy knows it isn't a geographic or even an international conflict; it cuts too deeply into the fabric of this nation. But because Italian Communists have played down the religious issue as they did in Hungary until they gained control, people here have not fully realized that Communism in power will tolerate no rival religion and respect no rights of conscience, no system of law or justice that opposes its purposes.

They realize it now. It is not farfetched to suggest that the fate of the Hungarian primate has lined up many former "neutrals" on the side of the west. Today's demonstration was special to Rome because it was primarily an expression of devotion to the Pope in time of trial but it was not unique. It was one of many popular protests in all parts of the world.

These protests reflect a reaction that should not be taken lightly either in Budapest or Moscow, for it brings emotional as well as reasonable support to measures to halt expansion of Soviet rule, and this in turn gives wider backing to western defense plans and supplies a new and telling argument for solidarity among people who prize freedom of conscience and deepens division into two worlds by showing how unbridgeable is the gulf between them.

For reasons already mentioned, this country is an exaggerated example of the effect of the Mindszenty trial. But Catholic Italy has more than 2,000,000 avowed Communists among its citizens, many of whom call themselves Catholic. Even leaders trained in Moscow keep on reiterating that there is no incompatibility between Catholicism and communism. Religious persecutions in Hungary and elsewhere cast doubt on these assertions, and the Mindszenty case just about finished that particular line of propaganda. Communists and anti-Communists agree that hereafter the Communist gospel will appeal only to the frankly irreligious.

THE LINES ARE DRAWN

Communist leaders here are making new efforts to assert their power. They have called out all transport workers on a 24-hour strike tomorrow, but are so afraid of the effect on popular opinion that they promise to discommode the public as little as possible. They have adopted a policy of noncollaboration in important factories, which De Gasperi announces he intends to fight to a finish. Annoyance strikes are of everyday occurrence and in the Chamber of Deputies Communist members shout down Government speakers, stage walk-outs, and exert themselves in general to make Parliament as ridiculous and ineffective as they can. Their greatest enemy, however, is Russia. When the Soviet at Lake Success offers to accept a candidate for Governor of Trieste it refused to consider last year, Italians interpret the action as a move to foil the western plans of returning the city to the Italians. And when Soviet agents stage a mock trial to degrade a cardinal of the church and destroy Catholic influence in Hungary, they cancel propaganda by which Communist leaders have induced many Italians to join their ranks. But this is not the chief consequence of this strange episode. The number of Communists it causes to waver is not so important as its effect in revealing what is really at stake in the cold war to multitudes who regarded it as a classic struggle for political or economic power. In this sense it vitally affects discussion of the Atlantic defense system and the European Union. It furnishes a final argument to convince Europeans that even if the United States refuses to pledge automatic action in case of attack on Europe it will be in the war on the first round. The lines are drawn.

Persecution of Catholic Priests in Satellite Countries

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. GORSKI of New York. Mr. Speaker, the arrest and mock trial of Cardinal

Mindszenty the Roman Catholic primate of Hungary was just a renewed drive on persecuting all Roman Catholic priests in the satellite countries.

This was evidenced by the arrest of 20 priests in Poland by the Communist-led government. The communistic form of government is more dangerous now than ever. Since 1946 priests had been placed on trial and sometimes sentenced to death as saboteurs with little or no publicity permitted.

The Polish people will never yield to the dictates of the Communist government as long as there is red blood flowing in their veins.

The following article is from the Washington Evening Star:

POLISH BISHOP CHARGES REGIME ABOLISHES RELIGIOUS TRAINING

WARSAW, February 9.—Roman Catholic Bishop Stanislaw Adamski today accused the Polish Government of abolishing religious teaching and ordering the removal of crucifixes in some schools in southern Poland.

Unconfirmed reports said from 6 to 20 priests have been arrested for reading the bishop's pastoral letter, containing the charges, in churches of Poland's great coal and steel industrial district.

A Government spokesman said he knew nothing of such arrests or of the pastoral letter of the Bishop of Katowice. He reiterated the Communist-led government's position that it is not interfering with church affairs. He said that the Government desired only that the church keep its hands out of state affairs.

Bishop Adamski declared that an anti-religious campaign in the Katowice area was being pursued despite assurance from President Boleslaw Bierut, of the Polish National Council that the right of religious teaching was guaranteed by the Polish constitution.

The letter said protests to the Government authorities of the district brought the reply that religious instruction had been halted because of the lack of teachers.

The pastoral letter apparently is being given general circulation since copies arrived in Warsaw today.

The letter charges that crucifixes had been removed from the walls of school rooms and pressure has been brought to bear on parents to demand removal of crucifixes.

Bishop Adamski said Catholics were resisting such pressure and children were carving their own crucifixes and placing them on walls.

Address of Hon. J. A. Krug, Secretary of the Interior

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KIRWAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Secretary of the Interior J. A. Krug at the annual convention of the National Rural Electric Cooperative Association, Hotel Commodore, New York City, February 2, 1949:

It is fine to get back home to rural-electric cooperatives. I have been associated with your movement and with many of you ever since the REA was born. I have negotiated power sales to your member co-ops and I've sweated out with you hundreds of the mean and troublesome operating and construction problems of a rural-electric co-op.

Last year, I was unable to attend your meeting but I promised myself that I would this year and when Clyde Ellis called me I made it a definite commitment even though several other important matters threatened to compete with this meeting—and have.

I am glad to get back home, because the rural-electric co-op symbolizes my idea of the function of electric power in the world today. Electric service is a service to humanity. It services factories, farms and shops; businessmen, housewives and children; army barracks, churches and hospitals. For privately owned publicly owned, or cooperative-owned utilities, the main and sole function must be good service at minimum cost to everyone.

When the private utilities forgot that, they were confronted with the competition of publicly owned utilities. Should the publicly or cooperative-owned utilities forget that they exist to serve the community, region and Nation, as well as their own electric-power consumers, they too will face trouble.

This possibility is not too strange to contemplate. There is no magic in either Government ownership or cooperative ownership. They were both born of a need to serve where service was not being given. If and when they fail to give that service they will be through.

One of the great attributes of our people has been their ability to devise economic and political institutions to serve their needs in a democratic manner. And we have not been slow to change, when change was required.

One example will suffice. Before 1900 the accepted form of municipal government in this country was based on an elected mayor and board of aldermen. When that, in many cases, provided inefficient administration, corrupt government, and inadequate services to the people, the council, or commission, and city-manager method was devised. In most cases this was an improvement. Yet, where it made the city government unresponsive to the needs of the people, cities have been quick to go back to electing their administrative officers.

Public power, in the broad sense, is now a permanent part of American life. But we are a dynamic people and we keep our economic, social, and political patterns alive by constant change. To survive, public power will have to be a good as and a little better than private power. We've got to run fast to stay where we are in the competitive field. And we've got to run very fast to improve our position.

The drive which your organization is conducting to guarantee itself a supply of aluminum conductor, is the most recent evidence that you are in there fighting every minute. I believe that you will get your needed conductor and other equipment and you have the full backing of the Interior Department in that activity.

But the country's record in rural electrification is the most striking evidence. Unprecedented rural line building in less than 15 years has jumped the number of United States farms with central station electric service from 1 out of 10 to 7 in 10 and what is equally important, you have perfected the distribution know-how to reach the other 3. The recent political decision by the American people in favor of candidates running on full public-power platforms is another. The idea advanced last summer that public power should be developed only as incidental to irrigation met with little favor and I believe it will meet with even less favor in the present Congress.

There are tremendous opportunities and responsibilities facing us. We are now in a period of critical shortage of electric power. In some regions of the country, consumers are voluntarily reducing their use during peak hours to keep the power systems from breaking down completely. Any industrialist who wants to build a plant to use a large block of power will search the Nation only to find that he must wait 2 years or more before he can get it. We are far from having any cushion of reserves to meet new loads or emergency requirements.

Certainly, an essential part of our national power policy should be that our power supply must be sufficient to meet all of the requirements of a full-employment economy and provide reserves for all emergencies whether those of an operating character or those threatening our national security and welfare.

When we start to put that policy into effect, we find that it involves the construction by the United States of more hydroelectric dams and powerhouses and the facilities for marketing their output. And that will bring another very critical barrage from certain segments of the power industry. What are the basic elements of this controversy?

The water resources of America belong to all the people. Since the days of Theodore Roosevelt, our national policy has been to conserve and develop these resources for the people's benefit. The first Roosevelt had bitter opposition, especially from his own party. During the intervening period before 1933, many battles were fought between the representatives of special interests who wished to exploit these resources and the champions of the people's rights and in most of them, the people lost. The late Franklin D. Roosevelt renewed the fight in this great tradition and brought the public interest into action to a degree surpassing all previous progress. And now President Harry S. Truman has added new strength to the movement in his forthright stand for public power and publicly owned transmission lines as part of his program to develop the Nation's resources.

Faced with the clear decision of the people—as expressed many times by the Executive and the Congress—that our water resources are to be developed for the benefit of the people and are not to be monopolized by limited groups, the segments of the power industry to which I refer have elected to follow a "rule or ruin" policy.

In the face of growing power shortages, one after another of the Federal power developments has been subjected to attack. The New Johnsonville steam plant of TVA, the steam plant and marketing facilities for the great Central Valley project in California, the marketing program of the Southwestern Power Administration—every one projected in areas where power needs are great, have all been hampered and hamstrung.

Some high-priced lobbying talent and some vicious propaganda have been employed. Most of you know that the top power lobbyist in Washington receives a larger annual salary than the combined and total annual pay of any five of the President's nine Cabinet officers. Only last week this gent commanded news headlines in our leading newspapers by damning the President's proposal for a Columbia Valley Authority.

Many of you have seen the power lobby's motion picture "The Power of a Free People." In it a swastika was used to characterize the Government's representatives working for a public power agency. In order to complete the confusion, cries are raised of "socialism" or "communism." It is charged that the Government's power activities are the advance guard of an army that will socialize American industry.

I am sure that this opposition will fail as it rests on false assumptions. It tries to pervert the language of liberty and freedom to cover privilege and monopoly. It strives to prevent the development of low-cost hydroelectric power and its sale at low rates where that kind of development is just the kind of support and encouragement which private enterprise needs for rapid progress and expansion. No one could go down to the

Tennessee Valley and take a poll of businessmen or even bankers as to whether private enterprise has prospered with the TVA program without getting an overwhelmingly favorable reply.

The Federal Government's role in the power business is properly that of a wholesaler. Local agencies, such as your cooperatives, should distribute the Government's power. In order that the wholesaler can operate on a businesslike basis, Congress has authorized construction of transmission facilities to take power to the load centers from which it can be distributed. Without that authority the only buyers would be those who could come to the dams, or principally the utilities already operating in the region.

Of equal importance to businesslike operation, in most regions of the country, is a supplemental source of energy, such as steam generating plants, to "firm up" hydroelectric energy which otherwise would have to be sold at bargain basement wholesale prices as secondary or dump power to be resold at retail at the existing rate of the private utility. Clearly that generation is of no benefit to the consumer.

It is good business for the country, too, to develop its constantly-renewed water resources in order that their energy potential may help conserve our exhaustible energy resources—oil and coal.

"These considerations, while important to the Nation and its future welfare, cannot determine the decisions of private management in the power business. As witness to this fact, the private companies of the Southwest are installing over 1,000,000 kilowatts of fuel-burning generating plants in the next 3 years, while several times as much water power could have been available if its development had been carried forward in time.

In a few cases, there has been an encouraging demonstration of the kind of industrial statesmanship which is required to reconcile the interests of private management and the public. The latest of these occurred a few months ago when the Interior Department executed a contract with the Georgia Power Co. for the sale to that company of the output of the Allatoona Dam, being built by the Corps of Engineers for flood control on the Etowah River, near Cartersville, Ga.

That contract will yield the United States over $1,000,000 a year. It will also permit the Government at any time to withdraw firm power to meet the requirements of public bodies and cooperatives which may desire to purchase power directly from the Government.

This contract is good for both sides. It leads me to hope that the blind opposition of parts of the power industry to the Government's program for development and marketing of power will be abandoned in favor of a good-faith effort to develop workable arrangements which both meet the requirements of public policy and yield a fair deal to private management.

It may well be that in some areas, as in the TVA region, the predominance of the power resources to be developed by the Federal Government may be such that the entire power market will ultimately be served from Federal projects. In still other areas, relationships may be entirely different. In either case, private equities and interests can and should be protected fully.

In the TVA area, and I speak from personal experience, the private owners of the electric systems acquired by TVA and the cooperatives and municipalities which it serves, received 100 cents on the dollar for their investments. This precedent can be followed elsewhere if Federal power sources predominate and communities desire to undertake their own power distribution business. In other areas, arrangements such as the one with the Georgia Power Co. may suggest the answer.

I believe that there should be the same kind of change of pace in hydroelectric development as there was in rural electrification. The total capacity of the power industry must at least be doubled in the next 10 years or so. During the last 15 years, we added 6,300,000 kilowatts of hydroelectric capacity in this country. In the next 15 years, we should add at least 25,000,000 kilowatts. Most of this additional capacity will be built as an integral part of our Federal multipurpose river-control programs. Much of it will be developed in our western regions where cheap power will make it possible to use the now undeveloped mineral resources and where additional power development can provide the basis for financing badly needed new irrigation facilities.

We need to be as decisive about our power supply as we were about our electrification of rural America. We need great efforts over the next decade on the part of the entire power industry, both public and private, to provide enough electric power to meet America's needs.

We should provide a substantial part of our additional capacity out of our inexhaustible water power resources. The power developed by the United States should continue to be marketed on a basis which will assure its widespread use by the ultimate consumer at the lowest possible rates.

Obviously, the power marketing operations of the Government should and will be conducted on a businesslike basis.

We will continue to uphold the principle that power from Federal projects in a region is developed for the benefit of the people of the region as a whole and is not to be monopolized. This is the purpose of the provisions of law which direct preference in the sale of power to public bodies and nonprofit cooperative organizations.

In carrying on the electric business, your cooperatives must recognize increasingly the importance of assisting their members to develop their use of electricity. It is not enough to deliver electrical energy at the customer's meter and then forget about it. In order for your service to do the job it can do in the home and on the farm, you must effectively discharge your responsibility to advise your members of ways to put your service to work more and more effectively and thereby to improve their level of living. In this work, there are great opportunities for cooperative action with other interested agencies, such as the Agricultural Extension Service and the Federal agencies marketing power to you at wholesale.

As I said earlier, these opportunities and responsibilities are tremendous. Public power—and by that I mean not only generation and transmission by the Federal Government and other public agencies, but also public and cooperative distribution—is going to have to be organized and prepared for the job. It is going to have to start now the operational planning and research which will allow it to shoulder effectively this new load.

I think that the National Rural Electric Cooperative Association at this meeting should take positive steps to prepare for this future of expanded power needs and expanded public power supplies. If you or any of the other public power groups in the country are not ready when the need is at hand, you will be by-passed. Your past progress has not been achieved because of any magic in "public power" but through the initiative and resourcefulness of your leaders. In that lies our hope for future progress. You should be ready to double your activities just as the country doubles its power activity.

Again I want to pledge to you the wholehearted cooperation of the Interior Department and its power agencies. The power-using public has benefited much in the past from our association with you and we expect the benefits to "snow-ball" in the future. Thank you.

Richard F. Pence

EXTENSION OF REMARKS
OF
HON. CLARENCE G. BURTON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. BURTON. Mr. Speaker, the outstanding service of a young man of Roanoke, Va., has earned the 1948 Distinguished Service Award of the Virginia Junior Chamber of Commerce and merits its recognition in the RECORD. This award was presented to Attorney Richard F. Pence by Frank Rogers, Roanoke attorney and vice president of the University of Virginia Law School Alumni Association.

The award was given to Mr. Pence, in part, for his service as civil and police justice for Roanoke from which position he resigned in November to resume his law practice. He passed judgment in over 20,000 criminal cases and 3,000 civil cases.

Mr. Pence was nominated for the award by Attorney General J. Lindsay Almond, Jr. In his nomination brief, Attorney General Almond said of Mr. Pence:

> He brought his court to a high level of efficiency not heretofore attained and has won an unparalleled reputation for decisions characterized by foresight, practicality and justice—impartial and equal for every race, creed, and nationality.

Mr. Pence is president of the Roanoke City-County Public Forum, Business Men's Club and Patchwork Players; chairman of the Roanoke Battalion, United States Navy Organized Reserves; vice president of the Roanoke chapter, Mental Hygiene Association of Virginia, and Mental Hygiene Service; vice chairman of the board of stewards, Greene Memorial Methodist Church, a member of the Welfare Conference, YMCA, Roanoke Council Boy Scouts of America executive board, Community Fund, Kiwanis, Junior Chamber of Commerce of Roanoke, Va., and American Bar Association.

He is also a member of the board of directors of the American Red Cross, Community Concert Association, Family Service Organization, Travelers Aid Society, Touchdown Club, and the Western Virginia Division of the Automobile Association of America.

He was chairman of the Roanoke Navy Day program last year and is a recipient of the Roanoke Junior Chamber of Commerce distinguished service award.

Mr. Pence received his BA degree from the University of Virginia in 1935 and his LLB degree from Harvard Law School in 1939. He was admitted to the Virginia Bar in 1939.

He has been secretary and clerk to Justice H. B. Gregory of the Virginia Supreme Court of Appeals and assistant Commonwealth's attorney for Roanoke. He is now a member of the law firm of Dodson & Pence.

He was in the Navy for 4 years and served as director of the legal department of the United States Navy Military Government on Okinawa. He was dis-

charged in 1946 as a lieutenant commander.

Judges for the award were Dr. Douglas S. Freeman, editor of the Richmond News Leader; William E. Blewett, vice president of the Newport News Shipbuilding & Drydock Co.; and Mr. Rogers. James V. Creasy of Charlottesville was the Jaycee State chairman of the award project. Also on the committee were Charles F. Clark of Roanoke, and Arthur S. Beauchamp of Newport News.

The Place of Psychology in Taxation

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of Arthur A. Ballantine at the annual meeting of the New York State Bar Association, January 29, 1949:

That a tax may have an important effect on the mental state of the taxpayer is obvious to all. Those who dispassionately consider the raising of maximum revenues through taxation of incomes recognize that rates may be so high as to discourage income production. While difficult to determine, there is a psychologically optimum rate from the Treasury standpoint, and that rate is by no means the highest rate conceivable.

What I wish to discuss here is not the psychological effect of taxation, but the use of a state of mind as a basis of tax liability. One might suppose that a basis so elusive would not be utilized in anything so strikingly practical as taxation. Yet the tendency to resort to a psychological base seems to be on the increase, and that tendency requires consideration.

The difficulty of basing tax liability on a state of mind may be seen from a simple illustration.

Suppose that you visited a jeweler and selected a watch to purchase. You then asked the jeweler about a tax on the sale, and he replied, "That all depends. If you are buying the watch to keep it for necessary personal use, the tax is $5. If you are buying the watch to give away, the tax is $10. If you are buying it to put away, to hoard, the tax is $20." You would probably say "Who determines why I am buying the watch?" The jeweler would then say, "I cannot determine that any more than you can. That has to be determined by the tax authorities."

And "When?" you say. "Oh, perhaps not for years" is the answer, "the authorities have much ground to cover."

Might not your conclusion be "Keep the watch. I cannot be bothered with having the tax uncertainty hanging over me. Perhaps Uncle Sam will be coming down on me when I am not in the mood or financial condition I am today."

Now that answer, springing from the difficulties of tax liability psychologically based, would be unfortunate for you, for the jeweler, the watchmaker and for Uncle Sam.

As we examine bases of tax liability utilized in the Federal tax law today, it will be seen that while the watch illustration is extreme, it is by no means fantastic.

CONTEMPLATION OF DEATH AS A BASIS

Treatment of property transferred "in contemplation of death," although perhaps many years before the death, as being part of the estate of the transferor, while not of great day-to-day importance in the application of the tax law, nevertheless shows the difficulty with the utilization of a state of mind as a basis of tax liability.

When the Federal estate tax was first imposed by the Act of September 8, 1916, following the practice in State statutes, it was provided that the estate subject to tax should include property transferred by the decedent "in contemplation of death." The statute made no definition of the possible liability. The Treasury recognized that "in such a case the question is necessarily as to the state of mind of the donor."

In the early leading case of *United States* v. *Wells* (283 U. S. 102 (1931)), the Supreme Court said that to make the transfer fall within the statute the death motive must be the inducing, compelling, controlling or dominant cause of the transfer. A subsequent authoritative decision in the Circuit Court of Appeals for the Second Circuit qualified the requirement somewhat, but left it that the death motive had to be important or substantial. (*Farmers' Loan & Trust Co.* v. *Bowers* (98 F. (2d) 794 (1938), certiorari denied, 306 U. S. 648 (1939)).)

It was the belief of the Treasury that in practice trial courts were unduly hard to convince that the death idea had been the motivating cause, even where the donor had been of advanced age and infirm health.

The Treasury sought to overcome difficulties as to proof of the mental state by the use of presumption. The original statute contained a presumption, which was rebuttable by evidence, that gifts within two years before the death were gifts in contemplation.

The 1926 act contained a provision (sec. 302), adopted at the instance of the Treasury, that in the case of gifts within 2 years a presumption of "contemplation" was to be conclusive. In *Heiner* v. *Donnan* (285 U. S. 312 (1932)), the Supreme Court held, with Justices Stone and Brandeis dissenting, that the conclusive presumption, incapable of being overcome by proof of any character, was void under the due-process clause of the fifth amendment, in that it operated to measure the tax on property of the decedent by including property that was not property of the decedent.

In actual practice the Treasury has found that the establishment of the state of mind of the donor on the basis of testimony is impracticable, and that "the effective administration of the contemplation of death provision" is limited to transfers which are presumed to be in contemplation of death. (See report of Committee on Ways and Means on H. R. 6712.)

The result of experience of difficulty with state of mind as a basis of tax liability found reflection in the inclusion of section 204 of H. R. 6712, passed by the House of Representatives last June, extending the rebuttable presumption to 3 years, but giving up any attempt to assert liability in the case of gifts back of 3 years.

Grounds for giving up the assertion of liability in the case of gifts long past were set forth by the Ways and Means Committee (Rept. No. 2087, p. 6) as follows:

"Under existing law the Government may raise the question of contemplation of death no matter how widely separated the time of transfer and the date of death may be. The consequence is that the executors of an estate may be put to a great deal of trouble and expense in order to disprove such an assertion of deficiency by the Government, which can be sustained in only a small percentage of the cases."

It will be of interest to find whether the Eighty-first Congress takes this sensible view.

ACCUMULATION OF EARNINGS TO PREVENT SURTAX

A very important instance of the use of a psychology test as a basis of tax liability is presented by the provisions of the Federal income tax levying a penal tax upon corporate earnings accumulated "for the purpose of preventing the imposition of the surtax" on shareholders. That tax, the very much discussed section 102 tax, reaches 38½ percent of the condemned accumulations. Under the law, liability depends upon the existence of the motive of retaining the earnings to prevent imposition of individual Federal income tax upon shareholders who would receive the earnings if distributed.

The actual application of the tax rests mainly upon the utilization of a presumption established by the law (sec. 102–c):

"The fact that the earnings or profits of a corporation are permitted to accumulate beyond the reasonable needs of the business shall be determinative of the purpose to avoid surtax upon shareholders unless the corporation by the clear preponderance of the evidence shall prove to the contrary."

Of much importance to growing enterprises, this tax has several distinct aspects, but my purpose is to discuss those aspects only so far as they are bound up with the use of the psychological test of liability.

Of those other aspects, there is first the original fraud aspect, which should now be regarded as defunct. Under the first income-tax act, passed after the adoption of the sixteenth amendment, the tax on individuals was made up of a normal tax of 1 percent and surtaxes beginning at $20,000 of income, reaching 5 percent. The tax on the income of corporations was a flat tax of 1 percent. Because the corporation income paid a tax equivalent to the normal tax, dividends received by individuals were exempt from normal tax.

Under that set-up, it was conceived to amount to fraud or evasion for a corporation to retain earnings instead of distributing them, as surtax on the earnings would be thus avoided. While the form of the penal tax has changed during the years, there is still embedded in the phraseology that thought of preventing the imposition of surtax.

Of course the fact is that the exemption of dividends from normal tax was abandoned back in 1936, so that dividend income is subject both to the corporation income tax, now very heavy, and to full individual income taxes, normal as well as surtaxes. The shoe is now rather on the other foot not of avoiding tax but of thrusting income under the yoke of double tax.

Another important fact on this phase is the presence in the law since 1934 of provisions taking by taxation substantially all the undistributed income of closely held corporations with income that is primarily of an investment character, the so-called personal-holding companies, popularly called incorporated pocketbooks.

A second phase of the penal tax is the strictly revenue phase. Does the presence in the law of this threatening provision add to the revenue, and if so does it add more in the long run than would have been added had the income in question been retained by the enterprise and used for its development? With regard to the payment of dividends under present conditions, there would seem to be the strongest kind of pressure from stockholders who so need cash returns to meet living costs.

A third phase may be termed the social or economic phase. The consideration here is brought out by the undistributed profits tax, enacted in 1936, altogether eliminated by 1940. Under that short-lived tax whatever appeared as earnings or profits, no matter how difficult or damaging to pay out, had to be distributed in cash, or in the form of debt, to avoid application of the tax, running up to 27 percent.

The theory of the undistributed profits tax was that the development of enterprise in America had been largely completed: that the economy would be better sustained if substantially all corporate earnings were

distributed or placed into the stream of consumption: that such a policy would take away much of large business units and that it would be wholesome to have any cases of needed expansion made the subject of market financing under SEC regulations.

What led to elimination of the undistributed profits tax was general recognition both that what were stated as corporate earnings could by no means be treated as all distributable because necessarily invested in the business in various ways, that business enterprise in this country was far from completed, and that if enterprises, large or small, could not build up out of earnings, as so notably in the past, a large part of the vitality of American enterprise would be lost.

When the undistributed profits tax was eliminated there was some difference of opinion in Congress as to how far the retention of the penal section 102 tax, never abandoned, represented continuation of the policy of compelling distribution.

In phraseology, however, the 102 tax differs vitally from the undistributed profits tax in that it would penalize nondistribution only where accumulation was motivated by intent to prevent the imposition of the surtax. How does the psychological test work?

When active enforcement of section 102 began, it was urged that the purpose test of liability was too vague to be constitutionally valid. In rejecting that contention, Judge Learned Hand recognized that "a statute which stands on the footing of the participants' state of mind may need the support of presumption, indeed be practically unenforceable without it." Judge Hand then rested his rejection of the vagueness argument on the ground that

"Standards of conduct, fixed no more definitely, are common in the law; the whole of torts is pervaded by them * * * the [standard] reasonable needs of the business, which is immediately within the ken of the managers, the supposititious standard, though indeed objective being as accessible as those for example of the prudent driving of a motor car or of the diligence required in making a ship seaworthy." (*United Business Corporation* v. *Commissioner* (62 F. (2d) 754 (C. C. A. 2d, 1933)).)

When this question came before the Supreme Court Justice Brandeis took the rather remarkable view that the tax is not on a state of mind as "the existence of the defined purpose is a condition precedent to the imposition of the tax liability" upon the retained income. (*Helvering* v. *National Grocery Co.* (304 U. S. 282 (1938)).)

The judges did not have occasion to point out that a standard which might pass the court test for constitutionality might nevertheless fail to pass the test of workability, particularly for such a practical subject as the determination of tax liabilities.

In the earlier years it was also urged that the penal tax was not intended to apply in the case of active manufacturing or commercial businesses, the needs of which are varied and developing. The argument was that the tax should be confined to investment companies, and the like, which are closely held and have since been thoroughly dealt with as personal holding companies. In the case of such companies even the psychological test is comparatively easy to apply. But that argument did not prevail and, indeed, there is nothing in the law to limit the application of the tax to any particular type of corporation.

What then became and remains the question is how the penal tax shall be applied in practice. Under the regulations of the Commissioner of Internal Revenue, as under the wording of the statute, application turns exclusively upon the presence or absence of the purpose to avoid individual surtaxes on shareholders. Application of the tax is not limited to cases of unreasonable accumulation of earnings or profits, but if earnings or profits are permitted to accumulate beyond the reasonable needs of the business, that fact is determinative of the purpose to avoid surtax upon shareholders unless the taxpayer proves the contrary by such a clear preponderance of all the evidence that the absence of such a purpose is unmistakable (regulations 111, sec. 29.102-2).

What part does established intent to avoid surtax actually play?

One would think that as it is such intent that determines liability, the condemned intent would have to be the inducing or compelling cause of the accumulation, following the opinion of the court in the Wells case as to the contemplation of death motive, or shown to be at least a substantial motive for the action, following the qualification of the court of appeals for the second circuit in the Bowers case.

The tax court has, however, maintained that the tax applies if it can be inferred from the circumstances that the thought of avoiding surtaxes played any part, no matter how small, in the determination of corporate policy—that the requirement for nonapplication is a complete lack of the condemned purpose. And the Circuit Court of Appeals and the Supreme Court, then acting upon the theory of very limited review, refused to correct that extreme position. (*Trico Products Corp.* v. *Commissioner* (137 F. (2d) 424 (C. C. A. 2d, 1943)), certiorari denied, 320 U. S. 799).)

In practice, application of the tax is made to depend on whether the retention of earnings or profits seems to be warranted by the reasonable needs of the business. No reliance either way seems to be placed upon establishing the actual mental attitude of directors or stockholders.

The difficulty with the intent question is thought to be avoided by making the answer turn to whether retention is beyond the reasonable needs of the business. Virtually complete reliance is placed upon the statutory presumption which Judge Hand recognized to be practically indispensable.

What is here overlooked is that the reasonable needs of the business test in which refuge is sought, is itself a psychological test. Judge Hand took the view that reasonable needs of the business was virtually an objective test, like the safe driving of an automobile or the seaworthiness of a ship. The truth is, however, that the needs of a business means very little except in reference to a mental conception of what the business requires or should be. On that there may be difference even among managers and of course between managers and revenue officials.

What the dangers and possibilities of business are is something to be estimated only by minds familiar and responsibly familiar with the conditions of the business. Who but Henry Ford himself could have estimated the reasonable needs of the Ford business?

The Commissioner of Internal Revenue has again and again assured directors that no fair or honest determination of the needs of the business will be rejected so that the tax will apply to earnings retained against those needs. In spite of the Commissioner's enlightened attitude, there remains the difficulty that with the law so broad and so vague, honest determination by directors may be attacked by revenue-enforcing officers.

An illustration of this is the recent case of a moderate sized newspaper enterprise in a western city. The corporation owning and conducting the newspaper enterprise in 1941 had a book surplus of $562,000. The directors deemed that the enterprise needed a new building, new presses, and a radio station. The minimum then estimated cost of those improvements was $500,000. During the war years of 1942 and 1943 it was impossible to obtain the desired material, and in each of those years the corporation added something to its surplus, $80,000 in 1942 and $70,000 in 1943. In 1945 all the long contemplated additions were completed, at a total cost of $938,000, almost double the original estimate.

Officers of Internal Revenue assessed the penal tax on the accumulations for 1942 and 1943, and their action was sustained by the circuit court of appeals. Certiorari was applied for on the grounds that the imposition of the tax in this case rests upon the substitution by the revenue officers of their judgment for the honest judgment of the informed officers of the company. But on January 17 the Supreme Court declined to consider such question. (*World Publishing* v. *United States* (169 F. (2d) 186 (C. C. A. 10th, 1948)).)

In fact, revenue officers are not selected or qualified to pass upon the financial needs of active and developing corporate enterprises. They have not the background or experience to do so. So long as the imposing of a penal tax may result from the substitution of the revenue officer's judgment for the honest judgment of management, the psychological provision in the law remains a threat to the development of enterprise, never more important than it is today.

Suggestions made to the last Congress included placing upon the Commissioner the burden to establish both the unreasonableness of the accumulation and the existence of the necessary tax avoidance purpose. This idea was watered down to the suggested provision that if a corporation being notified of threatened assessment should file a written statement of the reasonable needs of the business, the burden of proof should be on the Commissioner to prove them inadequate.

Changes in the burden of proof still leave vital questions in the fog of psychology. Section 102 requires cure not by shifting assumptions, but by the ax.

PSYCHOLOGY IN CORPORATE REORGANIZATIONS

The psychological test in the contemplation of death and accumulations of earnings cases was placed in the statute by Congress. In dealing with the provisions of the statute relating to corporate reorganizations, the courts have introduced a psychological test of exemption not set forth in the law. That test has resulted in confusion and frustration.

The corporation reorganization sections may not seem of importance to the average taxpayer, but they are whenever he is a shareholder, and they have general importance because they are intended to facilitate flexibility in the use of the corporate form, and that flexibility is intended to further the development of industry.

If the businesses of two or more corporations are to be put together, if a corporation finds that part of its business should be conducted by a subsidiary, or perhaps that a subsidiary should be turned over to its stockholders, it makes a great deal of difference whether the intercorporate transfer or the receipt of new shares by the stockholders, for or in addition to their original shares, is treated as a closed transaction giving rise to tax liabilities, measured by the excess of the market value of the new over the cost of the old.

The theory of the reorganization sections appearing in the Federal Act from 1919 on, almost as soon as Federal income taxes became high, is that certain transfers or exchange transactions turning on the use of the corporate form should be exempt from tax because in fairness they do not mark a time for a tax levy.

As the statute was drafted, it was found that the definition of what the exemptions should be, required change from time to time. In the light of experience and reflection, sections were added or taken out of the statute in its reenactments over the years.

In 1934 the Court of Appeals for the Second Circuit had before it a case, the celebrated *Gregory case* (69 F. (2d) 809), in

which certain transactions involving the formation of a new corporation resulted in the owner of all the shares of the corporation receiving "a parcel of shares" owned by that corporation on a reorganization basis, permitting her to account for the proceeds of the sale of those shares as a capital gain instead of accounting for them on the more expensive dividend basis.

The Tax Court which first considered the case concluded that as the application of the terms of the statute to the procedure which had been followed resulted in the lesser tax, the taxpayer should prevail over the irate revenue authorities.

The Court of Appeals took the view that such a result was not acceptable and rejected the consequence of literal application of the language. In construing the section, Judge Learned Hand in his vigorous opinion stated:

"The underlying presupposition is plain that the readjustment shall be undertaken for reasons germane to the conduct of the venture in hand, not as an ephemeral incident, egregious to its prosecution."

The Supreme Court, affirming the Court of Appeals stated:

"When subdivision (B) speaks of a transfer of assets by one corporation to another, it means a transfer made 'in pursuance of a plan of reorganization' * * * of corporate business; and not a transfer of assets by one corporation to another in pursuance of a plan having no relation to the business of either, * * *. Simply an operation having no business or corporate purpose."

Given this new psychological weapon—the purpose test—the Treasury proceeded to attack corporate transactions other than the type before the courts in the Gregory case, a type later expressly excluded from statutory exemption. "'Recapitalizations", by which a stockholder receives new securities in place of those originally held, were sought to be confined to readjustments having to the satisfaction of the Treasury a business purpose. Such restrictions were sustained by the Tax Court and by Circuit Courts of Appeal.

Restrictions in such cases were sustained by the Supreme Court. The Supreme Court did not follow the courts below in announcing the business purpose test of conformity to the statutory exemption. Instead the highest court reasoned that if the effect of what was done was to create what might be regarded as a taxable dividend, the dividend tax and not the exemption should apply. This is the new well known effect test. (*Bazley* v. *Commissioner* (331 U. S. 737 (1947)); *Adams* v. *Commissioner* (331 U. S. 737 (1947).) In the Bazley opinion, the Court said:

"Since a recapitalization within the scope of section 112 is an aspect of reorganization, nothing can be a recapitalization for this purpose unless it partakes of those characteristics of a reorganization which underlie the purpose of Congress in postponing the tax liability."

It seems not to have been perceived that the effect test is in essence the purpose test, simply given a less questionable label. This is made reasonably clear by the fact that the effect test excludes from exemption all cases that are excluded by the purpose test. It is still more clear when it is considered that all exchanges and distributions would be taxable and not exempt but for the reorganization sections. Those transactions, singled out under the effect test as not exempt, are simply those not conceived by the court to meet the test of business need or purpose.

Since the Gregory decision, a corporate reorganization has been like the fish in Alice in Wonderland, after the notable admonition by the mock turtle—it can't go anywhere "without a porpoise."

Elsewhere I have maintained that the courts as a matter of construction were not justified in reading into the statute the business purpose or effect test. Here I am maintaining that such a test, even if included in the very wording of the statute, is confusing and unworkable.

So long as the idea that a business purpose or effect appealing to the court is necessary to establish the taxable status of a transaction, the businessman or executive who must plan ahead is left puzzled, if not paralyzed. Treasury officials are very naturally tempted to push the doctrine further and further, even to qualify what seems to be a self-defining transaction like a dividend in kind.

In any genuine application of the test, the essential difficulty is as to whose purpose is to be taken into account and how it is to be determined.

For some years after the Gregory decision there prevailed in the Tax Court the idea that the exemption-giving purpose could not be a business purpose of the stockholders, but must be the purpose of that abstract entity, the corporation. That metaphysical conception was always opposed by clear-thinking judges in the Tax Court and in the court of appeals, and was never accepted in the Supreme Court. Confronted with a case in which the taxpayers found it to their interests to maintain that certain transactions were not reorganization transactions because lacking a business purpose of the corporation, the Tax Court finally abandoned this metaphysic in ringing terms, stating (estate of John B. Lewis (10 T. C. 1080, at p. 1086)):

"To say that a corporation, as such can have motives and purposes apart from its stockholders, the collective group of individuals who own it, is to indulge in metaphysical reasoning which has no proper place in such practical matters as taxation."

Even with the metaphysics out of the way, the psychological test leaves great trouble. What is a valid business purpose or effect is largely a question of how one looks at the corporate purpose and needs in general. It presents the same problem of whether the judgment of responsible officers is to be set aside by that of officials.

The only really workable solution is to get rid of anything so vague as the psychological test and make the statute so clear that it defines objectively the taxable status of transactions, and then, perhaps by a new revival in the courts, induce them to stick to the law as written by Congress.

The Treasury, the taxpayer, the worker, will all be helped if we get away from founding part of the tax house on the sands of psychology and found it all on the rocks of objectivity.

Michigan Needs a Fair Deal in Veterans' Hospitals

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

AND

HON. CHARLES E. POTTER

AND

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1949

Messrs. ENGEL, POTTER, and FORD. Mr. Speaker, under leave to extend our remarks in the RECORD, we include the following:

Mr. Speaker, following is a letter and table covering the veterans' hospitalization situation in Michigan and the 22 other States having the greatest number of veterans' hospital facilities. The table was prepared by us from statistics furnished at our request by Veterans' Administration.

This statement and table, which we wish included as a joint extension of remarks in the CONGRESSIONAL RECORD, show conclusively the shocking degree to which Michigan war veterans have been discriminated against, in comparison with other States, particularly those in the South, in the matter of hospitalization.

Here is the complete text of our joint letter to the Federal Board of Hospitalization, asking that, as a first step, two proposed veterans' hospitals—one a 200-bed hospital at Grand Rapids, another a 500-bed hospital at Detroit, both of which were canceled in the recent curtailment order of the hospitalization board—be reinstated:

FEBRUARY 16, 1949.

FEDERAL BOARD OF HOSPITALIZATION,

Washington, D. C.

GENTLEMEN: The undersigned Members of Congress are all war veterans, Mr. ENGEL being a veteran of World War I and Mr. POTTER and Mr. FORD being veterans of World War II. All three have had overseas service. We are naturally very much interested in adequate hospital facilities for war veterans. We were therefore not only amazed but shocked, when in view of the lack of hospital beds in Michigan the President ordered the proposed hospital program in Michigan reduced by 700 beds. Michigan has always trailed other States in hospital beds for veterans. As far back as 1935, a committee of Michigan Members of Congress appeared before your board protesting the lack of hospital beds for veterans. Despite the fact that there were at that time 196,000 war veterans in Michigan, there was not one general medical and surgical hospital bed in the State. Fifty beds had been assigned to the State by the Public Health Service. The veterans' groups came down here begging that another 50 beds might be assigned. Michigan veterans were being sent many miles from home, far from their families and loved ones for hospitalization. The result was that Michigan veterans refused to go to these hospitals, preferring to get along as best they could at home without the much-needed care.

Mr. ENGEL, one of the undersigned, was a member of that congressional committee which appeared before your board. Your record will show that he pointed these facts out to your board at that time. He pointed out that while there were many surplus hospital beds in the Nation at that time, the vacant beds were located so far from the homes of veterans who needed hospitalization that they refused to accept such hospitalization. Mr. ENGEL cited some cases in point. One in particular was that of a veteran whose wife was dead and who had one son. This son was 2 years old when the father was sent to a distant veterans' hospital, The veteran died in the hospital 14 years later. During those 14 years the father was able to see his son and the son the father only twice, and then only through the financial help of a friend. There were and are many similar cases. Most of these surplus hospital beds were and are in the South.

Your Board as then constituted gave the matter careful consideration with the result that Michigan was given its first general medical and surgical hospital. This hospital was built at Dearborn, in the center of the greatest Michigan veteran population. Michigan veterans, including Mr. ENGEL, were grateful for the action of this Board.

We are now confronted with another hospital crisis. Michigan today has not 196,000 but 788,000 war veterans. Again we find glaring discrepancies and injustices to the veterans of Michigan due to the lack of hospital beds. We are attaching hereto a table giving the 23 States which have the greatest number of veterans' hospital facilities. This table shows the number of veterans in each State, the veteran hospital bed capacity as of January 1, 1949, the beds proposed to be added by the Veterans' Administration construction program, the number of beds that actually will be added under the revised program, the total number of beds under the revised program and, most important of all, the veteran bed ratio under the revised program per 10,000 veterans.

Under this revised program, Georgia which heads the list has a veteran population of 341,000. It had a veteran bed capacity on January 1, 1949, of 2,505 beds. Under the revised program 1,200 beds are being added, giving Georgia a total of 3,705 beds, or 179 beds per 10,000 veterans. Michigan, which is number 23 and at the bottom of this list, has 788,000 veterans. It had on January 1, 1949, 3,265 beds. The original program, proposing 1,650 beds, was cut back to 950, giving Michigan a total of 4,215 beds or only 53 hospital beds per 10,000 veterans. An examination of this record will show that Georgia, Kentucky, Arkansas, Kansas, Alabama, Tennessee, Massachusetts, Virginia, and Maryland, nine States, eight of which are in the South, have a bed capacity ranging from 102 beds to 179 beds per 10,000 veterans. These nine States under the proposed program as revised will have anywhere from twice to three and one-half times the bed capacity per 10,000 veterans that Michigan will have under the same program. It is also interesting to note that 10 out of 12 States that top this list are in the South. Kentucky has 170 beds per 10,000 veterans, Arkansas 159, Kansas 155, Alabama 131 and so on down the list.

If the Veterans' Administration construction program had not been cut and if the entire 1,650 proposed beds had been added to this construction program, Michigan would still have been in twenty-second place with only 62 beds per 10,000 veterans. The 788,000 veterans of Michigan surely are entitled to a fair deal. The fact that only those hospitals were eliminated or delayed where construction had not been started does not alter the fact that Michigan will still have only 53 beds per 10,000 veterans under the revised program.

We repeat that the President's Hospitalization Board in its recent curtailment order has only increased this discrimination. It has removed two proposed hospitals in Michigan, a 500-bed TB hospital at Detroit and a 200-bed general medical and surgical hospital at Grand Rapids, Mich. It has approved 950 new beds, 500 added GMS beds at Ann Arbor, 240 GMS beds at Iron Mountain (first and only facility for Michigan's detached Upper Peninsula) and 200 GMS beds at Saginaw—950 beds in all. While expressing this generosity to last-place Michigan, it has approved 1,200 new beds for first-place Georgia—Georgia which already had more than three times the veteran bed capacity of Michigan, a State which apparently, with Government sanction, is out to set itself up as the hospitalization oasis for such distant States as Michigan. Massachusetts in turn is granted an added 2,000 new beds as against 950 for Michigan, North Carolina 1,500 and so on, despite the fact, again that these States are already far in excess of Michigan in veterans' bed capacity.

World War II veterans who come from Michigan will be in the same position that World War I veterans were as to lack of hospitalization. We realize neither Veterans' Administration nor your Board endeavors to even out veterans' bed capacity precisely by States according to veteran population within those States. But a geographical pattern is followed, as evidenced by the fact that one or more VA hospitals is found in each of the 48 States. We believe emphatically that veterans are entitled to be hospitalized within reasonable distance of their homes, for medical as well as humane reasons.

It is difficult to understand just what rule was used when the distribution of the veterans' hospital bed capacity was made. We ask that your Board give careful consideration in order that the 788,000 Michigan veterans will have the same opportunity for hospitalization that veterans have who are fortunate enough to come from other States and particularly veterans who come from below the Mason and Dixon's line.

In view of Michigan's extremely unfavorable present hospital ratio, as a first step the proposed hospitals at Detroit and Grand Rapids should be promptly reauthorized and we would like the attitude of your Board in that regard. As we have explained, even with such approval Michigan will still have only 62 beds per 10,000 veterans, in twenty-second position among the 23 States listed on the attached table.

May we have your views, and particularly your decision as promptly as possible as to whether the two Michigan hospitals will be reauthorized?

Most sincerely,

ALBERT J. ENGEL.
CHARLES E. POTTER.
GERALD R. FORD, Jr.

Veterans' hospitalization in 23 States

(Those 23 States with the most VA hospital facilities—States are ranked below in descending order in terms of veteran-bed capacity)

State	Number of veterans Dec. 31, 1948	Veterans hospital capacity, Jan. 1, 1949	Added beds proposed by Veterans' Administration construction program	Added beds under Veterans' Administration revised program	Total beds under revised program	Veteran bed ratio under revised program (per 10,000)
1. Georgia	341,000	2,505	1,800	1,200	3,705	179
2. Kentucky	320,000	2,914	750	500	3,414	170
3. Arkansas	188,000	2,396	500	500	2,896	159
4. Kansas	241,000	2,738	1,000	1,000	3,738	155
5. Alabama	313,000	3,503	600	600	4,103	131
6. Tennessee	361,000	4,662	1,500	0	4,662	129
7. Massachusetts	674,000	5,087	2,000	2,000	7,087	105
8. Virginia	357,000	3,704	0	0	3,704	104
9. Maryland	263,000	2,393	300	300	2,693	102
10. North Carolina	406,000	2,412	2,921	1,500	3,912	96
11. Mississippi	225,000	2,086	400	0	2,086	90
12. Louisiana	302,000	1,332	1,200	1,200	2,532	84
13. California	1,346,000	8,579	2,699	2,499	11,078	84
14. Wisconsin	403,000	2,891	500	500	3,391	84
15. New York	2,047,000	9,929	7,975	6,725	16,654	80
16. Illinois	1,213,000	8,687	1,750	1,000	9,687	80
17. Indiana	460,000	2,699	700	700	3,399	74
18. Texas	896,000	5,462	2,500	1,000	6,462	72
19. Ohio	983,000	4,455	4,462	2,462	6,917	70
20. West Virginia	240,000	1,290	400	400	1,690	70
21. Missouri	484,000	1,532	2,450	1,700	3,232	67
22. Pennsylvania	1,426,000	4,563	5,070	3,670	8,233	58
23. Michigan	788,000	3,265	1,650	950	4,215	[1] 53

[1] Thus Michigan, although seventh in war veteran population, is last on the list of 23 States in veteran hospital bed capacity. Even if the proposed VA hospital-construction program had not been cut, if the recommended 1,650 beds had been authorized Michigan still would have only 62 beds per 10,000 veterans and would still be next to last on the above list. As it is, despite Michigan's predicament, 700 proposed new beds have been eliminated, leaving Michigan still well in last place on the above list.

Problems Before Congress and the Country

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GREEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the Frankford (Pa.) Dispatch of February 18, 1949:

A LETTER FROM YOUR CONGRESSMAN, WILLIAM J. GREEN, JR.

This new Congress has emerged from the organization stage with the Truman legislative program parceled out to committees for hearings. The Senate side of the Capitol held the spotlight with its Labor Committee preparing to make recommendations about the Taft-Hartley Act. In the meantime, the floor debate was on cloture, with an eye to the future when bills on race discrimination are put to vote.

However, as I write this, the Russian situation transcends all other considerations; the cold war has had a rise in temperature, the Reds secure victory of arms in China, Norway is warned by Moscow, General Eisenhower takes leave of his Columbia University presidency to confer with our top brass in Washington. We get more convincing evidence that patience and a will for peace are not virtues, but signs of weakness in Kremlin eyes. With new and cruel forces we are compelled to see that you cannot do business with a gang whose word is worthless, and who no longer attempt to disguise their aim at world domination, by whatever means.

The recent affront came with the mock trial of Cardinal Mindszenty. We could not, if we would, be passive. Nothing could have stirred the Christian world as did the torture of the Hungarian prelate. Protestants, Jews, and Catholics have been stunned by this display of international arrogance. It is no mere Catholic matter, rather it is an offense against all God-fearing men of good will; for it insults human dignity and degrades justice. Now the line is drawn, God versus the antigod. Somehow we hoped that situation could be met in some other way, and yet we could have been prepared for it, had we harkened to the predictions made at Fatima in Portugal in the year 1917. World War I was still being fought. A vision of the Virgin appeared to three simple peasant children and predicted the outcome of the first war, the rise of the antigod in Russia,

then our ally; and World War II with its outcome. This miracle has attracted world attention and pilgrimages. The present crisis was foretold all too accurately, and the final word was "My immaculate heart will triumph in the end." The happening was written up, with illustrations, in Life magazine in December 20, 1948, issue. It has since been reported that Hollywood will make a feature film of the subject.

It is not likely that the disciples of Marx have much interest in history, and its lessons. If they did they would know that you cannot eliminate God from the individual or the nation without disaster. Any triumphs of the antigod, down through the ages, have been short lived. The Kremlin gang will fare no better than its predecessors. Examples: Hitler and Mussolini.

Cordially your Congressman,

WILLIAM J. GREEN, Jr.

George Washington Prayer 150 Years Ago

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. DOYLE. Mr. Speaker, as the 22d of February 1949 comes, and as we sit as Members in the United States Congress, on this day, it appears appropriate and of value that we also remember that George Washington was a man who believed in prayer to the Divine.

The other day, I received from a distinguished citizen, of my home city of Long Beach, Los Angeles County, Calif., Mr. Jackson M. Prentiss, a brief letter to me enclosing the text of A Holiday Prayer. Mr. Prentiss wrote me as follows:

LONG BEACH, CALIF., *February 7, 1949.*

Hon. CLYDE DOYLE,

Washington, D. C.

MY DEAR FRIEND: When the 22d of the second month nears, I always think of this prayer by the father of our country, so I am sending it to you. I know it by heart. If you do not already know it, I hope that you will find time not only to read it, but also to learn it. It has been very, very helpful to me for many, many years.

Sincerely yours,

JACKSON M. PRENTISS.

The prayer by George Washington, which my neighbor Prentiss sent me, is as follows:

Almighty God, Who hast given us this good land for our heritage, we humbly beseech Thee that we may always prove ourselves a people mindful of Thy favor and glad to do Thy will. Bless our land with honorable industry, sound learning, and pure manners. Save us from violence, discord, and confusion; from pride and arrogance and from every evil way. Defend our liberties and fashion into one united people the multitudes brought hither out of many kindreds and tongues. Imbue with the spirit of wisdom those to whom in Thy name we entrust the authority of Government, that there may be peace and justice at home; and that through obedience to Thy law we may show forth Thy praise among the nations of the earth. In the time of prosperity fill our hearts with thankfulness and in the day of trouble suffer not our trust in Thee to fail; all of which we ask through Jesus Christ our Lord. Amen.

Ominous Implications of the Recent Closed-Shop Decision of the United States Supreme Court

EXTENSION OF REMARKS

OF

HON. RAYMOND W. KARST

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. KARST. Mr. Speaker, there is no subject before us requiring more careful and temperate consideration than the field of labor relations. Our Supreme Court lately has dealt with this field in its very broad and far-reaching decision of the Closed-Shop cases.

The Court upheld the rights of the States to enact legislation outlawing closed shops and union shops. Had the Court done no more, our misgivings about such legislation might properly be addressed to correction by the political process. But a close study of the Supreme Court's decision indicated that its ruling may have gone much farther.

The St. Louis Post-Dispatch on Sunday, January 9, 1949, made a great contribution to the study of this question, in an editorial entitled "The Closed-Shop Decision." As is the custom of newspapers, the editorial is unsigned, but I am informed that it is largely the work of the wise and widely respected expert, Mr. Irving Dilliard, whose views always command attention.

The editorial follows:

THE CLOSED-SHOP DECISION

The United States Supreme Court has made a lot of trouble by the way in which it has handled the closed-shop cases. It has made trouble not only for trade-unions, but also for many employers. It has made trouble for the States and for Congress. And unless we miss our guess, the court has made trouble for itself.

What is wrong is not so much the end at which the Justices come out in the immediate cases, although there may even be argument on that, but in the manner in which they arrive at the end. By saying more than they needed to say, the Justices appear to have put the closed shop under a judicial cloud. It is a question now what the States may do about guaranteeing the closed shop when employees and employers desire to put it in a contract. It is a question now as to whether there would be a conflict between the court which handed down this decision and the restoration by Congress of the Wagner Act's approval of the closed shop.

Here are the basic facts:

Sixteen States have passed laws or amended their constitutions in such a way as to forbid the closed shop—the arrangement by which a union and an employer agree in a contract to work only union members.

Most of these States are in the South. The southern nine are Tennessee, Arkansas, Texas, Louisiana, Georgia, Florida, South Carolina, Virginia, and Maryland. Four other States made up a North-Central agricultural, almost antilabor bloc, namely, North and South Dakota, Nebraska, and Iowa. The only other States with such prohibitions are Delaware, Nevada, and Arizona. It is notable that the list contains no industrial State, such as New York, Pennsylvania, Ohio, Michigan, or Illinois, which has had extensive experience with the closed shop.

A COURT IN AGREEMENT

North Carolina's 1947 statute and the constitutional amendments of Nebraska and Arizona, both adopted in 1946, were challenged by labor unions. In each instance the State supreme court ruled against the union. It was on appeals from these rulings that the highest tribunal decided last Monday in upholding the anti-closed-shop enactments.

For a court which has been unanimous in only 6 of 27 decisions thus far this term, the Supreme Justices were in surprising agreement. Justice Black spoke for a unanimous bench in the merged Nebraska and North Carolina cases, to which Justices Frankfurter and Rutledge appended concurring opinions. In the Arizona case Justice Black was the spokesman for eight Justices. Only Justice Murphy dissented, and he without opinion.

The essence of the Black opinion is that the States are within their rights in specifying that a worker need not belong to a trade union. The senior Justice agrees that this may "weaken the bargaining power of unions and correspondingly strengthen the power of employers." There are, he says, other matters to be considered, as, for example, the "employment opportunities of members of independent unions." He then finds the prohibition of the closed shop to be a sort of opposite of the ban on the yellow-dog contract—the odious employment contract in which the worker pledged himself not to join a union.

In the end Justice Black says that the Supreme Court, at least since 1934, has "consciously returned closer and closer to the earlier constitutional principle that States have power to legislate against what are found to be injurious practices in their internal commercial and business affairs, so long as their laws do not run afoul of some specific Federal constitutional prohibition, or of some valid Federal law.

"Under this constitutional doctrine the due-process clause is no longer to be so broadly construed that the Congress and the State legislatures are put in a strait-jacket when they attempt to suppress business and industrial conditions which they regard as offensive to the public welfare."

Now what is unfortunate about all this is that the effect of the language appears to have the court taking sides on the closed shop. It may believe that it has left to the States the decision as to whether they forbid or tolerate the closed shop. The court may think it has issued an even-handed decision. We submit that in sum it seems not to have done so. Instead of deciding the issue closely on the constitutional right of the States to regulate their internal affairs, the justices give the impression of disapproving the closed shop. They have, in effect, linked the closed shop to injurious practices and conditions offensive to the public welfare. Even though this may not be their intention, or at least not the intention of all the justices, it is, so we believe, a result.

AN OLD BRANDEIS LETTER

Justice Frankfurter's extended concurring opinion demonstrates this to a more marked degree. He is at great pains to say that the role of the Supreme Court is not to set social or economic policy. Pointing out that "Mr. Dooley's 'th' Supreme Coort follows th' iliction returns' expressed the wit of cynicism, not the demand of principle," Justice Frankfurter says that "it is right that the court should be indifferent to public temper and public wishes."

Moreover, he recalls that Jefferson all his life thought of the court as an irresponsible body and says that "in the day-to-day working of our democracy it is vital that the power of the nondemocratic organ of our Government be exercised with rigorous self-restraint."

But having said this, Justice Frankfurter proceeds to throw away restraint. He literally studs his opinion with figures designed to show that the argument that a closed shop is needed by the unions does not stand up statistically. He presents tables of union membership and employment from 1898 to 1948 and similar tables concerning the membership of the railroad brotherhoods since 1919. He quotes the experience of countries advanced in industrial democracy, such as Great Britain and Sweden, where deeply rooted acceptance of the principles of collective bargaining is not reflected in uncompromising demands for contractually guaranteed security.

Then, as if to sweep the closed-shop adherents off their feet, Justice Frankfurter reaches back to 1912 to quote a letter from Louis D. Brandeis to Lincoln Steffens. The Supreme Court Justice-to-be said, 37 years ago: "The American people should not, and will not accept unionism if it involves the closed shop."

Several other extensive quotations from Brandeis in the Frankfurter opinion are calculated to argue against the closed shop. Justice Frankfurter sumarizes all this by saying: "Mr. Brandeis on the long view deemed the preferential shop a more reliable form of security both for unions and for society than the closed shop."

Now it happens that it was Justice Brandeis who in 1937 wrote the Supreme Court's decision in the case of Paul Senn, of Milwaukee, against the Tile Layers' Protective Union. Senn, a nonunion tile layer, hiring nonunion workmen, complained that union pickets deprived him of jobs and hence of his rights.

Justice Brandeis, not in a letter but in a considered decision, went to the heart of that issue. He said: "Each member of the unions, as well as Senn, has the right to strive to earn his living. Senn seeks to do so through exercise of his individual skill and planning. The union seeks to do so through combination. The disclosure of the facts may prevent Senn from securing jobs he hoped to get. But a hoped-for job is not property guaranteed by the Constitution, and the diversion of it to a competitor is not an invasion of a constitutional right."

AS IMPOSSIBLE AS FLYING

Where Justice Brandeis would have stood in the closed-shop cases today, we do not presume to say. We are sure of this however, he would not be bound by the past if he thought subsequent experience showed the need for change. In his memorable opinion in New State Ice Co. versus Leibman (1932), he took the view that Oklahoma had a right to enact a law prohibiting an increase in the number of ice companies unless the need for a new company in an area was certified by the State. He said:

"It is one of the happy incidents of the Federal system that a single courageous State may, if its citizens choose, serve as a laboratory and try novel social and economic experiments without risk to the rest of the country. This court may strike down the statute * * * but in the exercise of this high power we must ever be on guard, lest we erect our prejudices into legal principles. If we would guide by the light of reason, we must let our minds be bold."

Noting that there are many men now living who were in the habit of using the age-old expression "It is as impossible as flying," Brandeis said: "The discoveries in physical science, triumphs in invention, attest to the value of the process of trial and error."

Perhaps the most notable appeal by Brandeis to his fellow Justices to search their souls rather than stay the hand of experimentation—whether in taxation or labor relations—came in his luminous opinion in Burnet against Coronado Oil and Gas Co. (1932). Asking the Court to reverse itself frankly and thus permit the taxation of incomes from leased State lands, then immune under outmoded precedents, he wrote:

"Not only may the decision of the fact have been rendered upon an inadequate presentation of the then existing conditions, but the conditions may have changed meanwhile. Moreover, the judgment of the Court in these earlier decisions may have been influenced by prevailing views as to economic or social policy which have since changed.

"In cases involving constitutional issues of the character discussed, this Court must, in order to reach sound conclusions, feel free to bring its opinions into agreement with experience and with facts newly ascertained, so that its judicial authority may, as Mr. Chief Justice Taney said, 'depend altogether on the force of the reasoning by which it is supported.' "

THE UNSETTLED STRIKE QUESTION

So much for Justice Frankfurter's reliance on Louis D. Brandeis to appraise the closed shop. The point is that all of this consideration of the closed shop as wise or unwise public policy is unnecessary in these State cases. It would have been enough to do as Justice Oliver Wendell Holmes so often did. He said that it was immaterial whether he agreed or did not agree, that the States had a right to experiment and that was that. Holmes had his say in such cases briefly and was done with it.

Justice Frankfurter notes that in 1948 the voters of three States, Maine, Massachusetts, and New Mexico, rejected anticlosed shop and otherwise labor-restricting measures. He suggests that what one State can refuse to do another can undo.

But—and here is grave danger in the decision—can a State, if it so desires, guarantee labor's right to a closed shop without running into conflict with this new decision? Can a State's experiment be just the opposite of the experiment which the Court has now upheld? Has the Court not made it possible for opponents of the closed shop to argue that such experimentation in permitting the closed shop is unconstitutional? In what position has the Court left a union whose members prefer to go on strike for a closed shop rather than work with nonunion employees?

This last question is one Justice Rutledge found unanswered in Justice Black's opinion. Accordingly, on this matter Justice Rutledge's reserved judgment "until it is squarely and inescapably presented"—probably under strike conditions, since these cases were tests that did not involve closed-shop strikes.

The closed-shop principle appeared in union rules as early as 1799 and by 1842 a closed-shop strike was upheld in court in Massachusetts. That there have been abuses is a matter of common knowledge. It is also a matter of common knowledge that the closed shop has worked not only satisfactorily, but with notable social and educational benefit in many instances.

FOR WISE PUBLIC POLICY

Such a case is that of the International Ladies' Garment Workers. It is altogether possible for a closed-shop union to show complete awareness of its responsibility to use its power for good. The record is not so black as Marquis Childs seems to suggest in his comment under today's cartoon, though admittedly there are some kinds of work for which the closed shop may be unsuited and some other kind of shop is preferable.

One of the most mistaken provisions of the Taft-Hartley Act was that outlawing the closed shop in interstate commerce industries. It is a provision that should be taken off the Nation's lawbooks by the new Congress. Neither Members of Congress nor members of State legislatures should be confused by this unfortunately timed Supreme Court decision. The only sound course for our lawmakers is to work out wise public policies and leave them for the judiciary to approve.

For sooner or later the Supreme Justices will have another go at the question of the closed shop and the free rider it seeks to eliminate.

God Hates a Coward

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. O'HARA of Minnesota. Mr. Speaker, if our constitutional form of government is to survive, it must do so consistent with the check and balance system of two strong political parties.

I have been deeply impressed with an editorial in the Omaha World-Herald of January 26, 1949. Under the leave to extend my remarks in the RECORD, I include this editorial:

GOD HATES A COWARD

That's gospel truth. If any witness were needed to attest it the Republican Party of 1936–1948 would more than suffice.

For 12 years the Republican Party has been a coward; the worst kind of coward—a moral coward. In consequence it begins to take on the appearance of something the cat dragged in.

It is hard to define as an entity the Republican Party or any other large group of people, since however closely banded together all cannot think alike in all respects. But, speaking broadly, the Republican Party consists of men and women who in firm conviction are opposed to the swift trend toward the omnipotent state that is sweeping over every section of the earth. Whether it be defined as communism, fascism, socialism, totalitarianism, statism, the New Deal, the insurance state, these men and women regard it as a thing of infinite menace, however cunningly disguised, and however ardently supported by good but misguided people.

But the Republican Party has lacked the courage to say what its rank and file believe. Out of hunger for the flesh pots it has lacked the patriotism, the loyalty, to stand up for the free Republic of the founding fathers and to fight for it. Due to that lack of moral courage, of loyalty to the American creed, the United States, almost the sole remaining bulwark against the advancing tide, finds itself without a spokesman, without a champion to proclaim and battle for its traditional, glorious creed. And it finds the once-so-firm foundations of its temple crumbling.

The fact is known of all men.

Here too, in our own America, the state is taking control and ownership of the people. It is using the power to tax to destroy their independence and self-reliance. It is converting free men into vassals and dependents. It is devouring the substance of self-supporting people to render them self-supporting no longer, and to establish a condition of universal reliance upon the biased paternalism of a Great White Father—a "Father" corrupted and corrupting, since great power does corrupt and absolute power corrupts absolutely.

And the Republican Party has not dared resist the tide; it has gone along with it. Not out of conviction, but out of cowardice. It has not dared to be a Daniel; to have a purpose and to make it known. Its plea for votes has been the shameful one: Give us the offices, the power, and we'll give you as much

of what we believe to be wrong as will the Democrats themselves.

Americans do not respond to any such appeal. They, too, hate a coward. They despise hypocrisy. They hunger for a leadership of good faith. They will accept a brave and fighting leadership tainted even with Pendergastism and absolutism rather than a leadership that crawls—and trails its flag.

What a wonderful thing it would be if the Republican National Committee meeting here in Omaha, if other constituted Republican leaders, could realize how desperately these United States need an honest and brave Republican Party—how true Republicans above all others hunger and thirst for it. A Republican Party to raise high the flag of a loyal opposition. Opposition not alone to a misguided and recreant Democratic Party here at home, but opposition tenacious and resolute, brave and unyielding, to all the monstrous wrong and error that today menaces freedom, self-reliance, the courage to adventure, human dignity, in every land and every clime.

How joyously, with what reborn hope, men and women of the ancient faith of this Republic would rally about such a standard. Proud of it they would be in victory. No less proud in defeat.

Surely, surely, it shall not be recorded by amazed historians of a later day that when the black flag of absolutism was raised back in the twentieth century, when the fate of all mankind was involved, there was nowhere, in any land, not even our own, an organized body of men and women who had the courage, the devotion, the wisdom, the loyalty to God who made men free, to challenge that foul intruder and to dedicate their lives, their fortunes, their sacred honor, to driving him back into the Dark Ages whence he emerged.

Never has there been sounded such a call to service as rings today in the ears of the Republican Party. Never, for men and women of courage, of character, of conviction, has there been afforded such an occasion for rising to the heights of human devotion to imperishable ideals.

The Republican Party can keep on crawling ignominiously along the dusty trail of an order it abhors but shrinks from challenging. Or it can rise out of the dust of four merited defeats, stand erect and unafraid, proudly to take up the battle for all that free men prize.

Courage or cowardice? Loyalty or recreancy? Conviction or time serving?

It is as simple as that, ladies and gentlemen of the Republican National Committee.

TVA To Remain Independent—Hoover Commission Recommends That This Great Government Project Not Be Merged With Functions of Interior Department

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a news story written by Mr. J. Lacey Reynolds, Washington correspondent for a number of papers in the South and Southwest, concerning results of the Hoover Commission report with respect to the Tennessee Valley Authority. The news story, indicating that study of the operation of the Tennessee Valley Authority has been successful and that this agency is performing a useful service and doing a good job, is in line with the favor of the people of the Tennessee Valley area and the news of action recommended in this instance is gladly received.

The news story is as follows:

COMMISSION BACKS TVA INDEPENDENCE—HOOVER GROUP EXEMPTS PROJECT FROM INTERIOR DEPARTMENT MERGER

(By J. Lacey Reynolds)

WASHINGTON.—The Hoover Commission on the Reorganization of the Federal Government has exempted TVA from absorption into the Interior Department, it was learned exclusively yesterday.

The exemption was voted by the Commission in executive session Thursday over the opposition of former President Herbert Hoover and the so-called task force of experts who studied the Government's power activities.

The task force's original report and the initial action of the Commission would have lumped the power activities of the Government under Interior and included the TVA.

The task force even recommended that the Secretary of Interior or Under Secretary sit as a member of the TVA Board of Directors.

STRUCK FROM REPORT

Upon reconsideration, the Commission struck all such suggestions about TVA from its forthcoming report on water resources projects.

A reliable source said the action was taken by a majority of the Commissioners "because they felt TVA is doing such a good job."

In fact, the labor-relations policies of TVA will be recommended to other Government agencies in another of the Hoover Commission reports, this source said.

The argument for placing TVA under Interior revolved around the contention the President is overburdened because of the number of extraneous agencies reporting to him.

Although the Commission favors reduction in the number of such reports direct to the President, it made TVA an exception. The net result is to maintain the independence of the TVA and retain administrative direction of the project in the Tennessee Valley, rather than in Washington.

Kingsdale Dairies Unmasked

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, earlier this month some newspaper columnists and oleo-minded people made considerable fuss over a letter which Kingsdale Dairies, of New York City, sent to Members of Congress urging repeal of the Federal tax on yellow-colored oleo.

The letter was hailed by Drew Pearson as lobbying for the public good, which he called rare indeed.

But before anyone gets too enthused over the letter or the comments, he should be informed of the real motive of the sender. For that information, and for a complete rebuttal of the letter's inferences, I submit herewith a copy of the letter which Mr. Milo K. Swanton, of the Wisconsin Council of Agriculture Cooperative, addressed to Drew Pearson:

WISCONSIN COUNCIL OF AGRICULTURE COOPERATIVE,
Madison, Wis., February 7, 1949.

Mr. DREW PEARSON,
Washington, D. C.

DEAR MR. PEARSON: On February 1, 1949, in your syndicated column in a Madison newspaper you paid tribute to the Kingsdale Dairies, of New York City, for their letter urging Congress to legalize the sale of oleomargarine tax free in complete imitation of butter. In praising the Kingsdale Dairies you state "such a letter—lobbying against the sender's interest for the public good is rare indeed. Congratulations."

In your column you referred to Kingsdale Dairies as a producer. The facts are, Mr. Pearson, that the Kingsdale Dairies is not a producer. It does not produce, process, or manufacture any dairy products.

The Kingsdale Dairies is owned by Benjamin Redman, whose name, before having it legally changed, was Benjamin Rothenberg.

Mr. Redman is a dealer. He buys and sells butter, cheese, eggs, and oleomargarine. In fact, he handles two brands of oleo. One brand is Numaid, manufactured by the Miami Margarine Co., of Cincinnati. The other brand is Viola, which is a less-known trade name in the oleo world.

I think that you should know that Mr. Redman has a still deeper interest than the ordinary handler of oleo. He wants to expand his oleo business so as to have it shipped to him in bulk form. The reason is that he was the original inventor of a chiplet machine used in chipping butter. It seems that Mr. Redman was the original owner of the patent on this chipping machine for which he charges one-fourth cent per pound royalty. He would like to expand the use of this machine in the chipping of oleo.

The last week in January 1949, when customers opened their boxes of chipped butter, chipped by the Kingsdale Dairies, they found enclosed in each box a folder urging the use of oleo. Yet, when asked about this enclosure, Mr. Redman claimed to have no knowledge of it.

Mr. Pearson, it seems to me that before lending the prestige of your column you should look the whole facts in the face. I believe it is only fair to yourself as well as to the millions of people who read your column that you pull back the curtain of reality to determine the real influences behind the oleomargarine scene.

The facts I have given you should make it very plain to you that Mr. Redman has a very personal ax to grind. In reality he has no real interest in either the welfare of consumers or producers of dairy products that would warrant your broadly publicized congratulations.

It should now be plain to you that Kingsdale Dairies is not making any confession that they have nothing to fear from the removal of oleo taxes or from the removal of yellow color restrictions. It should be clear to you that Mr. Redman has everything to gain if Congress carries out the request he has made in his statement, which, in reality, is a proclamation of his personal interest.

Mr. Redman's letter states that he has no fear of fraud. Why should he have any fear? He is in a position to profit from the sale of oleo, which, if colored yellow like butter, is intended to be a fraud. Mr. Redman minimizes the danger of substitution even though a careful survey has shown that one-third of the public eating houses in eight States serve yellow oleo interchangeably with butter.

Through your column you have helped broadcast Mr. Redman's weasel words about "favoring one industry by restricting another." The dairy industry has no desire to restrict the oleo industry. The dairy industry asks only for fair play for the dairymen by eliminating oleo's determination to parade in false colors which makes oleo guilty of an unfair trade practice against the dairy industry and guilty of confusion and deception against the interest of consumers.

The dairy industry promises never to imitate whatever color the oleo people adopt and guarantees to support the repeal of oleo license fees and taxes the moment the oleo monopoly ceases its unfair trade practice of consumer deception by coloring their product in imitation of butter. In this the dairy industry has made a definite guaranty, but we have yet to hear a comparable guaranty from the oleo monopoly.

On the issue of allegedly favoring one industry at the expense of another, let us look at the facts. The oleo industry is protected by a 15-cent-per-pound import duty. If any vegetable oils are imported which might be used in making oleo, there is a further tax of 7 cents per pound. The protection to the dairy industry against imported butter is only 7 cents per pound.

The oleo makers can combine any number of various fats and oils. The butter industry can use only one fat. Oleo can be made with a preservative. Butter cannot.

In regard to comparability of tax treatment let me add further that if butter is made by the processes of heating and refining, similar to the processes used in making oleo, it must pay the same one-fourth cent per pound Federal tax. If butter is made with some fat other than butterfat it must be plainly labeled "adulterated" and must pay the same 10 cents per pound Federal tax that is paid on yellow oleo. In many States the sale of such butter is prohibited even though it is a nutritious food product.

Mr. Pearson, these are facts you should know before lending the prestige of your column in support of the hidden interests of men like Mr. Redman. A retraction by you of the support you have given to Mr. Redman would be of two-fold benefit. It would help to protect consumers against confusion and deception. It might help to end the oleo monopoly's unfair trade practices that today are threatening the welfare of millions of family-sized dairy farms in America.

Sincerely yours,

MILO K. SWANTON,
Executive Secretary.

Levy on Public Protection

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. BOGGS of Delaware. Mr. Speaker, a few weeks ago, on January 25 to be exact, I introduced H. R. 1822. This bill is one to allow a deduction, for income-tax purposes, of contributions or gifts to volunteer fire companies.

At the time I introduced H. R. 1822, I submitted for the RECORD and for the information of the distinguished Members of this House a statement emphasizing the need for enactment of this bill, and also directed attention to the invaluable and unselfish services rendered by volunteer fire companies throughout the United States.

In connection with H. R. 1822 there appeared in the Philadelphia Inquirer a splendid article by the able columnist, Mr. Herman A. Lowe, which I wish to include as a part of my remarks at this time:

LEVY ON PUBLIC PROTECTION—BILL BANS TAX ON DONATIONS TO VOLUNTEER FIRE COMPANIES

(By Herman A. Lowe)

WASHINGTON, February 16.—If you live in Philadelphia, a share of your municipal taxes goes to support the paid fire department. Your city taxes are a deductible item in making out your Federal income-tax return.

But if you should reside across the line in Flourtown, Montgomery County, and make a donation to the support of that community's volunteer fire company, the donation—whether it be large or small—is not a deductible item under the Federal income-tax law.

Philadelphia's paid fire department protects the property of all the inhabitants, the property of the municipality, and even the tax-free property of Uncle Sam, such as post-office buildings and the mint.

The volunteer fire companies of smaller towns also protect the property of all the residents, of the local governments, and even post-office buildings and other Federal property. Contributions to these companies go to buy uniforms, fire-fighting equipment, and the like.

So the interesting point arises—why should Uncle Sam demand his pound of flesh on such contributions?

In the Eightieth Congress, Representative J. CALEB BOGGS, Republican, of Delaware, introduced a bill to make these contributions exempt from Federal income tax. His bill got nowhere. But he reintroduced it the other day.

At first careless glance, you might decide—why shouldn't he? The State of Delaware has only one paid, professional fire department, the one in Wilmington. All the others, about 45, are volunteer companies.

That would be short-sighted. Pennsylvania is the virtual seedbed of volunteer fire companies.

Pennsylvania leads the Nation in volunteer fire fighters, so it behooves the Commonwealth's Federal legislators to get behind the Boggs bill.

The Keystone State has approximately 200,000 volunteer firemen. They are grouped into about 4,000 volunteer fire companies. Outside of about 20 to 25 large communities, the volunteers fight all the fires in the State. In some communities, a small share of municipal funds is given toward the support of these companies—particularly for the salaries of a handful of salaried drivers of the big mechanical equipment. The large part of the bill is paid by contributors.

Yet, our Federal tax law is so drawn that the contributions are not tax exempt.

In the United States as a whole there are about 650,000 volunteer firemen, contrasted to only 81,000 paid firemen. And there are from 14,000 to 15,000 volunteer companies, as against only 1,000 or so fully paid fire departments.

Even New Jersey (where the ratio of paid fire departments is much higher than in Pennsylvania) has several hundred volunteer companies. The International Association of Fire Fighters, an AFL international union composed of paid firemen, admits that in no State of the Union are there nearly as many paid firemen as there are volunteer firemen.

Which gives a pretty good idea of the importance of the volunteers in safeguarding the Nation's property.

"In nearly all the communities throughout the Nation served by volunteer fire companies," says Representative BOGGS, "our Federal Government has post offices and other public buildings and properties of tremendous value. For the protection of these public buildings from destruction by fire, our Government is wholly dependent upon the unselfish services of the volunteer firemen.

"I am not suggesting that these firemen be paid or that they receive any Federal subsidy, but I do say that we should enable these companies to raise larger sums of money by reason of tax exemption to donors so that our public property may be more adequately protected.

"Volunteer fire companies are to a very large extent educational organizations. For many years, in thousands of communities, they have conducted campaigns to educate the public in fire prevention. The number of lives and the property values saved from the ravages of preventable fires cannot be ascertained in dollars.

"Everyone who has ever lived in a rural community also knows that the very existence of a volunteer fire company represents an actual annual dollar savings to him by reason of reduced fire insurance rates. Our Federal Government is enjoying the same saving on the insurance on its public buildings."

The Defeated People in Germany

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, on January 28, Mrs. James Morris, of Bismarck, N. Dak., addressed the Congressional Club in Washington. Her remarks deserve perpetuation in the CONGRESSIONAL RECORD. Her message is one that should be understood by all people in this country. I am including it as part of my remarks as follows:

Madam President, members and guests of the Congressional Club, to have the opportunity to address this club, founded in this beautiful capital city over 40 years ago, which was conceived with the purpose of good fellowship and has maintained it, is a coveted privilege. To have the pleasure just to look at you, who are so representative of the best of America's gracious and competent womanhood, is recompense enough for looking upon a miserable, defeated people during the year I spent in Nuremberg, Germany, as the wife of one of the judges serving upon War Crimes Tribunal No. 6, which tried the I. G. Farben case, which is now jurisprudence history.

Blessed America! Whose womanhood could blossom forth in the new look during the year I was away, taking the new hats, the gowns, and the shoes for granted, even as she takes her birthright of American democracy.

Because the accident of birth made me an American, and the beneficiary of that democracy, I appreciate, more deeply than ever before, its privileges and the duty I owe to others to give to them a glimpse of life in a defeated Germany and what it would mean to be a defeated people. In all honesty, I can give you but a glimpse, for no one who is not one of a defeated people themselves could possibly know.

In giving to you these high lights of defeat, may I preface this necessarily personal story upon the two-fold premise: First, that the German people brought a well-merited defeat upon themselves by following a crim-

inal leadership; secondly, that the early occupation of Germany was in accordance with the Morgenthau plan, which is rapidly being modified today, as it becomes more and more apparent that the rehabilitation of Germany, under proper controls, is necessary to the economic stability of western Europe.

In the Bremen enclave, which is an area of 1,200 square miles, on the Wesser River, stands the port of Bremerhaven, which was allotted to the United States during the war as our port of entry, and has since remained so.

When Judge Morris and I arrived in Bremerhaven on August 4, 1947, nothing that we had read or seen in print or on the screen had prepared us for the indescribable destruction which we saw. This great seaport, with a prewar population of some 50,000, had been 65 percent destroyed by Allied bombers within 17 minutes. The great docks were a mass of twisted steel, except those repaired for use, and block after block of public buildings and homes were a mass of brick rubble. Here and there parts of buildings were still standing, and our startled eyes beheld in many of those inhabited gay window boxes of flowers. Cellars had been roofed over, and people were living in all kinds of makeshift shelter.

The American military train, minus all luxuries, of course, in which we entrained for Frankfurt that afternoon, traveled through the British zone, with its great partially destroyed seaport of Bremen, before arriving in the American zone, which bespoke the friendship of our two nations.

When we arrived in Frankfurt the following morning our eyes again beheld the stark, tragic destruction of that great city, for it had been an industrial center, the financial capital of Germany and home of the world-famous I. G. Farben Chemical Works. The great factories were now destroyed or stilled, and the huge depot and public buildings and many homes partially destroyed or a mass of brick rubble, which was being cleared in many sections to make of Frankfurt the present headquarters of the American occupation.

The drive of a hundred miles from Frankfurt to Nuremberg was an unforgettable experience. The summer of 1947 was one of severe drought in Germany, and the harvest very poor. The people were living upon a diet of 1,200 calories per day, when they could get it, with fats, meats, and potatoes often unobtainable in their stores for weeks and months at a time.

All along the highway were men, women, and children, trudging along, or at best riding a bicycle, and gleaning what food they could from the surrounding fields. In the harvested wheat fields they gleaned, straw by straw, until they had a neat bundle for their rucksack. In the potato fields, on hands and knees, finding here and there a precious tuber. Underneath the fruit trees, which lined the highways and whose fruit is usually apportioned to the people of each respective village by its burgomaster, they searched for a stray apple or pear. The green grass along the roadside was being cut by hand for the few cattle they had. And in the forests, in accordance with their rigid conservation regulations, the people were picking up twigs and leaves for their neat bundles, until the forests looked as though they had been swept.

Stretching as far as the eye could see were seemingly vast farm lands, but in reality small individual farms averaging from 5 to 50 acres. The German farmer lives in small farm villages and tends his crops from these, often in primitive fashion, with oxen and scythe.

These quaint farm villages have narrow, winding streets and red-roofed tile buildings, some of them hundreds of years old.

In spite of the destruction of the cities we passed through, we found Germany a beautiful country, with its vast forest areas and its illusion of vast farm lands, with its cities linked together by Hitler's magnificent modern highways, or autobahns, until we came, at eventide, to Nuremberg, our final destination.

Nuremberg, founded in 1050, as a center of international trade, later one of the art and cultural centers of Europe, made famous by Albrecht Durer, Hans Sachs, and Peter Henlein, whose old walled city had been a mecca of tourists for generations, now presented to our shocked eyes, a scene of indescribable destruction and desolation.

The scene of Hitler's first triumphs and shrine of nazism, Nuremberg had witnessed their gigantic parades within its huge stadium, which seated 500,000 people and from whose famous balcony, Hitler had reviewed his troops and exhorted his people to a patriotic frenzy. I stood on the famous balcony and watched an unkempt German woman pull the grass of the little green plot that grew at the base of that huge, deserted balcony, where once the great of Germany had trod, and put it in her rucksack.

From that famous balcony, I could look across Hitler's artificial lake, to his immense, circular, unfinished World Congress Building, which was to be Hitler's Capital of the World and house the representatives of those nations included. In the other direction, I could see the tall pillars of Hitler's unfinished stadium, which was to be the largest in the world, seating 800,000 people.

Truly, Hitler thought in terms of magnificence always, and had so convinced the people of Nuremberg of his greatness, that his storm troopers, entrenched within the old walled city, refused to surrender it or to declare it an open city. It was, therefore, of necessity, 75-percent destroyed by Allied bombers, within 20 minutes. The memorial wreaths of flowers or cedar that we often saw placed upon the piles of brick rubble were a grim reminder of what lay beneath.

The first day after arrival in Nuremberg, I stood on the balconies of the Grand Hotel and looked out over the ruins of the old, walled city. I could see the Kaiserschloss, or castle, atop the hill, which had housed units of the Hitler Youth, when bombed. I could see the world renowned Gothic churches of St. Laurence, St. Seybold, and Our Lady, completely gutted, but being lovingly and patiently restored, stone by stone, standing in the midst of, perhaps, the most awesome ruins of all Germany, whose streets led away into mere footpaths over hills of rubble.

Below me was the city square, just outside the old wall and city gate. On one side was the huge and partially destroyed depot; on the other, the old Roman Tower, with gay window boxes at its ancient portholes, which bespoke habitation.

As I stood there, across the square, came an old lady, clad in a once beautiful gray satin dress, pulling a four-wheeled cart of firewood. Below me, in front of the door of the hotel, was another, clad almost in rags, picking up the bits of paper and burned matches, with which to start her fire. Across the street intersection came an old couple pulling a four-wheeled cart, upon which reposed a simple, wooden casket. Down the other street came a man on crude sticks for crutches, his coat indicating that he had once been an officer in the German Army. They came, young men, old men, women, and children, clad in all kinds of garments which indicated anything but the new look, wearing all kinds of broken and fabric shoes upon their feet, and bearing all kinds of burdens in cart, rucksack, or handbag.

This then, was my first glimpse of defeat, within the 3 days' time of debarking until we were comfortably billeted in Nuremberg.

This was defeat I saw, not of armies, but of a great civilian population.

I stood there on that balcony and wondered what defeat would have been like for us, if our victory had been reversed. I wondered, too, what modern warfare would be like today, with assuredly America the first target, and with atom bombs loosed from rocket ships with a speed swifter than sound, which could lay waste our great harbors and industrial cities, in much less than 17 or 20 minutes.

I stood there on that balcony and thanked God over and over that the accident of birth had made me an American, instead of one of those hopeless, misguided people I saw out there.

For I realized then, as never before, that but for the grace of God in giving to America priority on the atom bomb, and the valor of our manhood and womanhood, at the front line and the production line, that port of Bremerhaven that we had entered might still have been standing, and that great, proud American harbor of New York that we had left might have been a mass of twisted steel and concrete rubble; and our great industrial cities destroyed, with their factories destroyed or dismantled and their workers gleaning in the fields for a bit of food.

Blessed America. With hope always, for a still more glorious future than her past and who has never known the bitterness of defeat, as a united Nation.

In subsequent travels throughout Germany, we became so accustomed to scenes of destruction that they no longer registered a shock to the senses.

Someone has said that, in the division of Germany, Russia was given its rich farm lands, Britain the Ruhr, France the Saar, and America the scenery. Certainly, Bavaria, in the American zone, is so noted for the magnificence of its Alpine scenery that Hitler chose a site there, near Berchtesgaden, on Mount Kelstein, for the cabin where he wrote Mein Kampf and later built his home and, atop the mountain, his Tiehaus, rechristened by the Americans the Eagle's Nest.

We were privileged to spend a week end at Berchtesgaden Hof, which was Hitler's beautiful hotel and is now an American rest center.

Halfway up the mountainside stands the ruins of Hitler's home, the homes of Goering and Bormann, the guest house of Mussolini, a huge hotel and garrison. These buildings were so well camouflaged and protected by artificial fog, which was released from huge hydrants when Allied bombers were detected, that Hitler's Storm Troopers finally destroyed them and the Eagle's Nest is still intact. Americans are allowed to reach the Eagle's Nest in summer, in a jeep driven upon a tortuous mountain road that winds around the mountain, passing guardhouses at intervals, once equipped with telephones.

One finally leaves the jeep and enters a long tunnel through which Hitler's Mercedes car, specially equipped to climb the mountain, and once been driven to an elevator. One enters the elevator, which is of ornate brass, with two floors. The upper compartment was for Hitler and the lower one for his guards, whose conversation, unknown to them, was registered by a microphone in Hitler's upper compartment.

One ascends in this elevator, through sheer rock, 400 feet to the Tiehaus, or Eagle's Nest, which was once sumptuously furnished and is now dismantled. The Eagle's Nest was used only for entertaining and Hitler is reported to have used it only five times in all, although the road alone cost millions of marks to build and maintain. It is truly the dream of a mad man.

We stood in the sumptuous picture windows of Hitler's home and Tiehaus, even as Hitler himself must have done, and gazed out over the mountains of Germany and Austria, to the magnificent panorama spread

out far below, to the colorful Bavarian villages, with their quaint balconied homes, upon whose walls were often inscribed religious paintings. We wondered how any man, unless mad, could so love beauty of nature and architecture and yet plan such diabolical crimes against humanity in that gorgeous setting. We wondered most of all how any educated, cultured, industrious, and religious people, whose beautiful old churches and cathedrals were the very first buildings to be restored and were so well kept and well attended, could so blindly follow such a criminal leadership and allow their money to be used for such crazy ventures as the Tiehaus.

We glimpsed the answer to that question when our young German guide suggested that we visit the fabulous castles of King Ludwig of Bavaria found in that vicinity, which are almost a shrine to the German people today.

At Chiensee, we found that the mad King of Bavaria had builded an unfinished replica of the Palace of Versailles, with its Hall of Mirrors more beautifully kept than that of the original. At Garmish, the Linderhof Castle was complete and utterly fantastic in the beauty of its gardens, fountains, and statuary, with its interior decorated in priceless gold leaf, paintings, and porcelains.

When we suggested to our young German guide that these castles must have cost the people of Bavaria millions of marks to build, he replied that King Ludwig had vast holdings and had built them himself. When we further suggested that King Ludwig's holdings had originally come from the people themselves, he was utterly speechless, for the thought had evidently never occurred to him before. He, like his people, live in the glories of a past feudal system, almost revering the old castles one finds in every city and village, and the history of a bygone era.

For generations the people of Germany have been educated in the "fuehrer" principle of government, of following a leader, and presumably their leader could do no wrong. Certainly, at first, they believed that Hitler could do no wrong, blindly believing his promises, as he pitted one class and one race against another, until it was too late, and they were enmeshed in the sinister military power of Hitler's stormtroopers and Gestapo.

This, following a criminal leadership, was the basic plea of almost every one of the defendants tried in the respective war-crimes tribunals soon to be terminated. I sat in the beautiful Palace of Justice, in the large courtroom where Goering and other satellites of Hitler had been tried and where now the I. G. Farben case was in session, and listened to the final pleas of the 23 defendants in their own behalf. It was, again, a tragic and sordid story of famous chemists and industrialists following a criminal leadership.

Germany's leadership will have received its punishment, with the termination of the War Crimes Tribunals, with the result that never again can any nation wage aggressive war and commit crimes against humanity, without, not only the nation receiving punishment, as heretofore prescribed by international law, but its leadership as well.

Whether or not we approved the validity or justice of these courts is beside the point. The fact remains that we have set the pattern. They will soon be history and history that America helped to write.

It would therefore seem that if any permanent good is to result from these trials they should be made the basis of an international code, providing for the just punishment of the criminal leadership of a nation, as well as the present provisions of sanctions, indemnities, and reparations, now invoked and exacted from nations.

How great was the crime of German leadership against their own people, we realized as never before when we drove through the great industrial areas of the Saar and the Ruhr, for on VE-day one-fourth of all German industry lay destroyed.

This was the death knell which heralded surrender, for the 70,000,000 people of Germany have always lived by exporting manufactured goods in return for food. Here, in this economic heartbeat of western Europe we found great factories, not only destroyed and stilled, but being dismantled for war reparations. In October 1947, the American, British, and French authorities published a list of 918 factories already dismantled in the three zones. But, in July 1948, the report of American military government revealed that the dismantling of German industrial plants in the American zone for war reparations had been virtually concluded.

This meant that the industrial capacity remaining there was virtually assured that it could now begin to work for the peacetime recovery of Germany. It meant much more than that. It meant that once again the German people might enjoy that greatest boon of all mankind, a job, and earn for themselves, food, shelter, warmth, and clothing. All life in Germany revolves around these four essentials of life, especially for its women, who outnumber its men by 7,500,000.

Before we left Germany, the first week of August 1948, we had witnessed a bumper crop in Germany and the reconversion of its currency, with the result that food was once more to be found in German shops, although very high in price. The basic food ration had also been stepped up. Today, food is being used as the incentive to put people back to work again, to force the production of coal and to use coal as the dynamic means of reviving industry within Bizonia.

As one official said to me, "When the German people go to work again, their hopelessness will disappear and they will stop the spread of communism west of the iron curtain." This is the hope of America for the older generation of Germany.

The hope of America for its youth lies in their reeducation, which is proving very difficult. The widespread destruction of their schools and denazification of their teachers has made a minimum of both available. Democracy was being taught, not in sunny schoolrooms, but in cold, unheated, gray ruins, with conditions so crowded that the children went to school in relays of a few hours each.

Whether or not we sell democracy to Germany, in my estimation, will depend upon how well we sell it to her youth and to her womanhood. You will recall that Napoleon sought to impose a form of democracy upon Germany which only intensified her nationalism. Democracy came again, with the advent of the Weimar Republic, after a lost war, as an imposed blessing and was rejected. Today, for the third time, the victor nations offer the blessing of democracy to the German people in opposition to communism.

I have found over here that, within the past year, Americans have had to ask themselves this question, Will democracy be accepted by the German people this time, if again synchronized with hunger and distress, or predicated upon a short-range program which would allow communism to move in when democracy moved out? It would seem that our Berlin lift has been our temporary answer.

I have found, too, that Americans have had to ask themselves another question within the past year, Can democracy be brought to any people, in one decade, who have followed the fuehrer principle of government for generations? It would seem that the proposed three-power controls of the Saar and the Ruhr and the economic recovery program is again our temporary answer.

But finally, it seems to me, this question resolves itself for all Americans to answer, "What is it that America has wanted from Europe in fighting two world wars and that she still wants today?"

I believe we can all agree upon the answer to the last question.

America has wanted a peace that would make America and the world safe for democracy. But peace, like victory, must be earned, step by step.

Today, America has finally awakened to the fact that, whether she wishes it or not, she has been given the place of world leadership among nations. But America is just beginning to realize that the nation that carries the lantern for democracy must walk ahead.

Blessed America! Given through the grace of God and the valor of her manhood and womanhood, the beacon light of leadership for the world. Let us thank God, every day, that the accident of birth made us Americans, with the privilege of sharing in that challenge, and willing to do our part. Let us have faith that we can achieve the peace, even as we achieved the victory. For faith ever marches at the head of the army of democracy, and the peace of this world will be what Americans believe it can be, and work to bring into reality.

The Need for a Single Supply Catalog for the Armed Forces

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. ANDERSON of California. Mr. Speaker, the following are excerpts from an article written by an ex-soldier of World War II. The article, which in 1947 won a prize given by the National Association of Purchasing Agents, gives an account of some of the experiences which the author encountered during five years of warfare including five major campaigns.

Lieutenant Colonel Rathbun, of Palo Alto, Calif., the author of the article, has as a result of these campaigns almost completely lost the sight of both eyes.

Excerpts from Colonel Rathbun's article follows:

The author finds that writing this manuscript affords an excellent opportunity to present to the National Association of Purchasing Agents some facts pertaining to the United States Armed Forces procurement and supply organizations as seen by a line officer of the United States Army Ground Forces in his travels throughout the world; statements collected from other service personnel; and a general plan that would alleviate some of the current malpractices. It in no way represents anything other than the personal opinion and observations of the author. If there is any similarity with any other written document or manuscript it is strictly coincidental.

During the period between 1941 and 1946 the author had the pleasure of participating in five major Army-Navy amphibious operations and several amphibious maneuvers. In all of these operations the problem of supply constituted one of the primary problems of both Army and Navy commanders, high and low. All officers were directly affected by this problem, while many, including the author, were responsible for maintenance of adequate supplies to the front-line forces. As will be brought out later in

greater detail, this problem could not be segregated into two separate categories, i. e., Army and Navy, but had to be attacked and solved jointly by both groups. The fact that there were two separate groups with responsibilities to two different heads only complicated procedures and hindered the successful prosecution of the war.

In addition to the author's private experiences and observations, many other officers of all branches of the armed forces whose experiences occurred in other theaters of operation have been interviewed on the subject. As a whole, the fallacies of decentralization vary only in degree of intensity. It must be noted that the most flagrant incidents of maldistribution were in the Pacific theater, due largely to the magnitude and frequency of joint Army and Navy operations. Procurement inefficiencies, of course, were centered in the eastern United States, where lie the majority of the industrial centers. The prevailing opinion among the new ex-service personnel is that the United States won its battles not because of the supply system but despite it. It has also been suggested that much of the current economic maladjustment of false prosperity is the direct effect of inefficient governmental war purchasing.

By standardization and simplification of many of the services' specifications, purchases of materials can be made in larger quantities. Maintenance on these equipments used in all branches will cost less by lowering the necessity of large inventories of different kinds of spare parts, quicker replacement of parts, cheaper training costs of maintenance presumed, and the ability to salvage parts to repair other equipment. All services used the world-famous one-fourth ton 4 by 4 "jeep." Each supply unit had to carry a stock of spare parts for this vehicle. The fact that there were both Fords and Willys used only increased the problem. If there had been only one standard make (that is, one standard specification for all manufacturers) and only one supply of parts at each geographical base, parts would have been easier to secure when needed and still have a lower total supply. As it was, if one unit ran short of parts, it had to go to its own base of supply for replenishment regardless of distance—all other services were afraid to release parts to another service for fear of running short.

Along the same line, many shiploads of supplies went overseas unnecessarily due to the lack of proper distribution of supplies already in the area. Under one head (and one identification system) such supplies could have been properly distributed to those who needed them and only that amount of additional material would have had to be shipped. This would have permitted the shipment of other more necessary equipment at a much earlier date and combat operations would not have had to be delayed. Such a delay of only a few days may lengthen the war many months. The lack of gasoline in France during September 1944 brought the Allied armored advance to a halt, giving the German forces time to reorganize and continue the war many months longer than was necessary. Not only did the delay cost money but it cost the Allies dearly in lives.

The vast variation in specifications only increased the cost of the materials by necessitating increased production costs. It is cheaper to produce a million items to 1 specification than it is to produce 10 lots of 100,000 to 10 different specifications. There is the cost of set-up training personnel, trial runs, ironing out the bugs, and the delays, all of which increase the unit cost. Since most contracts were cost plus, it was the taxpayers' loss rather than that of the producer. Standardization of specifications between the services will eliminate much of this cost and increase the production efficiency of the Nation in time of emergency.

It is a corollary to the above statement that the longer the production run is, the fewer poor-grade items are produced and the higher the standard of quality of equipment that reaches the armed forces. Such was the case of the C–47 transport plane. The producer had been manufacturing them for the air lines, and by not having to change his production set-up, he supplied the Air Forces with the most reliable transport plane of the war.

A good example of lack of coordination in standardization between services can be seen in the case of the Army-marine controversy over the adoption of the new semiautomatic rifle just before the war. A marine developed a new semiautomatic rifle and at the same time Garand developed the now famous Garand M–1. Many tests were made, and it was eventually decided by the General Staff to adopt the Garand M–1 as the primary rifle for all the services. Top marine and Navy officers objected loud and long, claiming graft, foul play, and conspiracy, but of no avail. The new rifle was adopted, and used throughout the Army with great success. It is claimed that it gave the American forces enough added firepower to be able to make successful attacks with only half the number previously required. For all of this, the marines refused to accept or use the new rifle even after the weapon had been proven in war. The prejudice was limited strictly to the high brass.

On the battlefields of the Pacific, where both marines and soldiers were fighting side by side, marine riflemen would discard the old 1903 bolt-action rifle every time they could find an M–1 dropped by some Army casualty. Some went even so far as stealing M–1's before they went into combat. The effect of the Marine high command's policy can be seen in a study of casualty figures in battles where both soldiers and marines were involved; an excessive loss of life was the reward of such foolish prejudices.

A good example of specification variations can be seen in the instance of rope purchases by the Army and Navy early in the war. The rope in question was to be used to make debarkation nets, and to be used by Army landing parties. The Navy used theirs aboard ship, while the Army used their net both for training and aboard ship. Significantly enough, the Navy inspectors refused to accept rope made for the Army and vice versa. The exact difference between the specification standards is not known by the author as the incident was learned during the war, when such information was secret, but nevertheless it points out one of the thousands of inefficiencies that are now reflected in the magnitude of the national debt.

Quality control will be enhanced immeasurably by standardization and simplification. It is only reasonable that it is easier to control quality of fewer variations and the resultant smaller number of items. There will be fewer inspectors to manage and, with the greater quantity of each standardized item, these inspectors will become more skilled and specialized. The producers will be able to increase and maintain a steady quality of products by having longer production runs. Slight variations in requirements between the services such as color can be handled in the flexibility of specifications.

The American Nation cannot afford to allow tradition and custom to interfere with its survival. If it permits such ideas to prevail the United States is doomed to die as have all the other great powers of history. Each one, down through the ages, maintained its progress as long as it was young, but as soon as it grew old enough to develop traditions and customs with strength such as we have seen in the United States Navy, a younger nation unhampered in its desire to progress and adopt new ideas became the victor. Any member of the armed forces who spent any time on foreign soil can testify that both Europeans and Orientals are so steeped in tradition that they have become a menace to themselves. France was defeated by the Germans simply because she relied on the traditional type of trench warfare and defense lines. With all the previews of fast moving tactics in Spain, Ethiopia, and China, she refused to change—when the attack came and the Maginot Line was broken she had no mobile forces to stave off disaster.

The same was the case when the British sent out their two prize battleships off Singapore without air protection. Traditionally, battleships could not be sunk by air power, but the result is well known. As a result, naval warfare was radically changed. Even after such a concrete example the "old Navy brass" refused to put much stock in air power until the carrier task forces began to check the Jap advance in the South Pacific. Tradition is a great thing and impossible to do without when morale is concerned, but it must not become an anchor around the neck of the entire Nation's existence. It must not be construed that the author advocates abolition of tradition, but only such modifications that will allow the United States to protect itself effectively and efficiently.

Mr. Speaker, many such reports of similar experiences and recommendations have been received by Members of Congress. These letters and reports from ex-servicemen are valuable in helping us to understand the needs of the services.

Behind the Scenes With the Arizona Press

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. POULSON. Mr. Speaker, my State of California and its neighboring State of Arizona have been for some years engaged in a most serious controversy over division of the waters of the Colorado River.

As might be expected, we who have been defending California's position have been the subject of bitter attacks by the Arizona press. That in itself is inconsequential, as far as I am concerned. The propaganda that Arizona reporters have deemed it necessary to write deceives and injures only the newspaper readers of Arizona.

However, it appears that the Arizona forces have let their fanaticism carry them beyond ethical bounds. A situation has arisen which has prompted me to ask certain questions. They follow.

Is it permissible for a full-time Government employee to serve at the same time as a correspondent for a newspaper?

Is it proper that a full-time Government employee, with access to confidential Government information, work at the same time as a Washington correspondent?

In the Phoenix Republic, a daily Arizona newspaper, there appeared in the issue of February 8, 1949, a dispatch under the byline "By Uttis Peterson."

Above Mr. Peterson's name was this information: "Republic's Washington Bureau, 1397 National Press Building."

This identification, I suppose, means that the dispatch came from Washington, and was written by the Republic's correspondent, Mr. Peterson.

The headline on this dispatch was as follows: "Few of its creators 100 years ago would know Interior today."

The Department of the Interior informs me that Mr. Peterson has been regularly employed since January 19, 1949, in the information, or press, section of the Bureau of Reclamation.

The dispatch in question, appearing under Mr. Peterson's name, apparently was sent to Arizona February 7. That is the date on it. Yet, that was 18 days after Mr. Peterson was receiving a salary from the Interior Department as a full-time Government employee.

I know of my own knowledge that Mr. Peterson has been a Washington correspondent for the Phoenix Republic for some time. He has written innumerable propaganda stories about the Colorado River controversy, and has called upon me for information. When I questioned him about inaccuracies contained in his dispatches, his reply was that he was obliged to write what his employers wanted to publish.

Arizona now is engaged in a strenuous effort to secure congressional authorization for a billion-dollar reclamation project to rescue a few thousand acres of privately owned land in central Arizona. It is an interesting fact that the Phoenix Republic has contributed money to the lobby working for the proposed central Arizona project.

As a partisan of Arizona, and as a correspondent for the Phoenix Republic, Mr. Peterson is in a strategic position as a press officer of the Bureau of Reclamation. Presumably he advises newsmen who call there for information. Presumably he has not permitted his Government position to interrupt his journalistic endeavors.

I repeat: Is this permissible, and is it proper?

"Zionist Organization of America Should Dissolve," Says Washington Chapter, American Council for Judaism

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a news release from the Washington chapter of the American Council for Judaism, issued on February 17. It is as follows:

The board of directors of the Washington chapter of the American Council for Judaism today urged the dissolution of the Zionist Organization of America as a logical consequence of the United States grant of full recognition to Israel. This, the chapter pointed out, would be an appropriate action recognizing the full sovereignty of the new State and enabling it to stand on its own feet. At the same time it would make it unmistakably clear that Americans of Jewish faith were, in no sense, obligated to, or participants in, the national affairs of the state of Israel.

The very existence of a private organization like the Zionist Organization of America engaging in such nationalist-political activities as have occupied it up to the present, will serve only to interfere in the affairs of a now sovereign State of Israel. Conversely, the continued existence of the Zionist Organization of America will have the unfortunate effect of linking the nationalism of the sovereign State of Israel to the lives of Americans.

Furthermore, the dissolution of the Zionist Organization of America would make possible humanitarian and philanthropic support of those of Jewish faith and others in Israel, through the medium of organizations for charitable purposes and charitable purposes only.

The State of Israel has now been accorded de jure recognition by the United States and de facto recognition by many nations of western Europe. Since no foreign nation can have agencies of its nationalism operating in the United States, as American institutions, without damage to itself and America, it behooves the World Zionist Organization and its American affiliate, having achieved its objective of creating an independent State of Israel, forthwith to dissolve.

The Reader's Digest and the Real Estate Lobby

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. MULTER. Mr. Speaker, I believe every Member of the House has received one or more copies of the reprint of the Reader's Digest article on rents in France. The following is an excellent analysis of that article. It appeared in the New York Post on February 17 in the column entitled "Washington Memo" written by Charles Van Devander, Oliver Pilat, James A. Wechsler, and William O. Player, Jr.

READER'S DIGEST DROPS NEUTRAL MASK AND GOES CRUSADING FOR LANDLORD LOBBY

WASHINGTON, February 17.—The Reader's Digest is a monthly magazine read by several million Americans who have never suspected that it would embark on a crusade. It is ostensibly a respectable, neutral journal devoted to the presentation of every side of every question. But this pale description must be drastically revised. The Digest is becoming a militant, fiery organ with deep convictions. Within the near future leaders of the real estate lobby may even be prepared to state publicly that this austere monthly journal is indispensable reading for patriots. The Digest no longer pretends to sit on the fence; it has aggressively joined the battle to destroy rent control.

Its venture into the realm of unpleasant controversy, however, has already produced a backfire; and in their sanctum at Pleasantville the Digest editors may be wondering whether there is any profit in preaching.

The story begins with the publication in the Digest this month of an article "No Vacancies." A promotion letter transmitted by the magazine to officials of real estate boards throughout the country reads in part:

"In the belief that it will be of particular interest to you, we enclose a copy of 'No Vacancies' by Bertrand de Jouvenel which is appearing in the February issue of the Reader's Digest. 'No Vacancies' describes the tragic effect of rent control of French housing, and draws a moral which is particularly pertinent at this time in our own country.

"Because the Reader's Digest believes this article to be timely and important, reprints are being offered at cost to interested individuals and organizations. If you feel that 'No Vacancies' should be seen by your friends and by leaders of thought in your community, you may obtain as many copies as you wish simply by dropping a note to the reprint department, the Reader's Digest. The price of 10 copies is 20 cents; of 100 copies, $1.50; of 1,000, $12.

"You may have other ideas for bringing the message of 'No Vacancies' to a still wider audience. If so, we should be very glad to hear from you."

One of those who received this objective, disinterested communication was Earl C. Burdic, president of the Nebraska Real Estate Association. Mr. Burdic does not conform to the usual stereotype of a real-estate lobbyist. He believes profiteering landlords are imperiling the status of all property owners. So he has sent this response to the magazine's invitation:

"No—we don't need any reprints of what is going on in France.

"And possibly you should stick to the printing and magazine business—and let Congress take care of the lawmaking. You will remember what happened to the Literary Digest. Also, please remember that tenants greatly outnumber landlords. If you want to get into housing, I would suggest that you impartially present a picture of both sides of rent control. Give us facts of and in America.

"Forget Europe—it never was a parallel for us to follow.

"In Norfolk, Nebr., a city of 12,000, we had no rent control until after the war was over and the boys were returning home. Why then? Because of runaway rent charges and demands made by some landlords. Greed and selfishness prevailed. Whereupon a United States office of rent control followed in our city—that is to say, they moved in and took charge. At first, I, like most realtors, was angry. I thought we had no use for such controls.

"However, as time went along and I saw and realized the magnitude of all injustices of exorbitant rent charges and unwarranted evictions, I, too, became somewhat converted in favor of the underdog.

"Let's don't forget, there's always two sides to every story."

In his voluminous mail yesterday, President Truman received a carbon copy of Mr. Burdic's letter to the editors.

That Tidelands Threat

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks, I set forth herewith an editorial from the Shreveport Journal of February 7, 1949, entitled "That Tidelands Threat":

THAT TIDELANDS THREAT

If anybody doubts the extreme menace to huge Louisiana income from tidelands usur-

pation demands by the National Government's anti-States' rights advocates, they are invited to consider this significant morsel of information reported from Baton Rouge by the New Orleans States' capital news bureau:

"Records in the office of Lucille May Grace, State register of the land office, disclosed that the State has been paid a total of $91,410,-356.76 in bonuses, royalties, and rentals from submerged lands in the Gulf, lands beneath the navigable waters, and on leases beyond the 3-mile limit."

These are among the lands which President Truman is on record as wishing the Federal Government to take control over, thereby depriving Louisiana and other coastal States of rights always considered theirs without question until the present Federal threat was instituted.

The threat is serious. The Nation's President has strong allies in his fight to deprive the States of their valuable tidelands—just another evidence of the trend toward centralized national government.

Assistant Attorney General John L. Madden, who has carried on the legal end of Louisiana's fight for these holdings for some years now, is in Washington at this time, as a member of Attorney General Boliver Kemp's personnel, to lend assistance in preparation of briefs to be presented to the United States Supreme Court with a view to halting United States Attorney General Tom Clark from pursuing his suit to obtain the tidelands for the National Government. This is proper activity by our State attorney general department. However, it is not all the State's official activity that should be put behind the movement to defeat the Truman plan. Every State official, as well as other citizens in position to lend aid to the resistance of the Government's grab program, should get vigorously into this scrap.

As shown by the report from the office of the register of the State land office, Louisiana has a gigantic source of revenue at stake in the tidelands litigation. No effort should be unexpended in this fight. Ninety-one million dollars is a huge sum of money, from which vast public benefit is made possible in Louisiana. The fund will grow, too. The National Government has no right to this property, but the national would-be usurpers, headed by President Truman, are determined to defeat the States in their endeavor to hold on to what by every logical and legal reason should be recognized as theirs in the future as in the past.

China—Statement of Hon. John F. Kennedy, of Massachusetts

EXTENSION OF REMARKS

OF

HON GEORGE J. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. BATES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the timely and interesting address delivered in Salem, Mass., on January 30, by my colleague, Hon. JOHN F. KENNEDY, of Boston, on the tragic story of China:

Over these past few days we have learned the extent of the disasters befalling China and the United States. Our relationship with China since the end of the Second World War has been a tragic one, and it is of the utmost importance that we search out and spotlight those who must bear the responsibility for our present predicament.

When we look at the ease with which the Communists have overthrown the National Government of Chiang Kai-shek, it comes as somewhat of a shock to remember that on November 22, 1941, our Secretary of State, Cordell Hull, handed Ambassador Namuru an ultimatum to the effect that: (1) Government of Japan will withdraw all military, naval, air, and police forces from China and Indochina; (2) the United States and Japan will not support militarily, politically, economically, any government or regime in China other than the National Government of the Republic of China.

It was clearly enunciated that the independence of China and the stability of the National Government was the fundamental object of our far eastern policy.

That this and other statements of our policies in the Far East led directly to the attack on Pearl Harbor is well known. And it might be said that we almost knowingly entered into combat with Japan to preserve the independence of China and the countries to the south of it. Contrast this policy which reached its height in 1943 when the United States and Britain agreed at Cairo to liberate China and return to that country at the end of the war Manchuria and all Japanese-held areas, to the confused and vacilating policy which we have followed since that day.

In 1944 Gen. "Vinegar Joe" Stilwell presented a plan to arm 1,000,000 Chinese Communists, who had been carefully building their resources in preparation for a post-war seizure of power, and with them to capture Shanghai and clear the Yangtze. This plan was supported by some State Department officials, including Ambassador Clarence Gauss. Chiang Kai-shek refused to cooperate with this plan, which would have presented the Chinese Communists with an easy coup. Chiang requested that Stilwell be recalled, which caused such bitter comment in this country; and Gauss resigned. From this date on our relations with the National Government declined.

At the Yalta Conference in 1945 a sick Roosevelt, with the advice of General Marshall and other Chiefs of Staff, gave the Kurile Islands as well as the control of various strategic Chinese ports, such as Port Arthur and Darien, to the Soviet Union.

According to former Ambassador Bullitt, in Life magazine in 1948, "Whatever share of the responsibility was Roosevelt's and whatever share was Marshall's the vital interest of the United States in the independent integrity of China was sacrificed, and the foundation was laid for the present tragic situation in the Far East."

When the armies of Soviet Russia withdrew from Manchuria they left Chinese Communists in control of this area and in possession of great masses of Japanese war material.

During this period began the great split in the minds of our diplomats over whether to support the government of Chiang Kai-shek, or force Chiang Kai-shek as the price of our assistance to bring Chinese Communists into his government to form a coalition.

When Ambassador Patrick Hurley resigned in 1945 he stated, "Professional diplomats continuously advised the Chinese Communists that my efforts in preventing the collapse of the national government did not represent the policy of the United States. The chief opposition to the accomplishment of our mission came from American career diplomats, the embassy at Chungking, and the Chinese Far Eastern divisions of the State Department."

With the troubled situation in China beginning to loom large in the United States, General Marshall was sent at the request of President Truman as special emissary to China to effect a compromise and to bring about a coalition government.

In Ambassador Bullitt's article in Life, he states, and I quote: "In early summer of 1946 in order to force Chiang Kai-shek to take Communists into the Chinese Government, General Marshall had the Department of State refuse to give licenses for export of ammunition to China. Thus from the summer of 1946 to February 1948 not a single shell or a single cartridge was delivered to China for use in its American armament. And in the aviation field Marshall likewise blundered, and as a result of his breaking the American Government's contract to deliver to China planes to maintain eight and one-third air groups, for 3 years no combat or bombing planes were delivered to China—from September 1946 to March 1948. As Marshall himself confessed in February 1948 to the House Committee on Foreign Affairs, this "was in effect an embargo on military supplies."

In 1948 we appropriated $468,000,000 for China, only a fraction of what we were sending to Europe, and out of this $468,000,000 only $125,000,000 was for military purposes. The end was drawing near; the assistance was too little and too late; and the nationalist government was engaged in a death struggle with the on-rushing Communist armies.

On November 20, 1948, former Senator D. Worth Clark, who had been sent on a special mission to China by the Senate Committee on Appropriations, in his report to that committee said, "Piecemeal aid will no longer save failing China from communism. It is now an all-out program or none, a fish or cut bait proposition."

Clark said this conclusion was confirmed by Ambassador J. Leighton Stuart and top American Army officers in China.

On November 25, 1948, 3 years too late, the New York Times said: "Secretary of State George Marshall said today the United States Government was considering what assistance it could properly give to the Chinese Government in the present critical situation."

On December 21 a Times headline was: "ECA Administrator Hoffman, after seeing Truman, discloses freezing of $70,000,000 program in China in view of uncertain war situation."

The indifference, if not the contempt, with which the State Department and the President treated the wife of the head of the nationalist government, who was then fighting for a free China—Madame Chiang Kai-shek—was the final chapter in this tragic story.

Our policy in China has reaped the whirlwind. The continued insistence that aid would not be forthcoming unless a coalition government with the Communists was formed, was a crippling blow to the national government. So concerned were our diplomats and their advisers, the Lattimores and the Fairbanks, with the imperfections of the diplomatic system in China after 20 years of war, and the tales of corruption in high places, that they lost sight of our tremendous stake in a non-Communist China.

There were those who claimed, and still claim, that Chinese communism was not really communism at all but merely an advanced agrarian movement which did not take directions from Moscow.

Listen to the words of the Bolton report: "Its doctrines follow those of Lenin and Stalin. Its leaders are Moscow-trained (of 35 leading Chinese Communist political leaders listed in the report, over a half either spent some time or studied in Moscow). Its policies and actions, its strategy and tactics are Communist. The Chinese Communists have followed faithfully every zigzag of the Kremlin's line for a generation."

This is the tragic story of China whose freedom we once fought to preserve. What our young men had saved, our diplomats and our President have frittered away.

Appropriations for Unemployment Commission

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. CANNON. Mr. Speaker, under leave granted I include a letter from the able and distinguished gentleman from Kentucky [Mr. WHITAKER], accompanied by correspondence from the Governor of his State, the Honorable Earl C. Clements, relating to Federal funds carried in the urgent deficiency appropriation bill:

FEBRUARY 17, 1949.

Hon. CLARENCE CANNON,
Chairman, Committee on Appropriations, Washington, D. C.

DEAR MR. CANNON: Enclosed herewith find copy of letter which I received on February 15 from the Honorable Earl C. Clements, Governor of the Commonwealth of Kentucky, and copy of wire from Mr. Frank Bane, executive director of the Council of State Governments.

I did not have an opportunity to present to your committee data touching the splendid progress which has been obtained by the creation of the new department of economic security, which department is headed by Commissioner Vego Barnes and embraces all of the State agencies spending both State and Federal funds—for, as you know the deficiency appropriation bill was at that time under consideration and being voted on by the House. However, I felt like this informative letter from Governor Clements should be filed with your committee in order to show the economy which Kentucky has demonstrated to be possible by the creation of the Department of Economic Security.

Respectfully yours,
JOHN A. WHITAKER,
Member of Congress.

COMMONWEALTH OF KENTUCKY,
EXECUTIVE CHAMBER,
Frankfort, February 11, 1949.

Hon. JOHN WHITAKER,
House Office Building,
Washington, D. C.

DEAR JOHN: I am attaching a copy of a telegram received from Frank Bane, executive director of the Council of State Governments.

The message, you will note, is self-explanatory. However, upon its receipt the matter was taken up with Mr. Vego Barnes, commissioner of the department of economic security, with reference to the needs for additional funds to cover administrative costs of the Unemployment Compensation Commission and the Employment Service.

As you may know, at the last session of the legislature the above-mentioned agencies together with the division of public assistance and child welfare were combined, and the outcome was the creation of a new department of economic security headed by Commissioner Barnes which embraced all of the State agencies spending both State and Federal funds in the over-all social-security program.

Since this consolidation was effected, and as a result of prudent and efficient administration, the commissioner reports that his department will be able to live within its budget and will not need additional allocations. It is his opinion that the support which the deficiency bill has is being generated by those States refusing to consolidate their various social-security programs—thereby failing to realize the economies which Kentucky has demonstrated to be possible through such a move.

I thought this information sufficiently important and interesting to pass along to you for whatever benefit it might be to you at the time this bill comes up for consideration.

Sincerely yours,
EARLE C. CLEMENTS,
Governor.

FEBRUARY 8, 1949.

In the great majority of States the appropriation and allocation for administration of unemployment compensation and employment service for fiscal year ending June 30, 1949, were inadequate when made. Since then increasing loads and lack of administrative funds have combined to create situation that not only causes great waste of public funds but serves to undermine system of employment security.

The problem is immediate and urgent. Congress now considering deficiency bill and States must have approximately $20,000,000 additional for this fiscal year to insure effective and economical administration.

If this situation exists in your State, and if you think wise, suggest you wire your congressional delegation.

FRANK BANE,
Executive Director, Council of State Governments.

American Military Government in Germany

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. DONDERO. Mr. Speaker, for the benefit of the Congress and the people of the United States, I wish to note in the RECORD my correspondence with the Honorable James Forrestal on a matter of deep national concern.

I include also a portion of the article referred to in my correspondence with the Secretary of Defense. I hope, in later extensions, to include two further installments of this article from the magazine Politics.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 26, 1949.

Hon. JAMES FORRESTAL,
Secretary of Defense, Washington, D. C.

DEAR MR. SECRETARY: You will remember that I have on frequent occasions called attention of the House of Representatives to the danger of penetration of pro-Communist elements into the American military government in Germany.

I am taking the liberty of enclosing a detailed article appearing in Politics, a liberal magazine, which describes conditions in considerable detail and fully corroborates what I have said. The article, beginning on page 194, is written by Peter Blake, who was a political intelligence officer with the Army's European headquarters in Frankfurt.

While the article describes conditions in this particular area, it is in fact a pattern of conditions under our occupation forces in Germany and Austria, which demand immediate correction. No doubt some steps have already been made in this direction.

Let me point out also that Brig. Gen. Robert McClure, in charge of the activities described in the aforementioned article is now head of the reorientation branch in New York. I am sure the National Military Establishment has his exact position and present title.

I am also enclosing the record of Cedric Belfrage, mentioned in the article.

Very sincerely yours,
GEORGE A. DONDERO,
Member of Congress.

AMG IN GERMANY
(By Peter Blake)

Reeducation, according to Potsdam, was one of the primary missions of American occupation forces in Germany. The strange collection of American liberals, Stalinoids, Russia-firsters, etc., that assembled to lend the United States Army a hand in accomplishing that mission has, instead, spent the better part of the past 3 years in making our zone in Germany ripe for Stalinism. This effort was substantially aided by theïveta displayed by the highest officials in the United States military government when faced with the facts of political life. Not until very recently did MG show even an elementary understanding of the methods and objectives of Soviet imperialism, and at no time during the past 3 years did MG show any ability to counter these objectives.

Two MG agencies especially have helped to break the ground for Stalin's agents in the American zone of Germany: The Information Control Division, whose functions include the organization and licensing of the German press, theater, radio, film, and musical effort; and the Political Affairs Division, which was supposed to establish German political life on a democratic basis.

(A) INFORMATION CONTROL DIVISION (ICD)

Organized early in the war as the Psychological Warfare Division under the command of Brig. Gen. Robert McClure, attracted a great many American and British intellectuals of somewhat varying, and not necessarily western democratic views.[1] Into these assorted hands the United States Army placed one of its most important missions in Germany: The education, by democratic propaganda, of the German people. The manner in which this mission was not accomplished by ICD can be seen from a number of case histories.

Item No. 1: The Frankfurter Rundschau

The most important newspaper to be licensed by ICD in the American zone was the Frankfurter Rundschau; circulation, over 150,000 copies. The Rundschau was started shortly after the end of the war, and its licensees were carefully selected by Mr. Cedric Belfrage and a juvenile ICD official named Adler. Two other ICD agents went as far as Thuringia to find the "right" kind of licensees. The result of this careful selection was an editorial board of three Communists

---

[1] Among those who served with ICD were members of PM's editorial staff such as Saul K. Padover, and men like Hollywood's critic, Mr. Cedric Belfrage. These liberals and other ICD employees are not best known for their ability to distinguish between Stalinism and democracy. There were also a number of former OWI employees who suffered from a similar failing. It was interesting to note, for example, that the former OWI Chief of the Czechoslovak Division of that organization, Mr. Adolf Hoffmeister, was recently appointed Czech Ambassador to France by the new Communist Government of that country. Mr. Hoffmeister, it develops, is a member of the Czech Communist Party. The OWI, which selected Hoffmeister for a key position, also supplied many ICD recruits.

and some ineffectual Social Democrats, who were soon forced out of the paper. There then remained: (1) Emil Carlebach, Communist, 12 years in Buchenwald Concentration Camp (where, according to excellent ICD sources, he had consistently worked with the SS)[2]; (2) Arno Rudert, Communist; and (3) Wilhelm Gerst, alleged Christian Socialist, but actually an energetic and consistent Stalinist throughout. Gerst had finally to be fired late in 1946 in connection with some unsavory publicity during his trial before a denazification court. At the time of his appointment, Gerst had admitted to ICD officials that he had written in praise of Hitler—yet, Gerst, too, was appointed by ICD in clear violation of its own directives. Since his dismissal in 1946, Gerst has been extremely active trying to organize the Russian Socialist Unity Party in the Frankfurt area.[3]

The case of Belfrage and Carlebach is even more fascinating. In the June 1948 issue of Harper's Magazine, under the title "The German Who Should Have Been Dead," Mr. Cedric Belfrage defended his appointment of Carlebach and admitted that he knew that Carlebach had drawn up death lists for the SS in Buchenwald. Belfrage explains all that away by indicating that the ethics of Buchenwald were different from those of the outside world. Two months later, in Harper's the ex-inmate of Buchenwald and witness of Carlebach's murderous SS-collaboration, Mr. Ernst Federn, a Socialist, utterly refuted Belfrage's specious arguments, and testified to Carlebach's typical party-line ethics in helping in the murder of Buchenwald inmates, who might have turned into potential postwar rivals of the Stalinist movement. In a reply remarkable for its decency and restraint, Mr. Federn cites two instances in which Communist Carlebach personally murdered, or attempted to murder, fellow inmates of Buchenwald concentration camp.

The case of Mr. Cedric Belfrage reached its logical conclusion when he appeared October 17, 1948, as the editor-in-chief of a fascinating pro-Wallace, pro-Stalin magazine called the National Guardian. In Mr. Belfrage's editorial company we find such Soviet-apologists as Louis Adamic, Konni Zilliacus, O. John Rogge, Frederick L. Schuman, Johannes Steel, William Gropper, and Leo Huberman. Business manager is John T. McManus.[4]

The manner in which German Communists approached their Stalinoid friends in ICD and persuaded them to cooperate in such important press ventures may be observed in the following transcript of a conference between Bruno Goldhammer, chief of the Bavarian Communist Party, and Dr. Joseph Dunner, former Chief of Intelligence of the OWI in Europe, and then an ICD official. Goldhammer evidently—and very mistakenly—assumed that Dr. Dunner was another innocent abroad. The following quotation is reproduced from the New Leader of June 8, 1946:

"I understand," he (Goldhammer) said, "that you are about to organize a German newspaper in Munich. You know that in Frankfurt, where such a paper already exists, several Communists have been admitted as licensees of the paper. I have come to you to ask you, in the name of the Communist Party, to follow the example of your colleagues in Frankfurt and to include among the licensees in Munich Communists whom my party will nominate."

Dr. Dunner, of course, refused, and a non-Communist paper, the excellent Süddeutsche Zeitung, was set up in Bavaria. Attacks upon it started immediately from both German Communists and their friends in ICD. According to Dr. Dunner, Mr. Mathieu, an ICD intelligence officer was sent down to Munich where he held long meetings with Goldhammer, wrote a detailed report fully supporting the Communist Party stand, and demanded that a member of that party be added to the list of licensees of the Süddeutsche Zeitung. A few days later Goldhammer himself, using almost identical words, sent a similar protest to the United States Third Army. An investigation was ordered by Third Army Commander Lieutenant General Truscott, which cleared the non-Communist paper of all Mathieu-Goldhammer charges.

ICD's excuse for having set up the Rundschau as a Communist organ was that there were no untainted Germans of other convictions to call upon. This is untrue. Not only did ICD later find many German Socialists, Liberals, and Conservatives upon whom it could depend, but there was, in 1945, the top-notch former editorial staff of the old liberal Frankfurter Zeitung—one of the finest European papers, with a tradition which ICD might well have emulated. These men had not compromised with the Nazis, but ICD agents "kicked them around" for so long, in the words of one of these editors, that they finally took off for the French zone where they were received with open arms.[5]

Item No. 2: DENA

One of ICD's early efforts concerned the setting up of a German-American news agency (DENA). Again according to Dr. Dunner "the Communists and their fellow travelers established a center in * * * the Information Control Unit for Greater Hesse. On June 29, 1945, Brig. Gen. Robert McClure, chief of the Information Control Division, assigned seven civilians of the OWI, two lieutenants, and four enlisted men to Bad Nauheim (in the American zone) to lay the foundation of DENA, the German news service. The team was headed by Lieutenant Edel, a former correspondent for PM." (New Leader, May 25, 1946.)

In addition to PM correspondent Edel, ICD enlisted the help of one Dr. Hans Mayer, who had spent the Nazi period in exile in Switzerland. There Dr. Mayer was one of the leaders of the Schutzverband Deutscher Schriftsteller—Protective League of German Writers—a well-known and painfully obvious Stalinist-front organization. Dr. Mayer, like Carlebach & Co., was especially selected by ICD and brought in from abroad to help out. When I talked to him many months later he told me, with praiseworthy candor, that he "thanked God (sic) for the Soviet Union."

After the early arrangements had been completed, DENA was handed over to a number of German licensees. The top licensee was none other than Dr. Rudolf Agricola, member of the German Communist Party since 1933, and ICD appointed editor of the important Rhein-Neckar Zeitung, circulation over 100,000. Of Dr. Agricola, an ICD official said to me in 1947: "You know, he is one of those mild and decent Communists, like Gottwald of Czechoslovakia." Another ICD agent told me that Agricola had not been appointed to DENA, but had been elected to the post by all the licensed German editors in the American zone. "And there are hardly any Communists among those," the ICD official added. On the face of it this is true; as of February 1947 the official ICD list of German newspapers shows only 4 or 5 avowed Communist licensees. But as we have seen in the case of Wilhelm Gerst, who was officially listed as a Christian Socialist, the official listing of avowed party affiliations is extremely misleading.[6] The fact that Communist Dr. Agricola was elected proves not only the extent of the prestige with which the American ICD had endowed him, but also the sad truth that many a nominal Socialist or nonparty man among ICD's German editors was not all he seemed.

Item No. 3: Radio Frankfurt

When he was no longer needed at DENA Dr. Hans Mayer was transferred by ICD to a more important job: He was appointed political chief of the American-controlled Radio Frankfurt, together with Radio Munich (see below) the most powerful broadcasting station in the United States zone. While this station is currently being used in feeble and sporadic attempts to refute the Soviet campaigns of lies and slander directed against the West, it was not put to such use until 3 years after VE-day, and not until Dr. Hans Mayer had finally been removed from its political directorate. Even ICD found his denunciations of Churchill and others as warmongers a little hard to swallow, and it even penetrated MG's consciousness that a Communist political commentator, broadcasting three times a week over one of western Germany's principal stations, was not the best advertisement the United States could produce of the democratic way of life. Whatever the reasons, Dr. Mayer was "granted his request to be permitted to resign." It came as a great surprise to him.

While Dr. Mayer operated a Communist radio station in Frankfurt, Radio Munich was also well taken care of. Dr. Dunner writes in the New Leader of June 8, 1946: "The Bavarian Radio in Munich—an American Army institution—is still today in the hands of a Communist, a Mr. Bentschen, and his assistant, Dr. Hahn, a former dentist from Koenigsberg."

While ICD thought nothing of placing Radio Frankfurt and Radio Munich in Communist hands, it sharply discriminated against at least one, and probably many another young German Socialist. The case of Herr , who was rejected for a job on Radio Frankfurt, is typical of antidemocratic personnel practices as carried on by our ICD.

H's political past includes several years with the Italian underground, indirect aid to Allied intelligence, close connections with the German resistance, and an intimate friendship of several years' standing with two outstanding American anti-Nazis: Dorothy Thompson and Edgar Ansel Mowrer. Despite his excellent record, H was declared politically unreliable by ICD's screening unit. The report on H, signed by a United States Army major who had told H that he okayed only heroes, contains the following phrase: "Herr H claims to be a Socialist, and claims to favor a United States of Europe, by which he presumably means a United States directed against the Soviet Union." After this astonishing observation the screening report on H was heavily, obviously, and utterly unfairly weighted against him in every single respect, including details which easily could

[2] This appears to have been common practice among German Communists. Bavarian Communist Karl Feuerer, secretary of the party in Munich, did similar work in Dachau. Cf. Rousset's The Days of Our Death (Politics, July–August 1947).

[3] In the first free election in Frankfurt the vote was 90 percent anti-Communist, despite the existence, as the sole information medium and propaganda weapon, of the American-promoted Communist newspaper. During this period, numerous Americans, including State Department officials, a general officer, and a former military governor of Frankfurt, repeatedly protested against continued American support for the Rundschau. They were politely told to go climb a tree.

[4] The Guardian is a direct product of AMG. Thus its editors write, in the October 25 issue: "No 90-day wonder, National Guardian has been 3 years in the making. It began in 1945 on a B–17 bound from Frankfurt to Bremen. On board were Cedric Belfrage and Jim Aronson (another Guardian editor), who had been assigned by the Allied forces the task of setting up democratic newspapers in defeated Germany."

[5] There they started a first-rate fortnightly Die Gegenwart, which has become one of postwar Europe's best magazines.

[6] Dr. Hans Mayer was officially listed as a nonparty man.

have been verified by a routine check with United States or British intelligence (both of which had screened H about a dozen times).

H of course wrote to his American friends of his misfortune. They, in turn, immediately made a strong protest with the State Department, where they were assured that there would be another investigation. Some weeks later they were informed that another investigation had confirmed ICD's earlier findings. This was quite untrue, although the State Department probably didn't know it. There had never been another investigation into H's past. Instead he had been summoned to the Frankfurt headquarters of the ICD to be threatened as follows by ICD officials (the following quotations are from a sworn affidavit I asked H to prepare for me immediately after his new investigation by ICD): "I was told by ICD intelligence that they were no longer willing to tolerate my open criticism of members of the Army of Occupation, and that other steps might well be taken against me if nothing else was effective—such as a trial by a military tribunal. It had been established as a fact that I was politically unacceptable." And later: "The official said that the Americans were, after all, no Gestapo."

The new investigation ended upon a tragicomic note: Herr H had in his possession a letter from the Provincial ICD headquarters (which I have read), signed by its chief, a Mr. McCarthy, assuring him that his political past was beyond ICD reproach. Since such a letter (from the ICD point of view) was obviously a highly dangerous and incriminating document for H to possess, the "no Gestapo" official ordered H to surrender the letter to him without delay. This was done in the presence of several witnesses. Thus ended ICD's new investigation.

Eisenhower on Paternalism

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Times-Star of February 15, 1949:

EISENHOWER ON PATERNALISM

If any American enjoys more public confidence and esteem than Dwight D. Eisenhower we don't know his name. General Eisenhower has just been asked by the President to return to temporary duty in Washington. His job is to coordinate the plans of the three branches of national defense at a time when they tend to pull apart, even as their requests for funds are pending in Congress.

No man could perform better than Eisenhower this task which is equally important to the American economy and to American defense. But the man who was chiefly responsible for the Allied victory in the field can see a great danger on the horizon. Speaking, appropriately, on Lincoln's Birthday, "Ike" warned the Nation against a creeping paralysis of thought. This is the result of the public's readiness to accept paternalism in government and the constant drift toward centralized bureaucratic government.

With a bluntness that Governor Dewey never approached in the last campaign, "Ike" warns that this tendency could lead the country into a dictatorship—a dictatorship not born of guns but of the extension of Government controls into every phase of the Nation's life in this complex era. The paternalistic state tends to become the all-inclusive bureaucratic state.

General Eisenhower is not the man to underestimate the menace of Russo-communism. But it is significant that, on the eve of his return to Washington, he warned the country against the menace to American freedom that lies in the surrender of our own responsibilities and * * * of our own thought over our own lives.

Commission on Service Pay

EXTENSION OF REMARKS

OF

HON. CARL VINSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. VINSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Mr. Charles R. Hook, Chairman of the Advisory Commission on Service Pay, before the House Armed Services Committee, February 21, 1949:

This program of career compensation that you are considering is based on the recommendations of the Advisory Commission on Service Pay in its report to the Secretary of Defense.

As Chairman of the Commission which prepared the study, I should like to explain briefly the method of our investigation and the philosophy which motivated us in the busy year during which the report was developed. At the same time, I would like to tell you about the way in which we proceeded and to present to you some of the basic considerations that affected our decisions.

Taking into consideration the size of the job, it was apparent to us we could not all devote a lot of time to the same subject. Each one of us, therefore, agreed to take the lead and sponsor a certain part of the program.

Surveys were made to determine the compensation of positions in civilian fields at comparable levels of responsibility and technical requirement. Insofar as the management field is concerned, we do not have knowledge of any other study of this kind and scope having been made before. It has taken months of most careful investigation and cooperation on the part of the chief executives of our major industrial institutions to gather this information.

To arrive at a pay scale that would attract and retain the men and leaders which our national security requires, the Commission decided to construct a military compensation scale on the scales paid for comparable civilian responsibilities, so far as practicable. By survey and proper adjustment, it obtained current data on civilian-pay ranges not only for nonsupervisory employees but for management. This principle departed from traditional methods of establishing military pay, but we, of the Commission, consider it essential to have such a foundation to insure success for the Military Establishment under present and probable future conditions.

Rates for positions comparable to those held by officers were obtained from selected large firms whose structure and method of operation would be deemed similar to the huge Military Establishment by comparing the descriptions of military jobs within each level with those in industry. As you know, no private industry comparison could be made with the combat arms, but since a great majority of service personnel are not now in combat branches, it was possible to select jobs in fields well known and easily identified in business. Job descriptions covering military duties were, therefore, developed in the eight fields of finance, transportation, construction, communications, selected manufacturing, warehousing and procurement, armament and mechanical equipment production, that is, ordnance, and shipbuilding. The firms which cooperated with us determined whether the job descriptions we furnished were identical with or closely comparable to those used within their organizations, and, if so, furnished us the rates and ranges payable during the early part of 1948. Where no comparable descriptions were available, the firms slotted our descriptions into their organizations if in their opinion such jobs would reasonably fit, and then indicated, on the basis of their wage and salary structure, what the pay would be. On the basis of the data so obtained, we prepared weighted averages for each level of military responsibility and drew a smooth curve, which seemed to us an adequate representation of civilian income for comparable responsibility.

With respect to enlisted personnel, we were fortunate in having available the current surveys of the Army and Air Force Wage Boards, covering over 2,000,000 workers, chiefly in the manual and trades occupations, which corresponded closely to the work performed by the privates, corporals, and sergeants and their counterparts in the other services. We then estimated for enlisted personnel the value of the free goods and services which the Army or Navy supplied, such as food, clothing, and shelter, and arrived at a pay scale which included both real pay and free goods and services, which seemed to us comparable to civilian cash payments.

Recognizing that advancement through the military grades does not follow the pattern of advancement in industry, we modified the industrial wage and salary range for responsibility concept in industry by using a range for each military grade which is a composite of proper pay for responsibility plus a far less significant factor for total length of service. In addition, for purposes of administrative simplicity, the pay scales were constructed so that payments covering periods of less than a month would be made without involving complicated percentages and fractions.

Although we have endeavored to match the military curve with the civilian curve throughout, it will be noted that the recommended pay for enlisted personnel, including an estimated $108 per month for the lowest four grades representing free goods, is consistently higher throughout their careers than comparable pay in industry. This was done in recognition of the fact that a good portion of their income is not in cash and that some leeway was necessary to offset the removal of certain special pays which many enlisted persons now receive. Most important, however, was the determination of the Commission to develop a plan which would attract and hold qualified personnel. On the other hand, in the officer grades it will be noted that although at the outset military pay exceeds civilian pay, the recommended compensation for officers in the rank of colonel and above falls below that for comparable civilian positions. At this stage the accrual of retirement benefits becomes significant and such benefits as proposed in our plan are far more generous than those usually provided in industry. At this time also I should like to mention that our survey was taken at a time when the pay of executives whose duties correspond to the colonels and general officers is relatively high, since it is based on gross compensation and includes in many cases incentive compensation based on earnings which are related to

corporate sales and gross corporate income, which is quite high during this postwar period. As all of you know, compensation of this group is unstable and is materially reduced when business falls off. This is a traditional pattern in American industry and probably will prevail in the future as well.

It was only after we had determined on a proper pay for each level that any cost estimates were made. And here I want to emphasize my belief that proper pay provides proper leadership and guarantees the opportunity for a satisfactory career and is more important to the Nation than the small percentage of the budget that would be saved by cutting here.

Using force figures as of November 1948, these recommendations would increase total pay costs by 14.2 percent, or $440,000,000, for the Military Establishment. These impact costs will be materially reduced in succeeding years as due to the savings provision it will take some time for all the special pays to be eliminated. My colleague will speak to you on this point in some detail.

Throughout our study we recognized that it was as important to protect the interests of the taxpayer as to protect the interests of the man in service. In view of my own position, and I think I may also speak for my colleagues, it is only natural that we would consider the effect which our proposal might have on the ultimate cost of Government and, in turn, the possible effect on taxation to support these costs. We are fully aware of the fact that what we propose would immediately add about four hundred million dollars to the expense of operating the Military Establishment. We agree unanimously, however, that this additional burden is essential and, indeed, feel that this cost is slight compared to the ultimate costs which may be incurred if we do not now provide means for attracting and keeping the best qualified men.

We members of the Commission are what might be termed generally managers of one sort or another, and are keenly aware of the need for good management in any enterprise. The scales we recommend for officers particularly and the costs involved, we regard as a sound investment in good management. Experience shows that well trained leaders and executives, who should be highly paid in accordance with their responsibility, generally save money in the long run. We, therefore, strongly urge you to retain the pattern of pay which we suggest to insure the best of administration and the most capable leadership. Even if the total military budget, within your wisdom, must be curtailed at this time or later, we feel that savings should be made elsewhere and not at the expense of responsible leadership.

As a result of this study I believe the recommendations made provide adequate compensation at all levels, for the work any serviceman may be called upon to perform. It provides an inducement to seek advancement and assume responsibility. In the uniformed forces in the Military Establishment in particular the responsibility of management is enormous. The property value alone runs into billions of dollars. I have been furnished an estimate that places these values at approximately, forty billion for the Navy, twenty-two billion for the Army, and thirteen billion for the Air Force. To this must be added the billions spent annually for current expenses. Enterprises of this magnitude require top-flight management and in my opinion it would be very short sighted policy to deprive the services of adequate leadership by failing to provide an adequate pay. In addition, the very security of the nation depends on the competence of our military leaders and the well-being of the hundreds of thousands of our young men in service is contingent upon proper administration and this can never be any better than the men who do the administering.

The Secretary of Defense appointed the commission in December 1947. We have worked individually and as a group for well over a year, bearing in mind at all times that our chief responsibility was the strengthening of the defense of our nation. We have sought to develop a program that would be fair to the military and to the taxpayer. We have considered the effect of our proposals upon the present military establishment and upon the economic life of the nation as a whole.

The Commission obtained its information and developed its report through formal meetings, presentation of witnesses, technical investigations made by its staff and consultants and through personal, independent inquiries and interviews with civilians and military personnel. My colleagues and I had many conferences singly and with groups of officers and men in all the services. The frank and open discussions which we had made it possible for us to realize, as no other method could, the principal problems of the men now in service and those who had been on active duty. We familiarized ourselves not only with the difficulties they experienced in meeting rising living costs but the problems of housing, moving, and continual adjustment which are peculiar to military life. We investigated the resources of men in service and men on the retired list to determine their current needs and their ability to support themselves and their families after a career in service. Special attention was given to the problems of enlisted personnel and to the proposed career programs which the services have developed and which will shortly be instituted. The pay of enlisted personnel was examined both in terms of the cash take-home and free goods and services such as food, clothing, shelter, medical care, and other emoluments. From the comments of enlisted men themselves, we were able to appraise the value to them of these noncash items.

Throughout the study the Commission checked carefully with the representatives of the services. Sections of the report were discussed informally and confidentially to insure a proper understanding of existing laws and practices and the needs and objectives of each of the services. Although the Commission's recommendations were arrived at independently, the factual background on which they were based was developed through constant and fruitful contact with the services. I should like to add that although we believe we have satisfied the primary needs of the military, consistent with the national economy, and have composed many of the differences which were very apparent at the beginning, there may still be areas in which we have not been able to compromise our independent judgment to satisfy a special demand.

In view of the Commission's determination to base military pay on corresponding civilian pay and provide comparable careers, it seemed to us that the impact of income tax on military pay was not a subject for consideration. The Commission felt that with the granting of proper pay and comparable opportunity, the soldier and officer should undertake an equal responsibility to support himself and his dependents and participate in the cost of Government as a taxpayer. Accordingly no attempt was made to adjust the proposed pay because of the existence of a wartime tax concession which the military enjoyed until January 1949. Although in some very few cases military personnel who paid little or no tax during the war may find that their take-home pay is about the same, or possibly slightly less following enactment of the Commission's program, the Commission did not regard tax amount and tax policy as within its province.

Taxation policy is developed for the American people as a whole and is subject to change for a variety of reasons. Indeed, during the course of our study taxes on incomes were revised and, if any attempt had been made to provide a scale which would fluctuate in accordance with tax incidence, our scales would have had to undergo revision. Manifestly no pay structure which is based on a sound pattern and which is a reflection of a career system can be tampered with as taxes are raised or lowered or extended to different groups of people. Moreover, to the extent that taxes may be imposed as part of a general economic policy predicated on a recognized system of earnings, adjustment of earnings to meet taxes might well defeat any such policy.

The Commission found that the present pay structure was characterized by a variety of unrelated pays, allowances, and benefits. Inequities among the services and within each of the services was the natural result of this history of piecemeal legislation. Not only are different laws applicable in many cases to each of the services, but differences in administration, legal requirements affecting promotion, authorized and actual strength, integration policy and budget permit the spectacle of higher pay for lesser responsibility and the pyramiding of pays without regard to relative authority and responsibility. Although the Pay Readjustment Act of 1942 attempted to provide a uniform pay system for the seven services, the objective has not been attained because of significant variations in career possibilities within the services and different concepts concerning certain positions. The Army warrant officer, for example, is treated in a markedly different manner from his counterpart in the Navy. The Pay Readjustment Act, moreover, did not affect separate pay scales, the existence of which further distort the concept of equal pay for equal work. In addition, the unanticipated expansion of certain segments of the Military Establishment because of the war deepened the contrast. The Air Force, perhaps, affords the best example of rapid growth and variance from the normal promotion system.

The outstanding fault, however, is found in the emphasis placed on length of service in the compensation now provided. Thus a lieutenant colonel may draw the same pay today as a brigadier general although his responsibility and importance is considerably less. Such over-laps in pay frequently permitting junior officers to earn as much as an officer two or three grades higher or permitting an enlisted man to earn as much as or more than a field grade officer cause dissatisfaction and are, in the opinion of the Commission, completely unwarranted.

For this reason the Commission decided that a percentage increase could not correct existing inequities and would simply postpone the overhauling of the pay system which we have attempted in our study. The cost of living increase would, of necessity, be a percentage increase, whether flat or varying and would constitute an improper solution to this problem. The Commission's recommendations, it is hoped, produce a framework in which there is due regard for increased responsibility. Appropriate differentials between grades are suggested and ranges within each grade are constructed so that there will be no over-lap if the promotion scheme is properly administered, and very minor overlaps even in the event of stagnation.

The Commission is presenting an integrated program which should be considered as a whole. Each part has a clear and definite relation to the whole and to every other part. The total is aimed at the principal objective of attracting and holding in service personnel adequate in numbers and capabilities. It is my belief that the proposal represents a proper balance between the basic and special pays and allowances and the retirement and death benefits.

In the course of our study individuals and groups have importuned us to give special consideration to certain features of pay or

benefits. For example, considerable emphasis has been placed upon the apparent necessity for extending the period during which length-of-service increases could be added in the junior grade because of the numbers of officers in those grades with considerable service. Obviously such a concession would result in continuing a distorted pay structure over a long period of time to meet a temporary problem. With respect to retirement benefits, similar demands have been made to continue certain early retirement features, although no good reason has been advanced which would be consistent with the philosophy underlying the Commission's benefit program.

It is important to bear in mind that each feature of the Commission's plan has been thoroughly considered and checked against the needs of the Services. I firmly believe that the parts fit properly and add together to make a sound career program for the man who chooses a military career. The selection or special emphasis of a particular feature, or the elimination of certain pays, or percentage reduction of the compensation suggested for certain grades or special duty may well upset a carefully planned structure.

Civil Rights Program

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 21, 1949

Mr. HÉBERT. Mr. Speaker, an article which Gould Lincoln, the eminent reporter for the Washington Star, wrote in connection with the so-called States' rights movement, is one of the finest analytical pieces I have read in any newspaper in recent months.

Mr. Lincoln's handling of the subject definitely stamps him as an objective reporter of unusual ability. He has hewed the line of objective reporting in discussing the status, purpose and future of the States' rights movement within the ranks of the Democratic Party. Mr. Lincoln is one of the few reporters who seems to have a firm grasp on the subject and for that reason I have asked permission to bring his timely article to the attention of the Congress.

There has been so much confusion and erroneous impressions concerning the States' rights movement that it is about time that the facts be brought out.

It is also about time that we decide whether we are fish or fowl. It is about time we walk either on one side of the street or the other. For my own part I find it impossible to walk on one side of the street down home and then walk the other side of the street here in Washington. I am not, nor do I desire to be, that good a political contortionist or acrobat.

I shall have more to say on this subject at a later date, so in the meantime here is Gould Lincoln's most informative and factual article from the Washington Star.

DIXIE'S POLITICAL COURSE TO SWING ON CIVIL RIGHTS—LITTLE CHANCE SEEN FOR CREATION OF REAL SECOND PARTY IN SOUTH, BUT STATES' RIGHTS MOVEMENT MIGHT GAIN

(By Gould Lincoln)

Passage of President Truman's civil rights program by Congress—and, more important, its enforcement—will have wide political repercussions in the Democratic "solid South," but there is not yet in sight opportunity for the creation of a real two-party system in that region.

One immediate effect would be the strengthening of the States' rights movement.

This summarizes the opinions expressed by Democratic Members of Congress representing the 11 States which make up the "solid South"—Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia.

FACTOR OF PARTY'S FUTURE

Four of these States, Alabama, Louisiana, Mississippi, and South Carolina, gave their electoral votes last November to Governor Thurmond, of South Carolina, the States' rights candidate for President. Tennessee also contributed one of its electoral votes to Governor Thurmond. It is well within the probabilities that efforts by the Federal Government to enforce on FEPC law—fair employment practices—would bring the Democrats in others of these Southern States into line with the States' rights movement and so solidify it that a Democratic candidate for President who supported the civil rights program would be deprived of the electoral votes of those States—just as President Truman was denied the electoral votes of four of them in 1948.

To understand the situation it should be remembered that the States' righters are Democrats. In the States they carried the States' righters controlled—and do control—the Democratic organization. In other words, they are the Democratic Party—and if they continue to be active—they will remain the dominant force in the Democratic Party of those States.

For all these reasons, the progress or nonprogress of the civil-rights program in Congress becomes an important factor in the future of the Democratic Party—not only in the South but nationally.

Within a few weeks, the States' rights plan to set up a States' right institute in Washington, D. C. It is to be educational its sponsors say. And it will be well financed and well staffed, with an organ of its own—a newspaper. The reports are that they plan a circulation of from 1,000,000 to 2,000,000 copies of this newspaper, at the start. The purpose of the institute, its backers say, is to return the country to constitutional government and the Democratic Party to the principles of Jefferson.

NOT LIMITED TO SOUTH

The race issue, involved in the civil-rights program and the issue of State or Federal ownership of oil-rich tidelands are incident to the whole campaign of the States' righters, who are opposed to the wide extension of Federal control over the activities of the people within the States.

The campaign which the States' righters plan to wage will go far beyond the confines of the solid South—it will go to every State of the Union, if they have their way. As one of the States' rights supporters put it, too, the campaign will be to restore the Democratic Party as a States' Rights Party and to shuck off the present control of radical Democrats. He insisted that the Democrats of the conservative South had always been the backbone of the Democratic Party; that had it not been for the persistence of the southern Democrats, the party would have vanished long since. If and when, he said, the Republicans regain control of the House of Representatives and of the Senate, the Democrats of the South would continue to be the strong backlog of the party.

Report has it that former Gov. Ben. T. Laney, of Arkansas, will head the States' Rights Institute in Washington. Mr. Laney was active in the organization of the States' rights group, although his State remained faithful to the Truman ticket in the national election.

Nothing arouses the States' righters more than to be called a splinter party—they insist they are Democrats. They consider it unfortunate, too, that during the campaign they became known as Dixiecrats. They are, they say, just as strongly opposed to socialistic proposals advanced by the Truman administration as they are to the civil-rights measures, anti-poll-tax, antilynching, anti-segregation, and FEPC measures. All of these civil rights proposed laws, they contend, are infringements on States' rights by the Federal Government.

POSSIBLE VOTE EFFECT

These southern Democrats agree that enactment of the civil-rights program by a Democratic-controlled Congress and approved by a Democratic Congress will arouse tremendous resentment in their States against the present national Democratic leadership. They do not expect that resentment to take many southerners into the Republican Party. Obviously, they point out, the civil-rights program, if enacted, would have been impossible had it not been for its support by the Republicans in Congress. The Democrats of the South will owe the Republicans nothing.

One effect, they admitted, might be the casting of Democratic votes for a Republican Presidential candidate—against Truman should he be renominated, or some other Democratic candidate who went all out for the civil-rights program. Indeed, one southern Democratic Senator offered the suggestion that had the Republicans nominated Harold E. Stassen, president of the University of Pennsylvania, instead of Governor Dewey, of New York, last year, Mr. Stassen might have carried several Southern States. He recalled that Mr. Stassen had made several speeches in the South during the preconvention campaign which had been well received. Governor Dewey, on the other hand, was known as the governor who had given impetus to the passage of a State FEPC law in New York, and the southern Democrats had little use for him.

States' righters insist that their organization, composed of conservative Democrats, is within the Democratic Party just as much as is the Americans for Democratic Action, representative of the left wing of the party.

The States Rights Institute may become a powerful propaganda instrument against Federal Government expansion and particularly against the civil rights program. It will, its supporters insist, give the conservative Democrats a better chance to spread their ideas and philosophy of government. In the past, they say, the propaganda has been all on the other side, with well-financed organizations like the ADA, as well as the Federal Government spreading left-wing doctrine all over the country.

The only chance for the development of a two-party system in the South would appear to rest on control of the Democratic organizations in the Southern States by the New Dealers, the Fair Dealers and the left wingers. This might drive many of the conservatives into other fields—though there is still a wide question whether they could persuade themselves to go over completely to the Republican Party.

DEBATE RULE IS HURDLE

The crux of the whole fight is found—for the present at least—in the fight over the civil rights program. This program could be jammed through Congress without a doubt were it not for the Senate rules of unlimited debate—and a cloture difficult to impose. Similar measures have been filibustered to death by groups of Southern Senators over a long period of years. So an effort is under way to change the Senate rules, making it easier to impose cloture and to get to a vote. So slow has been the administration in

getting the proposed change in the rules before the Senate, that the civil rights measures may be lost in the great mass of pressing legislation that must be passed by Congress before it adjourns next summer. Even now the Democratic leadership, while prepared to bring the new cloture rule up some time after February 28, does not plan to keep it before the Senate until it is disposed of, but will lay it aside for the other important bills that require early attention.

The southern Democrats in the Senate hold a rod over the heads of the administration forces. They have the votes, joined with the Republicans, to defeat all the principal items of the President's legislative program. They may use them to do that thing, if they are sufficiently provoked. Also they have little use for many of the President's proposals anyway. This may explain to some degree the seeming softness of the administration leadership in dealing with the civil rights program. It's anyone's guess today whether, at the present session, a vote can be had on any of it.

Also the southern Democrats are quietly threatening the Republican leadership if it persists in needling the administration leaders to bring up the new cloture rule. They are letting the Republicans know that, unless they quit such tactics, enough of these Democratic Senators may vote to ditch the Taft-Hartley labor law pretty completely, and also the Republican tax law of the last Congress.

The Southerners are not particularly excited over the antipoll tax and antilynching proposals of the civil rights program, they say. They are red hot against a Federal Fair Employment Practices Act, and against any attempt of the Federal Government to ban segregation of the races

The Eighty-first Congress has been in session for a month and a half. It does not go out of existence until January 1951. In all that time, the chances would appear to favor action on some of these civil rights measures. Indeed, some of the Southerners, when pressed, admit the chance for action is very real. It is when that happens, the real political repercussions will start.

The Vulnerable Flanks

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1949

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Joseph Alsop, from the Washington Post:

MATTER OF FACT

(By Joseph Alsop)

THE VULNERABLE FLANKS

LONDON.—From the vantage point of this old, indomitable city, it is clear that the world crisis is entering a new phase. In Europe, the chief scene of Soviet aggression since the end of the war, an uneasy stalemate is being reached. But the attack is meanwhile shifting to the vast colonial area which is the vulnerable flank of the western world.

As the disastrous developments in China and Indonesia suggest only too clearly, the first center of this new attack is the Far East. But China and Indonesia are by no means the whole story. What is going forward in the Far East is nothing less than a Soviet land drive toward Australia in many ways comparable to the Japanese drive by sea.

China being lost, the decisive area in this struggle will be to the southward. The outlook is nowhere good. In Indochina, the French have thus far failed miserably to deal with the Communist regime of Ho Chi Minh. Being unwilling either to make convincing concessions to Indochinese nationalism, or to convince by sufficient force, they have merely wasted men and treasure. London has now urgently warned Paris to get on with the job, grimly pointing out that the jig will be up if and when Chinese Communists control the other side of the border from Ho Chi Minh's forces.

In Malaya, the British are having serious trouble with small but elusive groups of Communist guerrillas. And in Burma, the situation is worst of all. The primitive Karens from the hills are giving a drubbing to the forces of the incompetent, frivolous and corrupt Rangoon government. Only one Rangoon leader of any consequence, Thakin Nu, remains unmurdered. Two factions of Communists are in the field. And if present anarchy continues, the Communists, being the only organized element, must win in the end.
